Bound in cloth. $1.00 each. Prospectus mailed free on request, or books sent prepaid on receipt of price. THOS. NELSON & SONS, 37 East 18th St., New York.

Houghton, Mifflin & Co.

Publish March 9:

KING'S END

By ALICE BROWN, author of "Meadow Grass," "Tiverton Tales," etc. 12mo, $1.50.

A charming story of New England village life, with amusing portrayals of eccentric New England character. It has Miss Brown's fine literary touch, also uncommon freshness, humor and personal charm.

THE CURIOUS CAREER OF RODERICK CAMPBELL

By JEAN N. MCILWRAITH, author of "A Book of Longfellow," etc. Illustrated. Crown 8vo, $1.50.

The Scottish hero fights for Prince Charlie for love of a lady above him in station. After Culloden the scene shifts to New York and Canada, where there are trading and exploring adventures among Indians, and fighting between French and English, and where the hero finally wins something far better than a battle.

THE LIGHT OF THE WORLD

By HERBERT D. WARD, author of "The White Crown, and Other Stories," etc. With a frontispiece illustration. Square 12mo, $1.00.

A lens-maker, who is a reverent doubter, dies, and his spirit goes out among the stars. Far off he meets light which left the earth long before, bearing the pictures of great events. He witnesses the resurrection of Jesus, and his doubts are removed. The story is novel in conception, is told with much dramatic interest, and is an excellent Easter book.

A SATCHEL GUIDE

For the Vacation Tourist in Europe. Covering the portions of Europe commonly visited by tourists. By W. J. ROLFE. Edition for 1901, carefully revised to date. With Maps, Street Plans, Money Tables, a Calendar of Festivals and Fairs, etc. Accurate, clear, compact, so as to go in one's pocket. Flexible leather cover, $1.50, *net.*

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, New York.

J. B. LIPPINCOTT COMPANY'S
New Publications.

The Chemical Analysis of Iron.

By Andrew Alexander Blair. Fourth Edition. Illustrated. Octavo, half morocco, $4.00.

The fourth edition of this work will certainly deepen the impression of authority created among analytical chemists by former editions. Everything has been done to bring the book to date. All new and improved methods have been incorporated in the text and those excluded which have become obsolete. The addition of methods for the analysis of the different Ferros is a particular feature of the edition. The entire re-writing of the book has necessitated the addition of many new pages of letter-press and numerous new cuts.

The History of Medicine in the United States.

By Francis Randolph Packard, M.D. Octavo, 526 pages, cloth, $4.00 net.

A Collection of Facts and Documents Relating to the History of Medical Science in this Country, from the earliest English Colonization to the year 1800, with a Supplemental Chapter on The Discovery of Anæsthesia. Recording the great epidemics of smallpox, yellow fever, and other diseases which have swept the country; together with an account of the circumstances attending the establishment of American Schools of Medicine.

THE NEW NOVELS.

By the Author of "Alice of Old Vincennes."

Sweetheart Manette.

12mo, ornamental, with frontispiece, $1.25.

The many more than one hundred thousand readers of Maurice Thompson's recent popular novel should welcome with enthusiasm "Sweetheart Manette," redolent of romance, charmingly told, and brimful of interest from its first page to its last. The scene is laid at Old Bay St. Louis, near New Orleans, a field full of interest for the novelist and his readers.

By Cyrus Townsend Brady.

When Blades Are Out and Love's Afield.

12mo. With 8 full-page illustrations and many decorations. Ornamental binding, $1.50.

A story of love making and warring on Revolutionary fields. Mr. Brady here takes into his confidence all who care for a sweet woman and gallant, daring men. In dress and illumination this will be one of the most attractive novels ever issued.

By Mrs. Hugh Fraser, author of "The Splendid Porsenna."

A Little Grey Sheep.

12mo, cloth, $1.50.

A story of social questions and temperaments. In the opinion of the *St. Louis Globe-Democrat*, "in many respects the best story Mrs. Hugh Fraser has written."

By General Charles King.

In Spite of Foes; or, Ten Years' Trial.

12mo, clotn, $1.25.

A stirring tale of a dismissed officer's struggle to regain the place of which he has been robbed by circumstance and malice. One of the most entertaining books presented by the novelist of the army.

By Guy Boothby, author of "Dr. Nicola."

"A Cabinet Secret."

Illustrated. 12mo, cloth, $1.25.

One of the most ingenious and daring concoctions yet, from a romancer whose tales have won him thousands of readers among those who enjoy the mysterious and audacious. The plot turns on nothing less than the abduction of the British Cabinet ministers and the Commander-in-Chief of the English forces in South Africa.

The Nation.

NEW YORK, THURSDAY, MARCH 7, 1901.

The Week.

The best thing that the Fifty-sixth Congress did was to enact the Gold Standard Act, which marks the longest step yet taken toward the permanent establishment of a sound financial system. The next best thing was the failure to pass the impudent Shipping-Subsidy Bill. But what, besides its extravagance, gives it an unhappy distinction, is its surrender to the Executive of powers which the legislative department formerly held with a firm grasp. Now that the bargain has been carried through, there is perfect frankness about the means by which Democratic opposition in the Senate to the Administration's policy in Cuba and the Philippines was overcome. The *Tribune's* correspondent at Washington cynically tells, on Monday, how liberal appropriations were made to the South and West in the River and Harbor Bill "in return for the Democratic 'lay down' in the Senate on the Philippine and Cuban propositions," how Tillman of South Carolina was "soothed into silence" by the Charleston Exposition appropriation of $250,000, and how Cockrell of Missouri, "the erstwhile 'watchdog of the Treasury,'" was won over by the gift of $5,000,000 to the St. Louis fair. The correspondent could tell the next day of the failure of this immoral consideration, for the River and Harbor Bill was defeated.

"Pure, simple, undiluted, unchecked despotism," Senator Hoar called the action of the Senate in passing the Spooner amendment to confer absolute, monarchical powers over twelve millions of human beings upon five citizens of the United States—or rather upon two, the President and the first civil governor appointed. The one encouraging feature of this whole melancholy spectacle of the Senate of a republic voting away such vast powers in obedience to blind party sentiment, was the acceptance of Senator Hoar's amendment. This forbids outright the sale and leasing of public lands, timber, and mining rights, and confers upon the President the power to grant franchises only when they are indispensable, and only for one year after the establishment of civil government. As Mr. Tillman put it, this drew the teeth of the hyena about to prey upon the Philippines, and the White House was directly heard to cry aloud.

As was expected, the House put through the Army Bill, Imperialistic and promise-breaking amendments and all, without hesitation and almost without debate. It apparently went on the principle that the less said about such things the better. A small conscience vote among Republicans was cast in opposition, or was withheld, but the President and the party will consider this a wholly negligible quantity. Republicans with a few dregs of conscience left are simply set down as "queer," and it is felt that no more need be said. Meanwhile the Cubans, whom we have deceived and cheated and now mean to coerce, are reported as still determined to reject our ultimatum. But this is explained as due only to their wish to stand well with "the masses" of the island. It is, of course, a grotesque supposition, or, as the *Tribune* puts it, "mere trifling," to say that we need to or shall pay any attention to "masses." We have the guns, and that ends the argument.

Some credulous people still think that the annexation of Cuba is not intended. They seem as unable to perceive the intent and effect of the language used in the Senate amendment as they are to fathom the purposes of the "original annexationists," who are now chuckling over the realization of their aims more speedily than they had dared to hope. Let there be no mistake about this—the annexation of Cuba is the goal to which the Administration is definitely and consciously marching. True, a few Republican editors and leaders think to stop half-way down the precipice. They have an idea that they can arrest their fall at a protectorate, or a colonial régime; anyhow, they now rebel, or profess to rebel, at the suggestion of Cuba's coming into the American Union as a State, or two or three States. But these benevolent aristocrats must not deceive themselves. They will not long be allowed to govern Cuba at the end of their finger-tips. The democratic principle may be temporarily in abeyance, but it will surely flame out again. We cannot hope permanently to govern 1,500,000 people at our door as we think best. not as they think best. They will surely come to govern themselves and help govern us. Men who are not congenitally or wilfully blind, who think clear and see straight, cannot be deluded on this point. The denial of independence to Cuba means the certain and speedy incorporation of the island in the American Union.

After our Cuban perjury, it will be hard to maintain any longer that Imperialism has anything to do with morals or religion. We shall have to go over frankly to the Bismarckian view that "principles" are as much out of place in politics as would be a pole held crossed in the mouth of a man trying to run rapidly along a narrow path in the woods. Good faith and honor must be discarded if we are to get on. The Senate had some witnesses to the facts and to truth, but it rode over them in the shamefaced silence of a brute majority applied in place of argument or explanation. Senator Morgan said to his fellows that they were guilty of "arrant hypocrisy" to make any such demands of Cuba as they were proposing to make, and yet to maintain that they were "executing the purpose and the pledge of Congress." The good Republicans said nothing except to express their impatience to vote. Senator Pettus told the majority that they were "bringing disgrace on the name of the American people," and Senator Tillman set forth the exact truth when he said, "We are, in the face of the Almighty and Christendom, telling a lie when we make that demand." It will now be very interesting to watch the religious papers come about into the popular wind, in this Cuban falsity. They have been taking high moral ground on the subject of our pledge to the Cubans. The United States must live up to it religiously; it must not be modified in word or letter, except as Cuba herself may ask for it—that is what they have said. We felt at the time that it was a rash commitment on the part of these leaders of religious opinion. It would have been much better to lie low and not have their own words, as well as our national promise, to swallow. But that they will swallow both with the utmost grace, and even unction, there is little reason to doubt. They will doubtless contend that Cuba has consented to give us what we demand, and that this lets us out. As a matter of fact, she has, so far, refused, and if she does ultimately consent, it will be very much as the victim of a burglary consents to give up his watch and money to save his life.

"We shall not leave the destiny of the loyal millions in the [Philippine] islands to the disloyal thousands who are in rebellion against the United States." Thus President McKinley in his inaugural. We can well imagine with what *vivas* this sentiment will be cheered as it passes from Filipino to Filipino throughout the islands. No loyal native can hear it, we are certain, without tears of joy that his great President in Washington should pledge him support so firmly. So, too, will rejoice the officers of the army, to whom the President referred as men doing "faithful and noble work in their mission of emancipation," even though they may wince under the reference to the paltry "thousands" whom Gen. MacArthur's

71,000 troops could not subdue. Here is what one of them, well up on the list of infantry officers, experienced in war and peace, says (January 6) of the townspeople he has "emancipated" and of whom he is the sole ruler:

"I have sized up the inhabitants of my town as follows: They are well-disposed, or appear to be so, because I have the necessary force to compel it. The town is clean because I make the people clean it. They are obedient because obedience is required and disobedience is punished. I trust very few of them any further than I can see them. They would like all Americans very much better if the Americans *were all dead.*"

Opinions will differ about the good taste of the President's inaugural address. Even the *Tribune* finds in it "self-laudation," though it gallantly adds that this could not have been "intended." His English will find no admirers. It is both ungrammatical and unintelligible. He uses words in a non-natural sense. When he says "independence" of Cuba, it is clear that he does not mean what the dictionaries and international law understand by the term. He has some vague, elastic, elusive thing in mind, which will take its exact meaning from the future event. So let nobody suppose that Mr. McKinley is binding himself to anything in respect of Cuba. The *Times*, indeed, sees in his language a "solemn engagement," and innocently adds that he "has *generally* kept" such personal pledges; but this is to show one's self little skilled in McKinleyese. When the President speaks, for example, of American "justice" being the same thing in Manila that it is in New York, he gives a sense of his own to the word. Only on Saturday an American citizen arrived in San Francisco who had been deported from Manila without trial, and solely on the ground that he was "mendacious." That is what the President means by "justice." It may be a good thing, but it is not what we have always understood by the word. It is an instance of the "under-song" in Mr. McKinley's vocabulary. He still says that the Teller resolution regarding Cuba "must be made good"; but in the same breath he expresses his approval of the recent act of Congress which notoriously makes it bad.

How rapidly the Philippines are becoming Americanized becomes plainer day by day. Gen. MacArthur, for instance, has been giving our State Governors, particularly that narrow-minded one who recently stopped a contest in Cincinnati, some good pointers as to how to treat the "prize-fighting fraternity" decently. On Thanksgiving eve, we learn from the Manila *Times*, there was a "grand boxing tournament" in the Alhambra Theatre between Spike Sullivan and Joe Cult, and Dennis Travers and Kid Wilhelm. This edifying and instructive occasion was preceded a few days only by three contests in which Marshall of the Sixth Artillery figured largely. Unfortunately, the spectators were not satisfied with the outcome of the first two bouts, and we regret to learn that there were "hisses and cries of fake" at the end of each. But if justice was cheated there, no one can read the accounts of Judge Whitsett's decision in the Parian Police Court without a thrill of satisfaction at the knowledge that simon-pure American law is being served out to all who come into this Missouri volunteer lieutenant's court. There, for instance, appeared Pedro Castro and his band of native musicians on the shocking and heinous charge of having played "Aguinaldo's March" at a church festival. Here was high treason and direct incitement to mutiny against the great American republic, and the band paid for it at the rate of $100 fine and thirty days each in jail. A lesson was necessary, this American judge declared—and they got it. So, too, did the five loathsome wretches whose crime was the printing of pictures emblematical of freedom upon cigarette wrappers. Thus brilliantly does our famous American personal liberty illuminate the darkness of the Philippines! We trust that no Filipino will be so dastardly as to translate the "Biglow Papers" and circulate them in Manila. If he does, may the righteous wrath of Whitsett of Missouri, lieutenant of infantry and judge of infamy, descend upon him!

What is the condition of a community in which such an outrage can occur as the deliberate lynching of a negro murderer, the burning of his body after death, and the distribution of fragments as souvenirs, all of which occurred in Terre Haute, Ind., the other day, in the presence of a large crowd, which included women and children? Can such a place be called civilized? These are questions which go to the very heart of things, and we are glad to see them frankly raised by a leading newspaper of the city. "Is Civilization a Failure?" was the title of an editorial article which appeared in the Terre Haute *Gazette* on the day after the frightful affair. The editor pointed out that only a small fraction of the people were in the crowd which gathered while the lynching progressed, and that many in this crowd were opposed to violence, but none of these would carry their opposition beyond words, and "a great preponderance of people in that crowd sympathized with the angry and desperate men who were willing to go to any length to wreak summary vengeance on the murderer." Moreover, the *Gazette* is constrained to make the "humiliating confession" that the sentiment of the town really approved the performance—an opinion since strikingly confirmed by the commendations which the Sheriff has been receiving for encouraging his deputies to yield to the mob.

Another Indianian expressed some views recently which seem worth considering in view of these Terre Haute developments. Not long ago *Harper's Weekly*, which had been a thick-and-thin supporter of the Administration's Expansion policy, published an editorial article which admitted that there were two sides to the question of Imperialism, and invited a general expression of opinion from its readers. Dozens of letters in response have appeared in the last two issues of the *Weekly*, the majority of which, by the way, are against the course of our Government in the Philippines. The communication from the Rev. Stanley Hughes of Richmond, Ind., must have been written at least ten days before Ward was lynched at Terre Haute, but he suggested the development of forces in society which operate to such ends. Mr. Hughes has lately seen a letter from a soldier in the Philippines in which he tells how the men of his company shoot unknown natives on sight; how his sergeant was cheered because, on coming in sight of a Filipino in a distant field, he shot him dead—a very fine shot; how some natives, fleeing from their homes at the approach of the Americans, were wounded and left without food or drink in a deserted hut for twenty-four hours, and "we were surprised to find them alive on our return." This young man, Mr. Hughes says, went from a Christian home and bears the name of an honored family; and the brother of Mr. Hughes, to whom the letter was written, and who served with him in the Spanish war, is amazed to find him so brutalized that he can tell these things. The incident suggested some reflections to the Indiana clergyman which it is worth while to quote:

"But is it not the natural result of a cruel war that those who wage it lose their finer sense of right? Is not our country suffering a convulsion of mob violence? Are not negroes being burned? Is not the whipping-post seriously recommended in New England, and seriously needed? Has not Jane Addams found crimes of cruelty redoubled in frequency in the slum district of Chicago since this war began, and that, too, among the youth?"

Gov. McSweeney of South Carolina is quoted as being extremely indignant at the shocking revelations in regard to the enslaving of negroes in convict labor stockades in his State. He insists that the negro convicts leased out to contractors are well treated, and that it is the densely ignorant and non-criminal negroes who are being abused and deprived of freedom. The Governor is said to have denounced this condition of affairs as worse than lynching, and to

have declared that he will conduct an investigation himself, regardless of cost, if his duly appointed law officers fail to do their duty. Furthermore, the Governor has stumbled upon the truth by saying that if the enslavement of negroes is not stopped, that of poor whites will follow. In this case, as in the matter of lynching, it is the whites that suffer most in the end. Their punishment comes inevitably in the form of their own brutalization by the lawless acts they commit, each one a downward step from the plane of civilization. In regard to the Anderson outrage the highest praise is due to the Anderson *Mail*, which dared to expose the system, and the nefarious traffic of its own neighbors, at what must have been a considerable personal and pecuniary risk to the editor. Such courage as this deserves its medal of valor. Both the Anderson *Mail* and the Columbia *State* agree that the infamous system of leasing negro convicts, which Gov. McSweeney defends, is at the bottom of the whole trouble, and that it must go.

There has been some sharp comment in the War Department and in the service newspapers upon the looseness and carelessness of the language of the law for the increase of the army, which was signed on February 2. The ink of the President's signature was scarcely dry before it became necessary to ask for corrective legislation in the shape of riders to appropriation bills. For instance, by some oversight, appointments to the Quartermaster's and Commissary's Departments were limited to volunteer officers already serving in those departments, instead of being thrown open to all volunteers, as was intended. This is but a sample of the errors of the law, which will cause endless perplexity to the Judge-Advocate-General, the Comptroller, Auditor, and Attorney-General for months if not years to come. Speaking of this latest example of growing Congressional carelessness in lawmaking, the *Army and Navy Register* of Washington says:

> "It is barbaric in its inconsistencies and inadequacies. There has been nothing worse as a literary composition pretending to the dignity of a United States statute. The bill will be construed, of course, in the best interests of the army, and it will not be allowed to block the legitimate purposes of the legislators by any narrow process of interpretation which is possible as the result of the carelessness of those who are responsible for the law. It will be due entirely to the liberality of the interpreters of the act, therefore, that the law is not an absolute failure and does not defeat its own objects by its defects in phraseology."

But no interpreters of any act of Congress should be given the opportunity to exercise their judgment in the matter. As in the case of the canteen, two years ago, such an opportunity for "liberality" in construction may very easily result in thwarting the plain intentions of Congress.

New Jersey is taking a backward step in the bill abolishing "spring elections" in the cities of the State. Gov. Voorhees has signed it, although he was understood to be strongly opposed to the measure. It was confessedly urged by politicians only, and for partisan reasons only—that municipal elections might be held again on the same day as State elections, and so State and national politics be brought into questions of purely local administration. The prime movers were the Republicans of Essex County, who think to prevent the (to them) unhappy spectacle of the city of Newark going Democratic again and again in the municipal election, though strongly Republican on State and national issues. But their bill, to which the Governor has given reluctant consent, may be held unconstitutional by the courts where the Democrats mean at once to carry it, and in any case is apt to provoke a reaction which will defeat the aims of its promoters. Many shrewd Republicans are predicting that the inevitable result will be to lose for their party both cities and State. However that may be, the principle of separate elections is so well established and approved in New Jersey experience, as elsewhere, that this attempt to overthrow it can be regarded only as a vicious partisan manœuvre.

Lord Wolseley's reputation as a strategist was never great, and can hardly be said to have been enhanced by his long-promised attack on the English War Office in the House of Lords on Monday. Not even Methuen himself could have advanced more directly upon the enemy's position than did the Field-Marshal. But the enemy, in the person of Lord Lansdowne, was ready for him with a flank attack which was driven home with force. To Wolseley's criticisms of the War Office, that the titular Commander-in-Chief is limited to recommendations to the Secretary for War; that the army is divided into four independent, water-tight compartments, and that there is a fatal distribution of responsibility, the reply was that, whatever the faults of the system might be, Wolseley had not made the best of it nor understood his duties. Lord Lansdowne did not hesitate to declare that the mistakes and blunders in South Africa were not due to the system, but to the fact that it was not carried out as faithfully as it should have been. In enumerating his own duties to Lord Salisbury, the Field-Marshal had failed to state that among his most important were those of preparing plans for offence and defence and for mobilizing the army. Altogether Lord Wolseley was well routed in this first skirmish of what is certain to grow into a pretty general engagement before it is ended.

Several French professors—the offensive "intellectuels" of Dreyfus days—have united in a public protest against the enormities of which the Christian troops in China have been guilty. They call the attention of "all friends of humanity" to the narrative of "massacre and pillage" at the hands of Europeans in China, denounce such deeds as "criminal," and demand that the respective governments of the guilty men proceed against them with due severity. Of course, nothing of the kind will be done. Each nation will take it out by concealing its own misdeeds and blushing ostentatiously for the crimes of the others. Yet such a protest as that of these enlightened Frenchmen—Bréal, Havet, Reclus, and the others—is heartening. Humanity and decency have some witnesses left yet. All have not bowed the knee to the Baal of Imperialism. Perhaps the indignant cry of these leaders of French thought had something to do with the shipping back from Marseilles of the boxes of Pekin loot. But one could wish that similar protests might make themselves heard in other Christian countries—the United States, for example. So far as we know, there has not been among us one organized expression of the shame and horror that is widely felt in connection with the slaughter and rapine in China. The churches and missionary societies cannot, it seems to us, afford to keep silent much longer, lest they be thought to acquiesce in the crimes committed in the name of Christianity.

The Macedonian situation has long been an uneasy one. A few months ago it nearly caused a rupture between Rumania and Bulgaria. High officials of the Bulgarian principality are members of the Macedonian Revolutionary Committee, and while the Bulgarian state opposes the revolutionary movement by all moral means, it appears wholly powerless to control the revolutionary propaganda, even in the Bulgarian capital. There is no question that the committees mean to precipitate a war, trusting probably to Russian intervention, and looking forward to a further partition of the northern range of Turkey in Europe. Arms are freely imported, outrages here and there keep the advance of the conspiracy in sight, and the leaders are bold enough to promise open revolt for the month of April. The success of the "Ethnike Hetairia" in precipitating the brief and inglorious war between Turkey and Greece presages alarmingly the possibilities of the present situation. The Turks could presumably settle the matter as easily again if only they were let alone. But would they again be let alone? That is the question. That they are fully alive to the peril of the situation, the irade for the mobilizaiton of fifty thousand troops on the Macedonian border abundantly proves.

THE GOOD-NATURED PRESIDENCY.

American political history has had its "Era of Good Feeling"; we now have our epoch of good nature. Mr. McKinley is likely to be known as the mildest-mannered President that ever suffered long and was kind in the White House, and his Presidency as the political replica of "The Good-Natured Man." He has absolutely no enemies, because he will allow no man to be his enemy. When he comes to lie on his death-bed and is exhorted, like the Spanish Marshal, to forgive his enemies, his reply will be the same as that of Narvaez: "I have none. I have killed them all." But Mr. McKinley will mean that he has killed his with kindness. "I ran into a bank of roses," was the comment of an angry Senator who had gone to the White House to protest against an appointment to office—the only thing, of course, which can rouse the celestial ire of a Senator. He might have added that not even roses are allowed in the President's room unless they are thornless.

You cannot, in fact, talk with Congressmen and others who have had business with the Executive during the past four years, without discovering that his term of office is distinguished above all others by personal kindliness. "That kindly gentleman in the White House" is the ordinary Washington way of referring to Mr. McKinley. It betrays an undertone of something very like contempt, but, anyhow, kind hearts are more than the Constitution, and the President has determined to be good and let who will be clever. This is what Senator Hoar means by calling Mr. McKinley "the best beloved" President that over occupied the White House—his charity is so all-embracing, approving of right and wrong with equal tenderness, endorsing contradictory principles with generous hospitality for every view. He "abounds," as the Spanish say, in the sentiments of every man with whom he talks. The Presidential hand goes confidingly to the Congressional shoulder. "What can I do for you? Ah, that favor, I am sorry to say, is promised to another, but let me give you something 'equally as good.'" Like the great Marlborough, Mr. McKinley allows a political or personal enmity to stand in his way no more than would the law of gravitation. Good nature is his forte and kindliness his foible. His method and theory of government are a compound of blandishment and promise. "Let us all be as good as we can, and better when convenient."

On the merely personal side, all this has its obvious advantages. It enables the President, after having been kind to everybody, to go off to unruffled sleep. No worry, no friction, no sense of a promise unmade can ever trouble a public man who makes it his rule to be strong upon the stronger side, and to govern by yielding. The happy temperament that means an easy-going and a long life, Mr. McKinley has in a degree which any of us might envy. Only, the question is whether this is the fittest temperament for the chief ruler of a great nation. It is the more necessary to ask and answer this question because, rather surprisingly, many people are pointing with approval to the astonishing efficiency of the President's method. See all that he has accomplished. Observe how harmonious his relations with Congress are. How much better for the machinery of government, to say nothing of policy, Mr. McKinley's wheedling is than Mr. Cleveland's grumbling and lecturing. It is, after all, good nature which makes the wheels go round.

Now, in putting this theory to the test—the theory that the President must stoop to conquer, and that honeyed words will extract from Congress what no reminder of public duty can secure—we must rule out all that has been done at Mr. McKinley's request in support and prosecution of war. The war spirit always breaks down the Opposition, and makes the man master who determines to give it its head. The personal equation does not enter here. To a curmudgeon as readily as to a man all adrip with kindness Congress will give what the madness of war demands. We see how the thing works in England to-day. The Boer war has dashed the Liberals to pieces, Salisbury has a free hand. Go back only to our own unlucky Venezuelan episode of 1895. When Mr. Cleveland, the disliked, the tactless, the deadlocked, talked war for a day, both houses and all parties of Congress sprang to "stand behind him." They voted him $100,000 on the trigger, and would just as easily have voted him $50,000,000. The good-natured method, we see, therefore, is out of the reckoning when the war mania is upon the country. The governmental machine then goes of itself.

It is, rather, to the ordinary routine of legislation that we must look to determine whether flabby good nature is the quality most to be desired in a President. And here it will be found that Mr. McKinley has as long a line of failures as any of his predecessors. "International bimetallism," shipping subsidies, the Nicaragua Canal, a Government cable to Hawaii—these are among the measures which he has "earnestly" urged, or described as a "paramount necessity," but none of which he has accomplished. The capital instance, however, is the way in which Mr. McKinley's treaties have been flouted by the Senate. This comes nearest to the President's prestige. He negotiates treaties. He is personally committed to them. If there were anything in the theory that a President who refuses Senators nothing would easiest induce them to grant him everything, we ought to see the most perfect harmony between Executive and Senate in this matter of treaties. But what do we see? Leaving out again the war, we see that Mr. McKinley has a longer list of rejected or smothered treaties than any of his predecessors. The arbitration treaty with England, which he pressed upon the Senate with religious fervor, it first amended out of all semblance to the original, and then allowed to die of inanition. The Hay-Pauncefote canal treaty has met an even more contumelious death; and the whole line of reciprocity treaties sleep the sleep that knows no waking in the Senate's archives. Surely, an irascible and impractical man like Mr. Cleveland could have fared no worse than this.

We press the point because it is the convincing illustration of the truth that, in some ways, it is "here below," as the poet says, "fatal to be good." There is such a thing as fatal good nature. To be so meek and yielding that your authority is despised is not the road to efficiency. The Senate was never weaker in personnel than it is to-day, yet it is strong enough to defy the ease-loving President. Senators know that he will fall on their necks as before; so they wink at each other, praise the President (one hand always behind their back to receive the expected favor), and then go on in their blindly selfish way. He has made them strong by his uncomplaining deference and unprecedented turning over of patronage to them; and they use this strength against his very policies. That is the fine fruit of his good-natured theory of government, as we see it in actual practice.

In a larger way and in more critical questions, we cannot fail to see how the past four years of good nature have been four years of public demoralization. The typical instance in Mr. McKinley's career is that so innocently narrated by his friend, Mr. Kohlsaat. It was at the time when the expediency of endorsing the gold standard in the St. Louis platform of 1896 was under debate. The prospective candidate pointed to two piles of letters on his desk. One was for endorsement, the other and larger pile was against it. Therefore, he was against it. In this we see the key to a good-natured character which is ever fortune's champion. It makes it easy for him, but it may be death for the country. A President who had no convictions which could not be gracefully waived at the demand of an apparent majority, took us kindly and prayerfully into the Spanish war. There was the supreme test of good nature in the President, and it broke down so disastrously as to discredit hopelessly this new-fangled theory that a man set in high place must use a wooden lath instead of cold steel. The boasted triumph of tender-heartedness, in conjunction with spineless inertia and waiting

on chance, is really enough to make the standards of an earlier day seem infinitely better. "Away," cried Canning, "with the cant of 'Measures, not men'—the idle supposition that it is the harness, not the horses, that draw the chariot along. No, sir; if the comparison must be made, if the distinction must be taken, men are everything, measures are comparatively nothing. I speak of times of difficulty and danger, when systems are shaken, when precedents and general rules of conduct fail; then it is not to that or to this measure, but to the energy and character of individuals, a state must be indebted for its salvation."

LIFTING THE PHILIPPINE VEIL.

After nearly three years of silence and secrecy respecting the peace negotiations with Spain at Paris, the President has at last sent to the Senate his original instructions to the Peace Commissioners, and his subsequent correspondence and instructions during the weeks through which the conferences were protracted. "Certain matters," says Secretary Hay in his letter of transmittal, are still withheld as being "inconsistent with the public interest to communicate," but he assures us that they "in no wise affected the negotiations as between the United States and Spain." Thus we have the whole story for the first time, and a curious one it is.

To begin with, Mr. McKinley instructed his Commissioners on September 16, 1898:

> "It is my earnest wish that the United States, in making peace, should follow the same high rule of conduct which guided it in facing war. It should be as scrupulous and magnanimous in the concluding settlement as it was just and humane in its original action. The lustre and the moral strength attaching to a cause which can be confidently rested upon the considerate judgment of the world, should not under any illusion of the hour be dimmed by ulterior designs which might tempt us into excessive demands or into an *adventurous departure on untried paths.* It is believed that the true glory and the enduring interests of country will most surely be served if an unselfish duty conscientiously accepted, and a signal triumph honorably achieved, shall be crowned by such an example of *moderation, restraint, and reason in victory* as best comports with the traditions and character of our enlightened republic."

Noble sentiments, truly; and that they were understood by two at least of the Commissioners to be aimed against the acquisition of the Philippines, was made certain by the telegrams sent to the President on October 25, by Judge Day and Senator Gray. The former said:

> "I am unable to agree that we should peremptorily demand the entire Philippine island group. *In the spirit of our instructions,* and bearing in mind the often-declared disinterestedness of purpose and freedom from designs of conquest with which the war was undertaken, we should be consistent in our demands in making peace."

Senator Gray added that to take the whole of the archipelago would be to "make a mockery" of the President's instructions.

Against what, in fact, could Mr. McKinley's solemn warning concerning "an adventurous departure on untried paths" have been directed unless against just this project for taking over the whole archipelago? That it had been pressed upon him, we know from the testimony of Mr. Whitelaw Reid, who has declared that he advocated the taking of all the Philippines "in the very first conference in the President's room at the White House, in advance of any instructions of any sort." But it is evident that when the instructions came, they were intended as a kind of *Apage Sathanas* to this proposal of Commissioner Reid's. The President would never consent to that untried path. He instructed the Commissioners to demand Luzon, and even that only as a kind of disagreeable military and commercial necessity. And it was not till more than a month later, after his Western tour of stump-speaking, that the President discovered from the cheering crowds that "the sentiment in the United States is almost universal" that the Philippines should all be taken, and instructed his Commissioners to go blithely ahead with the adventurous departure upon untried paths.

All this is an official confirmation of what was freely suspected and said at the time. The President was averse to the Philippine venture, but was howled into it by the populace that thronged about his car platform. He had no new information to impart to the Commissioners; he simply told them that "the President concurs" in the "sentiment," and the thing was done. It was done rashly, but it was not done blindly. The President was plainly warned of the danger of his course by two of his own Commissioners, Judge Day and Senator Gray. They gave him, moreover, information which it was fatuous in him to disregard. For example, he was told on October 7 that "Aguinaldo and his leaders will resist any attempt to reorganize a colonial government, but *want native republic.*" On the same date the President was informed of Gen. Merritt's opinion that "if the United States attempted to take possession of Luzon, or all the group as a colony, Aguinaldo and his immediate followers would resist it." With what face, after this, could Mr. McKinley say, as he did at Fargo, North Dakota, on October 13, 1899, "We never dreamed that the little body of insurgents . . . would turn upon the flag that had delivered them from Spain"? He had been officially and authoritatively told that they would do just that thing.

The President was not deceived about the aspirations of the natives and their determination to resist his aggression. But he was undoubtedly misled as to the strength of their resistance. Gen. Merritt informed him that Aguinaldo's forces "are divided, and his opposition would not amount to anything." Elsewhere this high military authority roundly declared that "the natives could not resist 5,000 troops." That will do to set beside the British "Promenade to Pretoria," for military expertness. It was going to be so easy, and Messrs. Davis, Frye, and Reid assured the President that the revenues of the islands were ample to pay for "the whole cost of administration and defence." How safe that seemed to make the departure on untried paths, in pressing forward upon which we have since had to use an army of 70,000 men, and spend at least $350,000,000!

From the very first, however, the President appeared to feel that he might be tempted on the commercial side. Nothing, he said, but "duty and humanity" must guide the Commissioners in their deliberations, but still there was an "incidental" "commercial opportunity" which they must not overlook. He did not overlook it himself. There has been much wondering about that dispatch of Dewey's recommending the retention of Luzon. How did he come to send it? It was in answer to a telegram from the President. On August 13 (the very day after the peace protocol was signed), Mr. McKinley desired the Admiral's opinion on "the relative desirableness of the several islands." He was averse to an untried path, but if he must walk in it, he wanted to make sure that it would lead him to the richest islands. Could there be a more deliberate preparation of temptation, or a more evident intention to yield to it in the end? In the light of these revelations, and of the President's abandonment of his own prescribed "moderation and restraint" in settling the terms of peace, his protestations of devotion to the good of the islanders put him in the same category with the crocodile lawyer of the 'Bab Ballads,' Mr. Baines Carew, whose "grief would overcome him so, He'd scarce have strength to take his fee," and of whom the veracious Mr. Gilbert wrote:

> "No charges can approximate
> The worth of sympathy with woe—
> Although I think I ought to state
> He did his best to make them so."

It will be said that all this is a "dead issue," "burnt powder," a "closed case," and so on. But it is important to bring out the facts, because the same policy of concealment and shiftiness is still being practised by the same Administration. On October 13, 1898, the President telegraphed the Commissioners, in reply to a suggestion that we should assume a certain sovereignty in Cuba:

> "We must carry out the *spirit and letter* of the resolution of Congress."

How he is carrying it out now, we know. In Cuba, as in the Philippines, he conceives it to be his duty to lay down lofty

principles of conduct for the express purpose of making his own violations of them appear the more heinous.

THE CITY MUST WORK OUT ITS OWN SALVATION.

The decision of the Court of Appeals, annulling the Prevailing Rate of Wages Law, on the ground of unconstitutionality, is important in itself, because it establishes, regarding municipalities, a sound principle which will save New York city millions of dollars; but it is of far greater significance for the philosophy which underlies it. The law in question was a particularly offensive display of the legislative disposition to truckle to "organized labor." It provided that a contractor performing public work should pay his workmen at a rate "not less than the prevailing rate for a day's work in the same trade or occupation in the locality"; the theory being that the contractor might thus often be forced to pay men more than they were ready to work for. The court sets this requirement aside for various reasons, of which one is sufficient—the fact that "it invades rights of liberty and property, in that it denies to the city and the contractor the right to agree with their employees upon the measure of their compensation, and compels them in all cases to pay an arbitrary and uniform rate, which is expressed in vague language, difficult to define or ascertain, and subject to constant change from artificial causes."

It is, however, in the definition of State authority over cities and in the restrictions imposed upon this authority that the chief value of the decision rests. The court admits that the Legislature is clothed with extensive powers over the administration of municipal governments, but it maintains that these powers are not arbitrary. The Legislature cannot, for example, compel a city to give money or loan credit for any private purpose, or fix the price which a city must pay for materials or labor, or appoint city officers, because the Constitution recognizes the existence of cities as political and corporate bodies, and restricts the authority of the Legislature to interfere in matters of local government. Local self-government for cities is established in the fundamental law, and, as Judge O'Brien forcibly puts it, local self-government "would be nothing but a sham, a delusion, and a snare" if the Legislature could do such things as were attempted in the Rate of Wages Law four years ago—and, he might have added, in the provision of the Police Commission Law which gives the Governor the power to remove the Police Commissioner of New York city.

It is peculiarly fortunate that sound doctrines regarding municipal government should thus be enunciated by the highest judicial tribunal at the very time when the relation of the State to its largest municipality is under discussion, both at Albany and in New York city. The plain implication of Judge O'Brien's language is that the Court of Appeals will declare unconstitutional that part of the Police Commission Law which empowers the Governor to remove the Police Commissioner of New York, if the statute shall be brought before it. Whether this shall happen or not, the recent decision shows plainly that this provision is against the spirit of the Constitution, and is really one of those things which, if allowed, would make local self-government only a sham, a delusion, and a snare.

So far as the argument for State interference in the affairs of New York city is not partisan and insincere, it is based upon the assumption that the metropolis is to be saved by the help of outsiders, whereas the truth is that the city must work out its own salvation. The very development of the commonwealth proves this. New York is fast becoming a State of large cities, in the sense that the Government of the State must before long be controlled by the people of the large cities. It would be so controlled to-day, except for the fact that the chief city is almost always Democratic, while the rural districts and some of the other cities are Republican. Neither this partisan element nor any attempt to restrict through the Constitution the legislative representation of the metropolis will permanently prevent the triumph of majority rule in this and in other States. Of course the moment that the majority living in cities controls a Legislature, the whole theory of the State imposing upon the cities other government than they desire utterly breaks down.

Indeed, this theory would already have broken down here if it had chanced, as it well might, that there had been originally two colonies, one of New York, comprising the bulk of the present commonwealth, and another of Manhattan, taking in what has become New York city and the suburban districts. In that case New York city would now elect nearly the whole Legislature of Manhattan, and the State could not make the Government of the city anything different from what the city wanted, because the State and the city would be practically identical. In Rhode Island the city of Providence already has more people than all the rest of the State, and while Constitutional restrictions still prevent it from exercising its fair share of power in the Legislature, every student of government knows that, as the majority of Rhode Island people living in Providence grows larger, that majority will more and more have its way about the government of Providence.

We might as well meet this issue fairly and squarely at the beginning of the new century. New York and a number of other States are already or will soon be States with a majority of their people living in cities. The residents of those cities are entitled to have the sort of government they want, and they will have it—whether it is good, bad, or indifferent. The rural sections ought not to govern the cities, and they will not long have the power. The nineteenth-century test of democracy was its capacity to rule a nation composed of States whose people lived for the most part in the country or in small towns. The twentieth-century test will be its capacity to rule the great cities which will dominate many of the States. The question must be decided by those cities, and the sooner the people in the rural districts understand this, the better all around.

MODERN CHRISTIANITY.

I passed part of the summer of 1893 in Edinburgh, and went one Sunday to church in the little Gothic chapel of Roslyn, celebrated for the mediæval beauty of its architecture. I drove out for that purpose three or four miles from the city, and, when I entered the church, found the clergyman (Episcopal) preaching on King David, and going slowly over the chapter in which the King's misdeeds are recounted. At the close of the history of each one, he paused, and said: "I am sorry; he should not have acted thus; I wish he had not done so, but we know he was a man of God." At the close of his discourse he said, as a sort of summing up, but very necessary: "How do we know he was a man of God? Why, the Bible tells us so."

I have since been forcibly reminded of this incident by Senator Hoar's comic defences of the revered McKinley, and similarly of the defence of Clovis, the first King of France, by Gregory of Tours, the Christian historian of the sixth century. Mr. Hoar, after employing all the force of his rhetoric in painting the crimes and illegalities which McKinley had permitted or instigated in the Philippines, spent the last half-year in trying to impose him on his country as Chief Magistrate, and voted for him himself. Clovis had for neighbor another Gothic chief named Cloderic, son of Sigebert the Lame, so called from a wound received in the knee in a battle against the Allemanni in which Alaric was killed. Clovis instigated Cloderic to kill his father, saying: "Thy father is old and lame. If he should die, his kingdom would belong to thee, as well as my friendship." Having obeyed this hint, Cloderic sent to Clovis, saying: "My father is dead. Send hither thy envoys, that I may show them my treasure, and take what pleaseth thee." Clovis thanks him sweetly for his good will, and sends his envoys with directions to murder him, which is accomplished by knocking his brains out while Cloderic stoops over his ill-gotten stores.

Finding father and son no longer in his way, Clovis appears on the scene in person, and reasons thus with their subjects: "See what has happened; while I navigated the river Escaut, Cloderic, son of my relative, filled his father's ears with fears of

me; as he fled across the forest, Cloderic sent murderers after him, who slew him; Cloderic has himself been assassinated, I cannot tell by whom. I am a stranger to all this. I could not shed the blood of my relatives—that would be a crime ('criminal aggression'); but since such things have come to pass, I will give you this advice, and, if it is agreeable to you, you will accept it. Have recourse to me, and put yourselves under my protection." The warriors applauded him, and recognized him as their king. In this way, Clovis added the treasure and the kingdom of Sigebert to his own, and Gregory thus concludes this pious narrative: "Every day God caused his enemies to fall into his hands" (Destiny), "and increased his kingdom, for he walked with an upright heart before the Lord, and did the thing that was good in His eyes" (Duty).

The similarity of all this to our own historical episode would strike everybody. McKinley's murders are many times more numerous than those of Clovis. Not only has human nature not changed, but the religion which was to change human nature has not changed either. Nothing about Christianity has been to my eyes more astonishing than the facility with which a modern Christian is able to twist it to suit his own purposes, or to forward his own designs, however criminal. I have lately searched history, as well as I am able, to get hold of some piece of wickedness which Christianity has impeded or prevented. On the contrary, when such a thing is designed or being carried out, we find as many religious papers and pious men supporting it, or finding excuses for it, as good men who oppose it. And I suppose so it will be to the end.

We are having another illustration of the same kind in China to-day. In that country we have sent several bands of Christians to protect the cross with Krupp guns, as Dr. Parkhurst has well said; in other words, we have left nothing undone to show that Christians are hypocrites and do not believe their own gospel. This has been, for ages, the way of the world at large, but we flattered ourselves that America was to prove an exception to the rule; yet she has been, every year for the last four, looking around for fresh iniquities to commit. Stephen B. Elkins first attracted my attention to the decay of Christian morality among us a few years ago when he interpolated an unauthorized passage in a public bill, and jauntily justified his course by saying that, whatever was said or thought of it, his act was committed "for America"—America evidently standing in the place occupied by Satan. There is no doubt that thousands of our young men to-day are brought up to believe that, provided a thing be done for "our country," its moral aspect does not admit of question. In other words, the coming of Christ has not made the slightest difference to them. Their patriotism is that of the Greeks or Romans.

The Chinese enterprise is the last fine flower of the modern gospel. There could not be a better illustration of the way to fight the devil with fire. Satan's arts have all been borrowed by Christian armies, to punish Chinese wickedness, and every species of iniquity which man could devise against his fellow-man has been employed. In fact, if I were compelled to describe the history of the United States during the last four years, I should have no hesitation in calling it an attempt to carry on a great nation without morals or religion. I should not care how sick my answer made Imperialists look, for I should cite as my authority the book in which the Roslyn minister found his authority for his eulogy on David. E. L. G.

THE FIRST PORTO RICAN LEGISLATURE.

SAN JUAN, February 19, 1901.

The first session of the Legislative Assembly of Porto Rico ended upon the last day of January in the most approved American style, with clocks turned back, rules of order suspended, the Governor in attendance busily signing belated bills, and all the excitement and bustle that characterize the closing scenes of our State Legislatures.

The Legislative Assembly, and the House of Delegates in particular, have been bitterly criticised by the opposition press in Porto Rico, and have also, it seems, been the object of some very lofty sarcasm in press dispatches to the United States. The opposition press excited itself most violently over the passage of a tax bill, and the failure to pass certain other bills suspending the foreclosure of mortgages, remitting delinquent taxes, and authorizing Government loans to the farmers and planters of the island. The press dispatches seem to have been written after an exhaustive study of the results of the first forty-eight hours' work of a body of men who had hitherto had no opportunity to learn the meaning of representative government, and who were engaged in mastering parliamentary procedure and creating *de novo* the necessary machinery of legislation. The burden of both complaints seems to have been the paucity of legislation. It is pleasant to record, however, that in journals which have grown yellow in the practice of vilification, no charge of bribery or jobbery appeared. The worst accusations were that time was wasted and an undue subserviency shown to the American Administration.

In a sense—the unimportant sense—this complaint was well founded. It is true that but few bills were passed, that valuable time was consumed in getting started, that the Republican party in the House failed to develop an acknowledged and capable leader, and that the House of Delegates, with but one American member, showed a disposition in contests to yield to the leadership of the Executive Council, in which the Americans had a majority. But it is also true that the general average of intelligence and culture in the House of Delegates was above that of our ordinary American Legislatures; that its sessions were dignified and business-like; that less time was devoted to buncombe than in Congress; that, in order to make the most of the short session of sixty days, meetings were held almost every night and Sundays, and that the result was the passage of thirty-six laws which amount to a virtual reconstruction of the legal code of the island. No leader appeared in the House, but in the Executive Council the republican party was represented by a leader who, in the opinion of his American colleagues, is not only a real statesman, but a solid patriot. And the fact that the House, of its own initiative, discontinued the military orders suspending the foreclosure of mortgages and in disputed points yielded to the Executive Council, is an encouraging indication that the masses of Porto Rico are capable of self-government. The House was peculiarly representative of the masses, not only because it was elected by the people, but because it was exclusively republican, and in so far as the masses and classes are politically differentiated in Porto Rico, the republican party undoubtedly represents the masses. It is true that the federal party endorsed free silver and Bryanism at the last election, but it is to be hoped that this was merely a freak of Latin-American politics due to the fact that the opposing party had preëmpted the name "Republican." There is no real connection between national and insular politics.

The acts of the Legislative Assembly, to return to the subject, are not without interest for students of the tentative experiment in self-government which is taking place in Porto Rico. Twenty-two Council bills and fourteen House bills became law. Among the more important are acts establishing and regulating trial by jury; requiring the registration of foreign corporations; providing for insular directors of charities and prisons; establishing a system of public schools, and providing for the education of forty Porto Ricans in the United States, twenty of whom, it is understood, will be colored and will attend the industrial schools at Hampton and Tuskegee. The acts of the Assembly constitute, on the whole, constructive legislation of fundamental importance, and, if time prove them to have been wisely framed, will form a record of which any legislative body may well be proud. "We can stand the criticism of not having passed more bills," said the President of the Executive Council in reply to a vote of thanks extended to him at the closing of the session, "but we could not stand the criticism of having passed many bad ones."

Whatever the defects of this legislation, it has been practical legislation, framed, apparently, in strict accordance with administrative experience, and devoid of utopian schemes or radical innovations. Throughout the more important bills an evident tendency towards centralization of administrative power is manifest. Thus, the whole penal system is brought under the supervision of a director of prisons, and public charities will also be controlled by a director of charities. The assessment of direct taxes is taken from the two hundred local boards appointed by the various municipal councils, and placed under the charge of a supervisor of assessment, who is appointed by the Governor, and who, in turn, appoints the district assessors. The municipalities will be required to devote at least one-tenth of the municipal revenues to public education, which will be expended by local school boards elected at the regular elections. But these boards will exercise their functions under the guidance and control of the insular Commissioner of Education. Probably the most important increase of insular, at the expense of municipal, function, was effected by the insular police bill. By this act the separate municipal constabulary is abolished in towns of less than six thousand inhabitants; in case of conflict, the insular police are given paramount authority, and the Governor is empowered to put the insular police in charge of any municipality threatened by serious disturbance. The insular police will

be directed by an unpaid commission of three, and appointments and promotions will be by competitive examination and the merit system.

The most widely discussed measure of the session was "el Bill Hollander," as the Porto Ricans call it—an act repealing the existing land tax, a cumbersome license system, and a number of municipal *consumo* taxes or *octrois*, and substituting a property tax, an inheritance tax, and a system of excises. The significance of the bill lies in the change from a system in which foodstuffs and the class of consumers bore the main burden of taxation, to a system in which property-owners and the consumers of tobacco and alcoholics will bear the brunt of supporting the state. During the Spanish régime the principal revenue had been raised by indirect taxes—customs duties upon imports and exports, upon the loading and unloading of freight, the embarkation and disembarkation of passengers; stamp taxes upon the conveyance of property, documents, and instruments of indebtedness of all kinds, ecclesiastical bulls, a *consumo* tax upon petroleum, and a state lottery. The old system was preponderantly indirect; the new is preponderantly direct, prepared in anticipation of the abolition of the tariff between Porto Rico and the United States.

The owners of property protested vigorously. A "committee of defence" appeared and addressed a memorial to Congress that protests, among other things, against several provisions which are not contained in the revenue act. A "monster meeting" was also held, at which fiery speeches were made and a delegation appointed to visit Washington and petition Congress to annul the act. Property, it was said, cannot bear a maximum tax of 1 per cent, one-half of which need not be levied unless the municipal councils, and through them the people, decide that it is desirable. Since the meeting was held, a decided reaction in favor of the bill has set in, and it has become apparent that most of the protestants were frightened by reports about a law which they had never read.

The law was passed by the Legislative Assembly with but one dissenting voice. The opposition came principally from the owners of property, who claim that the agricultural classes have never recovered from the hurricane of August, 1899, and that, instead of being called upon to pay a tax, the farmers should be assisted by Government loans. This sentiment was endorsed by practically the entire native population, and the House of Delegates passed a bill directing the insular Government to borrow three million dollars, and loan them through the agency of several well-known banks—which were also enthusiastic supporters of the scheme—to the farmers and planters of the island. The bill passed the House without opposition. It was held up in the Finance Committee of the Executive Council until the last night, and, in retaliation, the House held up the Appropriation Bill until the fate of the Loan Bill should have been finally decided. The situation at eleven o'clock upon the night of the 31st of January smacked of the dramatic or of the melodramatic.

The bluff—for no other word so fittingly describes the situation—was finally called by the presentation of the report of the Finance Committee upon the Loan Bill. The report was unfavorable, distinctly unfavorable, and couched in the most vigorous terms of the Chairman of the Committee. The attempt to launch such a scheme at that critical juncture in the history of the island, he thought, would be fatal to the public credit. He was aware that certain agricultural interests were in a state of depression, that the people of Porto Rico were practically a unit in favor of the bill, and that the project had been defended by men as able and well-informed as Gen. Davis. But the eyes of the United States, and particularly of the financiers of the United States, were upon them. The island would be judged by the legislation of that session. Up to this point it had been practical, temperate, conservative. But the passage of a bill authorizing Government loans to private parties would destroy the good effects of the previous laws, and in the end would deter the investment of more private capital than the three million dollars which it was proposed to borrow and distribute. In conclusion, the Chairman pointed out that the bill would fail to relieve the very classes for whose assistance it had been devised, inasmuch as it contained a provision that none of the money should be loaned upon land which was already mortgaged. And, he naïvely added, at that hour it was too late to amend the bill.

The bill was lost by one vote. The result is an interesting demonstration of the value of the modified form of cabinet government now in existence in Porto Rico, since it was only by the united opposition of the administrative officers who constitute a majority of the Executive Council that the bill was defeated. It was also a personal victory for the Treasurer and Auditor of the island, who had contended not only against the sentiment of the people, but against the inclination of Porto Rican members of the Executive Council to risk the great dangers inherent in the bill, in the hope of affording some relief to the coffee-planters of the island, who are unquestionably in bad shape. The decision of the Executive Council was undoubtedly a fortunate one. The three million dollars could have effected no permanent alleviation of the distress which is said to exist; the distribution of the money would have offered a thousand avenues for fraud and speculation; the bill, as framed, would have withheld the money from the only classes that need it, while the passage of the act would probably have discouraged private investments in Porto Rico, and impaired the confidence which the people of the United States now have a right to feel in the government of the island.

The House of Delegates, it will be remembered, had held up the appropriation bill until the fate of the loan bill was known. When the defeat of the latter was finally communicated to the House of Delegates, it promptly proceeded to pass the appropriation bill. It had evidently learned two wholesome lessons of American politics: the one, to accept a defeat with good nature; the other, that, whatever else is or is not done, the appropriation bill must be passed.

T. S. A.

POPULAR UNIVERSITIES IN FRANCE.

ITHACA, February 24, 1901.

In the midst of the Faubourg St.-Antoine, that preëminently popular quarter, breeder of so many disturbances that became Revolutions, one may now see, between two shops, a large sign inscribed "Université Populaire." From the crowded and noisy street you follow up a narrow alley to ample premises that might be a club, a library, or a lecture-hall. It is furnished with books and reviews; a billiard-room lies beyond, and in rear of all is a spacious hall adorned with busts, photographs, and works of art. In this last assembles every evening an audience of two or three hundred persons to listen to a lecture. They consist of working-people of both sexes, of the lower middle class, and of students. The whole appearance is of an undertaking in its beginnings, on a slender pecuniary basis, but with plenty of good will behind it. This Popular University of the Faubourg St.-Antoine is, in fact, still in its infancy, but it is interesting and characteristic as having given the impulse to a great university-extension movement which has prevailed in France for two years, and of which the economist, Charles Gide, said, some time ago, that it was the most important event of the year 1900. In truth, Paris reckons at this moment twenty of these universities, and there are nearly twice as many in the provinces. Only a few weeks ago M. Brisson, the well-known philosopher and teacher, inaugurated that at Versailles. Experiments are multiplying in all parts of France, and everywhere they fill their founders with pride and courage.

The initiator of this great movement, the creator of this first University of the Faubourg St.-Antoine, model for all the rest, is neither a philanthropist nor an "intellectuel," as one might think. M. George Deherme is a former type-setter, a self-taught man who learned by his own experience all the obstacles to the emancipation of the proletaries in that they have not had access to the higher education so widely open to the bourgeois. Thereafter his dream was to put within reach of workingmen what he himself had had to acquire by his own initiative and labor. Several partial essays made by him had long since brought him into relations with professors and men of letters, thanks to whose coöperation he at length succeeded, two years ago, in laying the foundations of the university now established at No. 157. These premises were dedicated with much ceremony in October, 1899, in the presence of all the literary and scientific notabilities of Paris interested in the work. A philosopher of the Sorbonne delivered the inaugural address, and a famous young poet read some fine verses. The university even then reckoned 600 associate members paying two dollars a year, and 900 workingmen students paying ten cents a month for profiting by all the advantages of the institution. These had been set forth in a placarded manifesto addressed "to laborers," and which, in words of generous idealism, invited "comrades" to come to this "People's House" and employ their leisure hours for their physical, intellectual, and moral development, and to "rear over against the saloon and the music-hall" the People's University, the "seat of justice and fraternity." This manifesto affirmed, with touching candor, an unlimited ambition. "Our aim," it said, "is truth, beauty, moral living for all; that all may be admitted to a share in those blessings which are humanity's rightful patrimony; that, as the sun rises for all eyes, so the light of intellect may rise for all intelligences."

One of the most interesting aspects of this movement for popular education is the part taken in it by the members of the Paris University and by literary men.

An occasion has been offered, perhaps without precedent, for a coming together of workingmen and intellectuals. Men hitherto solely literary dilettanti, like Anatole France, laboratory savants like Duclaux, professors of the higher education like the historian Lavisse, the philosopher Séailles, the Hellenist Croiset, the mathematician Tannery, suddenly began to visit out-of-the-way quarters of the capital to deliver lectures, simple and learned at once, in modest little halls, low-studded and smoky, to some hundreds of workingmen who had never heard their names. Professors in the lycées, Parisian and provincial, university students, physicians, engineers, have offered by hundreds to sacrifice their leisure hours for the conduct of courses in philosophy, history, literature, politics, and science with rudimentary and ignorant audiences.

I select at random a list of lectures announced for one week in December last in the different "universities" of Paris—each, by the way, having its special name, which often of itself reveals the state of mind both of those who founded and those who attend it. Thus, at the "Contrat Social du Seizième [Arrondissement]" M. Gide, the celebrated economist, spoke on Coöperation; at the "Union Populaire du Quatorzième" M. Bloch, an eminent professor of history in the École Normale Supérieure, discoursed on the Beginnings of Paris; at the "[Union] Fraternelle du Troisième" there was a forenoon lecture presided over by a professor of botany and a professor of philosophy of the Sorbonne, at which a popular poet, Maurice Bouchor, recited his own verse amid musicians with songs from Gluck, and actresses with recitations from Victor Hugo. Add lectures on Swiss Democracy, the Crusades, the Right to Strike and Syndicates, the Evolution of Astronomy, Hauptmann's "The Weavers," the Grippe; Infants' Diseases—Varioloid and Vaccination; Joseph Chamberlain, Bakunin, French Literature in the seventeenth century, the Apostles, the Philosophy of Socialism, the Emancipation of Women, Alcohol and the Laboring Classes, Pasteur's Work, the Idea of God and the French Revolution, Trades-Unions, "How Should We Be Fed?" Paris Architecture—the Sainte-Chapelle, Notre Dame. As will be seen, the programme includes everything, from hygiene to æsthetics, and each science is treated by a specialist. Politics and political economy naturally play a leading part.

Some of these university groups quickly became militant Socialist clubs, owing to the fact that the better elements of the working class and many of the young professors are Socialists; and anyhow the spirit which animates all is distinctly democratic and anti-religious. A Catholic priest who sought to defend his religion was hissed. One of my friends, a lively agnostic, endeavoring to explain historically the origin of Christianity, was accused by his simple-minded hearers of religious propaganda. It is difficult to accustom these inexperienced men to study and grasp a subject from an objective point of view; but they more and more tend that way. The greatest diversity reigns in these groups, which have each their autonomy and a character of their own. Only one is a veritable Settlement in the English-American sense, viz., the Belleville University Foundation, established and occupied by students. At the head of it is M. Bardoux, son of the former Minister of Public Instruction, and author of a recent very remarkable dissertation on Ruskin. It was started in November, 1899, by young men of tact and experience, and is in every respect a genuine success. In a year's time it has brought together 200 workingmen among the élite of the Quarter, a hundred students, and professors from all the faculties. It has associate members who lend it pecuniary aid. It has a library of 3,000 volumes; complete courses in philosophy, science, political economy; dramatic representations; excursions to the museums; infant classes.

In fact, the workingmen who attend these universities are the best elements of the proletariate, and have been recruited from the various social workingmen's organizations already in existence. Very curious types are often met with among them. Thus, to the Belleville Foundation belongs an omnibus conductor who has presented the library with a Plato annotated wholly by his own hand, and a cook who applied himself to learning Latin for the better handling of French. A friend of mine who has for a year lived in this university, gives me some information as to the intellectual status of the students, from which I extract a few lines:

"The instruction possessed by these men is very variable, full of immense gaps; clear ideas and absurdities jostle each other. They have often read a great deal, but their notions are indescribably muddled. Philosophy has had the most rapid success. . . . In general, they understand what is taught them, provided technical phraseology is avoided and the subject does not run counter to one of their hobbies—determinism, the influence of environment, utilitarianism, anarchist and socialist theories."

From this education, now only in its beginnings, useful results little by little stand out. Among men hitherto subjected to the tyranny of leaders and parties, there is developed in some measure the critical spirit which will teach them to free themselves from the exclusive influences they were under; the historical sense, too, which will teach them to view questions in different aspects, thus widening their horizon and enabling them to understand (and consequently even to respect) men and ideas antipathetic to them. In this way head is made against the petty jealousies and baneful distrust which are the scourge of the laboring world, and rear so many barriers not only between the members of their class, but between them and the "bourgeois" they have been taught to detest. Hence not only are better workingmen prepared, more emancipated in spirit, more intelligent, but also better bourgeois, more fitted to discharge their duties and to accept responsibilities towards their less fortunate and educated fellow-citizens. And when, in the century now dawning, the time comes to regulate the great social question whose solution seems more imminent than ever, the strife will, we may hope, not take on the barbarous and savage character so insistently predicted, but will be conducted on a common ground of reason and fraternity between men who have learned to know each other and recognize that they have common interests and ideals to safeguard and defend. OTHON GUERLAC.

THE EIGHTEENTH BRUMAIRE.—I.

PARIS, February 15, 1901.

M. Albert Vandal, well known by his interesting work on the relations of Napoleon I. and the Emperor Alexander of Russia, has applied himself lately to the complete elucidation of an event which goes in history under the name of the 18th Brumaire, and which had a decisive importance in the affairs of France, as it was the beginning of Napoleon's dictatorship. The Government of the Directory had lost all its prestige and its force. "A great part of the nation," says M. Vandal, "threw itself into pure reaction and turned towards royalism; the rest of France, living in a mortal languor, despised its Government and made a sort of vacuum about it." An immense discredit attached to the governing class—that is to say, to the majority of the former members of the Convention and to their friends, to the men who, after Thermidor, struck alternatively Jacobinism, the reactionaries, the moderates, and who kept themselves in power by periodical *coups d'état*. On the evening of October 13, 1799, Sieyès, a member of the Directory, was waiting in his apartment in the Luxembourg for Gen. Moreau, who had just returned from the army of Italy. The meeting had for its object the defence of the Revolution and of the leading revolutionists by a *coup d'état* and a reorganization of the Government. Moreau had hardly arrived when Sieyès received, by a courier, the news of a most unexpected event. Bonaparte, who was thought to be shut up in Egypt, had just disembarked at Fréjus, with five generals, a few Mamelukes, and two scientific men. Sieyès communicated this news to a Deputy named Baudin, who, almost beside himself, declared that Bonaparte's return was a sure sign that he was to be the expected saviour. Moreau said to Sieyès: "Here you have the man you want; he will do the thing better than I." Baudin died the next morning, from excitement, and, people said, from joy. Bonaparte received the most enthusiastic reception in all the villages and cities he went through. At Lyons Bonaparte saw Marbot (so famous now since the publication of his memoirs), and told him plainly that he meant to put an end to the Directory.

On the 16th of October, three days after the announcement of his landing, early in the morning, Bonaparte entered Paris and went to his house, in the Rue Chantereine, which in his honor had received two years before the name of Rue de la Victoire (which it still preserves). He did not find Josephine there, as she had left Paris and gone to Lyons in order to meet him. They had not encountered each other on the way, as Bonaparte had followed, instead of the road from Lyons to Macon, that through the Bourbonnais. After some hours of repose, Bonaparte made his official visit to the Directors. The situation was awkward. The Directory had sent orders to Bonaparte to come back from Egypt with his army; he was coming back alone, and his return had the appearance of an evasion.

"By having him arrested and tried," says M. Vandal, "the Government would not have exceeded its right. Some Republicans who already felt the usurper in Bonaparte, jealous colleagues, personal enemies, recommended this measure; but who would have dared to undertake it? In the eyes of the public this legal measure would have seemed like a sacrilege. . . . The Directory resolved with a good grace to register the national absolution."

Bonaparte was solemnly received by the Directors; he wore a singular costume, half military and half civil, a redingote with a

Turkish scimitar. He told the Directors that he would never draw his sword except in defence of the Republic and its Government. The crowd round the Luxembourg was immense; soldiers who recognized their chief shed tears.

I shall not dwell on the scenes between Bonaparte and Josephine which followed on her return to Paris. He had received proof, while he was in Egypt, of her infidelity; he came back almost resolved to divorce her. "But," says M. Vandal, "he had reflected and calculated; he feared a public scandal on the eve of the day when he was to mount the political stage as the leading actor. Besides, Josephine would be useful to him; by her birth and her relations she was in touch with regions to which he had no access."

Napoleon gave himself wholly to the preparation of the political changes which he had decided to make. Offers came to him from all sides; civilians, soldiers, Deputies, functionaries, journalists, army contractors, financiers, all looked upon him as the arbiter of the situation. Talleyrand, Rœderer, Regnaud de Saint-Jean d'Angély, Marat, Admiral Bruix, Boulay de la Meurthe, Réal, offered their services; Fouché came in his turn; three of the Directors, Barras, Gohier, Gen. Moulins, became assiduous. All the officers in Paris left their cards at the little house in the Rue de la Victoire. Bonaparte felt the pulse, if I may say so, of all parties, of all political groups. He first thought of introducing himself into the Directory, and of becoming a member of it. This project was abandoned, and he resolved to introduce himself into the Government by an act of authority; he wished, however, to reduce forcible action to a minimum, and to proceed legally, if possible. His brother Lucien had been elected, in the first days of Brumaire, President of the Cinq-Cents, the Lower Chamber. His election was a triumph for the Moderate party of the House and for Sieyès; it was a defeat for Barras. A curious incident completely separated Bonaparte from the latter. They were dining together at the Luxembourg:

"After dinner, the conversation," says M. Vandal, "turned on politics, on the future. Barras tried to tempt Bonaparte with the prospect of new victories, of an inexhaustible crop of laurels; as for himself, he played the part of a disgusted and disinterested man, the comedy of abnegation. When they came to the question of the future Presidency of the Republic, as he wished to put Bonaparte aside, and to have himself designated, though he dared not propose himself, he resorted to a miserable subterfuge and pronounced an inadmissible name, that of Gen. d'Hédouville. Bonaparte remained silent, but he looked at Barras with so much contempt that the latter lost his countenance and muttered unintelligible explanations. The General left the place after a moment and went to see his friends, to whom he reported without any commentary Barras's proposition. They were confounded by the stupidity of this coarse *finassier*. 'What an imbecile! What an imbecile!' said Réal."

Barras was judged; he was, in Bonaparte's mind, left out of the new combinations. Bonaparte turned towards Sieyès. But Barras was still a Director, he was the man of Thermidor, of Vendémiaire, of Fructidor; he must be managed, and kept in the dark to the end. On the night of the 10th, Bonaparte and Sieyès met secretly, had a long conversation, and struck up an alliance. Sieyès promised a majority of the *Anciens* (such was the name given to the upper House, a fraction of the Cinq-Cents); he presented also a plan which consisted in employing the existing authorities and in changing the Constitution by constitutional means. The Anciens had, by virtue of these articles of the organic law, the right to transfer the residence of the legislative body out of Paris to a calmer atmosphere. By these means the chambers would avoid the interference of the populace, which for many years had dictated its will to them. Bonaparte accepted this plan, and it was agreed that the Anciens should order the transfer of the chambers to Saint-Cloud; that, in order to insure the execution of this measure, the supreme command of all the troops in Paris should be immediately given to Bonaparte. What was to become of the Directory in the impending movement? Two of the Directors, Sieyès and Roger Ducos, agreed to resign; Barras would have to resign also. "He must make his embezzlements forgotten by resigning," said Bonaparte. The two other Directors were nonentities, who would find themselves in a minority. The two chambers, once at Saint-Cloud, surrounded by troops, were expected to vote the change of régime. "If the Cinq-Cents," said Bonaparte, "are not subjugated by the ascendancy of an event the force of which lies in public opinion, we will make them feel their weakness." It was Bonaparte's hope and desire that this ascendancy of public opinion would make the use of force unnecessary; but in this he was mistaken.

The new Government was to be composed of three Consuls; a small Parliament would make a new Constitution, and submit it to a plébiscite. Two of the Consuls were to be Bonaparte and Sieyès; Roger Ducos, a friend of Sieyès, was to be the third. All the parts of the political drama in preparation were distributed. The Jacobins were very uneasy, but they did not come to any understanding. Paris was quiet; it was tired of revolutions, and took little interest in the quarrels of the politicians. The Directors not immediately in the plot were aware that changes were impending. Barras would fain ignore everything. Josephine took care of Gohier and of Madame Gohier. "I don't know," said Napoleon, at Saint Helena, in speaking of Gohier, "if he was my partisan; he paid court to my wife." On the 17th Brumaire, Bonaparte, who had already composed his staff, and who, during the preceding days, had seen nearly all the officers who were in Paris, dined with Cambacérès, who was Minister of Justice. The legend will have it that he met there Treilhard, Merlin, Target, and other famous lawyers; that they discussed the future Code Civil and the great principles which were to be the foundation of this compendium of the new laws of France; and that Bonaparte astonished everybody by his extraordinary calm and by his profound remarks. The truth is, that Cambacérès did not have at his table the framers of the Code Civil, only a few generals and administrators who were in the secret of what was coming; that they were all preoccupied, and the dinner was without gayety. They all felt that their heads were at stake.

At two o'clock in the night Bonaparte sent word to Gen. Moreau and to Macdonald to be at his door on horseback at dawn. Josephine had sent an invitation to Gohier, asking him to breakfast on the 18th. "In a conspiracy," said Napoleon at Saint Helena, "everything is allowable."

Correspondence.

ENGLISH PESSIMISM.

To the Editor of The Nation:

Sir: In the article on King Edward VII., in the *Nation* of January 31, to the tone and spirit of which no objection can be taken, you make a remark which may mislead your readers, both as to the feeling of the British nation towards the close of the nineteenth century, and on a point of literary chronology. You say:

"That date, 1887, may hereafter come to be regarded as England's grand climacteric. Since then have come the murmurs about the weary Titan," etc.

A reader unacquainted with the facts could hardly help concluding from this that Matthew Arnold's celebrated passage on the Titan was written after 1887. You certainly cannot have intended to convey this impression, knowing as you do that Arnold died early in 1888. But perhaps you may not consider it superfluous to state that this passage, insofar as it reflects any popular sentiment, reflects the sentiment of twenty years earlier, the poem in which it occurs, "Heine's Grave," having been published in 1867.

It is perfectly true that about 1867 an unreasonable pessimism did exist among the more cultivated classes in Great Britain, though I do not think that it extended beyond them. I have always attributed this circumstance to the fact that at this period these classes looked, one can hardly say for "light," but certainly for "leading," to the *Pall Mall Gazette*, and that from 1865 to 1869 inclusive, fully half the leading articles in the paper were written by Mr. (afterwards Sir) Fitzjames Stephen. Mr. Stephen was a very powerful and a very pessimistic writer, and verified the saying about Robespierre that he would go far because he believed every word he said. He made persons of Mr. Arnold's calibre very uncomfortable, while the humbler members of society pursued the even tenor of their way, more intent upon the next cricket match than on "what the Swede intends, and what the French." They are, as it appears to me, in much the same frame of mind at present, while the more intellectual classes, if not unaware of the trials and dangers of their country, are now, in the absence of Mr. Stephen, happier than of old. The *Times* is doing wonders to reassure them by publishing day by day the news of a century ago, from which we learn that in January, 1801, upon a rumor of peace, consols actually went up to no less than 56. After this we may well say, "O passi graviora, dabit Deus his quoque finem."

Yours very truly, R. Garnett.

Hampstead, England, February 16, 1901.

FREE AND INDEPENDENT, BUT——

To the Editor of The Nation:

Sir: If one can overcome one's depression over the national dishonor involved in our prospective treatment of Cuba, there will be seen something decidedly comic in the contrast between our former heaven-high protestations of disinterestedness and the Senate's peremptory demands. The present situation suggests nothing so much as one of the most delicious passages in Ros-

tand's recent masterpiece. The dialogue between Cuba and her benevolent guardian may be conceived to run as follows:

Dietrichstein McKinley.
Of course you're not dependent, but—

Cuban Eaglet.
I like that "but"; I hope you feel its value!
I'm surely not a colony, "but"—that's all!
"But"—not dependent, "but"—that is the word,
The formula! A colony? Oh, not a moment!
"But" I must yield my treaty-making rights.
I subjugated? No! You know I'm not.
"But" if I venture to contract a debt
It needs the sanction of my Uncle Sam.
Of course, I'm free, "but" still I must assent
When kindly Uncle intervenes to save
From European greed. He's truly not
My sovereign, "but" his growing appetite
For coaling-stations claims profound respect.
I'm not the least bit in the world "controlled,"
"But" I must swear by treaty I'll be good.
Dependency? Oh, no! "but" I must scrub
For fear my Uncle's health might be impaired.
A colony—I, Cuba Libre? No!
Dependency? I'm *in*dependent, "but"—!

Lake Forest, Ill., February 28, 1901.

THE STUDY OF ITALIAN.

To the Editor of The Nation:

Sir: The address delivered by Prof. Thomas R. Price, as President of the Modern Language Association of America, at the recent convention in Philadelphia, and now printed in the Publications of the Association, contains a passage to which I should like to call attention. The subject of the address, "The New Function of Modern Language Teaching," has often been discussed. Professor Price's main point is that, whether or not our schemes of education omit Greek, the study of modern literature must be made to give the same training in the appreciation of literary form that all educated men formerly received from Greek. After admitting that for practical purposes French and German come next to the mother tongue in order of usefulness, he says:

"For me, the worst blemish in our modern practice of education is, under the pressure of other studies, that neglect of the Italian as an element of culture which has, within the last fifty years, as well in England as in America, made itself felt. And, if the study of modern languages is ever to be made to yield its full harvest, we should unite in restoring the Italian to its rightful place in the development of the sense of form. . . . There is not, as I believe, in all the range of modern-language instruction, any other modern literature that can do for the student's sense of beauty just that which the Italian has never failed to do."

Professor Price goes on to show the value of French, German, and Scandinavian as culture studies; his emphasis on the importance of Italian, however, seems to me particularly timely. Spanish he does not mention at all. Now, while no one would in the least wish to deny the glories of Spanish literature, past and present, may it not be wise to dwell on this note of warning at a time when, in most of our American colleges and universities, immensely more attention is being given to Spanish than ever before? It is most earnestly to be hoped that no commercial or political interest will be allowed to usurp for any other language the position in culture-study that belongs to Italian. Kenneth McKenzie.

Yale University, March 2, 1901.

SUBSCRIPTION METHODS.

To the Editor of The Nation:

Sir: It seems to me Mr. Morgan's reply to my question as to the Garnett Anthology reads very much like a bit of special pleading, although very courteously done. This whole subscription matter, however, has become a very serious thing to librarians, and I think we have a right to know just what we are subscribing for. I hope the A. L. A. will see its way ere long to appointing a competent committee before which such matters may be laid for an expert, unbiassed opinion.

When it comes to the Pepys matter, I must say that it is no case for Spenlow & Jorkins. The agent I mentioned claimed no more for the edition than does the firm, for I have before me a circular of the firm, from which I take the following: "New Importation," "Imported by ..... Boston and New York." "The small limited edition of this valuable work, which has been printed complete without abridgment," "and one volume known as 'Pepysiana,' specially prepared for this edition." And again (this time printed in green ink), "The present edition (printed in England, only for private subscription)." "The few copies of this private edition which we have secured are not available through any publishing house or selling agents. . . ."

Now, inasmuch as these volumes were printed from the Macmillan Company's plates, at the Norwood Press, and the English edition was printed by Bell & Sons, London, and sold in the regular channels of trade at half a guinea a volume, I do not see how the firm can escape on the ground of "the soaring imagination of agents." The intent seems to be clear, to mislead the purchaser. I hold that publishers can very easily remove such apprehension by making plain, unvarnished statements of fact.

It may be quixotic to cavil at these things, but I hope it may never—even in the channels of trade—be considered quixotic to have "clean hands and a pure heart." We certainly have a right to expect better things from publishers.

Most truly yours,
Louis N. Wilson.

Clark University, Worcester, Mass., March 4, 1901.

"GROUCHY."

To the Editor of The Nation:

Sir: Can any of your readers give the origin of the word "grouchy," which is much used nowadays, though it appears in neither of the greater dictionaries? It is no doubt a slangy corruption of "grouty," as "stunt" is of "stint" (for which "stent" used often to be heard in New England). "Grouchy old man" seemed to a class in Latin a very effective rendering of "morosus senex."—Yours very truly, W. R. B.

Lake Forest, Illinois, February 18, 1901.

Notes.

Among works of fiction announced for the spring by Little, Brown & Co., Boston, are 'The Love-Letters of the King,' by Richard Le Gallienne; 'Sir Christopher,' by Mrs. Maud Wilder Goodwin; and 'Ballantyne,' by Mrs. Helen Campbell.

'Birth a New Chance,' by Columbus Bradford, is in the press of A. C. McClurg & Co., Chicago.

Booker Washington's autobiography, 'Up from Slavery,' is shortly to be published by Doubleday, Page & Co., along with 'A Journey to Nature,' consisting of the agreeable articles by J. P. Mowbray which have appeared in the *Evening Post*. A "Personal Edition" of George Eliot's works is also to be launched this month under the editorial care of Mrs. Esther Wood. Many new portraits and photographs of scenes will give distinction to this reprint.

'Colonization,' by Poultney Bigelow; 'The Life of Stanton,' by Frank A. Flower; and 'Lovers of the Woods,' by W. A. Boardman, are announced by McClure, Phillips & Co.

A glorified limited edition of FitzGerald's Omar, illustrated with drawings by Gilbert Jones, with sundry illustrations in gold and colors in Persian fashion, is promised by the New Amsterdam Book Company. There will be, in the same issue, three series differing from one another in gorgeousness.

Henry Holt & Co. have nearly ready 'The Anatomy of the Cat,' by Professors Reighard and Jennings of the University of Michigan.

The first volume, A to I, of Prof. J. Mark Baldwin's 'Dictionary of Philosophy and Psychology' is among the spring outputs of Macmillan Company. Its companion volume will complete the text, while volume iii. will be given up to the bibliographies. The work has been safeguarded by a board of consulting editors, so called, who form committees in English, French, German, and Italian, and by departmental control by writers of the highest authority. The scope of the dictionary is wider than is customary in works of this character; conceptions and not merely terms are included, and the history of thought rather than of language is emphasized. Quotations are rare. Biographies of philosophers are very brief. The terminology will be exhibited in the four languages named above.

Mr. Frederic W. H. Myers, who died on January 17 at Rome, where he had gone, according to *Science*, upon the invitation of Prof. William James, was an admirable poet and man of letters, but he had devoted his chief energies of late years to the cause of psychical research, and he was the Honorary Secretary of the society established in 1882 for the carrying out of that work. He was, in conjunction with Mr. Podmore, author of 'Phantasms of the Living,' and he is said to have left nearly ready for publication a work on 'Human Faculty.'

'Comparative Physiology of the Brain and Comparative Psychology,' by Jacques Loeb, M.D., Professor of Physiology in the University of Chicago (Putnams), the eighth volume of the Science Series edited by Cattell, possesses remarkable interest. It is a record of a coördinated series of experiments on the various orders of animals, from jelly-fishes upward, made partly by the author and partly by others, whom he cites; and to those who have not followed the accounts of the researches as they were published, the pages will seem well filled with novel observations of fundamental significance. It is made clear, in the first place, that the position of the nervous system in relation to the various functions of the body has been to a great extent misunderstood. The part which it plays in the lower orders of animals differs only in degree from that of the tissues to which it is anatomically related. These creatures live and perform even seemingly complex acts, Dr. Loeb thinks, under the control of influences with

which the nervous system has no *necessary* connection, except that of expediting the processes at stake. Such influences are: the need of moving toward the earth or moving away from the earth, of bringing both sides of the body in contact with solid objects, of seeking or avoiding the light, of responding to chemical attractions and repulsions, etc. In many of these reactions animal and vegetable organisms are closely related. Consciousness comes in with "associative memory," and the writer denies the logical necessity of assuming that consciousness is a necessary part of protoplasmic life. This associative memory gives its possessor, of course, a vastly increased chance of success, but it does not justify the ranking of him in all respects in a different category from animals of simpler structure or even from the vegetable world. To attempt any critical analysis of the views advanced by Dr. Loeb would require far greater space than can be allotted to this review.

With a very proper deliberation, the Watertown (Mass.) Historical Society has prepared, at the public charge, the second volume of transcripts of the town's early records, "comprising the third book of town proceedings and the second book of births, marriages, and deaths to the end of 1737; also, plan and register of burials in Arlington Street burying-ground." Six years have elapsed since the first volume was noticed in these columns. There is little in the proceedings that distinguishes them from the foregoing or calls for comment. The life of a Puritan community is still reflected in entries wonderfully misspelt, like this ("town meting the furst of march 1686-7"): "The towne decleared by auoate that thay disaproued of ye Custum of parsons [!] Seting vp of notes vppon the meting house dore about Cattell & such like things Standing thear vppon the Saboth day." Besides the editorial committee's care in copying *litteratim*, to be commended is the insertion of numerous facsimile plates showing the handwriting of the clerks (including Benjamin Garfield) and others. There are several indexes of names and matters. Other volumes are in preparation. "Six of the original grave-stones" in the Watertown Cemetery, we are told, are older than any in the old cemetery at Plymouth.

The 'Cairns of British Columbia and Washington' are described by Harlan I. Smith and Gerard Fowke in a contribution from the Jesup North Pacific Expedition, published in the latest number of the Memoirs of the American Museum of Natural History. These cairns are found in the southeastern part of Vancouver Island and on the San Juan group and Whidbey Island, and are of considerable age, although the Indians have no traditions as to their origin. They are from three to twenty feet in diameter, and usually consist of small boulders placed together so as to form an oblong enclosure covered by one or more slabs of rock, above which a rough pile of stones is reared. They are always, so far as known, near shell-heaps, which, however, are so numerous along the coast that their proximity does not necessarily imply an historic relation between the two kinds of structures. The evidence secured in this region tends to show that, at one time, the cairns were the burial-places of the makers of the shell-heaps, although these people did not invariably thus dispose of their dead. The position of the skeletons shows that the bodies were placed on one side with the limbs flexed. The skulls prove the use of the same methods of deforming the head that were practised in this locality until recent times. A specimen from Coupeville exhibits the characteristic deformity of the Chinook heads in which forehead and occiput are so much flattened that they are nearly parallel. A few skulls found near Victoria and at North Saanich show a narrowing and lengthening produced by antero-posterior and lateral pressure, a mode of deformation similar to that practised by the Kwakiutl. The scarcity in the cairns of objects other than human bones is remarkable, and only a few copper ornaments have been found buried with the skeletons. Some excellent illustrations accompany this paper.

The University Extension movement has at last reached Belgium, and, after some experiment, has been found so successful in Brussels that it will soon be extended to the smaller towns, beginning with Ghent and Liège. Thirty or forty courses have already been given, and include a wide range of subjects, in science, art, literature, and philosophy. Syllabuses of the courses are published at 75 centimes apiece (Brussels: Lamertin), and most of those which have reached us appear to be models of compression and method. The cognate courses on the "Principles of Colonization," by MM. Cattier and Plas, will be found especially interesting at the present time, but perhaps the most remarkable of the lectures are those devoted to English literature. These are in charge of a small group of scholars whose contributions to literary history are already well known here, including Dr. Hamelius, whose 'Kritik in der Englischen Literatur des 17. und 18. Jahrhunderts' was reviewed at length in these columns on its appearance several years ago, M. de Reul, author of a sympathetic study of Ruskin (Brussels: Lamertin), M. Vermeylen, and others. Their lectures include such subjects as 'Le Théâtre de Shakespeare,' 'La Vie du Langage,' 'Les Poètes Anglais du XIXe Siècle,' and 'Le Théâtre dans l'Église.'

Among the numerous meetings held in France to protest against the Associations Bill was one of the Société d'Économie Sociale, which is reported in its organ, *La Réforme Sociale*, for February. The principal speaker was the Superior-General of the Pères du Saint-Esprit, Mgr. Le Roy, who showed in a graphic manner the civilizing work of Christian missions in Africa. By means of numerous contrasting lantern-slides he demonstrated how the slave-raider and cannibal was changed, under the influence of the missionary, into the industrious cultivator of the soil; how well-built villages with school and church were supplanting grass kraals; how the sick and famishing were cared for, and the children taught simple industries as well as the rudiments of learning and religion. Several of the pictures are reproduced in the magazine, including one of a chief and another of the heads of 300 slaves devoured at a feast given by him. The closing address was by the President, Vicomte de Vogüé, of the French Academy, who made an eloquent defence of missions, taking the patriotic point of view that they tended to increase French influence wherever they were established. In support of this he quoted the testimony of some distinguished colonial rulers, and the statement of the Grand Vizier, Fuad Pasha, that he feared an army of 40,000 Frenchmen less than he did the sixty missionaries who were in Syria.

That the traditional view held even by scholars, to say nothing of the opinions of ordinary people, concerning Altaic psychology, must be radically changed, seems fairly certain. Those critically familiar with the history of the Japanese, especially of the last few decades, have long felt this. Dr. David C. Greene of Tokio, for more than thirty years a dweller among the Japanese, and especially acute in studying their intellectual movements and in interpreting sects and parties, has reprinted, in a pamphlet of thirty-nine pages, his address on "Conditions" recently published in the *Japan Mail*. Showing the strain to which the Government has, from 1868, been subjected from the reactionists, on the one hand, and the ultra-radicals on the other, he proves, also, the close intellectual relation of Japan to the West. Internal politics, legal reform, international relations, the growth of the nation, the national wealth, education, the press, benevolence, ethics, and the religious situation come under notice and analysis; the whole making a very luminous review of the past three decades. It is demonstrated that to the movements of thought which agitate the civilized world, Japan has responded promptly and strongly. With modifications from local influences, the varied phenomena of the nation's life are in response to movements in the world at large. Even the intense nationalism and anti-foreign reactions are but wavelets in this universal wave. "Japan is a true sister nation." Dr. Greene's verdict is all the more significant since, as an American citizen, he was among the first, more than fifteen years ago, to urge the abolition of extra-territoriality and the recognition of the sovereignty of Japan.

The utilization of the Zambesi as a waterway for the development of central Africa was the subject of a paper lately read before the Royal Colonial Institute by Major Gibbons. The results of his expedition may be summed up in the statement that "this river's navigable reaches stretch three-fourths of the way across the continent, and the sum of such navigable reaches as exceeded 100 miles amounted to nearly 4,000 miles." In consequence of his success in taking a steam-launch from the first rapids to the Victoria Falls, several trading companies are contemplating the introduction of steamers to develop trade and the resources of the country, which include at least two coal-fields.

It is evident, from an article on "The Religion of Nietzsche," by M. Fouillé, in the *Revue des Deux Mondes* for February 1, that the question as to the originality of Nietzsche's ideas cannot be settled till a more exhaustive investigation is made of his indebtedness to French thinkers than the commentators have hitherto undertaken. Renan's influence was shown a number of years ago by Georg Brandes, in 'Menschen und Werke,' but Guyau, for instance (the author of 'L'Esquisse d'une Morale sans obligation,' of 'La Généalogie de la Morale,' and of 'L'Irréligion de l'avenir'), with whom Nietzsche has much in common, has received little attention in this connection. M. Fouillé states that the German thinker had read Guyau, and he speaks of a copy of 'L'Esquisse' with marginal notes by Nietzsche.

—"In view of recent events in the West," writes a correspondent, "the following passage makes timely and piquant reading:

" 'The college founded by rich men, and obliged to depend on the gifts of rich men for its continuance, is sometimes, though not always, forced into degrading positions on account of favors received or favors expected. The officers of more than one of our colleges dare scarcely claim their souls as their own for fear of offending some wealthy patron. There is a college in New England, of old and honored name, in which to-day the faculty go about with bated breath for fear of offending two wealthy spinsters in the town, whose money the college hopes to receive.'

The extract is from an address given on Charter Day of the University of California, at Berkeley, in March, 1893, by David Starr Jordan, and published in a book entitled 'The Care and Culture of Men,' with a dedication to Jane Lathrop Stanford."

—Virginia has two historical quarterlies and South Carolina one, and the January issues contain good material. In the *William and Mary College Quarterly* some account is given of Goronwy Owen, master of the grammar school in that college before 1760, and a poet of some merit. In company with the professor of moral philosophy, he led the students into a row with the young men of the town, and was soon after nominated to be minister of St. Andrew's Parish in Brunswick. Here he drew his salary, preached, and, getting drunk, swore profanely. It is a curious picture even of a colonial clergyman. His will is included among the original matter here printed. A negro woman was (only) hanged for arson in 1704, in York County. A curious and not very intelligent note on slavery agitation (p. 195) must be read to be appreciated at its worth. The *Virginia Magazine of History and Biography* gives the will of the mother of Mary (Ball) Washington, thus adding one more to the long series of Washington wills. A number of letters of the Gray family give a picture of Boston and London in 1775-'76 from the loyalist point of view. The English are represented as "never more united," and one of the reasons was that "every principal manufacturing town in the kingdom have as much Business as they possibly can attend to, so that the americans can have nothing to hope for from that quarter." The *South Carolina Historical and Genealogical Magazine* continues its records of the Committee of Safety (1775), and of the mission of John Laurens to France. Mention should also be made of E. C. Barker's interesting article in the January *Quarterly* of the Texas State Historical Association on the "Difficulties of a Mexican Revenue Officer" in 1835.

—No sooner have we said good-bye to the 'Jesuit Relations' than there appears another reprint which may be easily connected with them. We refer to Shea's edition of Charlevoix (Francis P. Harper), which is being published in six large and handsome volumes. The number of sets is limited to 750, thus corresponding exactly to the issue of the 'Jesuit Relations,' and the publisher's announcement shows that he has kept Mr. Thwaites's series well in view. "While Charlevoix in itself is an independent and complete historical work, still to subscribers to the excellent reprint of the 'Jesuit Relations' it will especially appeal, as it further completes that valuable series." Concerning Charlevoix himself we shall only say that every one who wishes to feel familiar with the rise of New France must know his 'History and General Description.' It is a work which has its clearly marked limitations, but they have been pointed out by more than one critic, including Parkman, and they do not impair the general serviceableness of the narrative. Moreover, the notes to this edition go far towards helping the reader to follow Charlevoix's use of his sources. The present reprint is an identical copy of the translation which the late Dr. Shea prepared some thirty years ago. Mr. Harper's prospectus says: "A fire destroyed a large portion of certain of the volumes, and not more than 150 complete sets were ever sold." Shea's immense learning in matters relating to the progress of the Roman Church on this continent and to the Indian tribes is justly celebrated, and no one could have been better qualified by attainments and sympathies to annotate Charlevoix. The chief feature of this reprint (we have only the first volume before us) is a short memoir of Shea, by Mr. N. F. Morrison, to which a bibliography of his publications is added. This forms a useful summary of a studious life, but we can hardly accept the statement that Shea was made "an honorary member of nearly every historical society in this country and Europe." While true enough of America, it is far from being true of Europe. As an illustration of the merit which Shea's notes on Charlevoix possess, we may take one striking passage (p. 206). Apropos of Menendez and Ribaut, Charlevoix says: "The French historians all agree in stating that all these were hung to a tree, on which was a label inscribed: 'These are not treated thus as Frenchmen, but as heretics and enemies of God.' " Shea's comment is: "This is not stated by Laudonnière, nor by Challeux, nor by Chauveton in his Latin version of Challeux, nor in the letter addressed to King Charles. The story was apparently put forward for the first time in the account of De Gourgues's expedition. It can hardly be said, therefore, that the French all agree."

—We have been tardy in taking up the one-volume popular 'History of Westchester County, N. Y.' (New York History Co., No. 114 Fifth Avenue), of which the authorship is so pleasantly divided in the preface. Mr. Frederick Shonnard modestly takes credit only for the collection and systematizing of materials, with supervision of his colleague's literary presentation. Mr. W. W. Spooner is wholly responsible for the text as literature and is entitled to high praise. He shows grasp of his matter with unusual powers of orderly arrangement and consecutive narration for a work of this kind, and his chapters are at all points readable and interesting. The numerous illustrations are, with rare concession to imaginative delineation, of genuine historical value. Dutch and English began settlements almost simultaneously in the county, in 1639 and 1640, but, while the patroonship of Adrian Van der Donck (whence Yonkers gets its designation) plays a large part in the landed history of the territory, the human drama is preponderatingly English and non-Dutch. Anne Hutchinson's tragically short-lived colony at Pelham in 1642 was remembered in the name of Hutchinson's River and for some time in "Ann Hoeck's Neck"; and it is singular that John Throckmorton, who simultaneously settled Throg's Neck, was a Baptist convert, who had removed for peace and comfort from Salem, Mass., to Rhode Island, and became intimate with Roger Williams, that Thomas Cornell (settler of Cornell's Neck as well as ancestor of the founder of Ithaca's university) came from Boston by way of Rhode Island, while Capt. John Underhill, of ruthless Pequod memory, who wrought a second Indian slaughter with fire and sword at Bedford, had been banished from Boston as one of Mrs. Hutchinson's sympathizers. Not less curious is the exchange by which Boston got its "Cradle of Liberty" from Peter Faneuil, born at New Rochelle of the Huguenot refugees expatriated by the revocation of the Edict of Nantes. It was in the same place that Thomas Paine ended his days, and has his monument, though his bones are elsewhere. The Jays, the Morrises, Aaron Burr commendably, are among the great local figures of the Revolution, and to Westchester belongs the romance of André's capture. Irving was the chief resident man of letters, while Cooper and Poe were transient sojourners. One-sixth of this history, or the last hundred pages, properly suffices for the period since the Revolution.

—Vere Foster, who died in Belfast, Ireland, in December, at the ripe age of eighty-one, was a remarkable man, a true lover of Ireland. He was content to devote his life and his means towards her good in directions never likely to win popular applause or bring him renown. He outlived his generation. Latterly, to many he was but the shadow of a name. His great-grandfather was Earl of Bristol and Bishop of Derry. His grandmother by a second marriage became Duchess of Devonshire. Her sister also married a duke. He was born at Copenhagen, where his father, Sir Augustus Foster, was British Minister. He was educated at Oxford and trained in the diplomatic service, partly under his relative Lord Palmerston. During the famine of 1846-7 his attention was attracted to the miserable condition in which a large proportion of the Irish people were plunged. Thenceforward he generally lived on but £100 per annum, devoting the rest of his fortune to their good. His efforts were first in the direction of emigration, and personally settling individuals and families in the United States and Canada. To understand the conditions under which emigration was being carried on, he shipped, disguised, as a steerage passenger. Dysentery laid him low, interference to prevent an outrage on the part of one of the sailors led to his being brutally assaulted, and for some weeks after landing in New York he lay blind and helpless in hospital. The journal of his voyage, published as a Blue Book, attracted much attention, and was largely instrumental in the subsequent passage of the emigration acts. His energies in later life were devoted to the improvement of Irish school accommodation and the perfecting of better systems of teaching writing. The preparation of his charming volume of family reminiscences, 'The Two Duchesses,' gave great interest to his last years.

RECENT POETRY.

The critic of recent poetry has always that feeling of interest which comes from dabbling in a science where prediction is impossible, and where his most innocent characterization may be cited years hence as an example, not of the foresight of critics, but of

their folly. When we read, for instance, Addison's 'Rhymed Account of the Greater English Poets,' an account from which the names of Shakspere, Jonson, Beaumont, Fletcher, and Marlowe are omitted, and then find him in the *Spectator* praising Sir Richard Blackmore's "Creation" as "one of the most useful and noble productions in our English verse!"; or when we find Tennyson originally described as "Miss Alfred" by Lord Lytton and by *Blackwood's Magazine* as "the Monarch of Little Britain," we feel that the chief value of a critic's work may be in inverse ratio to its truth. His praises may be valueless, but his condemnations may be encouraging and valuable through all coming time.

This is especially appropriate at a period when the more recent growth of poetry, both English and American, exhibits, as a spring landscape should, a charm of immaturity rather than that of ripeness. New poets are appearing, of promise still indefinite, while the older ones offer little of aftermath. This is noticeable, for instance, in 'Last Songs from Vagabondia,' by Bliss Carman and Richard Hovey (Small, Maynard & Co.), a little book which closes the rather prolonged period of juvenility in its authors, yet offers nothing nearly so fine and strong as "Gamelbar" or so graceful as "Round the World with Marna" in previous volumes. The mixed origin of its contents is for the first time definitely exhibited by the initials of the two authors, and while the book cannot be ranked with its predecessors in respect to general ability, it yet contributes the less striking grace of songs like the following (p. 3):

MAY AND JUNE.

I.

May comes, day comes,
One who was away comes;
All the earth is glad again,
Kind and fair to me.

May comes, day comes,
One who was away comes;
Set his place at hearth and board
As they used to be.

May comes, day comes,
One who was away comes;
Higher are the hills of home,
Bluer is the sea.

II.

June comes, and the moon comes
Out of the curving sea,
Like a frail golden bubble,
To hang in the lilac tree.

June comes, and a croon comes
Up from the old gray sea,
But not the longed-for footstep
And the voice at the door for me.

James Whitcomb Riley, in his 'Home-Folks' (Indianapolis: Bowen-Merrill), is an exception to the general charge of arrested development. He adds nothing in quality to his previous dialect poems, but in the following lines he perhaps touches a profounder chord than he has ever before struck (p. 39):

O LIFE! O BEYOND!

Strange—strange, O mortal Life,
The perverse gifts that came to me from you!
From childhood I have wanted *all* good things:
You gave me few.

You gave me faith in One
Divine—above your own imperious might,
O mortal Life, while I but wanted you
And your delight.

I wanted dancing feet,
And flowery, grassy paths by laughing streams;
You gave me loitering steps, and eyes all blurred
With tears and dreams.

I wanted love—and, lo!
As though in mockery, you gave me loss.
O'erburdened sore, I wanted rest; you gave
The heavier cross.

I wanted one poor hut
For mine own home, to creep away into:
You gave me only lonelier desert lands
To journey through.

Now, at the last vast verge
Of barren age, I stumble, reel, and fling
Me down, with strength all spent and heart athirst
And famishing.

Yea, now, Life, deal me death,—
Your worst—your vaunted worst! . . . Across my breast
With numb and fumbling hands I gird me for
The best.

The new school of German writers, headed by Hauptmann, is perhaps responsible for the wild, picturesque, and in part supernatural drama, called the 'Ghost of Rosalys,' by Charles Leonard Moore (Philadelphia—privately printed); though the scene is transferred to an old French château, and rather gains by it. Some passages are vigorous, and even fine, as where the heroine is threatened with banishment from her castle, and meets it with this fine note of womanliness (p. 63):

"Anywhere! God, the world is wide enow!
What does it matter if we starve in rags
So our proud brows untarnished keep the flags
Of honor flying. You think me weak and frail;
See if I will in aught my husband fail.
Do you know what wifehood means? It is to be
A servant mistress. To strive for mastery
Only for kindness. While joy lasts to caress,
Make breathless with expected happiness,
Vex, torment, be ten thousand things at once,
So that he tire not. But when Joy's sand runs
And Sorrow turns the hour-glass, then indeed
To be the perfect partner of his need,
To keep no separate self count—but to toss
All, all your being to make up his loss—
To go forth with one Faith unto one Fate—
Nor look back at the Angel at the gate:
To sin together, to be together sent
Out of your Eden into banishment!"

Toward the conclusion, the drama rises into the preternatural, with Lucifer and the angels and with a post-mortem theory, not quite intelligible, of the resurrection of the hero and heroine into a final life amid home and its scenery.

Mr. Arthur Sherburne Hardy adds to his twin distinction as a mathematician and a novelist by the authorship of a thin volume, 'Songs of Two' (Scribner), containing some thirty short poems which combine the romance of one of his previous vocations with the terseness and precision of touch which suggest the other. These two brief examples show that the book should have been larger (pp. 13, 32):

LOVE ME NOT.

Love me not, Dearest, for the smile,
The tender greeting, or the wile
By which, unconscious of its road,
My soul seeks thine in its abode;
Nor say, "I love thee for thine eyes,"
For when Death shuts them, where thy skies?
But love me for my love,
Then am I safe from all surprise,
And thou above
The loss of all that dies.

IMMORTALITY.

My window is the open sky,
The flower in farthest wood is mine;
I am the heir to all gone by,
The eldest son of all the line.

And when the robbers, Time and Death,
Athwart my path conspiring stand,
I cheat them with a clod, a breath,
And pass the sword from hand to hand!

We have more than once praised the admirable translations, especially from Heredia, by Edward Robeson Taylor of San Francisco. His new volume, 'Memories, and Other Verses' (San Francisco—privately printed), has a few difficult and admirable translations, and many poems written perhaps with too great facility, but some of them exhibiting in the sonnet, which is his favorite form, an exquisite precision and delicacy of touch, as in the following (p. 7):

IN TIME OF MAY.

Within thy silvern bars, oh, hold me fast,
My Sonnet;—hold me safely, that my dream
Of immemorial blooms on men may beam
In all thy artistry of splendor cast.
To murmurous music of the far-off Past
Again I loiter by the woodland stream,
Till on its memory-haunted banks I deem
Myself with joys in fairy legion massed.
Once more I seek the walnut's easeful shade
To eat the mandrake's gold-hued apple there,
As all the ravishments of May are mine;
Once more with her that in the grave was laid
Long, long ago, I breathe the fragrant air,
And pluck at her fond wish the columbine.

'Idyls of El Dorado,' by Charles Keeler (Robertson: San Francisco), has the immense advantage of fresh material ranging from Monterey to Alaska, and of vignettes designed from the California flowers. Some of the poems are elaborate, perhaps rather academic, but always with a background of California scenery. We have not before seen the redwood tree so well sung (p. 5):

TO A REDWOOD TREE.

Praise be to thee,
O time-wrought monument!
Praise be to thee,
O sky-supporting pillar!
The stars that shine above thee,
The earth that dreams below thee,
The mountains that have borne thee,
All loud proclaim thy glory.
All chant to thee their choral.

Thy shaft is as a column
Of heav'n's wide arch of azure,
Thy boughs are spread about thee
In stately sweeps of verdure;
Thy form is robed in splendor,
With majesty invested—
O praise be to thee,
Fair monument of time!

The winds are thy companions,
The skies bend round thy branches,
The earth supports thy vastness,—
And all day long the soft winds sigh
Their song of praise to thee,
And all the night the wild winds sweep
Amid thy sheltering arms.

Something of the same local coloring belongs to 'The Path of Gold,' by Carrie Blake Morgan (New Whatcom: Edson & Irish). The author's poems are dedicated to her sister, the well-known poet of that far Western region, Mrs. Ella Higginson, who has, however, written better verse herself. At any rate, these new poets of the Pacific Coast are well worth watching.

It is to be noted, however, that Mr. Charles Elmer Jenney publishes even in California his 'Scenes of My Childhood' (Fresno, Cal.: *Republican* Publishing Company), which is full of verses and illustrations all seeming as if there were no place but New England in the world. Another attractive book of the same kind is 'The Mountain Maid, and Other Poems of New Hampshire,' by Edna Dean Proctor (Houghton), with many spirited poems of New Hampshire legend and attractive photographs of scenery. 'From Mayflowers to Mistletoe: A Year with the Flower Folk,' by Sarah J. Day (Putnam), is a book charming in conception, almost all the poems being founded on American wild-flowers; but the execution is not quite so poetic as the plan. Something of the same limitation belongs to 'Songs of North and South,' by Walter Malone (Louisville: Morton), the best pages 'n which are enriched by the simple enumeration of details, as thus (p. 12):

SEPTEMBER IN TENNESSEE.

The sad September comes with asters in her auburn hair,
Her lovely face transfigured with a gentle touch of care,
With pale blue morning-glories, paler than her pale blue eyes,
And pearly hillside hazes, dimmer than her dreamy skies.

She comes with cataracts of amber honeysuckles sweet,
With golden-rods that powder all her garments and her feet,
With humming-birds for heralds, all bedecked in starry scales,
With glow of jewelled armor, burnished throats and twinkling tails.

Amid her forest depths, like white-limbed giants in the land,
The clean athletic sycamores in naked grandeur stand;
And now the sweetgum overflows with aromatic drops,
While pungent sassafras perfumes the bramble-tangled copse.

Pecans on bending branches hang their wealth of clustered nuts,
And chinquepins and hazels ripen by the negro huts;
The brown buckeyes are swelling, purple wild-grapes swinging low,
And sumach berries by the fence like blood-red torches glow.

And now the year has lost the gladness of her girlhood time,
And prose of homely Autumn follows Spring and Summer rhyme;
Deserted by the song-birds, hang her melancholy bowers,
And like a cobweb curtain swing her deathly-pale moon-flowers.

But it is impossible not to recognize the immaturity of a poet who prints a poem of six eight-line stanzas, each of which begins and ends with the name of Edith Adair—another of the same length with a similar duplication of words, Geraldine Gray—and fills other poems in the same way with signal-lights hung out for Genevieve Mar, Mary of Jonesburg, and Beautiful Jean, with other lyrics addressed in similar monotony to "Lucy, my lass" and "Lucy, my own." The traditional multifariousness of Southern love-making is certainly vindicated by Mr. Malone's muse.

'Poems, Lyrical and Dramatic; to which is added Cromwell, an Historical Play,' by Sarah King Wiley (New York: Richmond), is one of the books which inevitably leave in the critic's mind the doubt whether he is dealing with a poet or only with a poetic mind. Miss Wiley's descriptions of nature are always rich and thoughtful, though sometimes marred by odd phrases, such as "a wannish sheen" (p. 11), or "the silver sliver of the moon" (p. 12), and she always is at her best in dealing with classical or mediæval themes, where the very names help the romance. Her best line, perhaps, is where she describes the huntress who watches the sleeping Endymion,

"With all her senses shrunken into sight."

But when she comes to deal with the battle of Lexington or of Monmouth, she is less effective, and her historical play, though it has life and vigor, still seems rather a promise than a performance.

"Ad Astra," by Charles Whitworth Wynne (Lane), is a long and somewhat monotonous poem marked by ardent Anglicism and strong condemnation of the Jews, and dedicated to "An Unknown Goddess." Apparently this unknown deity is, to the author at least, Liberty. Mrs. Annie Fields desires, like Keats, to touch once more the beautiful mythology of Greece before she bids it farewell, but we cannot think her effort a supreme success. The title of her book is 'Orpheus, A Masque' (Houghton). The scene of Capt. Arthur Peterson's 'Collected Poems' (Philadelphia: Coates & Co.) is laid partly in New Sweden (Delaware), partly in Japan, and partly in Samoa, and he employs good and even fresh material, if without great inspiration.

As the English-speaking nations are yet occupied in wars of invasion, books of poetry still appear on both sides. 'Men of Men,' by C. Fox Smith (London: Sampson Low), offers the usual beverage of watered Kipling on one side, while Denis A. McCarthy, in 'A Round of Rimes' (Review Publishing Company), celebrates Paul Kruger and Gen. Joubert. For the rest, this last author is a mellow-hearted Irishman, who is at his best in echoing the same rhymes and melodies which the older Irish bards have sung, as in the following (p. 21):

AH, SWEET IS TIPPERARY.

Ah, sweet is Tipperary in the springtime of the year,
When the hawthorn's whiter than the snow,
When the feathered folks assemble and the air is all a-tremble
With their singing and their winging to and fro;
When queenly Slievenamon puts her verdant vesture on,
And smiles to hear the news the breezes bring;
When the sun begins to glance on the rivulets that dance—
Ah, sweet is Tipperary in the spring!

. . . . . .

Ah, sweet is Tipperary in the springtime of the year,
When life like the year is young,
When the soul is just awaking like a lily blossom breaking,
And love words linger on the tongue;
When the blue of Irish skies is the hue of Irish eyes,
And love dreams cluster and cling
Round the heart and round the brain, half of pleasure, half of pain—
Ah, sweet is Tipperary in the spring!

A much more highly cultivated author, of Irish origin, is the Rev. P. A. Sheehan, who publishes his poems under the name of 'Cithara Mia' (Boston: Marlier), containing much harvest of travel and varied study—Arabian and Culdee traditions on the one side, June roses on the other; but the most unwonted form of priestly poetry comes in the following semblance of a French song (p. 201):

COSETTE.

Across the gray sands of Dinan,
Cosette!
Comest thou, bird of sea and song,
Cosette!
Thy hair-cloud streaming far behind,
Vexed by the teasing, amorous wind,
Light in thy laughing eyes, and kind,
Cosette!

Where art thou now? On what far brink,
Cosette!
Of life's wild waves, that swell and sink?
Cosette!
Dead is the spring of nimble feet,
Dull are thine eyes' glad fires, and fleet,
And silvered age thy youth must greet,
Cosette!

Back, Fancy! and let Memory paint
Cosette!
Hers are the lines most true, tho' faint,
Cosette!
Child wert thou then! Child art thou now!
Life's dawn upon thy shining brow!
Woman and wise? God disallow!
Cosette!

. . . . . .

Nay! let me see thee as afar,
Cosette!
Above the floor of yonder star,
Cosette!
When we shall meet in halls of heaven,
Beyond those peaks with sorrow riven,
Let me behold my child of seven,
Cosette!

A curious and interesting book of Latin hymns is 'Hymns Translated and Original,' by A. S. Chavasse, Senior Fellow and Late Senior Tutor of University College, Oxford (Henry Frowde). The translations are not made from the original text, but from the last edition of 'Hymns Ancient and Modern.' Thus, the editor thinks that most readers would prefer to accept Wesley's "Christmas Hymn" in the modified shape of the church services,

"Pleased as man with man to dwell,
Jesus our Immanuel,"

instead of the original

"Pleased as Man with man to appear
Jesus our Immanuel here."

But what the poets themselves would say to this modification, he does not inquire, knowing, perhaps, that all writers of hymns are accustomed to sorrow. Mr. Chavasse can hardly be said on the whole to have improved his hundred and twenty-eight hymns by translating them. For instance, Dr. Watts's high-water mark of real poetry,

"O God, our help in ages past,
Our hope in years to come,
Our shelter from the stormy blast
And our eternal home,"

is sadly diluted in the Latin (p. 102):

Præteritum nobis Deus auxiliate per aevum,
Venturi nobis temporis alma Salus,
Perfugium bacchante Noto portusque procellæ,
Certa per æternam Spesque Domusque diem,

and a similar enfeebling effect is produced upon Heber's resounding verses,

"The Son of God goes forth to war" (p. 120).

But this is by no means a specimen of Mr. Chavasse's success, and many of his terser versions, especially in the mediæval rhyming Latin, are condensed and fine, as for instance this of Wesley's "Jesus, Lover of My Soul" (p. 46):

Iesu, Qui amasti me,
Ad Te sine fugiam,
Vita dum ceu turbine
Undam volvit timidam;
Dum componis hiemem,
Conde, mi Salvator, me;
Duc in portus sospitem,
Spiritumque suscipe.

This is followed by an equally good translation of "Thou art the way," by the elder Doane, the only American hymn, so far as we are aware, which is included in the collection.

'Ye Gods and Little Fishes,' by James A. Henshall, M.D., of Bozeman, Mont. (Cincinnati: Clarke), is a mock-heroic poem, being a travesty on the Argonautic expedition, and inscribed to Admiral Dewey, whose shipmate the author has apparently been. It is printed in a handsome illustrated volume. The writer has previously published several books upon fishing, but has seldom stooped to smaller game than here. If this author has, however, given us too much of what the late Edmund Quincy used to call "specific levity," that is the only good quality wanting to a new singer, Alexander Blair Thaw, who writes his 'Poems' in California, prints them in London, and publishes them in New York (Lane). His volume has in it more thought, more fine images and utterances of deep feeling than any recent volume we have encountered, but it is written almost wholly in a graver and weightier measure than its compeers, and with a prevailing sombreness of tone. No one, for instance, has better handled the somewhat difficult problem of Kipling (p. 76):

TO A LAUREATE OF EMPIRE.

You sing to us the song of steam.
And true romance; our world is yours:
You draw things as they seem;
What know we if the dream
Dies or endures?

You set forth with the rising sun,
And watched your brothers as they wrought;
So they may read who run.
You told of work well done,
Battles well fought.

On every little thing and dear
You set the mark of true romance:
And wondrous true and clear
The forms of things appear
To your quick glance.

Out of the sunrise in the East
You came and made our dreams come true;
And made us, great and least,
Each man, and boy, and beast,
All friends to you.

. . . . . .

Were your romance then but a mist
To veil from us God's law and love,
'Twere better you had missed
The mark; nay, in the list
Ne'er thrown your glove.

Oh, better had our hands but shook,
And spilled the wine! Not now with laughter.
But through our tears we look,
Deep, deep within Life's book,
Before and after.

Think you we had not understood
The spirit of your spoken word?
We know the wine is good:
Being our very blood,
That you so stirred.

The wine is pure; but in the jar
Were left the old wine's bitter lees,
Whose bitterness shall mar
The vintage new, while war
Still taints the seas.

And since our war may never cease,
Shall we not make new bottles then,
Wherein the years of peace
Shall pour the Earth's increase
Of joy for men?

You praise our work; why then we'll pray
For power to make, and better mould,
New jars of sweet earth's clay,
Those others put away,
Men made of old.

WENDELL'S LITERARY HISTORY OF AMERICA.

A Literary History of America. By Barrett Wendell, Professor of English at Harvard College. Charles Scribner's Sons. 1900.

The title of this book, "a literary history," instead of a "history of literature," indicates its design and method. These are, to sketch the political and social history of a period, especially as affecting the intellectual life of the time, and then to coördinate with it the literature which came into being under these conditions. It is a profitable mode of study, and especially so when there is a tendency in the manuals of the day to treat literature as self-determined, or as handing down its traditions from one "school" to another, in continuous development, only disturbed from time to time by some violent irruption of external forces.

That American literature was in its origin a continuation of English literature, is obvious. The two are two stems springing from one root; at first so closely united that they are virtually one, then differentiating as they separate, until they are distinct trees. The first colonists of America belonged to the Elizabethan and early Stuart period, and brought with them the modes of thought and of expression of the time. They left England while men's minds were profoundly stirred by religious and political questions, and they brought away with them, as their most precious heirlooms, the Bible and the Common Law. With these in hand, and in their hearts all that these represented, the colonies began their existence as a part of England.

But they were embayed and withdrawn from the political currents of England and Europe. Prof. Wendell's parallel chapters show England passing from Tudor to Stuart policy, to the Commonwealth, the Restoration, and the Revolution, and English literature passing from Shakspere to Milton, Wycherley, and Dryden, while the literature of New England passes from Michael Wigglesworth to Cotton Mather. "Such stagnation of social evolution . . . is only possible where the pressure of external fact is relaxed, and the individual type is stronger than the universal."

As the eighteenth century advanced, Americans, though, as compared with the English, still in a state of retarded development, gradually grew conscious of themselves as Americans, with interests and an environment of their own. While Jonathan Edwards brought his massive logic to buttress the old theology, and material interests inspired Franklin's philosophy of shrewd common sense, the events which led to the Revolution awakened the minds of Americans to their interest in great political questions and the doings of the world outside. They felt that they were not scattered colonists, but a people. Still, while thinking and feeling as Americans, they were thinking and feeling as Englishmen had thought and felt a little more than a hundred years before. It was England that had drifted and removed; they were standing in the old paths.

The Revolutionary period was unfavorable to pure literature, unless under that title we include political oratory. But it left feelings which found expression in literature later, such as the anti-British patriotism which glows so inspiringly in the romances of Cooper. And it implanted in us the American characteristic of which we are most justly proud—sympathy for all peoples who are struggling for freedom, except it be freedom from our own beneficent sway. But, with the beginning of the new century, pure literature revived, magazines and reviews were founded, and fiction, essays, and literary criticism made their appearance. New York aspired to lead in this renaissance, and Charles Brockden Brown (a Philadelphian by birth, whose literary life was chiefly passed in New York) founded the American novel, soon to be followed by Irving and Cooper. Brown and Irving deal with American subjects and scenery, but, outside of this, there is little to mark their work as characteristically American, admirable though it be in many respects.

The names chronicled by Professor Wendell show the literary activity of New York in the first half of the century; but not much of the work then produced had enduring value. Bryant wrote, perhaps, the best poetry that the country had yet given birth to, and with the note of *distinction* so often missing in American work. Poe (whom we may class with New York writers) had an unusually fine sense of literary criticism, and in his poems and tales showed a singular power of dealing with strange and fantastic moods of mind.

About the same time there was a remarkable intellectual and literary renaissance in New England. Unitarianism had arisen as a revolt against the iron-bound Calvinistic theology and as a liberalizing force. It taught belief in man as well as belief in God. "Spiritual freedom, the Unitarians maintained, must result in spiritual growth. For a dogmatic dread, they substituted an illimitable hope. Evil and sin, sorrow and weakness, they did not deny; but, trusting in the infinite goodness of God, they could not believe evil or sin, the sorrows or the weaknesses of humanity to be more than passing shadows." It was this attractive belief, enforced by the moral beauty of the lives of its leading teachers, that captured the fortresses of Calvinism and drew to its side the best part of the intellectual life of New England.

Closely connected with this enfranchisement was what was called "Transcendentalism," a movement often misunderstood, and treated by Professor Wendell, we think, with something less than his usual catholic breadth. While to the hasty observer some of its phenomena appear grotesque, it is not quite fair—at least, it may produce an unfair impression—to call it "an outbreak of intellectual and spiritual anarchy." It was, we may say, the Extreme Left of Unitarianism, the farthest dissidence from Calvinistic theology. Its literature, Professor Wendell justly says, "constantly and earnestly aspired to be a literature of both knowledge and power, seeking in the eternities for new ranges of truth, which should broaden, sweeten, strengthen, and purify mankind."

Of all the Transcendentals Emerson alone has secured literary eminence. And this he accomplished by freeing himself in a great measure from the estranging phraseology of the school, while holding fast to its spirituality. To his mind spiritual truths were the only ones worth serious consideration, and the spiritual development and elevation of the individual soul the true end of life. In his intense and contagious earnestness he is somewhat akin to Carlyle, though far enough in his serene optimism from the fuliginous misanthropy of the Seer of Chelsea. Like all idealists, he appeals strongly to the young; and it is impossible to estimate the effect that his teachings have had on the formation of character. Professor Wendell thus sums up his estimate of Emerson:

"We may not care for the things he said, we may not find sympathetic the temper in which he uttered them, but we cannot deny that when, for two hundred years, intellectual tyranny had kept the native American mind cramped within the limits of tradition, Emerson fearlessly stood forth as the chief representative of that movement which asserted the right of every individual to think, to feel, to speak, to act for himself."

Professor Wendell's treatment of Hawthorne is very satisfactory. Hawthorne had a rare and delicate genius and the most refined artistic sense. The feeling of the world of mystery that surrounds our daily life was ever present with him. Such a feeling was traditional in the Puritan element, and the penumbra of the old witchcraft gloom still rested on Salem, his birthplace. But Hawthorne seized the grim old Puritan conceptions, glorified them by his genius, and wrought them into exquisite works. "Beyond any one else, he expresses the deepest temper of that New England race which brought him forth, and which now, at least in the phases we have known, seems vanishing from the earth."

Lowell and Holmes lived so near to us, and the impression of their personalities is still so strong upon us, that it is not safe to pass a judgment upon them. Professor Wendell sees in Lowell the chief American humanist; the man who cherished literature as preëminently the cultivating, refining, and humanizing influence. In Holmes, that admirable compound of wit and wisdom, he finds—it startled us when we came upon it—an American Voltaire. He hastens to admit the points of difference: the Frenchman lived in an almost unimaginably corrupt society, and had an innate coarseness in his nature; the American passed his life amid social surroundings altogether good and clean, and was himself pure as crystal. One was a bitter and malicious mocker, while the other's sharpest sarcasm is kindly. But, as Voltaire's life was a warfare against what around him was called Christianity, so Holmes was always in a mood of militancy against orthodox Calvinism. Both saw things clearly, both were impatient of hypocrisy, and both used wit as their weapon. The parallel is perhaps closer than that between Macedon and Monmouth.

Considerations of space prevent our noticing Professor Wendell's treatment of Southern writers—especially the poets, whose works, he thinks, may "forerun a spirit which shall give beauty and power to the American letters of the future"—as well as his views of Western literature. Both are handled with judgment, urbanity, and admirable liberality. He concludes with the conjecture that the characteristic American literature of the future will probably be developed from newspaper humor, magazine stories, and the popular drama. It may be so; but the present reviewer will cherish a modest hope of better things.

The Rise of the Russian Empire. By Hector H. Munro. London: Grant Richards; Boston: L. C. Page & Co.

Mr. Munro has undertaken a task which was awaiting the discoverer. He has felt, with all students of Russian history who are confined to works available in English, that the early period of the country's growth has presented but a dry, confused register of multitudinous princely aspirants to petty, perambulatory thrones, of fierce, incessant, but miscroscopic wars, both foreign and domestic. The confusion, it is true, arose chiefly from the apparent lack of motive in the majority of the moves upon the chess-board, the explanation for which was, necessarily, omitted from the only good work in English on this period, Rambaud's History of Russia. Rambaud, it should also be noted, sometimes errs in the original French, and is made to err still further in the English translation, through negligence and lack of intimate acquaintance with the subject on the part of the translator. Mr. Munro has, accordingly, attempted to render real and living the personages and events connected with the history of the infant colossus, from its earliest dawn down to the firm establishment upon the throne of the first Romanoff Tsar, in the year 1612. He succeeds admirably, it must be confessed. It is evident that the actors in the drama are as vividly before him as if they were holding a special performance, in the flesh, for his benefit and the benefit of his readers. His style is adequate to his vivifying enterprise—he has a genuine talent for picturesque and telling double-barrelled adjectives; but his vivacity of characterization, both of people and events, approaches perilously near flippancy at times when the dignity of the occasion and of history demands a certain gravity of statement. Yet the reader pardons even these blemishes for the sake of the keen analysis, sound common sense, and felicity of statement associated with them. Sketch-maps aid the reader in following the agile somersaults of the governing power in those early days, and four genealogical tables (of the Grand Princes of Kiev in capitals; of the Grand Prince in Kiev; with two corresponding tables for the Tsars of Moskovy) still further facilitate comprehension. The famous "Song of Igor's Expedition," hitherto inaccessible in English, is another valuable feature of the book; and the prefatory list of books consulted, in French, German, Russian, and English, offers an opportunity for fuller studies.

One statement of the author's preface is somewhat puzzling, however, in the light of evidence apparently to the contrary in the body of the work. He says: "The rule observed with regard to the rendering of names of places and persons has been to follow the spelling of the country to which they belong as closely as possible." Why, then, does he write *Toushin* instead of *Toushino*, *Oukrain* instead of *Oukraina*? Again: if Lithuania, Esthonia, Kourland, and Livonia are to follow the native appellation in each case, they should read respectively: Lietuva, Wiroma, Kurseme, and Lieveseme, while if the Russian name be applied (this being more rational than the English), they would be almost equally different from their form in these pages, as: Litva, Estlyandia, Kurlyandia, Liflyandia. In any case, the form employed, *Lit'uania*, with the apostrophe representing the b—the *yer'* or mute *y* (according to the convention by which it is elsewhere in the book correctly used), seems indefensible and misleading to the purely English reader. Then, too, if he objected to the time-hallowed form Cossack, why did he not comply with his own "rule," and spell it *kazák* instead of *Kozak*? In the matter of pronunciation, the English reader can hardly be expected to know that it is stressed *Kazák*. Mr. Munro leaves Tartar in its old English form, instead of adopting the Russian *Tatar*, as his rule demands.

The reader has another quarrel with this author—a quarrel such as would-be readers of the second Jungle Book have with Mr. Kipling: he deliberately uses Russian words where there are more or less suitable English equivalents, and he fails to chronicle a good share of these in his brief glossary, regardless of the fact that even a glossary is not so satisfactory as the English alone or (in extreme cases) bracketed with the Russian word. For example: *Vladuika* (not in the glossary), for *Prelate*, which represents the rank, although the Russian Church objects to the Roman Catholic term; the "Velikie Kniaz," and the "Krimskie Khan" instead of the Grand Prince, the Khan of Krim (or the Crimea); the "Krimskie Tartars," alternating with "Krim Tartars," and similar unnecessary if not downright awkward use of the Russian adjective, such as the "Liublinskie Union," the "Novgorodskie authorities," the "Tzarskie army," wherein by the way, no difference is made between the singular and the plural form. *Strielitz, hetman, voevoda* are pardonable, because accepted and intelligible. *Gosoudar*, the specific title of the Emperor, is really a good innovation, if properly explained or bracketed; but *gosoudarstvo* had better have been translated "kingdom" than left to the guessing powers of the reader, even if it does not accurately represent the fact. *Vremenshiki*, once explained, but not entered in the glossary, although often used, might better be rendered "favorites in power." And, in conclusion, there seems to be no good reason why the inhabitants of Novgorod, Nizhni-Novgorod, Tchernigov should not be called Novgorodians, and so forth, instead of *Novgorodskie, Nijhnienovgorodskie*, and *Tchernigovskie*, if the inhabitants of Kiev, Kazan, Pskov, and Moskva are designated as Kievians, Kazanese, Pskovians, and Moskovies; while it would be difficult to allege a satisfactory excuse for bewildering the lay reader with "Ljhedimitri" for "The False Dimitry" (or the Pretender), "Ljhepetr" for the "False Peter," or *kolokols* for bells. However, as it seems an impossibility to cure writers on Russian subjects of this little affectation, the reader must wrestle with it as best he may, and return thanks to Mr. Munro for a delightful as well as an instructive volume.

Between the Andes and the Ocean. By William Eleroy Curtis. Chicago: Herbert S. Stone & Co. 1900.

Presumably the purpose of this ponderous octavo is to reintroduce the people of the west coast of South America to the North American public, in view of the opportunity which will soon be afforded of seeing the evidences of their state of culture at the Pan-American Exposition. How far it will stimulate to a closer acquaintance with the Ecuadorians, Peruvians, and Chileans, is a matter of considerable doubt. It is unattractive in literary style, and no thought seems to have been bestowed upon the method of presenting data. It reads like the unedited jottings in a tourist's journal. The tourist, moreover, was often in a condition of excessive levity, retailing anecdotes that savor of the café gossip current among the foreign colonies in the South American cities. What is still more surprising, considering the reputation which the author enjoys for familiarity with the Spanish language, is the misspelling of common Spanish words, occurring so persistently throughout the book that the errors cannot be charged to careless proofreading. As examples of these we may cite *haciendados* for *hacendados*, and *arrerios* for *arrieros*, which are thus spelled dozens of times from title-page to finis. In addition, we find "Santa Domingo," *sirroche* for *soroche*, "Chilanos," "cabellero," *cuedebra* for *quebrada*, as conspicuous and often repeated mistakes; and, finally, as if to emphasize his weakness in the fundamentals of the language, Mr. Curtis explains that the English name Giles is pronounced in Spanish as if it were spelt "Hy-lees"!

Errors of fact are also too numerous to be dealt with in detail. It is evident that our author's knowledge of Whymper's explorations in the high Andes of Ecuador has been obtained at second hand, or he could not credit him with having ascended Chimborazo, but having failed to reach the summit of Cotopaxi. He is perhaps to be pardoned for not knowing that it is the Dutch, and not the British East Indian colonies, that have monopolized the culture of cinchona bark, but we can hardly understand how a traveller in the Bolivian plateau could locate the famous Huanchaca silver mine at Oruro. As a promoter of mines, Mr. Curtis might take high rank, judging by the facility with which he affirms that the Bolivian copper mines often turn out ore containing from 80 to 90 per cent. of pure metal, while "the average of the tin is 73 per cent" (p. 325). Such simple credulity, which shows again in his acceptance of the old fable of a subterranean outlet from Lakes Titicaca and Poopo, through the Andes to the Pacific, is amusing, but it indicates a mediæval state of faith to believe that Mr. Agassiz could have made so preposterous a statement as the following: "Professor [read, Mr. Alexander] Agassiz made more than five hundred soundings [in Lake Titicaca] during his explorations, and came to the conclusion that the waters now occupy what was once the crater of a mighty volcano, which in the centre is still open to the centre of the earth" (p. 266).

In some respects, however, the book has merit. The strong points in the character of the South Americans are brought out, their bravery, their natural kindliness, their efforts to ameliorate the condition of the masses, as shown in the labors of the Descalzos monks in Peru; their progress in education, their emancipation from ecclesiastical domination. Such descriptions as that given of a session of the Peruvian Chamber of Deputies must go far toward correcting erroneous impressions concerning the conduct of state business in South America. Mr. Curtis also displays a sympathetic understanding of the spirit of political evolution through revolutions, in his account of the striking career of President Alfaro of Ecuador. Though the methods employed are

more violent than we have been accustomed to since the winning of our own popular rights with the sword, we must have respect for the self-sacrificing efforts of a true patriot in contending against the bigotry of a corrupt and grasping clergy, that would stifle progress in intellectual growth for the sake of retaining absolute power. The discussions of South American politics are handled throughout by the author with intelligence and in a critical spirit that gives them superior value. A most interesting matter, regarding which we can but wish Mr. Curtis had supplied fuller details, is the survival among the Aymará Indians of Bolivia of a dream that the old Inca empire will be reëstablished, bringing again the blessings of that combined socialism and paternalism for which the government of the Incas was so remarkable. That the memory of the old régime should endure in these people, and influence them in such political views as they may possess, is a striking circumstance, worthy of further investigation.

While the author in the main deals fairly and unpatronizingly with the peoples of South America, he reveals the lordly feeling of superiority which a conquering imperialistic race can with difficulty keep long hidden, where he says (p. 397) that "while the people of Chile are very far advanced in civilization, more so probably than those of any other country in South America, you still see and hear some odd things, and they still stick to the Spanish language"!

The Migration of Birds as Observed at Irish Lighthouses and Lightships. By Richard M. Barrington, M.A., LL.B., F.L.S. Pp. xxiv, 285, 667. Maps, Tables, and Diagrams. London: R. H. Porter. [1900].

This portly volume of nearly one thousand pages is, we believe, generally acknowledged by British ornithologists to be one of the most valuable contributions ever made to the study of bird life in Ireland. It is the outcome of twenty years' observations in a somewhat original channel by a trained and conscientious observer, who has inherited habits of exact scrutiny regarding natural phenomena. Some seventy years ago a Dublin merchant was attracted by the natural capabilities of a somewhat bare hillside tract on the borders of the Counties Dublin and Wicklow. He took it on a long lease at a fair rent, and, possessed of business habits, ample capital, and plenty of brains, turned it into a profitable farm, surrounding one of the most beautiful homes in Ireland. Meteorological observations were made and recorded. From the very first a ledger account was kept for every field and every crop. For decades past it is to the records at Fassaroe (Hibernicè, "The Glad Wilderness"), which have always been placed at the service of the public, that Irish statisticians and engineers have turned for information concerning climatic conditions, crop yields, and the possibilities of Irish agriculture. The son of the original renter is now the owner of Fassaroe under one of the late land-purchase acts. An enthusiastic agriculturist, he is well known as an authority on land values, and is besides no ordinary botanist and ornithologist. This book is his. In 1879, at the instigation of the British Association, observations concerning bird migration in Great Britain were sought to be procured from the lighthouse keepers on the coasts of England and Scotland. These were continued with more or less success for seven years and then discontinued. Mr. Barrington took up the work for Ireland in 1881.

"The time and attention of the light-keepers were [with the permission of the Irish Lights Board] given voluntarily, and without payment they have filled over one thousand schedules, and made about thirty thousand separate observations on birds during the past eighteen years. Over two thousand specimens were forwarded to corroborate these observations. The light-keepers deserve not only my gratitude, but that of all their fellow-countrymen who take an interest in the birds of Ireland."

The volume opens with lists of the Irish lights, their situation and powers, and with copies of the schedules and forms used. We then find a table "showing for several species, both in spring and autumn, the dates of arrival and departure, . . . whether long-winged or short-winged birds come first, the dates on which the earliest and latest specimens have been killed, and the northernmost and southernmost light-stations from which examples of each species have been forwarded."

The book proper consists of *1—285* pp. of analyses of reports, 1—619 pp. of detailed reports, followed by tables of measurements of wings, and an index. It is of interest mainly to the ornithologist, but it contains much that can be "understanded" and may even be found fascinating by the ordinary reader. Its very casual perusal is beneficial as an example of guarded statement and conscientious avoidance of hastening to generalities.

The "specimens" of course kill themselves, flying at night and in thick weather against the glass of the lighthouses. At times, in the migration season, the outside galleries are piled thick with a mass of feathered bodies. The power of flight of some birds is shown to be extraordinary, 7-16 inch outside plate-glass of lights occasionally being smashed through by such heavy species as ducks, even the keel of the breast-bone being flattened at the same time. The longer-winged examples arrived first in spring.

"The close connection between lunar darkness and the number of birds killed striking" is demonstrated. "It does not imply that there is less migration during moonlight, but it proves that the birds avoid the lanterns at that time." "The number of birds killed striking in the autumn considerably exceeds the deaths from a similar cause in spring. This may be due either to the longer autumnal nights, or to the greater number of birds in the autumnal rushes, or to the fact that many of them are young and inexperienced, or, what is most probable, to a combination of all three causes." "Neither the wings nor the statistics afford any sufficient clue to enable one to determine positively in any given species whether the young birds precede the old ones or not."

As to why so many birds, of apparently feeble flight, should select the night-time for travelling, "it is worth while considering whether these voyagers do not thereby greatly diminish one of the chief perils of migration, namely, destruction by gulls at sea, and near shore by hawks of various species." The height at which birds fly is an interesting problem. Fixed lights are more fatal than revolving, and white light than red. "One way of accounting for the comparative scarcity of seaward movements is to assume that departing birds ascend to a great height, and so escape observation, and that they descend gradually when approaching land"; also, "arriving birds are more likely to strike than those departing, because, among other reasons, many lights are partially obscured at the landward side." "It is the force and not the direction of the wind which hastens or delays the departure of birds." The author's consideration of the migration routes is interesting. Apart from the scientific data afforded by Mr. Barrington's analysis of the observations, he has considerably enlarged the heretofore known number of feathered visitors to Ireland. And Irish self-respect cannot but be raised by the steady, intelligent observant powers shown through so many years by his lieutenants, the Irish lightkeepers.

The American Negro. By William Hannibal Thomas. The Macmillan Co. 1901.

The author of this book, himself one of the proscribed race, informs us that he doubts if any white person lives who has an adequate comprehension of negro characteristics. However this may be, we doubt if any such comprehension will be obtained from a perusal of the present disquisition. It is largely a railing accusation, frequently coarse, and generally undiscriminating. Mr. Thomas, it is true, begins by warning us that the admitted degradation of the race is not characteristic of all persons of negroid ancestry. There is, he says, a saving remnant of good men and true women. But he presently forgets his caution, and daubs his canvas with the blackest colors. The negro, in his opinion, "not only lacks a fair degree of intuitive knowledge, but so dense is his understanding that he blindly follows weird fantasies and hideous phantoms"; he appears incapable of understanding the difference between evidence and assertion, proof and surmise. The negro intelligence is both superficial and delusive. The chief mental anxiety of the freedman is for the immediate gratification of his physical senses. The highest aspiration of negro ambition is, not to acquire the essential spirit of knowledge, but to imitate mechanically what he only succeeds in caricaturing. The educated class "rarely seeks for truth in statement, but rather for rhetorical flourish, skill in contradiction, and word-juggling, in order to confuse, bewilder, and impose upon their hearers, and to make those among the less informed believe them to be wise and all-knowing." "The negro life is a conglomeration of specious expedients, evolved from high-sounding precepts that have existence and source in the pretensions of arrant hypocrisy."

Negro religion, Mr. Thomas continues, is worthless as a factor in race regeneration: "The great majority of the professedly religious negroes are visibly seamed and seared with carnal vices." "Falsehood, hypocrisy, pilfering, and drunkenness are but minor vibrations in an ascending gamut of saintly turpitude." A large majority of the negro ministry is conspicuous for licentious indulgence with church members. The chief and overpowering element in the negro make-up is an imperious sexual impulse, to which both sexes yield unquestioned obedience. Marriage is no bar to illicit indulgence. It is almost impossible to find a chaste negro over fifteen years of age. These charges, and others as sweeping, are sustained by specific illustrations which are

not suitable for quotation, and the negro schools are described as little better than the negro homes.

To a certain extent the sweeping character of these accusations is attributable to the fatal fluency of expression which sometimes goes with imperfect education. To apply the author's generalizations to his own case:

"When the negro acquires the terminology of things, he vainly imagines himself endowed with a knowledge of the subject-matter represented thereby. . . . And his mental environment is not only complicated by the fact that in his quest for knowledge he never gets beyond unverified theoretical assertion and memorized verbal learning, but also because the opinions he asserts are echoings of second-hand utterances. . . . He talks too fast and too recklessly to afford time for pause or opportunity to think; hence his indiscriminate use of words, and the frequently disagreeable, and sometimes disastrous, consequences that ensue from his ill-timed sentences and falsely gauged phrases."

In short, the author profusely employs long and technical words with little notion of their meaning, because his ear is pleased, or he believes his readers will be impressed, with sounding periods. He thus exaggerates unintentionally; but he also exaggerates recklessly and even wilfully. Fortunately, we are not without evidence, furnished by trustworthy negro witnesses, that the condition of the race is very different from what it is here represented to be. The vices described by Mr. Thomas are known to exist, and in a discouraging and even appalling degree; but a wise man will not frame an indictment of a whole people.

Paradoxically enough, the aspersive matter in this book is what gives it such value as it has. The practical suggestions for reform are puerile in the extreme, and show that the author is incompetent to give advice. To the question, What can be done to ameliorate the condition of the negroes? he replies: "We have but one solution to offer, and that is an amenable family supervision of such a character as will impart to its old and young useful knowledge of immediate needs, and induce one and all to strive for sincere social betterment. As we see this question, the one supreme need of negro family life is regenerated fathers and mothers, and wholesome living." This is sufficiently absurd; but it is surpassed by the grave application to our negro problem of the current twaddle about the duty of the whites to inferior races. When such talk began to be heard, its reaction on this problem was dreaded; and this book shows that the apprehension was justified. The author announces that, "as the freedman is not amenable to verbal suasion," it is our duty to back up commands for right-doing with force. "The one fundamental remedy is the eradication, root and branch, of negro ideals, characteristics, and other inherited idiosyncrasies." The negro has neither the intellect nor will to institute self-redemptive measures. Force must be applied, "of such inexorable and all-pervading efficiency as to implant in them ethical and mental vigor." Therefore, "the exponents and custodians of our civilization have a right to say to them: 'You evince neither capacity for rational self-government, nor intelligent conformity to our standards of civic social polity.'" Hence we have a "God-ordained right to insist that all who are within the limits of our custody shall accept and conform to the standards which we have set up, and if they fail therein, we will exercise the right to force them into submission or extermination." Such language may pass in a President's message concerning the Philippines; but when the doctrine is applied to the treatment of our negro fellow-citizens, it should startle those who have given it thoughtless approval.

The Inhabitants of the Philippines. By Frederic H. Sawyer. Scribners.

Mr. Sawyer is obviously more accustomed to the theodolite than to the pen, yet he has made an interesting and useful book. His residence in the Philippines for fourteen years has been reinforced to good advantage by study of the best authorities, Spanish and German, as well as English; so that the record of his personal experience and observation is supplemented by much valuable statistical and historical matter. His chief motive for writing is, he avows, to speak a good word for the native, whom he well knows and partly admires, and whom he is certain that most foreign critics have slandered. As compared with American writers on the Philippines, it may be said that Mr. Sawyer thinks better of the Filipinos, but less favorably of the prospects of their commercial exploitation. Many even of our official forecasts of the wealth to be got out of the archipelago he dismisses as "fairy-stories." To his mind, we shall be doing exceedingly well if we double the foreign commerce of the Philippines in twenty years. Our beginnings of rule there he thinks horribly inept, but is apparently persuaded that we are to stay and blunder into something better.

As we have intimated, Mr. Sawyer's style is somewhat staccato and rambling, but he has packed real information into his volume. The resources and possibilities of the islands he discusses as a cool-headed engineer. His chapters on the religious orders tend to make them out a natural and even necessary growth, a real aid in the civilization of the past; but none the less his verdict is that now they "must go." He does not add, what Judge Taft has made uncomfortably clear, that we must first pay them to go. Mr. Sawyer devotes an adequate number of pages to Philippine manufactures, agriculture, and commerce; social life in Manila has a chapter to itself, as also does "Sport"; the various islands are taken up in turn, with races, customs, religions, etc. He furnishes maps and tables (chronological, linguistic, commercial, and other), and has adorned his book with more than forty full-page illustrations after photographs. All told, a worthy and timely work.

REIGHARD AND JENNINGS'S

ANATOMY OF THE CAT.

By Prof. JACOB E. REIGHARD and HERBERT S. JENNINGS, both of the University of Michigan. With 173 illustrations. xx+498 pp. 8vo, $4.00 *net*.

The authors have aimed to make this a clear, correct, and not too voluminous book, for the practical study of mammalian anatomy, such as has long been a desideratum. It is based on a work prepared nine years ago by Professor Reighard, which has since been in use, in typewritten form in the University of Michigan. It has also been used at the Universities of Illinois, Nebraska, and West Virginia, and at Dartmouth College. It now appears in enlarged form, illustrated by numerous original figures and with an appendix giving methods of work and detailed directions for the dissection and study of the different systems of organs.

READY TO-DAY

Our European Neighbours.

Edited by WILLIAM HARBUTT DAWSON. A series of books descriptive of the Home and Social Life of Continental Peoples, by Authors whose long residence on the Continent enables them to write with fulness of knowledge and with impartiality. The books are not statistical, political, or controversial, but describe such phases of life as are peculiar to each country. 12mo. Illustrated. Each, 1.20 *net*.

1. **French Life in Town and Country.** By HANNAH LYNCH.

To be followed by:

German Life in Town and Country. By W. H. DAWSON, author of "Germany and the Germans," etc. *Ready shortly.*

Dutch Life in Town and Country. By a Resident at The Hague.

Russian Life in Town and Country. By FRANCIS H. E. PALMER, sometime Secretary to H. H. Prince Droutskop-Loubetsky (Equerry to H. M. the Emperor of Russia).

St. Louis (Louis IX. of France)

The most Christian King. By FREDERICK PERRY, M.A., Fellow of All Souls' College, Oxford. No. 31 in the "Heroes of the Nations." Cloth, $1.50; ½ leather, $1.75.

St. Louis is unquestionably entitled to a place in the "Heroes of the Nations" series. His saintly character and sterling qualities drew from Voltaire the following glowing tribute: "Louis was in all respects a model for men. His piety, which was that of an anchorite, did not deprive him of royal virtues. He made a profound policy agree and concur with exact justice."

Chapters on the Theory and History of Banking.

By CHARLES F. DUNBAR, Late Professor of Political Economy in Harvard University. Second Edition, Enlarged. Edited by O. M. W. Sprague, Ph.D., Instructor in Economics in Harvard University. 12mo, $1.25.

"Prof. Dunbar's exposition is eminently clear and satisfactory, and gives a better idea of banking operations than can be got from any other treatise we have met with."—*N. Y. Critic.*

"It is admirably prepared for clearing a reader's mind of all false notions concerning the first principles of banking as carried on by the civilized world. On this account there are few people so skilled in banking matters that they might not read this book with profit. The mysteries of discount, deposit and issue, banking operations and accounts, the check system, bank notes, and reserves, etc., are illuminated."—*Public Opinion.*

An Account of the Gypsies of Spain.

By GEORGE BORROW. Uniform with "The Bible in Spain," "Lavengro," etc. *A New Edition.* 12mo. Illustrated. $2.00.

G P. Putnam's Sons,
New York and London.

The Most Charming Love Story of the Year
SEVENTIETH THOUSAND

The Cardinal's Snuff-Box

By HENRY HARLAND, author of "Comedies and Errors," "Grey Roses," etc.

Crown 8vo - Cloth, $1.50

The North American—"This charming love story."
New York Tribune—"So captivating, so good, that we want it to be perfect. . . . It is a book to enjoy and to praise."
Boston Herald—"One of the most refreshing love stories of modern fiction."

JOHN LANE, 251 5th Ave., New York

AMELIA E. BARR says:
"LORDS OF THE NORTH is a distinct mental gain. It has taken me into an hitherto unknown country, and among men who are as veritable heroes as any 'nobility of the Sword,' and yet heroes of whom the world knows so little. It is a fresh, pure, breezy book, full of incident, and incomparably more deserving of a great circulation than some of the novels which have lately achieved it. Its literary quality is excellent, and the intense humanity of the story gives it a distinctive quality."
FOR SALE EVERYWHERE.

On Friday, March 15, we shall publish:

SOME ILL-USED WORDS

By ALFRED AYRES. One vol., 16mo. Cloth, $1.00.

Mr. Alfred Ayres in his "Orthoëpist," "Verbalist" and "Mentor" has hurled his critical spear at many ill-favored errors of speech. He again comes to the defense of his mother tongue and corrects some half dozen blunders made by well nigh every one.

CHINA

Travels and Investigations in the "Middle Kingdom"—A study of its Civilization and Possibilities. Together with an Account of the Boxer War, the Relief of the Legations, and the Re-establishment of Peace. By General JAMES HARRISON WILSON, LL.D.

Third edition, revised throughout, enlarged, and reset. 12mo, cloth, $1.75.

General Wilson is one of the greatest American authorities on military affairs. He has twice visited China; once fifteen years ago in a private capacity; in 1900 as General of the American forces. Doubly important, therefore, is his great work which has been already taken as a standard by the United States Government.

BETSY ROSS

A Romance of the Flag. By C. C. HOTCHKISS. One vol., 12mo. Cloth, $1.50.

The Stars and Stripes were first put together by Betsy Ross in Philadelphia.

The picturesque figures of the time, sea rangers and Quakers, redcoats and Continental soldiers, even Washington himself help develop a strange and thrilling story by the author of "In Defiance of the King."

We have in preparation for immediate publication:

Pleasures of the Telescope

A Descriptive Guide for Amateur Astronomers and all Lovers of the Stars. By GARRETT P. SERVISS. Illustrated with charts of the heavens, and with drawings of the planets and charts of the moon. 8vo, cloth, $1.50.

The sudden flaming up of a star from the tenth magnitude to the first—an event of rare occurrence—has turned the eyes of millions to the skies of night. Most timely is the new book by the author of "*Astronomy with an Opera Glass*," which was so remarkably successful.

War's Brighter Side

By RUDYARD KIPLING, JULIAN RALPH, LORD STANLEY, H. H. GWYNNE, PERCIVAL LANDON, Etc. One vol. 8vo. Cloth, illustrated, $2.00. While the British army was at Bloemfontein, LORD ROBERTS engaged RUDYARD KIPLING and several other brilliant journalists to edit a paper called *The Friend*. Selections from this have been edited by Mr. Julian Ralph.

A Landmark History of New York

By ALBERT ULMANN. With many illustrations. 12mo. Cloth, $1.50. The sweep of commerce is rapidly destroying the old landmarks of New York. Mr. Ulmann conducts a party of young people to places about the city interesting for historic events, and describes them most entertainingly.

Dodd, Mead & Co., Publishers, New York

NEW BOOKS OF PECULIAR INTEREST TO MEN AND WOMEN WHO THINK

A BOOK OF INTIMATE PERSONAL CHARM.

My Autobiography. By Max Müller.

A work of the deepest interest in which the famous Oxford scholar describes his career up to the time when he became a professor at the English university. The period covered in the volume was in many respects the most interesting in the author's life, the work being complementary, in a sense, to the two volumes of recollections which Professor Max Müller published a few years ago under the title of "Auld Lang Syne." Many men of note figure in the pages; and the thought is both stimulating and entertaining. (*With portraits, 8vo, $2.00.*)

Published Last Saturday, Mr. Sonnichsen's Filipino Book has been reviewed at length by the representative press, and has already affected public opinion.

Ten Months a Captive Among Filipinos

By ALBERT SONNICHSEN. (*With Portrait. 8vo, $2.00.*)

From the N. Y. Evening Post.

"The author, an army quartermaster, was captured early in 1899 and traversed nearly the whole of Northern Luzon during his long captivity. He had the opportunity of observing the native army, of taking some part in native society, and finally even of serving as school-master to native children. . . . . The calm and unpretentious tone of the narrative carries conviction."

From the N. Y. Herald.

"Quite the most interesting, thrilling, and informing of all books that have been prompted by the Philippine episode in our history."

From the N. Y. Tribune.

"To be read not only as a spirited recital of personal adventures, but for the light it throws on the inhabitants of the Philippines."

A BOOK OF CHARMING RECOLLECTIONS OF THE STAGE.

Mrs. Gilbert's Reminiscences

With many portraits and other illustrations from rare sources. (*12mo, $1.50 net.*)

No woman familiar to and admired by the present generation has had so long and so interesting a career on the American stage as Mrs. Anne Hartley Gilbert, whom of late theatre-goers have chiefly identified with Mr. Daly's company. The recollections of her busy life and the leaders of the stage with whom she has been brought into contact are among the most entertaining of their kind.

TWO NOVELS THAT MAKE A STUDY OF MAN.

Henry James' "Sacred Fount"

12mo, $1.50.

"Where he thrilled us in 'The Turn of the Screw' with a convincing sense of an unreal presence, he now clothes his vampires in evening dress; he puts them, with their victims, through the decorous paces suited to an English drawing-room, and where he might have made them shapes of dread he leaves them figures of fun."—Royal Cortissoz, in *The Tribune.*

Paul Bourget's "Disciple"

12mo, $1.50.

The Disciple is M. Bourget's most characteristic work and the one in which he has best demonstrated his title to be called the most eminent of psychological novelists living. It is a deeply moving and dramatic study of the subtle demoralization involved in the philosophy of utter scepticism.

Under Tops'ls and Tents. By C. T. Brady.

A volume in which the author describes his experience in the Army and Navy, with stories based upon historical incidents of heroism and danger. Humorous, pathetic, dramatic, and occasionally even tragic, these experiences cover a wide range of life, from the skylarking of the cadets at Annapolis to some heartrending scenes in the war with Spain, in which Mr. Brady served as chaplain to the First Pennsylvania Volunteers. (*Illustrated, 12mo, $1.50.*)

CHARLES SCRIBNER'S SONS, Publishers, New York.

NEW FICTION OF THE BEST SORT

MISTRESS NELL

George C. Hazelton

Reversing the usual process, Mr. Hazelton, the dramatist, has turned novelist, and out of the historical materials which he gathered for his very popular play has constructed a romantic comedy of the same name. The story of Mistress Nell and the Merry Monarch is told with such spirit and wit as to hold the attention from the outset. *Frontispiece portrait of Nell Gwyn in photogravure.* 12mo, $1.50.

CRUCIAL INSTANCES

Edith Wharton

Since the appearance of "The Greater Inclination," a new story by Mrs. Wharton has been an event among readers of discriminating taste. "The Touchstone," which followed "The Greater Inclination," was equally remarkable for the power of the single situation it portrayed. "Crucial Instances" surpasses in range and variety Mrs. Wharton's former work, each story depicting a crisis of extraordinary intensity in the lite of one or more of the characters. 12mo, $1.50.

THE WAYS OF THE SERVICE

Illustrated by Howard Chandler Christy

Frederick Palmer

As special correspondent for American papers Mr. Palmer has seen service in four campaigns; the Greek war of 1896, the war with Spain, last summer's Pekin campaign, and our campaign in the Philippines, so he has a first-hand knowledge of the ways of the service. The stories in this volume deal with army life in the Philippines, and depict in a fascinating way the part American women are playing on the picturesque background of the Far East. 12mo, $1.50.

THE SHADOW OF A MAN

E. W. Hornung

Mr. Hornung, who is an Australian, began his literary career with a series of stories of life in the Bush, of such power and freshness, that he became known as the "Bret Harte of Australia." In addition to his Australian stories, he has achieved two remarkable successes in "The Amateur Cracksman," the counterpart of Sherlock Holmes, and in "Peccavi," the story of a minister's downfall and of his expiation of his sin. In "The Shadow of a Man" Mr. Hornung returns to Australian scenes, and has written a stirring story of love and adventure. 12mo, $1.25.

WITHOUT A WARRANT

Hildegard Brooks

Especial interest attaches to "Without a Warrant" as the first literary work of an entirely unknown writer, and yet a novel of most unusual interest and rare artistic power. A plot of ingenuity and mystery leads up to a dénouement as unconventional as it is true to human nature and love, and reveals the hand of a born story-teller. The time is the present, and the scene the South. 12mo, $1.50.

THE INLANDER

Harrison Robertson

"How the Derby was Won," a short story in Scribner's, first brought the author of "The Inlander" into literary prominence, although he had long been known in journalistic circles as the associate editor and later managing editor of the Louisville Courier-Journal. "How the Derby was Won" was followed by "If I were a Man" and "Red Blood and Blue," two novels which have placed their author in the first rank of Southern writers. "The Inlander" is another striking story of the new South. 12mo, $1.50.

THE DELECTABLE MOUNTAINS

Arthur Colton

Like so many other young writers, Mr. Colton's first literary work appeared in college periodicals. Born in Washington, Conn., he was graduated from Yale, where for two years after graduation he was instructor in English Literature. The present stories, written from the point of view of an imaginative boyhood, make really "Delectable Mountains" out of the Connecticut hills which have suggested the title. 12mo, $1.50.

GOD'S PUPPETS

Imogen Clark

Miss Clark, who is a New Yorker, made her first venture in literature as the author of the very popular juvenile "Will Shakespeare's Little Lad." Her new novel takes its title from a line in "Pippa Passes"—"God's puppets, best and worse, are we," and is a vivid picture of life and character in New York City in the middle of the eighteenth century. 12mo, $1.50.

THE WHITE COTTAGE.

Author of "Life is Life," "On Trial."

"Zack."

"The White Cottage" is the best example Zack has yet given of her peculiar power of giving simply and starkly the elements of passion and tragedy. Her success in this, without apparent device and subtlety, has been the mark of this author from her first remarkable book, "Life is Life"; but in "The White Cottage" she has a field for her power much broader than in any of those early sketches.

ON PETER'S ISLAND.

Arthur Roper

On Peter's Island is a stirring Russian story by a born story-teller. It is incidentally an animated picture of the varied life in St. Petersburg during the '80s, and the characters that figure in it, notably two Americans and a Polish adventurer, are typical and boldly drawn. But the main interest is the thread of love and adventure that follows the narrative through exciting scenes of secret political conspiracy and social intrigue, that are realistic as well as romantic because they are Russian.

THESE ARE SUCCEEDING BECAUSE THEY DESERVE SUCCESS

CRITTENDEN
By John Fox, Jr.
11th 1,000. 12mo, $1.25.

THE HOUSE OF EGREMONT
By Molly Elliot Seawell.
13th 1,000. Ill'd. 12mo, $1.50.

CHARLES SCRIBNER'S SONS, Publishers, New York

From Harper & Brothers' Spring List

AMERICAN ENGINEERING COMPETITION

A series of papers which appeared originally in the London Times. They are the work of an English engineer and show with what success we are competing with England along the very lines in which she has long been preëminent. Their publication aroused the greatest interest among British manufacturers. $1.00.

NAPOLEON—THE LAST PHASE

By LORD ROSEBERY.

The most notable biographical work of recent years. It is no less notable as an example of a vigorous and forceful literary style than as a character study. Crown 8vo, $3.00.

LITERARY FRIENDS AND ACQUAINTANCE

By W. D. HOWELLS.

A volume of literary recollections covering the past thirty-five years. A book which should be in every American library. Illustrated. Crown 8vo, $2.50.

THE LOVE LETTERS OF VICTOR HUGO

These are the impassioned love letters written by the great Frenchman to his fiancée, Mlle. Adèle Foucher, from 1820 to 1822. Eloquence and the most impulsive affection combine to make these letters models of emotional literary beauty. The difficulties which beset the ardent young Victor and the lovely Adèle in the obstructions made for them by their parents and otherwise, their persistent devotion, and their eventual marriage, read like a spontaneously beautiful romance. The letters are published for the first time in book form. Illustrated. Crown 8vo, $3.00.

LIFE OF EMPEROR FREDERICK

By MARGARETHA VON POSCHINGER.

An intimate and sympathetic biography of the much-loved "Unser Fritz." It contains much heretofore unpublished correspondence. With Portrait, $2.50.

A NEW WAY AROUND AN OLD WORLD

By REV. FRANCIS E. CLARK,

President of the United Society of Christian Endeavor.

An account of the trip made by the first party of Americans to cross Siberia by the new Trans-Siberian Railroad. Illustrated with Photographs, $1.50.

THE LOVE-LETTERS OF BISMARCK

These letters are written to his fiancée, afterwards his wife, Fräulein von Puttkamer. They cover the years between 1846 and 1889. The letters are especially valuable, not only from their emotional nature, but because they show the familiar, personal side of the famous "man of iron." They are written sometimes while he is listening to a debate in the Reichstag, during diplomatic expeditions in the company of Emperor William, and at various odd moments. The Chancellor's interest in family matters—the children, the servants, the household—and his practical grasp of all such situations, make this collection of letters an extraordinary exposition of the domestic side of Bismarck. Illustrated from Rare Portraits. Crown 8vo, $3.00.

THE STORY OF 19TH CENTURY SCIENCE

By HENRY SMITH WILLIAMS, M.D.

An eminently readable résumé of the scientific progress of the century just completed, together with much interesting matter concerning the men who have accomplished the great step in this progress. Illustrated. Crown 8vo, $2.50.

THE RIDDLE OF THE UNIVERSE

By ERNST HAECKEL.

Professor Haeckel's remarkable book has already attracted widespread attention. His position as a scientist, together with the general interest in the subjects of which the volume treats, make the work an uncommonly important one. $1.50.

THE PROGRESS OF THE CENTURY

A series of articles by the world's greatest specialists, reprinted from the New York Sun. They deal with literature, science, medicine, surgery, engineering, etc., and together form a brilliant record of what has been accomplished in the past one hundred years. Crown 8vo, $2.50.

Franklin Square **HARPER & BROTHERS** New York City

NEW BOOKS *NEW BOOKS*

NAPOLEON

With a sketch of Josephine. By IDA M. TARBELL. *Richly illustrated. Cloth, 8vo. $2.50.*

To her "Short Life of Napoleon" Miss Tarbell now joins a sketch of Josephine. The elaborate illustrations which distinguished the former publication of the Life of Napoleon will be preserved in the present revised edition.

"I desire to congratulate you," writes John C. Ropes, "on having furnished the public with such a complete and impartial, as well as interesting and attractive, Life of Napoleon. The pictures are also most interesting; few of them have ever before been put within reach of the general reader, at least not in such a fine setting."

A SACK OF SHAKINGS

By FRANK T. BULLEN. *Cloth, 12mo. $1.50.*

Life aboard ship seen from the under side. The "Shakings" are bits of waste accumulated during a voyage and are the perquisites of the first mate. Mr. Bullen was an A.B. (able bodied) seaman and knows whereof he writes, and these stories cannot fail to illuminate and entertain.

THE CRUISE OF THE PETREL

By T. JENKINS HAINS. *Cloth, 12mo. $1.25.*

A novel of sea life during the war of 1812 when privateering was common and the "swift shuttles of an Empire's loom" had remarkable experiences around Cape Horn and in the southern Pacific. The "Petrel" was one of the sailing craft of the day and the story relates the experiences of a lad who shipped upon it.

HAMLET

MR. EDWARD H. SOTHERN'S PROMPT-BOOK.

Flexible Board Cover. Narrow Octavo. 50 Cents, net.

Printed on toned deckle-edge paper with sixteen half-tone illustrations, eight of which show Mr. Sothern and Miss Harned as Hamlet and Ophelia, the rest exhibiting whole scenes in the play. The cover design is the most elaborate ever attempted on a book of this character, being a representation in six colors, on imitation Japan vellum, of the burial of Ophelia.

THE RAILROAD

Cloth, 16mo. 50 cents.

A beautifully printed and bound volume of railroad stories selected from the best that have appeared in McClure's Magazine.

ENCYCLOPEDIA OF ETIQUETTE

What To Do—What To Say—What To Write—What To Wear

Compiled by EMILY HOLT. *Illustrated. 12mo. $2.00.*

A Book of Manners for every day use. Not only is every perplexing point of etiquette brought up and answered, but a dozen or more valuable departments hitherto ignored are introduced and developed.

MONSIEUR BEAUCAIRE IS NOW IN ITS 51ST THOUSAND.

McCLURE, PHILLIPS & CO., Publishers

141-155 East 25th St, New York

THE MACMILLAN COMPANY'S NEW BOOKS

ELEMENTS OF THE THEORY AND PRACTICE OF COOKERY

A TEXT-BOOK OF HOUSEHOLD SCIENCE FOR USE IN SCHOOLS

By MARY E. WILLIAMS, Supervisor of Cookery in the Public Schools of the Boroughs of Manhattan and the Bronx, New York City, and KATHARINE R. FISHER, formerly Teacher of Cookery in these Schools. Illustrated. Cloth, **$1.00** *net.*

THE NEW NOVELS

THE MAKING OF CHRISTOPHER FERRINGHAM

By BEULAH MARIE DIX, author of "Hugh Gwyeth," "Soldier Rigdale," etc. Cloth, 12mo, **$1.50**

Young Christopher, bred in the Cavalier camp, is sent out to the new colony of Massachusetts to be made over according to Puritan pattern, and this is the story of his adventures thereupon. A good love story is involved, and an able picture of the tyranny of Puritanism even in the chosen land of freedom.

The Life and Death of

RICHARD YEA-AND-NAY

By MAURICE HEWLETT, author of "The Forest Lovers," etc., etc. Cloth, **$1.50**

"A work of fiction rising far, far above all the novels of the year—of a good many years."—*The Bookman.*

A Love Story of Old Madrid

By F. Marion Crawford, author of "Via Crucis," "Saracinesca," etc. Cloth, **$1.50**

"Bold and daring . . . dramatic, picturesque, and intensely interesting." — H. W. Mabie.

GWENDOLEN OVERTON'S

THE HERITAGE OF UNREST

Cloth, 12mo, **$1.50**

"Should take Its Place with the Best of the Year's Production in Novels."
—*Army and Navy Register.*

"Entertainingly written, an extremely vivid picture. . . . Unconventional; and . . . refreshing."—*Boston Herald.*

"The Work Will Be Extremely Popular, and It Deserves to Be."
—*Baltimore Sun.*

THE MACMILLAN COMPANY, 66 Fifth Ave., New York

The Nation.

NEW YORK, THURSDAY, MARCH 14, 1901.

The Week.

Senator Lodge takes the rejection of the Hay-Pauncefote treaty very much to heart. We should think he would. He was its chief disfigurer, and he it was who explained on December 21 how certain it was that Great Britain would accept the Senate amendments. These were all "fair, reasonable, friendly, and in no sense offensive"; the English Ministers were men whose "ability, experience, and reputation are known to all the world," and there was no doubt whatever that they would "comprehend the purpose of the Senate amendments." But now that they have shown their comprehension, and seen through Lodge's little game, he utters a loud wail. He very much doubts if "the country will endure this indefinitely." Endure what? Why, Great Britain's persistent attempts to "thwart" us. From the arch-thwarter this comes with fine grace. If Lodge had not been frightened by the Irish outcry, and set to work slyly to mar the treaty, it would have been accepted by both countries as it stood, and solved every difficulty. Lodge condescendingly explained at the time how it was necessary for a Senator of real experience in foreign affairs to step in to make good the deficiencies of an amateur like Mr. Hay. The Secretary meant well, but didn't know how, and Lodge would show him. With his own work now thrown back in his teeth, we should think that he would at least have the decency to keep still.

While Washington dispatches take the usual roseate Administration view of affairs in Cuba, the news direct from Havana puts a more sober face upon the situation. It is evident that the mass of the Cubans feel that they have been not only tricked, but insulted. First asked politely by Gen. Wood what, in their opinion, the relations between the island and the United States ought to be, the delegates were bluntly told, before they had had time to formulate their own notions, what those relations must be. No longer ago than February 21, Gen. Wood, in his letter to the Convention outlining the ideas of the President, expressly guarded against the supposition that anything he said would be "binding" upon the Government of the United States. What he put forward was apparently only a tentative basis for negotiations. But within a week he had to deliver the ultimatum of Congress, which cannot be modified even in the crossing of a letter. Small wonder that the Cubans feel bitter. It is a bitter deception to which they are just fully awaking. They see our boasted humanity taking on the guise of greed, and our solemn promises about to be violated on the sole ground that our interest is against keeping our pledge, and no one is strong enough to compel us to. Placards posted in Havana, signed by George Washington, and warning Americans against the breaking of promises, would be a laughable sign of Cuban wit if they were not so melancholy a reminder of the national humiliation to which Washington's successor has brought us.

No American can read the full text of the report made to the Constitutional Convention by its Committee on "Relations" without admitting that it is as admirable in spirit as it is correct in tone. The deepest gratitude for what the United States has done in behalf of Cuba, is expressed in the same breath with a pure love of country and unconcealed pain at the discovery that the President of the United States is bent on exacting from Cuba conditions fatal to her independence. "A policy of perfidy" is what the Havana *Patria*, owned and edited by a member of the Convention, and the organ of the Cuban Republican party, calls Mr. McKinley's new Cuban policy—or, rather, his old policy at last uncovered. We are content, for to-day, to let the victims of his latest attempt at "forcible annexation" turn against him his own declaration that such an act would be "criminal aggression."

We learn by way of Havana that the United States is very anxious to "avoid having in any way to coerce the Cubans." It seems that the Administration considers that its "moral prestige" would be seriously impaired if only a few hundred negroes raised a revolt in Cuba and had to be shot. We cannot understand this squeamishness. It looks to us like "sickly sentimentalism." A moral prestige that is not injured by swearing brave oaths and bravely breaking them, surely would not suffer from killing black men in Cuba as well as in the Philippines. Would not an outbreak in consequence of our broken promise be the desired conclusive proof that the Cubans cannot govern themselves? And the President's shrinking from the thought of "coercing" the Cubans is something beautiful to see. He has procured and signed an act of Congress which proposes to strip them of their dearest rights. To this, he says, they must consent. But that is not coercion. It is only a sweetly reasonable request. So is a highwayman's request for your purse, while he holds a loaded pistol to your head.

We do not know why the President falls back on a helpless *non possumus*, in his reply to the delegation of Porto Ricans who are here to protest against what they allege to be an ill-considered and oppressive tax-law. Mr. McKinley seems to be convinced of the truth of their representations, but says he cannot interfere. Why not? Section 31 of the act for the government of Porto Rico provides that "all laws enacted by the legislative assembly shall be reported to the Congress of the United States, which hereby reserves the power and authority, if deemed advisable, to annul the same." It is clear, then, that the President might promise the Porto Ricans that he would recommend to Congress the annulment of their burdensome revenue law. "Something is certainly wrong in Porto Rico," says one of the delegates plaintively. He points to the extensive emigration of the natives in search of work, a phenomenon never known under Spanish rule. But this is all a mistake. Nothing can be wrong. The American flag is over the island, which is being benevolently assimilated. The inhabitants should be the happiest in the world. If they are not, it only shows that there is no such thing as gratitude on this wicked planet.

We are glad to see that our Government's professions in the Chinese difficulty are promptly followed up by deeds. The best way to avoid more slaughtering and looting—"punitive expeditions" the wise them call—is to cut down the foreign forces in Chinese territory. This is what is being done with the American detachment, and we shall soon have only a legation guard in Pekin. We can afford to bear in silence the flings of the Germans. They say that we have a bad "stomach-ache" in the Philippines, and that we talk moderation in China only because we have no soldiers to spare for the work of burning Chinese villages. Let the others have what glory there may be in such exploits; we may feel a truer pride in contemplating the excellent results of Gen. Chaffee's policy of justice and conciliation. For our part, we see more reason for national congratulation in the successful administration of the section of Pekin under the American flag, in such a way as to win the favor and confidence of the natives, than we should in the bloodiest battle ever fought to victory.

To be elected to Congress and to live

on your salary while you are in Washington, is to be "a drone," according to our new political definition. It was given by Mr. Hull, Chairman of the House Committee on Military Affairs, when replying to the charge that he was interested in the Philippine Lumber Company. Of course he was. He gloried in it. He would prefer to leave Congress rather than be "a drone" who had nothing but his salary to live on. Even such a worker bee as Mr. Hull felt it necessary, however, to disclaim any connection of his company with the Government. It was a perfectly legitimate business, able to stand on its own feet without Government favor. Excellent; but on the last day of the session some strange letters referring to this Philippine Lumber Company were read in the Senate. They were written by Major Frank S. Bourns, who is general health officer of Manila. He is also the head of that purely native "Federal party" which has a heart beating so warmly—with such suspicious warmth —for the Americans. He is also agent of the Philippine Lumber Company. What other occupations he unites in his single person we do not know, but he evidently merits the high praise which Senator Beveridge bestowed upon him —"a good man." Bourns's letters, which Mr. Hull, of course, knew nothing about, were filled with talk about Government contracts for the Philippine Lumber Company. The "Government wants lumber badly," he writes; "we can depend upon a certain amount of aid from the Government"; "the engineer in charge . . . will use pine for the bridges, etc., in the Benguet region. If I am on the ground, therefore, *I should come in for a share of this.*" Bourns is evidently a "good man" and no "drone."

It seems only rational that a legislative body should have the power to limit debate, and that the majority should be able to bring a question to a vote. While few people mourn the defeat of the River and Harbor Bill through Senator Carter's resort to the practice by which one member may consume hours in what is not properly discussion at all, and even block the passage of a bill which the great majority of his fellows want to vote for, it appears little short of an outrage that such a result should be possible. At the same time it must be said that public sentiment is not now likely to support a *clôture* rule with any such heartiness as it did a few years ago. The House of Representatives has virtually ceased to be a deliberative body when propositions of such extraordinary importance as the Cuban and Philippine amendments to the Army Bill can be put through with only an hour's debate. There ought to be a chance for serious consideration and orderly discussion of public questions in one branch, and it would be a great misfortune if the Senate should ever imitate the practice which has grown up in the House of letting a small group of managers decide how long a debate shall be allowed on any issue which arises.

Mr. Cannon, whose past work as Chairman of the House Appropriations Committee has been really valuable to the public interests, does not seem to us to appear to advantage in the statement which he put out on Wednesday week. Mr. Cannon plainly took the tone of an apologist. He explained in detail that although the total appropriations of the Fifty-sixth Congress foot up the handsome amount of $1,440,062,545, still they fall short by $128,150,091 of the Congress which preceded it. This is perfectly true; but the real explanation of the difference is not even remotely suggested in Mr. Cannon's statement. To find that explanation, the puzzled citizen must turn back to Mr. Cannon's statement of March 11, 1899, when he was undertaking (very properly) to explain the heavy outlay of the Fifty-fifth Congress. Under the heading "War Appropriations, on account of or incident to the war with Spain," Mr. Cannon submitted a very carefully drawn-up table, which concluded with the following entry: "Grand total war appropriations made during the Fifty-fifth Congress, $482,562,083." We should say that a Congress which had managed to cut only $128,000,000 out of appropriations swelled to their total by so gigantic a special item of expenditure, was pretty gravely in need of an apologist.

Addicks has again succeeded in carrying out his threat that it should be Addicks or nobody when a Republican Legislature in Delaware was called upon to elect a United States Senator. The first time was in 1895, and the result was that one of the State's seats in the upper branch of Congress remained vacant for two years, and was then filled by the election of a Democrat for the remaining four years of the term. The next time was in 1899, and the result then was that the other seat was kept vacant for two years, when, except for Addicks, it would have been occupied by a Republican. The third time is the adjournment of the Legislature without choosing anybody for either the long or the short term, and the result will be that Delaware will have no representative in the Senate for the next two years. Seven Republican members of the Legislature withstood all temptations to go over to the rich and corrupt speculator who has so long tried to buy the seat, and they deserve national honor. Never before in our history has a State been in Delaware's predicament because its Legislature could not fill either of two vacant seats in the Federal Senate. The incident must strengthen the popular disposition to favor a change in the method of choosing Senators.

Montana's Senatorial deadlock was broken early on Friday morning. The session expired by Constitutional limitation at midnight, and when twelve o'clock came, no choice had been reached. But the old device of putting back the hands of the clock was employed, and then voting went on without reference to time until, after some hours, a bare majority was secured for one candidate. It will not surprise the country to learn that the new Senator is a "retired capitalist," for the office is not likely to go to a poor man in such a State as Montana, but it is encouraging to hear a good report of his character.

The report of the grand jury in the Anderson County (S. C.) cases of enforced labor fully sustains the charges made by the Anderson *Mail*, and pays that paper the compliment of saying that the agitation has already killed the system of illegal contracts in use in some places. On five plantations the jury found a most iniquitous state of affairs, the contract laborers being imprisoned when not actually at work, and often being cruelly whipped—one to the extent of a hundred lashes from a rawhide whip. Two cases of kidnapping were found where men were enslaved without any charges of misconduct having been made against them, and the plan of working negroes awaiting trial was found to have been a great success. That such a state of affairs could exist in one of the oldest communities in the United States seems hardly credible. A redeeming feature of the revelations is the spirit of the law officers thus far concerned. The grand jury has been as fearless as the presiding judge, Benet, who has again declared that the State courts will do their duty, and that Federal interference is unnecessary. "No politics, no party, no race issue," he says, are involved in this case. If the State can really rid itself of this infamy without outside pressure, it will have done much to restore its lost credit.

It being understood that the Virginia Constitutional Convention, which is to meet in Richmond in June, is to consider the question of having the school tax paid by whites applied to white schools only, President Dreher of Roanoke College has taken an early opportunity to come out against the plan. He finds it directly opposed to the fundamental American theory that the common schools are the foundation of the State, and sees no more reason why the negroes should be deprived of the assistance of the richer whites in obtaining their education than why for-

eigners in Northern cities should be discriminated against because they pay but a small part of the school taxes. President Dreher quotes, with approval, from a recent paper by President Dabney of the University of Tennessee. Comparing Massachusetts, Tennessee, and the United States as a whole, President Dabney said: "Education is as 14 in Massachusetts to 8.8 in the United States, to 6 in Tennessee. Production is as 13 in Massachusetts to 8.5 in the United States, to 5.8 in Tennessee. Twelve million dollars invested in superior education in Massachusetts yields four hundred millions a year." Dr. Dabney rightly believes that Tennessee must educate its black children as well as its white, "not poorly, but thoroughly," if Tennessee is to rival other States, and the same is true of every other Southern State. Such an action as that proposed in Virginia would be an inconceivably short-sighted and inexcusable step backward.

The Maryland House has passed Senator Gorman's Negro-Disfranchisement Bill, and now everything depends on the Senate. The scheme has never had the partial justification that similar restrictive legislation has had in Southern States where the negro population is a large majority of the total. In Maryland the negroes are a small minority, and the attempt to disfranchise them is an outrageous bit of partisanship. The terms of the bill are most objectionable. Instead of establishing frankly an educational qualification for the suffrage, the supervisors of elections are to be given the power to arrange the names of candidates on the ballot in confusing fashion, while aid is to be refused to illiterate voters at the polls. It will be seen, not only that the bill admits of unfair discrimination, but that the application of the system would be peculiarly irritating, and probably conducive to disorder at the polls.

It is clear that Governor Odell has everything to gain by sticking to his convictions against the State Constabulary Bill. Such a piece of legislation would be unwise politically, as well as from every other point of view. Even if it would give the machine a few offices to distribute, it is so objectionable to the larger cities that a Governor who approved it would forfeit the confidence, not only of the great body of independent voters, but of many of his own party as well. In New York city, for which the bill is chiefly intended, the feeling of opposition is very bitter among all classes of citizens. Tammany is strong enough now, but were it to enter the next municipal campaign as the avowed champion of home rule in a fight against the Republican State machine, it would be irresistible. It is true that the present condition of the municipal police force is unspeakably bad; but the present condition, with the responsibility for it fixed upon Tammany, is our chief hope of overthrowing Tammany. A force under control of the State Republican machine would in all probability be little, if any, better than the present; and it would be such a source of irritation to the people of the city that it would vastly strengthen the hold of Tammany. Moreover, the Court of Appeals has, for the second time within a fortnight, rendered a decision which shows that it is disposed to sustain the home-rule principle to its full extent. Six years ago "organized labor" induced the Legislature to pass a law that all stone used in State and municipal contracts should be dressed within the State. During these six years New York city has had to pay great sums in order to have stone brought in the rough from other States and dressed under far more expensive conditions here. The highest tribunal has now declared this statute void, for the same reason as the Prevailing Rate of Wages Law, which the court also annulled recently—that it put an unconstitutional restriction upon the freedom of action which a municipality should enjoy; as well as for the further reason that it is an attempt to regulate commerce between the States, which, under the Federal Constitution, is the prerogative of Congress.

Negotiations for a Boer surrender, more or less extensive, are clearly progressing in South Africa. When Buller was talking surrender to Botha a year ago, the parley was broken off on account of the harsh terms insisted upon by Lord Roberts, of course under instructions from London. Sir William Harcourt, by the way, has just exposed a characteristic misrepresentation by Mr. Chamberlain on this very subject. The Colonial Secretary was dwelling, in his speech in the Commons, on the extremely generous terms offered Botha. All the members of his force were to be "permitted to retire to their farms." Did that include the officers? Mr. Chamberlain was asked on the spot. "Certainly," he replied, "the officers." Now, will it be believed that Lord Roberts's telegram to Buller, telling him what terms he might offer—a telegram which Mr. Chamberlain must have had before him—specifically excepted the Boer officers? They were to "remain with you on parole until you receive instructions for their disposal." Sir William Harcourt makes the obvious comment on what he describes as the "truly admirable accuracy and ingenuity" of Mr. Chamberlain's version of the official correspondence:

> "The exception of the officers reduced the whole thing to a farce. How was it to be expected that these officers, through whom alone the terms could reach the men, would press them on their acceptance? How was it likely that men like the Boers would consent on such terms to abandon their chiefs? Such was the manner in which the war was prolonged."

It is significant that a relief of the English military strain in South Africa is instantly followed by rumors of a stiffer attitude towards Russia on the part of the British Foreign Office. "Our teeth are all in South Africa," said Lord Salisbury a year ago, when told that it was time for England to show her teeth to the Russians. The situation is unquestionably one in which a good deal of friction might easily develop. Russia is trying to make a separate agreement with China as respects Mantchuria; yet she is profuse in her assurances that the arrangement is only temporary, and that Mantchuria is ultimately to be "restored" to the Chinese Empire. But England and the United States object, it is said. They know what this "restoration" means. Egypt was to be "restored" in the same way, and so was Cuba. Neither has been or will be. What Great Britain apparently desires is something more than a verbal promise from Russia that she will not annex Mantchuria. Secretary Hay's position is that, whatever may be done in the end, the first thing is to arrange comprehensive terms of peace between China and the Powers, and that, in the meantime, no country should fish for itself in the troubled waters. That, also, was the purport of the Anglo-German agreement; and there is little reason to doubt that on some such basis the matter will be amicably adjusted. But that, in one way or another, Mantchuria is ultimately to become Russian, we presume that the most ardent Russophobe would not longer question. Its absorption is clearly in the line of Russia's contiguous expansion.

Mr. Brodrick, the English Secretary of State for War, announced on Friday in the House of Commons the Government's plan for the increase of the army. In brief, the scheme calls for 115,000 more regulars, 50,000 more militia, 25,000 additional yeomanry, and a volunteer increase of some 40,000 men, and provides for the modernization of the various branches of the service in accordance with the lessons of South Africa. Particularly striking are the determination to reform the training of officers, and the adoption of the rotation idea in the commands of army corps. Along these lines there is the most to do. Mr. Brodrick's proposal is not revolutionary, in that it proposes no new branch of the army, and does not disturb the present establishment. It is a recognition of the fact that England's Imperialistic policy demands an Imperial army, and as such it gives the final coup to Lord Salisbury's childish rifle-club plan of a year and a half ago. But Mr. Brodrick's critics have already found the weak spots. Can the additional men be obtained without balloting for the militia or conscription? Upon the answer to this question depends the success of this attempt to increase England's military burdens.

ARE WE TO HAVE AN EMPEROR?

A phrase torn from its context and sent reverberating round the whispering gallery of the press, is getting to be our ordinary way of misquoting a public speaker, even in the very act of repeating only words actually used by him. It is a subtle temptation beseting even the most conscientious reporter and the most careful newspaper. President Hadley is the latest victim of this journalistic habit. In his Lenten address in the Old South Church in Boston on Sunday night, he said something about our having an Emperor at Washington in twenty-five years unless we find some way of regulating Trusts. What else he said will not matter to the run of newspaper-readers. Any one can see how the thing will go flying over the country. "Hadley Predicts an Emperor!" "The Trusts Aiming at an Empire!" Every man can write his own headlines. And it will be impossible for the truth to catch up with the misrepresentation. The President of Yale will hereafter be quoted in a thousand newspapers and in endless speeches as warning his fellow-countrymen that they are headed straight towards an Empire. Nothing he can do now will prevent that.

There may be, however, yet seven thousand who have not bowed the knee to the Baal of sensationalism, and who will take the trouble to inquire exactly what it was President Hadley said and intended. Discrimination is the beginning of wisdom, and the first discrimination to be made in this case is that between the economist and the preacher. President Hadley was in the pulpit, not in his lecture-room, not writing in the *Yale Review* or the *Journal of Economics*, when he used the language of which we shall doubtless hear so many distortions. He spoke as a preacher of righteousness. It was a moral warning and a moral appeal to which he gave utterance. This was eminently proper in a Lenten discourse. Anything else would have been out of place. There exist undoubtedly moral and religious and social sentiments and motives to which a preacher may appeal in restraint of greed, in rebuke of senseless luxury, in condemnation of power unjustly acquired and inhumanly used. In all this President Hadley was only repeating, in another form, his plea of a year ago for social ostracism of the criminal rich. What he said was that, unless in our own personal standards of right and wrong, unless in our social customs, unless in our public opinion, we found a means of checking the power of organized and unscrupulous wealth, laws would not save us, universal suffrage would not help us, but we should march swiftly along the path of Imperialistic greed and cruelty till we had an empire in name as well as in substance.

Well said, say we—that is, for a pulpit utterance. It has the true prophet ring about it, and, addressed as it was (so the thoughtful reporter informs us) to "the richest church society in New England," should have left more than one hearer cut to the heart. But if we were to take the deliverance purely as an economic and political one, no little demur would be necessary. If President Hadley were to speak as an economist, he would doubtless agree that there are possible and desirable legal curbs to apply to the great combinations of capital. What, for example, could be more surely "indicated," as the physicians say, as a remedy (only partial, of course) for the huge Steel Trust than the prompt abolition of every cent of protective duty on steel products? Congressman Babcock has already proposed this; we presume that President Hadley would heartily agree to it. And we make no doubt that, if he had been speaking as an economist and publicist, not merely as a preacher, he would also have agreed that an adequate legal remedy for the political evil he complains of can be found. If not, our mouths are shut. "No remedy, no wrong," has been the historic Anglo-Saxon maxim. If a just and wise and enforceable statute cannot be drawn to repress the political evils of Trusts, then we had better keep still. Our forefathers knew how to strike at monopolies and regrating in their Common Law. We can, in like manner, clip the claws of Trusts—if we really want to.

There's the rub. Do we want to? Is the enthronement of unscrupulous wealth in the politics of our States and in Washington a thing which the American people really desire to abolish? Any one who doubted it would have many things to show for his opinion. Many of our ablest public men would admit, do so privately, that they like the present system of purchasing legislation. In this sense, many of our best would say, as Paley said of himself in his day: "I am an advocate for corruption." And the kind of Emperor we shall get from the continuance of our method of making politics an annex of business is not at all a bold usurper on horseback. No, he will be still more of the negative and unresisting type of our existing "Emperor of Expediency," as ex-Speaker Reed calls President McKinley. He will be, that is, still more of a meeting-point of vast financial interests, still more the line of least resistance along which they move steadily for the subjugation of the powers and forms of government to their own private ends. And if a violent reaction comes, it will not be towards personal and arbitrary power, but towards a man who can utter and execute the passions of the masses. If President Hadley is thinking of a régime which will break the grip of greed upon our Government, he must look for it in the advent of a man who will arise, as Burke said of Chatham, to use the mob as his raw material of power.

In mere appeal to the moderation and forbearance of the man who has made himself unlawfully rich, and who has it in his power to prey upon the community, we confess that we see little hope. When was it the characteristic of power to be moderate? When will greed admit itself satiated? When did a vulgarized society, drunk with wealth and mad with the competition in ostentation, ever long ostracise a man whose millions can minister to its sybaritic delights? Ask Dr. Huntington, whose Lenten sermon on Sunday in Grace Church was also a prophet note, piercing to the recesses of the vice that flaunts itself in Fifth Avenue, though really as foul as any that lurks festering in the city's lowest purlieus. We are, in truth, living in a time when we can hear little but the jingle of the guinea. It is the ugly side of our prosperity. We have gone over frankly from the standards of Gen. Gordon to the standards of Cecil Rhodes. Rhodes once asked Gordon if it was true that the Chinese Emperor had offered him, and he had refused, a roomful of silver after the suppression of the Tai Ping rebellion. It was so, Gordon said, and he asked Cecil Rhodes whether he would have accepted it. "I would have taken it," replied Rhodes, "and as many more roomfuls as they would give me. It is of no use having big ideas if you have not the cash to carry them out." That is the spot upon which our prophets must strike the hand to show where we "all"; and until we discover that honor and truth and purity and self-sacrifice and public service are also "big ideas," we shall not make much headway against the prevailing apotheosis of brute wealth.

OUR STATISTICS OF DEPORTATION.

The United States has opened a new account, to be hereafter included in the official "Statistical Abstract." It will give the figures, not of importations or exportations, but of deportations. Gen. MacArthur has sent on the first instalment. Eighteen Filipino officers and twenty-six civilians—all of them American subjects—have been deported. This punishment is not known to the laws of the United States; but, of course, martial law can invent its own punishments as well as its own crimes. If Gen. MacArthur does not like the cut of a native's clothes, he can order the man imprisoned or deported or shot, and no court may say him nay. And, of course, with no one in Washington caring what becomes of the Filipinos, with no Senator threatening and frightening the President on that subject, the whole incident is shrugged aside by Imperialists. Their uniform answer to all who object to their proceedings, on the ground of either law or policy or phi-

lanthropy, has come to be that of the ballad:

"It's very hard them kind of men
Won't let a body be."

The case is somewhat different, however, when it comes to deporting an American citizen. Mr. George T. Rice, who went to the Philippines as a member of the Minnesota volunteers, was on January 24 deported by Gen. MacArthur as a "dangerous incendiary and a menace to the military situation." Now, who was this dangerous incendiary, and what was his offence? The facts were all set forth in the Senate by Mr. Teller. Rice was the editor of the Manila *Daily Bulletin*. This was a commercial organ, established at the request of the merchants of Manila, and conducted in their interest and to their satisfaction. Purely as a trade journal, the *Bulletin* printed on January 14, as it stated, "at the request of several business men of Manila," the official pilot and moorage regulations of the port. Upon them it made running comments, showing that many of them were slackly enforced, disregarded, or openly violated under the eyes of the Captain of the Port. Evidently, this was a terrible "menace to the military situation." Without trial, and simply on the report of a military inspector, "Rice was summoned to the office of the Governor-General's military secretary, and called upon to promise that he would publish no more such articles. He declined to give such a pledge, but insisted that the article was truthful, and took a defiant attitude when threatened with deportation." But deported he promptly was, and is now in this country preparing to bring a suit against his own Government for damages.

He may get no damages, but, being an American citizen, he ought at least to get a hearing. If his criticism of a faulty public service was a crime, then, as Senator Teller has said, "there is not an editor in the United States who runs a newspaper of any character whatever who could not be sent to jail." If he had violated the press laws, the courts were open. If he had libelled the Captain of the Port, legal redress could speedily be had. But that is not the way of a military government. "Shut up or get out," was Gen. MacArthur's ultimatum.

The affair throws a curious light upon the President's instructions to the Taft Commission. Does the country still remember with what unctuous solemnity he told the people in his letter of acceptance last September of the "inviolable rules" which he had imposed upon "every division and branch of the Government of the Philippines"? Here are some of them: "No person shall be deprived of life, *liberty*, or *property* without due process of law. . . . The accused shall enjoy the right to a speedy and public *trial*, . . . to be confronted with the *witnesses* against him, . . . and to have the assistance of counsel. . . . No cruel or *unusual* punishment shall be inflicted. No law shall be passed abridging the freedom of speech or *of the press*." Every one of these "inviolable rules" was flagrantly violated in the case of this American citizen. What force or observance are they likely to have had in dealing with Filipinos? As a matter of fact, everybody knows that they have had none at all, and that the President was simply humbugging either himself or the people—or both. What we have in the Philippines is a government by military whim, and all pretence to the contrary is fraudulent. No man can name a law or Constitutional guarantee upon which Gen. MacArthur may not set his boot under the plea of military necessity.

And what a petty and childish business this deportation is! It was said that it would strike terror into the hearts of the Filipinos. As if they had not been used to it under former tyrants! Spain deported them wholesale in 1872, and at other times, but found it a vain as well as cruel and unusual punishment. Have we to copy Spanish blunders down to the very last one? For a complacent "world-power," in particular, deportation is a lamentable thing. Can we not even bear the gaze of our victims? Are we afraid of these puny patriots, willing to rot in jail rather than submit to us? Where is our boasted strength? Where our traditional good nature? A typical American Government would laugh at these offences which drive us in the Philippines into such a fury. Uncle Sam, before he became a world-power, would have chuckled at ease in presence of the newspaper criticism and native obstinacy which now make him so angry and anxious. What is the matter with the old gentleman? Is he, instead of a great and consciously strong world-power, only a nervous *nouveau riche*, not sure of himself in the elegant society of the nations?

RELIGION AND HONESTY.

According to the popular view, religion is something which transcends morals. No one can be truly religious who is not moral, but the man who is merely honest falls short of that height which is reached by the fortunate possessor of both cardinal and theological virtues. Now this is very well, or would be if the religious were not sometimes tempted to cut short corners for the sake of helping on the cause of religion. We are all familiar with mediæval devices for contributing to the good work by forgery of decretals on behalf of the Papacy and of title-deeds on behalf of the Abbey. These were cases of uncommon dishonesty. The modern world, watching the same tendency, is more familiar with breaches of what we call "common honesty."

At a period when biological research is active, and the comparative method in literary study yields manifest results, acute friction is constantly arising between a minority of theologians who keep well informed, and a majority who would abide strictly within the boundaries which our fathers marked out. We do not raise the general question of heresy in the Christian Church—its causes and its probable results. But we should like to point out that even where the suspect is not actually found guilty, he is sometimes treated with less than fairness because he has been scholarly enough to ascertain the best opinion and candid enough to accept it.

Montreal is now agitated by an attack on academic freedom which presents more unpleasant features than attended the dismissal of Professor Ross from Stanford University. Professor Steen of the Diocesan College has been forced out of his position for holding such views regarding the authorship and inspiration of the Bible as are avowed in England by Canon Driver and many others with complete impunity. He was not dismissed, for, on being told that his withdrawal was desired by the Dean, he resigned instead of fighting the matter out. There can be no question of fitness, since Professor Steen's learning far exceeds the actual requirements of his position. Besides, his students have all signed a letter which expresses their feeling towards him in terms of enthusiastic admiration. Nor has the influence of Professor Steen been restricted to his classroom. He has often been heard from the pulpit of the Cathedral, and by many he is considered to be much the best preacher in the diocese.

The incident, however, owes any general significance which it may possess to the circumstances of the resignation. When suspicion of error had once been aroused, Professor Steen should have been summoned before a lay or ecclesiastical board, and asked for a declaration of his views. But a different procedure was followed. The Principal of the college came to him and said that the Dean wished to see his note-books. Any self-respecting man, whether a teacher or not, can imagine what answer this request, or demand, drew forth. After Professor Steen had refused to let the Dean see his note-books, the lecture notes of a student were procured and examined before any verbal explanation at first hand was asked for. The study of this evidence seems to have taken several weeks, at the end of which the Dean expressed his displeasure and the resignation was handed in. Then Professor Steen appeared before a committee, stated his attitude on the points at issue, and was exoner-

ated; but his resignation was accepted. We now come to the disingenuous part of the story. When the fact of the resignation became known, a newspaper reporter called on the Principal of the college and asked for further information. He was told that Professor Steen had resigned on the ground of ill-health, and that his resignation had been accepted. The exact terms of a newspaper "interview" are always open to question; yet, as the reporter's statement was not denied, the college authorities were evidently willing to have the public believe that the resignation of so good a scholar, teacher, and preacher was due solely to ill-health.

Since Professor Steen's resignation, questions have been asked in Synod concerning it, and the answer given is that the Diocesan College is an institution which stands outside synodal jurisdiction. A further appeal for information which was made to the Principal of the college has been acknowledged with a statement that the Board feels under no obligation to explain its actions to the public. Here the matter rests. A man of irreproachable morals and demeanor, who by virtue of talents and attainments stands head and shoulders above the clergy of the diocese, is given to understand that his services are no longer wanted. He resigns, he is acquitted of misbelief, his resignation is accepted, and then the college prompts, or at least countenances, the report that such an abrupt withdrawal is due to ill-health. While this lack of honesty in facing facts is shown by religious bodies, the Church may fulminate for ever against Sunday bicyclists without producing much effect.

Whether we trace it to ignorance or fear of skepticism, the attitude of many Protestant churches in this country towards knowledge and the results of knowledge is a sad subject. The well-educated clergy of the large cities may form a class apart, but it is separated by a wide gulf from the rank and file who fill the country pulpits and those of the small towns. We know it is hard to part with the beliefs of one's childhood, but still we can find no excuse for the parsons who tell their congregations that biologists are at sixes and sevens among themselves about the truth of evolution. The "forgotten millions" receive such doctrine from their spiritual guides in every section of this continent where there are churches, and the obvious result is to shake popular confidence in the preachers who say such things. But this kind of misrepresentation can often be set down to ignorance. Far worse is the lack of fair dealing which we have criticised in the case of Professor Steen. The students of the Diocesan College may henceforth be told that the world was created in the year 4004 B. C., and that St. Paul wrote the Epistle to the Hebrews. We doubt whether these assertions will be recommended by the knowledge that Professor Steen did not resign on the ground of ill-health as alleged, but that he resigned because his withdrawal was desired.

Obscurantism, though always bad, is sometimes amusing, as it was in the days of Reuchlin and Ortvinus Gratius. Leslie Stephen relates that one day in the Alps he stumbled upon some peasants who were protecting their cattle from the pest by a rite of exorcism. Not far away, almost within earshot, locomotives were running up and down the Rhone valley from Brieg to Martigny. Yet these Valaisians, who lived on the skirts of civilization, were repeating a practice of the Middle Ages. It is still more singular that many persons who dwell in large towns and occupy high official positions should remain so "unravaged by the fierce intellectual life of our century."

THE NOVEL AND THE THEATRE.

At the present moment half a dozen of the principal theatres of this city are offering what are called dramatic versions of popular novels, and the managerial craze for this form of entertainment seems to be steadily on the increase. The phenomenon is not curious, because the explanation of it is perfectly simple, but it is disquieting on account of its rapid development and the evil influences which it exercises, indirectly, upon a stage that is already sufficiently degraded.

The book-plays, as it is now the fashion to call them, possibly because they have so little in common with the volumes from which they are supposed to be derived, are attributable, in the first instance, to the literary log-rolling effected under the guise of correspondence or reviews in the cheaper popular magazines and the least responsible specimens of the daily press. It is by these agencies that novels of second or third-rate importance are boomed into brief but wide popularity, and are enabled to attain the amazing figures which are so impressive in an advertisement. Some of the books, of course, are much better than others; here and there one of first-rate quality occurs, worthy of the encomiums bestowed upon it, but that is beside the present subject. The point is, that from month to month many volumes of indifferent fiction are proclaimed masterpieces, with reiterated and resounding flourishes of literary trumpets, until the great public which reads the newspapers, and but little else, is familiar at least with their titles, and becomes vaguely desirous of a more intimate acquaintance. This is the opportunity of the speculative manager, who knows as well as any man alive the value of notoriety. About the actual merit of the particular book he is not concerned at all. But if the title of it, backed by rhapsodical recommendations, is to be seen in all the street cars, or in large type in the newspapers, he realizes its value for theatrical purposes. A play bearing that name starts with a sort of ready-made reputation, profits by all the advertising, legitimate or otherwise, of the original work, and is practically certain of that audience—a very large one—which is attracted chiefly by curiosity.

From the point of view of the box-office this is nothing but a smart stroke of business, a trick of the mere trade to which play-producing has been reduced. And the trick, having proved exceedingly lucrative in several cases, has been adopted by most of our theatrical directors, who are as imitative as they are obtuse. In reality the policy is likely to prove in the long run just as fallacious as a money-making scheme as it is injurious to the best interests of theatrical art. It is assailable also on the score of false pretence, for the book-play in nine cases out of ten is something essentially different from what it pretends to be. This, however, is a matter of comparatively small importance, as the original source of a play is of no consequence to the spectator so long as the play itself is a good one. But the fact is that such a thing as a satisfactory dramatic version of a novel is so rare as to be practically unknown. Of all the experiments of the kind that have been made by the most experienced of hack playwrights—the really able dramatist rarely wastes time in such follies—upon the books of such popular romancers as Scott, Dumas, Dickens, and a score of others, there is scarcely one that can be pronounced adequate, either as a sample of the original or as a piece of dramatic construction. This does not mean that none of them have been successful in a commercial sense, that they have not contained powerful scenes, or afforded opportunities for fine individual acting. Instances to the contrary abound in the records of the stage, but as plays their value has always been inconsiderable. Nor could it be otherwise. Between fiction and drama is all the difference that exists between description and execution; and the very arts that constitute the charm and potency of the one are necessarily detrimental and often fatal to the other.

These are trite reflections, but it is obvious that if they apply to the real masterpieces of invention, imagination, and original characterization, they are still more applicable to the great bulk of such modern fiction as is selected for the operations of the professional adapter, whose main object is to include in the prescribed number of acts as many "situations" as possible, without much reference to the minor incidents and conditions for which he has no

space, but which are often essential to comprehension or plausibility. He is, moreover, hampered, as a rule, by the necessity of keeping some male or female star prominently before the footlights, which involves the suppression of subordinate but important personages, and the neglect of all proportion. The method, judging from results, which he generally adopts, is first to pick out the scenes for his climaxes, of which he requires four or five—and then to connect them with such rough links as he is able to hammer out in the poorly furnished workshop of his imagination. His job, when completed, is subject, of course, to arbitrary modification on the demand of the star—if he is big enough—or of the stage manager. All literary decorations are stripped off, as being dilatory and superfluous, and a series of violent episodes, just barely possible, perhaps, individually, but wholly preposterous in conjunction, are served up in a nudity absolutely offensive to the commonest intelligence. Thus it is that a novel which by a strain of courtesy might be dubbed romantic, is converted into the rawest and most puerile of melodramas.

In the end the evil will bring about its own remedy, because the current romantic novel, apart from its merely literary accessories, which vanish in the play, is modelled upon old conventions, in its incidents and heroics, and the recurrence of stale sensations is certain to cause satiety. But the end is not yet. The literary puffing machine is still busy upon the notices of the book-plays to be produced next season, and the prospects of the original native dramatists, outside of the few who have made their mark already, are not encouraging. They now have to encounter the competition of the novelists—who naturally are wide awake to their chances of theatrical royalties—as well as the indifference of the managers. It begins to look as if they would be obliged in self-defence to expand their plays into novels in order to get the publicity which seems to be the necessary preliminary to theatrical production. This would be a troublesome but entirely rational proceeding. A bad play may be converted easily into a good novel, whereas a poor novel is almost certain to eventuate in an inferior drama.

But it is not only the original dramatists who suffer from a system which prefers second-hand plots to new, and makes the stage a dumping-ground for all sorts of sensational rubbish, but the whole theatrical profession and the public. Inferior plays beget inferior acting, as is clearly demonstrated today in many of our leading theatres, where the general performance is slovenly and incapable in a marked degree. The fact is, that in the average book-play everything is sacrificed to situations and tableaux; acting, except in the case of one or two leading performers, being regarded as an affair of secondary consideration. Most of the minor characters are designedly colorless puppets, into which even good actors could not infuse vitality. Startling scenic effects, extravagant costumes, and sensational episodes will attract the crowd for a season, and then there will be a reaction of some sort. Meanwhile the theatre is sinking lower and lower in the estimation of the reflecting classes, who realize its possibilities under intelligent direction, but are inclined to despair of a future so menaced by the spirit of commercialism.

THE RUSSO-TURKISH BORDER.

TREBIZOND, October 31, 1900.

Erzerum is the present great distributing depot of Eastern Turkey. But it has no railroad, and is not on a navigable river. It is merely a caravan centre to which long trains of camels and oxen wend their way from the Black Sea coast, and from which, after unloading and repacking, they set out upon distant journeys into Persia and the Tigris Valley. The city itself is in a fertile valley on the head waters of the Euphrates River, and has about 40,000 inhabitants; but the valley is 6,000 feet above the sea, and surrounded by barren mountains. The climate is very hot in summer and very cold in winter. If the channels of trade ever desert it, the city will have no reason for existence.

The port of Erzerum is Trebizond, on the Black Sea, 120 miles to the northwest; but the distance cannot be reckoned in miles alone—the difficulties of the road must be taken into account. Even now, with a macadamized military road which is a marvel of engineering skill, the ups and downs are so serious that eight days of hard driving are necessary to cover the distance. It is impossible for the imagination to paint the difficulties of the trip twenty years ago, before the road was built. In going up this road the other day to the Ziganeh pass, retracing the route of Xenophon's famous Ten Thousand, I saw one of the most impressive illustrations of the conservatism of Eastern habits. It was a long train of donkeys and cattle, carrying cans of Baku refined petroleum from Trebizond to Erzerum. Now Baku is far to the east of Erzerum, and there is a railroad from Tiflis to Kars, only four days distant by caravan, but the oil is carried past Tiflis to Batum, and from there shipped to Trebizond, and then transported to Erzerum by a route which requires three times as many days, and involves three times as much up-hill work as it would from Kars.

Trebizond is an old and interesting city of 30,000 inhabitants, but, with the building of railroads, it will lose its importance, especially if it is ever absorbed by Russia. It is not the natural terminus for a railroad to the interior, on account of the snow-capped and picturesque mountain border which rises all along the coast abruptly from the sea. To reach Erzerum, two passes, each more than 6,000 feet above the sea, have to be surmounted, and the ascent in each case is so rapid that it was all the engineers could do to secure grades that horses and carriages could climb. Easier grades could be found from Tripoli, about 100 miles farther west. From there a stream could be followed up behind the first range of mountains. But at Tripoli there is no harbor, and, for that matter, there is but a very poor one at Trebizond. The south shore of the Black Sea is peculiarly destitute of good harbors. At Trebizond there is a projecting point of land which gives some protection from westerly storms, but none from the north and east. In the time of the Roman Emperor Justinian, an artificial harbor was constructed, whose walls can still be traced, but it is now nearly all filled with sand. One reason why the Turks do not build a new harbor is that they expect the Russians will take the province before long, so all such improvements would inure to the benefit of their inveterate enemy.

To a citizen of the New World, there is a strange fascination about this port of the Black Sea, on account of its historical associations. Just east of Trebizond was the ancient Colchis, where was laid the Grecian legend of the Golden Fleece. Long before the Christian era, Greeks colonized these shores, but never penetrated far inland. Their descendants are still here, and preserve both the language and the physical peculiarities of their celebrated ancestors. The Greeks, Armenians, and Turks, though occupying the same territory, are as separate from each other as oil and water. They rarely intermarry. They each have their own language, their own schools, and their own religious institutions. Of the three races, the Armenians have by far the largest intellectual capacity. They are the principal merchants and business men of the region. Their opportunities for development, however, are greatly circumscribed in Turkey, whereas in Russia there are more than 1,000,000 in the vicinity of the Caucasus. The Minister of Education for the whole Russian Empire is an Armenian. The richest oil operator at Baku, almost equal to Rockefeller in America, is an Armenian. But in the present strained relations between Turkey and Russia the Armenians are between the devil and the deep sea. Russia will not allow any more to come into her territory from Turkey, and Turkey will not allow those already there to come back, even to join their own families. The shadow of the horrible massacres of the Armenians by the Turks still hangs heavy over this whole region. The slaughter began in Trebizond five years ago, when 400 inoffensive citizens were shot down in cold blood and in open daylight. Massacre after massacre followed throughout the empire, until fully 150,000 were slain. There were, it is true, some extenuating circumstances in the fact that a secret society of visionary Armenians was plotting the overthrow of the Sultan's power. Their revolutionary efforts aroused both the fears and the religious passions of the Turks. In the result, it was the innocent who, for the most part, suffered the penalty. In Trebizond, two young Armenians attempted to assassinate a prominent Turkish official, and then took refuge among their own people. The Turks held all the Armenians responsible, and hence the massacre. Probably the assassins were not sheltered by their countrymen, but the Turks believed they were, and the result was the same as if it had been true.

The mass of the Armenians and Turks

have always been on pleasant business relations with each other. It has been a common practice for individuals of the two nations to become partners in business, so that when the Armenian partner had to flee at the time of the massacre, his Turkish partner was left to look after the business, and, it is said, he usually did so faithfully. In company with the English Consul, I called upon the Governor, Kadri Bey, to get permission to travel into the interior. He is regarded as one of the ablest and best of all the Turkish Governors, yet, at the time of the massacres, he evidently looked on with little concern, and telegraphed to the Sultan, when the day's work was done, that there had been an insurrection, in which twelve Turks and seventy Armenians had been killed. But there was no insurrection, and no Turks were killed. The Armenians had no weapons. The Sultan, however, made a show of consistency by restoring to a widow whose husband was cruelly massacred, some of the plunder which the soldiers took from her home. The Governor received us very graciously, and not only gave us the requisite permission, but furnished us with a mounted gendarme to accompany us, thus making it a sort of official excursion. Our companion fully realized his importance, and did not fail to draw attention to his "distinguished" party. This secured us every favor which the land afforded. The Mayors of the villages came out to meet us on horseback, and expressed themselves as highly honored that we should visit them. The Governor had, however, made one stipulation, namely, that we should make a report to him suggesting, if possible, some way in which the poor inhabitants along the way could increase the productiveness of the soil, and so improve their conditions. This, certainly, was creditable to his character. There is no doubt that he has a genuine interest in the prosperity of his people.

On passing over the thirty-five miles which took us to the summit of the mountains bordering the sea, we did not wonder at the Governor's request. There is no level land. The mountainside is furrowed with gorges thousands of feet in depth, with slopes so steep that they were well-nigh inaccessible. Yet hamlets dotted the surface in the most impossible situations, and cultivated fields met our eyes on slopes so steep that one could hardly climb them on his hands and knees, and this without any terracing. We advised the Governor to encourage the planting of evergreen trees over the uncultivated areas, to set out hazelnut and blackberry bushes on the steeper cultivated slopes (hazelnuts are already a staple article of export, aggregating more than any other one thing), and to terrace the mountainside, so as to prevent all the fine soil from being washed away.

But, to return to the Armenians, it is important to remember that they are no longer a nation. They have no local habitation. They are scattered far and wide in eastern Turkey, and are a large element in the Russian province of the Caucasus. An independent Armenia is a dream that ought not to be thought of in one's waking hours. Under a Christian government like Russia, however, the people would have the hope of development along the lines of their past noble history. Russia is the natural protector of the large Christian population of eastern Asia Minor. When the jealousies of the other European Powers permit her to exert this protection, there will be no more Armenian massacres.

G. Frederick Wright.

LONDON'S WINTER EXHIBITIONS.

London, January 8, 1901.

For many years the Royal Academy has given an interesting Winter Exhibition by borrowing old masters from the numerous private collections in England. The Academy's "Winter Garment of Repentance" this exhibition has been called, so great a contrast has it always presented to the modern indiscretions of the summer. But there are signs that the supply of old masters has been exhausted. "One-man" shows of Leighton and Millais, Rembrandt and Van Dyck, helped for a few years to conceal the unpleasant truth; but now that there is no special reason for any "one man" to step into the breach, the Academy cannot but reveal the poverty of its resources. This winter it is reduced to British art of the last half-century.

Now, it may be said that, under these conditions, a most important and suggestive collection could have been got together. True, Bonington and Constable, who were the pioneers of modern landscape, Turner, and the last of the great British portrait painters who still upheld the tradition of Van Dyck, belong essentially to the first fifty years. But in 1850 Pre-Raphaelitism, the last reëcho of the Romantic revolt that had long agitated the schools and studios of the Continent, was in full swing, and the time has come when it would be possible, were the opportunity offered, to measure not only the accomplishment of the Pre-Raphaelites themselves, but the manners and extent of their influence upon the art of England. If the result were the proof that their influence counts for nothing, so much the better; it would clear the air of cant. But it might be embarrassing to the Academy to bring forward the members of the brotherhood it neglected, or to include other artists who have set the standard for the present generation, but whom it has ever carefully ignored. Therefore, it has drawn a line, as foolish as it is arbitrary, and restricted the collection to the "Works of British Artists Deceased since 1850." A moment's reflection will show to what absurdities this can lead. Turner happened to die in 1851, and so he has a place upon the walls in the company of Holl and Pettie, Calderon and Hodgson—Academicians who died but yesterday. David Cox and William Hunt are found lingering in a period which can only by courtesy claim them. Poole and E. W. Cooke, both Royal Academicians—as were most mediocrities of the century—must be dragged once more before a patient public; Landseer, the sentimentalist of a past generation, resurrected; and honor paid to long-buried Presidents like Eastlake and Grant, whose careers have left no mark even upon the body over which they presided. The great contemporaries of Turner cannot be admitted because they died too soon; more famous Academicians than Poole and Cooke are not qualified because, fortunately, they live too long. The result is a tedious, chaotic hodge-podge of second-rate pictures, with here and there an occasional exception; not much better than an average Academy, and without any historical value to make up for its artistic shortcomings.

Nor has the Academy displayed much intelligence within the limits it has set itself. It is not to be complimented on its method of selection. There are cases where it seems almost as if an artist's least creditable achievements had been deliberately chosen. The treatment of the Pre-Raphaelites is one of the most glaring instances. Mr. Holman Hunt, of course, is excluded, as he happily is still living, so that the group must remain incomplete under such illogical classification. But it seems almost as if care had been taken to scatter the work of the others, so that there might be nothing to suggest the movement, rebellion, a new departure, or whatever it may be called, of which the Academy, at the time, was so disdainful. And the work itself is anything but representative. Of Ford Madox Brown, whose name will ever be memorable in the art annals of the century, there are but two, very unsatisfactory examples—"The Coat of Many Colors," painted after his drawing in pen-and-ink for Dalziel's Bible, a work so much more appreciated now than when it was published, and a smaller version of his "Chaucer at the Court of King Edward III." To these two paintings is added a water-color, "Romeo and Juliet." During his life Ford Madox Brown's relations with the Academy were never the most amiable—a fact which the Academy, burdened with prejudice, is not likely to forget. Rossetti fares worse. Only a single picture has been hung, and it is one which the Academy can best afford to hang, "A Vision of Fiammetta," a late work, in which his mannerisms are most pronounced. Type, color, and composition are all exaggerated; it is Rossetti in his least inspired mood. The two water-colors, "Paola and Francesca" and "Beatrice at a Marriage Feast Denies Dante her Salutation," are far more characteristic; but it would have been a generous way of confessing an old mistake had the Academy now spared to so distinguished an artist, never officially recognized during his lifetime, the same space accorded to insignificant Academicans. Burne-Jones fills a very modest corner with his "Flamma Vestalis," while, that there may be no doubt of the Academy's feelings in the matter, no less than nine pictures by Millais—none, however, dating back to his first Pre-Raphaelite period—have been included, though it is but a short time since the entire gallery was devoted to him.

On the other hand, if the Pre-Raphaelites are slighted, effort has been made to obtain an adequate representation of the few landscape painters who, in mid-century, never deserted the realism of Constable for a romanticism that left the Barbizon school far behind—that is, in romantic motive, not in merit. But as two among them were Associates of the Academy, the reason for this amiability is not far to seek. George Mason is much the oldest, having been born in 1818. Like Millet, he felt that no landscape was complete without figures—without human interest—but how differently he saw these figures! He was saturated with sentiment, and to turn from Millet's sowers and gleaners to his laborers, is to exchange tragedy for romantic comedy. His "Harvest Moon," one of his most famous canvases, is here, and I am struck again, as I have always been in looking at the print after it, by the theatrical sentiment in his procession of harvesters, who, in type, pose, and dress, belong not to the fields, but to the stage.

The scent of the footlights, not of hay, meets you as they pass. But Mason had an agreeable sense of composition and a true decorative instinct; he was always quiet and refined in his methods, and his work, if never great, almost always has charm. Fred Walker inherited his affectations, and fell into lower sentimental depths. There is one picture shown, "The Bathers," in which he seems to forget whatever story he may have started out to tell, in sheer delight in the beauty of line made by the graceful, lithe young figures, with bits of drapery flying against the straight stretch of river and fresh green shores beyond. But in such pictures as "The Old Gate" and "The Wayfarers," the landscape, for all its excellence, is subordinated to the anecdote, in both pathetic to the verge of bathos. Where Corot or Rousseau lets you divine the sentiment of their meadows and woodlands for yourself, Mason and Walker fairly force it upon you until you shrink from its obviousness. Walker was unusually popular among his fellow-artists, and this popularity, together with the fact of his early death—he was but thirty-five—has transformed him into a hero, or a genius, in the eyes of Englishmen. But, at the Academy, you feel that, though as an illustrator he still had a career before him, as a painter he died in time to save his reputation. Pinwell, who resembles him in many ways, also died young—at thirty-three. And so also did Cecil Lawson, who was of a later generation, and really held out promise of being the most original and strongest of the group. He could see in Nature a beauty that never depended upon anecdote for its expression. It is said that one of the landscapes now exhibited was refused by the Academy when he himself submitted it, and, indeed, during his short thirty-one years, he never reached the dignity of Associate. Nor did John Linnell, though he lived to be fourscore and ten. Whatever the Academy's grudge, it has evidently survived, for Linnell is now shown to anything but advantage.

Outside of these two groups there is little to be said of the exhibition, unless it would be to describe individual pictures—an odd Leighton or John Gilbert, a portrait by Boxall, who at least lived and worked before the flood of vulgarity set in, a Venice by Holland, an architectural study by David Roberts. Most of the pictures are hardly worth such desultory criticism, but there is one man who towers above the others, a giant among the pigmies—Alfred Stevens, who is just beginning to receive the recognition that is his due. The doors of the Academy were shut to him during his life. His work has been dishonored almost persistently. Wellington's tomb at St. Paul's has never been finished, the little lions have been removed from the railings in front of the British Museum, his name is probably not known to more than one out of the hundreds who would respond with enthusiasm to the mere mention of Leighton or Millais. And yet he is to be counted among England's greatest sculptors, and a small portrait of a man, now at the Academy, proves that, though his pictures may be few, he was also a painter of unusual distinction. With its vigorous modelling, its wonderful rendering of the bony structure of a strongly marked face, its subtle expression of character, its color, its dignity, it is almost the one canvas in the collection that would stand the test of being hung with the usual winter array of old masters. It is at once the surprise and triumph of the Exhibition.

The water colors are as bewildering a medley as the paintings. Turner, Prout, David Cox are found side by side with the Pre-Raphaelites; Fred Walker and Pinwell, both better in this medium than in oils, are the near neighbors of Sir John Gilbert and Alfred Hunt, who were at work but yesterday. It is, however, in the black-and-white room that the Academy has gone most hopelessly astray. If there is an art which is really characteristic of the second half of the century, it is the art of illustration, and most of the men who did the great work of the sixties are long since dead. But you may look in vain for the drawings of Boyd Houghton, perhaps the most distinguished of all and absolutely unrepresented in the Exhibition; Rossetti, Pinwell, Mahoney. The single illustration of the period is Leighton's impressive "Moses," drawn for Dalziel's Bible. There is a Fred Walker, "The Vagrants," in pen and ink, but it is a study for the picture at the National Gallery, and not an illustration; while Millais, who would live were it solely for his Parables series and his work in Moxon's Tennyson, is seen only in a very commonplace drawing, "The Last Trek," published as frontispiece in a book by one of his sons, shortly before his death. Black and white, to the Academy, means chiefly *Punch*, another of England's worn-out and, therefore, highly respected institutions. With the exception of some designs by Burne-Jones, the collection consists almost altogether of a few examples of Leech, England's greatest bore, and Du Maurier, and a large number of studies and drawings by Charles Keene, whom it is as delightful as it is astonishing to find in a gallery where he himself was careful never to exhibit. If the object of the Academy was not to compete with the Government's Exhibition of Illustration, to open in a few days at South Kensington, it has been most successful.

At the New Gallery, where the other important exhibition of the winter is always held, the conditions this year are not much more encouraging than at the Academy. One can look back with pleasure to the splendor of Tudor and Stuart, Venetian and Flemish collections; but what is there now to take their place? "The Works of Sir W. B. Richmond, K.C.B., R.A., D.C.L." He is a painter whose special distinction it is to have been during several months probably the most severely and unanimously criticised man in England. As all the world surely must know by now, he is responsible for the recent decorations that have gone so far to degrade the beauty of St. Paul's, Wren's masterpiece. For a while, the outcry against this work was as loud as it was persistent. The press was almost unanimous in condemning it; questions were asked in the House, architects protested officially; even students, who are so seldom heard of in London, joined in the chorus of criticism and condemnation. Nothing came of it all; England's cathedrals are in the power of dean and chapter to "restore" and ruin as they see fit. The work went on in St. Paul's, and now, as if to challenge his critics, Sir William Richmond has collected together his life's work, from the early portrait group of 1864, which made a stir at Oxford, because the three "Sisters" were the daughters of Dean Liddell, down to the studies and cartoons for the decorations that have forced him into such unpleasant prominence. The collection, however, but plays into the hands of his critics, for it more than justifies them in their attitude. Richmond began his career as a disciple of the Pre-Raphaelites, and "The Sisters" is really a remarkable performance, for the youth he was when he painted it. But gradually, in his portraits, you see how the decorative ideals took possession of him, until, in his effort to build up a striking pattern out of elaborate costumes and the appropriate accessories, his sitter became for him a mere lay figure, useful as a motive for an ingenious and intricate arrangement. In their gorgeous robes, against gorgeous backgrounds, enclosed in gorgeous frames, his women too often degenerate into puppets, with hardly the semblance of life. On the other hand, in his large Academic pictures, you have proof of his weakness in composition, color, and drawing—that is, in the three essentials to great decoration. His portraits explain his reason for accepting the commission to decorate St. Paul's, though his experience as decorator was virtually all before him; his other pictures explain how ill qualified he was for the task. After seeing his exhibition, it is easier to understand his failure in Wren's Cathedral.

N. N.

Correspondence.

PRINCE ALBERT'S OPINION OF THE IRISH.

To the Editor of The Nation:

Sir: I think I can help your correspondent "D. B." (February 14, note to the Queen in Ireland) to his lost reference. In the 'Life of Wilhelm von Humboldt,' the Prussian statesman and brother of Alexander, who wrote 'Kosmos,' Prince Albert is quoted as comparing the Irish to the Poles, in Baron von Humboldt's hearing. The Baron remarks: "Und dies ist der schöne Gemahl der Königin von Grossbritannien!"

The Life was published in the fifties, and I have not seen the book since. But though I cannot venture on the exact words, I don't think that either race was declared to be unworthy of sympathy. The Poles were just then at their lowest ebb, and for us who have an affection and respect for our fellow-subjects of the sister island, even though we may love them too well to part with them (as I do), it was a painful shock to learn that that was Prince Albert's view of them. And, being a painful shock, I have remembered the fact.—I remain, yours obediently,

S. I. Sidgwick.

Rugby, Eng., February 28, 1901.

"BIG KNIFE," "GREAT KNIFE," "LONG KNIFE."

To the Editor of The Nation:

Sir: Though the above expressions have had a limited vogue in this country for over a century and a quarter, yet their history has never been shown, the dictionaries mostly ignore them, and some of the explanations of their origin are open to doubt.

In 1643 Roger Williams, in his 'Key into the Language of America,' pp. 37, 38, recorded five Indian words, among them *Chaúqock*, all of which meant "a knife"; and then went on to observe: "Whence they call *English*-

men Châuquaquock, that is *Knive-men*, stone formerly being to them in stead of *Knives, Awle-blades, Hatchets* and *Howes.*" In 1691 Cotton Mather, in his 'Life of the Renowned John Eliot,' part iii., p. 78, remarked; "But our shiftless *Indians* were never Owners of so much as a *Knife*, till we come among them; their name for an *English-man* was a *Knife man:* and Stone was instead of Metal for their *tools.*" And in 1764 Gov. Hutchinson, in his 'History of Massachusetts Bay,' i., 478, said: "The French speak of others, viz. that, at certain repasts, they never make use of knives; it is not probable they ever had any to use, on any occasion, until they were brought to them from Europe; they called the first English, Knifemen." Though neither Mather nor Hutchinson refers to the above passage from Williams, yet clearly both had it in mind. Why, with the term "knifeman" so readily at hand, none of the expressions under discussion took root in New England, it would not be easy to say; but apparently they did not, for I know of no evidence to indicate that they were ever employed in this part of the country.

It was in Virginia that the expressions first came into actual use among the colonists, though seemingly not until about the middle of the eighteenth century. Col. James Smith, referring to events which took place about 1758, wrote:

"The next morning I met with a prisoner at this place, by the name of Thompson, who had been taken from Virginia. . . . I applied to the chiefs, who agreed to my proposal, and said they were anxious to see what the Great Knife (as they called the Virginian) could do. . . . When they returned from the battle to Fort Du Quesne, the Indians concluded that they would go to their hunting. The French endeavored to persuade them to stay and try another battle. The Indians said if it was only the red-coats they had to do with, they could soon subdue them, but they could not withstand *Ashalecoa*, or the Great Knife, which was the name they gave the Virginians." (*Account of Remarkable Occurrences*, 1870, pp. 100. 101, 104.)

Smith's book was first published in 1799, but parts of it may have been written earlier, and it seems not unsafe to assume that the expressions were in vogue when the events which Smith is relating occurred. The subsequent history of the terms is shown by the extracts which follow:

"The Shawanese are about 200 miles south of the Muskingum, on the Scioto, & can raise nearly the same number [of fighting men]. They have always shown great opposition to christianity, and have great hatred of the *Long Knife*, which is the name given by them to the *Virginians.*" 1772, Oct. 7, Rev. D. McClure, *Diary* (1899), 93.

"The Shawanese message is insolent enough; and we have a certain account that twenty of their warriors are gone out, but we have still reason to think they do not mean mischief to the people here, as they lay all to the charge of the Big Knife, as they call the Virginians." 1774, May 29, Arthur St. Clair, in *St. Clair Papers* (1882), i. 297.

"Mr. Butler informs me, he has a speech for the inhabitants of the forks of the Two Rivers, meaning our Province; and Blain has a speech to deliver to Mr. Connolly as representative for the Big Knife, so that I hope you will be up before the speeches will be delivered." 1774, June 17, A. Mackay, in *do*, i 313.

"MR. WOOD informs the Committee, . . . that on the twenty-seventh [July] he delivered a speech to the Indians at the Wiandots town, which was as follows:

"'Brothers, the Wiandots and Taawaas,

"'Your Brothers of Virginia, in their great Council, are desirous of brightening the chain of friendship between you and them; . . .'

"To which the War Post returned the following answer.

"'Brothers, the Big Knife,

"'We have heard what you have said, and desire time to consider of it, when we will meet you in the Council House, at the time mentioned.'" 1775, Oct. 2, *Boston Gazette*, No. 1063, p. 4/1.

"The Grand Kite and his Nation living at Fort St Vincent told Mr. Hamilton that he and his people was Big Knives, and would not give their hands any more to the English, for he would shortly see his Father that was at Kaskaskias" 1779, Feb. 3, G. R. Clark, in P. Henry's *Life, Corr. & Speeches* (1891), iii. 221.

"I sent the following Speech to the different Tribes near the Lakes that was at war with us, to wit:

"TO THE WARRIERS OF THE DIFFERENT NATIONS.

"*Men and Warriers:* It is a long time since the Big Knives sent Belts of peace among You Siliciting of You not to listen to the bad talks and deceit of the English, as it would at some future day tend to the Destruction of Your Nations. You would not listen, but Joined the English against the Big Knives and spilt much Blood of Women & Children. . . . The Big Knives are Warriers, and look on the English as old Women and all those that Join him and are ashamed when they fight them because they are no Men." 1779, Nov. 19, G. R. Clark, *Campaign in the Illinois* (1869), 80, 81.

"I had probably travelled about two miles when suddenly I felt a hand laid upon my shoulder, and turning round, saw a naked Indian with a bow bent in his hand, and the arrow pointed towards me. . . . I now found myself completely in his power; but recollecting that if an enemy, he would have shot me before I saw him, I held out my hand, which he took, and afterwards laid his hand on my breast, and in the Osage language said, '*Moi-he ton-ga de-ah*,' literally in English, 'Big Knife you?' which luckily I understood, and answered, '*Hoya*,' (yes)." J. Bradbury, *Travels*, 1817, pp. 74, 75. In a note the author adds: "The Americans are called 'the Big Knives' by the Indians of the Missouri."

"I have myself, in 1782, while at Detroit, witnessed the Chippeways, who on meeting an American prisoner who was walking about, called out *Messamochkemaan*, (long knife) though he had no knife, sword, or dirk at his side." J. Heckewelder, *Account of the History, Manners & Customs of the Indian Nations*, 1819, p. 132.

"It has been taken for granted that he [Logan] did so listen, and that he then buried the hatchet, having slain just as many of the 'Long Knives' as the Virginians killed of Mingoes." 1882, W. H Smith, in *St. Clair Papers*, i. 317, *note.*

From these extracts it appears that the expressions came into vogue in Virginia and adjacent parts shortly after the middle of the eighteenth century; that during the colonial period they were applied to the Virginians only; and that, when the Revolutionary war broke out, the terms, perhaps because the Virginians were identified with the American cause, were used to designate those who revolted against the British.

G. H. Loskiel, in his 'Geschichte der Mission der Evangelischen Brüder unter den Indianern in Nordamerika,' 1789, i. 23, employed the term *Langmesser;* but I give the passage in full from the English translation by C. I. La Trobe, 1794, Part I., p. 18: "Since the late war, which procured the independence of America, the white Americans are all called *Big-knives* by the Indians, from the long swords worn by them." As the expression itself was well known before the outbreak of the Revolutionary war, Loskiel's explanation cannot be accepted. It was, however, adopted by Bartlett, who in 1848 said that the term "signifies the wearers of swords." In their 'Dictionary of Slang, Jargon, and Cant,' 1890, ii. 27, Barrère and Leland observe: "Long-knife (American), a white man, so called from the swords which the first settlers wore. The term came from the Algonkin Indians. In Chippeway to this day the term for a white man is *chee-mŏckomon, i. e.*, great or *long-knife.*" Under date of January 28, 1806, Z. M. Pike said: "Struck for a point about 3 miles, where we found a Chipeway lodge of one man, his wife, and five children, and one old woman. They received us with every mark, that distinguished their barbarity, such as setting their dogs on ours, trying to thrust their hands into our pockets, &c. but we convinced them that we were not afraid, and let them know, we were Chewockomen; (Americans) when they used us more civilly" ('Sources of the Mississippi,' 1810, p. 65). Upon this passage the late Dr. Elliott Coues remarked:

"'Chewockomen,' as well as the 'Chewockmen' of the 1807 ed., is far from any recognized or acceptable spelling of the Chippewa word, one fairly good form of which is *Kitchimokomen.* Schoolcraft has Chimoquemon. It means Big Knives or Long Knives, and is commonly so translated, the reference being either to the swords of the officers or the bayonets of the soldiers, which have often struck Indians forcibly, both in a literal and in a figurative sense. Kitchimokomen corresponds to the Sioux name *Isantanka*, of the same meaning and application." (*Expeditions of Pike*, 1895, i. 148 note.)

A quite different theory was advanced in 1851 by Wills De Haas. At some uncertain time, but apparently about 1760, some settlers on the Monongahela were cut off by a party of Delawares; one who escaped carried the news to Fort Pitt, and Col. Gibson was at once sent down the river to intercept the Indians.

"In this, however, he failed; but came accidentally upon a small party of Mingoes, encamped on Cross creek. Little Eagle, a distinguished chief of that tribe, commanded the party, and discovering the whites about the same time that Gibson saw them, he gave a fearful whoop, and at the same instant discharged his gun at the leader of the whites. The ball passed through Gibson's coat, but without injuring him. With the quickness of a tiger he sprang upon his foe, and with one sweep of his sword, severed the head of the Little Eagle from his body. Two others were shot dead by the whites, but the remainder escaped, and reported that the white captain had cut off the head of their chief with a *long knife.* This was the origin of that celebrated and fearfully significant term, the 'long-knives.' It was applied throughout the war to the Virginians, and even to this day has not been forgotten by some of the Western tribes. Captain Gibson, himself a Virginian, acquired the *soubriquet* of 'Long-knife Warrior,' and was known by it always afterward" (*History of the Early Settlement and Indian Wars of Western Virginia*, pp. 215, 216.)

This bears every appearance of being one of those stories which, unheard of until years—in this case almost a century—after the event, yield such joy to the heart of the biographer and the commentator.

Until evidence to the contrary is produced, it seems safe to conclude that Roger Williams, who wrote early and from an intimate personal knowledge of the Indians, was correct in his explanation that Englishmen were called "knifemen" because they introduced knives into America; and that, when the expressions under discussion came into vogue a century later, the whites had forgotten their true origin.

ALBERT MATTHEWS.

BOSTON, February 24, 1901.

Notes.

The Harriman Alaska Expedition will be the most striking single volume in the

spring list of Doubleday, Page & Co. Some twenty-five of the illustrations will be in color; three times as many will be photogravures, and there will be 100 drawings besides. William H. Dall, C. Hart Merriam, Henry Gannett, George Bird Grinnell, Bernhard E. Fernow, Charles Keeler, John Muir, and John Burroughs contribute chapters whose topics will be readily divined in each case. 'Shells and Shell-Builders,' by Charles W. Johnson, and 'The True Story of Capt. John Smith,' by Miss Katharine Pearson Woods, are also in preparation. Of the forty-volume Shakspere which the same house has in hand, under the editorship of Prof. Mark H. Liddell, lately of the University of Texas, the prospectus shows an intention to construct a new critical text from the various Quarto and Folio sources, with the inestimable aid of the Oxford English Dictionary as far as it has proceeded, and with the least possible emendation. For the spelling, the Folio will be followed, as most faithfully representing the difference between Shakspere's English and modern, and for the sake of a uniformity not obtainable from the Quartos. Elizabethan typography will not be imitated, and the punctuation will be cautiously modernized. A novel feature will be marginal cross-references (in the fashion of the Oxford Bible) in conjunction with glosses, as a help in mastering the range of associated ideas which words then had, quite different in extent from that now attaching to them. Notes at the end of each play will complete the apparatus. The line-numbering and the division into acts and scenes will accord with those of the Globe edition. The Merrymount Press will manufacture the work with its customary taste and elegance. "Macbeth" will lead the series.

'Reconstruction in Theology,' by Prof. Henry Churchill King of Oberlin College; 'The Books of the New Testament,' by the Rev. Leighton Pullan; 'The Limits of Evolution,' by Prof. G. H. Howison; and 'The Elements of the Theory and Practice of Chemistry,' by Mary E. Williams and Katharine Rolston Fisher, are in the press of Macmillan Co.

The three supplemental volumes of the 'Dictionary of National Biography' will, in the main, be devoted to winding up the last century; but an exception will be made in favor of Queen Victoria, the Bishop of London, and a few other notables whose lives ended in the early weeks of the present year.

Ginn & Co., Boston, have nearly ready 'The Working Principles of Rhetoric,' by Prof. John Franklin Genung of Amherst College.

Longmans, Green & Co. are to publish the Life of Max Müller, undertaken by his widow, who desires for this purpose the loan of any letters in the possession of Professor Müller's correspondents. They should be addressed to her at No. 7 Norham Gardens, Oxford, and will be duly returned.

It is announced that Dr. A. F. Chamberlain of Clark University, Worcester, Mass., will assume the general management of the *Journal of American Folk-Lore*, Mr. W. W. Newell remaining as associate editor, and being still the medium of communication with the American Folk-Lore Society.

The sixth of the seven volumes of the Siddal edition of the works of Dante Gabriel Rossetti (London: Ellis & Elvey) constitutes part iii. of the vague subdivision (which excludes 'The House of Life' and the Ballads) called "Poems." In this section, most curious are the "Sonnets and Verses for Rossetti's Works of Art," as to which William Rossetti's explanation in the preface is helpful in pointing out the pictures which failed to be produced as embodiments of the poetic conception.

There are one-third as many photographic illustrations as pages in 'A New Way Around an Old World'—namely, by water and rail from Vladivostok to Moscow (Harpers). They are excellent, much superior in quality, it must be said, to the text, which is from the pen of the tourist, the Rev. Francis E. Clark, D.D., President of the United Society of Christian Endeavor. His party was, he thinks, "the first Americans, and in all probability the first foreigners," to achieve this trip, and his unskilful, unadorned narrative and rather thin observations have a certain historic value in consequence. The date of the journey was just before the Chinese outbreak, or but a little in advance of that recorded in these pages by the Rev. G. Frederick Wright of Oberlin. Readers of the latter writer's correspondence will find this volume a pictorial supplement in matters superficial. A vocabulary of "some necessary Russian words" is added, but as the Russian characters are used without transliteration or indication of pronunciation, the author's complacency in offering "a very small fraction of a loaf" when he might as well offer a stone, is amusing. Dr. Clark testifies to the general courtesy and considerateness of his Russian fellow-travellers.

Americans can scarcely feel the need of such a guide-book as that entitled 'New Lands,' by Hugh Robert Mill (London: Chas. Griffin & Co.; Philadelphia: J. B. Lippincott Co.), but to the home-seekers of Great Britain it may yield gracious light. It deals fairly and honestly with the relative advantages, not ignoring the disadvantages, of Canada, Latin America, the Falkland Islands, Australia, New Zealand, and South Africa. The assumption is frankly made that the Anglo-Saxon should not venture upon the perils of pioneering in tropical countries, and no information is given concerning regions warmer than those embraced within the semi-tropical belts. The United States receives attention in one chapter, though it is classed among the settled countries. The book is written mainly in the interest of emigration into the British colonial dependencies.

The January and February numbers of the Bulletin of the New York Public Library contain a check-list of general municipal documents pertaining to this city and accessible in the Library, another of city maps and atlases, a third of guide-books, and a fourth of general newspapers published here.

In his excavations at Sandahannah, Dr. Bliss discovered "sixteen little figures of men and women in lead, two to three inches in height, very roughly executed. The personages, all nude with one exception, are represented in strange and distorted positions, as if they were writhing in suffering and torture. They have all, without exception, the peculiarity of having the hands and feet laden with bonds and fetters designedly complicated." Dr. Bliss supposed these figures to represent captives, but M. Clermont-Ganneau, discussing the question in the last Quarterly Statement of the Palestine Exploration Fund, argues rightly, we think, that these little lead figures represent persons against whom incantations were directed. At the same place there were found some fifty small stone tablets with Greek inscriptions which Professor Sayce, the only person, apparently, who has had the opportunity of examining them, declares to be "magical charms and incantations." Lead and wax have played, it will be remembered, the same part in magic, owing to the softness of the material and the fact that it is easily melted. Every one is familiar with the old custom of making a figure in wax of the person to be bewitched, which figure was melted before the fire, or pierced with needles and the like. These lead figures, apparently, represent the persons to be bewitched, who are bound with the fetters of the evil spirits to whom they are to be handed over. In a footnote in the same number of the Quarterly, M. Ganneau suggests the possibility, which we think to be a probability, that these figures were "destined, like the wax images of the spell-bound, to be finally melted in some magic ceremony" (p. 58). There is a most amusing instance of conflict of authorities in this number of the Quarterly in the explanation of a curious mosaic found at Husn in the Hauran (p. 92). Père Séjourné believes it to represent "a mathematical division of the circle," but M. Cognat thinks that it was "for a game of hop-scotch."

'Die Deutschen Kolonien in Wort und Bild,' by Gustav Meinecke, Director of the Kolonialmuseum, is, as the title suggests, a somewhat popular treatise. The author's name, however, guarantees something more than sensational treatment, even in a popular work. A short history of the seventeenth-century Brandenburg possessions on the Guinea coast is followed by a series of chapters on the several present-day protectorates of the Empire. Among the latter we note the recently acquired Caroline and Palau (Pelew) Islands, and the "leased" port of Kiaotchau. All the colonies are treated systematically under such heads as climate, vegetation, government, and missions. The Germans were happily surprised in getting hold of the Pacific islands mentioned, for which they had been negotiating in vain; they promise themselves great commercial advantages from these way-stations on the Oriental trade-routes. The Central American canal, they think, will further enhance the value of these islands. As for the virtual seizure of the Chinese port and its environs, it was a premeditated action, the fruit of a settled purpose. The Germans, when they entered the field fifteen years ago, found the districts available for colonies pretty well occupied, but they determined to be in at the finish in any Asiatic dissolution. Their tenure of the port is for ninety-nine years. This (folio) volume is liberally equipped with illustrations from photographs, etc.; a characteristic likeness of Prince Bismarck, "The Founder of the German Colonial Power," occupies the position of prominence.

In Boshart's 'Zehn Jahre Africanischen Lebens,' the military element is prominent, and a certain bluffness and directness of expression attest the soldier. Boshart was sent by the Southwest Africa Company to investigate the political and commercial possibilities of the districts under its control. With regard to the company itself, the author is a sharp critic; he asserts that its funds are spent extravagantly, that they go to pay for expensive quarters, banquets, etc., in Berlin, while progress in the colony is rendered exceedingly painful and problematic because

of lack of adequate financial support. He deals with questions of acclimatization at some length and from personal experience. Collapse in the tropics is largely a result of general weakening due to heat, hardships, coarse food, etc.; then comes the dread African fever, from which there is no immunity, even for animals. Even without the fever, the strain on the nervous system resolves itself frequently into excessive irritability, melancholy, and insanity. In short, even if "meteorological acclimatization" is possible, "pathological acclimatization" is an illusion. This being the case, the white man cannot in person develop the tropics; the native is absolutely indispensable, and if he will not work, he must be made to work. Hence, in common with other German authorities, Boshart advocates a system of compulsion analogous to the Dutch "cultuurstelsel."

Africa is the principal subject in the *Geographical Journal* for February, the first article being the account by Major Gibbons of his difficult ascent of the middle Zambezi to which we have already referred. The most interesting incident of his journey was the trial of two chiefs by a court-martial of some fifty chiefs presided over by King Lewanika, a most intelligent African sovereign. Major Gibbons and his colleagues can claim a high rank among travellers, not only on account of the extent and value of their explorations, but also because, in journeying over 20,000 miles, mainly in the most remote parts of Africa, "no one of us," says their leader, "has found it necessary to take a single human life, and, for my own part, I would have no compunction in travelling again unarmed over any part of those 20,000 miles." In striking contrast to this experience, M. Foureau's expedition from Algeria to the French Congo bears at times a strong resemblance to a simple raid. His narrative contains little worthy of note except this passage in respect to the shores of Lake Chad: "The ground is everywhere strewn with the remains of huge fish, and the whitened bones of hippopotamuses, crocodiles, and elephants. Game simply swarms, and on one occasion the troops of antelopes occupied more than ten minutes in galloping past our encampment. Giraffes, lions, and rhinoceroses are also abundant." H. Arçtowski of the Belgian Antarctic Expedition tells of his twenty landings, with graphic descriptions of scenery, as well as numerous details in respect to the configuration of the southern continent, its geological formation, and the peculiarities of its cap of ice and snow. Each article is illustrated and is accompanied by maps.

Revista de Construcciones y Agrimensura is a technical journal, issued monthly in Havana, which has now entered upon its third year of publication. It contains many excellent articles on architecture, which are accompanied by plans and views of buildings in Cuba and South America, and also articles and news relating to surveying, roads, and railroads, and engineering construction in general. It is interesting and gratifying to note that much space is devoted to technical education. The reorganization of the University of Havana, ordered by Gen. Chaffee in April, 1900, included the establishment of courses in civil, mechanical, and electrical engineering; these have now been definitely laid out, and professors and students are actively at work. The Havana School of Surveying and Civil Engineering, which existed prior to the Spanish war, has been abandoned, and its work transferred to the University. The total number of students in the University of Havana is now 629, of whom 309 are in the department of medicine and pharmacy, 165 in the department of law, and 155 in the department of letters and sciences, in which the engineering courses of study are included. These courses are four years in length, and embrace all the topics of American technical colleges, while the published examination questions indicate thoroughness of instruction. There are also minor technical institutes, called Schools for Surveyors, at Matanzas, Puerto Principe, and Santiago, which have courses of one and two years in length. With sound scientific education as a basis, the industrial development of Cuba is sure to proceed on stable and satisfactory lines.

The part of women in the efforts of the past twenty years to make good and useful citizens of our Indians is well described by Miss Mary E. Dewey in her brief 'Historical Sketch' of the Women's National Indian Association. Beginning with a petition to Congress to redeem the pledges to the nation's wards, its most important achievement was the securing the passage of the Severalty Bill in February, 1887. "Since this act became law, more than 60,000 Indians have taken up individual allotments; 25,000 have become citizens and voters; and 35,000 pay taxes in aid of the Government. The industrial products of Indian labor are valued at more than a million and a quarter of dollars annually, and all educated Indians look to this bill as the Magna Charta of their race." The day of its passage is celebrated at Hampton and Carlisle. The Association's principal work now is to give information as to the condition and needs of the Indians, to provide teachers, open libraries, build hospitals, and to send "clothing and comforts to the aged and helpless of seventy tribes." To illustrate what is being done, a single tribe, the Navajos, is chosen, and its progress in enlightenment is sketched from the brush hut covered with skins or a blanket to the "decent little houses where the light comes in and the smoke goes out—those two movements typifying the whole change from barbarism to civilization." Frequent acknowledgment is made of the cordial assistance given by the Government to the Association. "Four-fifths of the Indians now support themselves by respectable industry. Most of these are farmers or stock-raisers, a large number are mechanics, and some, both men and women, are taking good rank as doctors, lawyers, ministers, nurses, journalists, and assistant teachers. A religion of hope, of joy, and of peace has taken strong root among them."

Public education in Alaska, to judge by Commissioner Harris's 'Report for 1898-99,' volume ii., is progressing but slowly, if at all; the total enrolment in the public schools, which had risen from 794 in 1892-93 to 1,395 in 1896-97, having since then slightly fallen off. We do not doubt, however, that, with a meagre appropriation of $35,000 annually, all is being done that can reasonably be expected. The Sitka Training and Industrial School, carried on by the Presbyterian missions, with the aid of five additional teachers paid by the Bureau of Education, seems to be doing a useful work in training pupils from the principal tribes in a dozen or more trades, the introduction of which must contribute to the advancement of civilization. There are 150 pupils in that institution. To that other civilizing agent in Alaska, the reindeer, a special chapter is again devoted in the Report. Several papers on the subject of "Education and Crime," among them one of decided interest by Horace Mann, of the year 1847, fill the first 100 pages of the volume; while consular reports on various topics bearing upon education in European countries and an enormous amount of statistics make up the bulk of the publication. It is a pity that some of the statistical matter is so far from being up to date that it no longer gives a correct idea of the actual status of the institutions concerned.

—Volume iv. of the 'Writings of James Monroe' (Putnams) shows him to be still very sensitive and suspicious. He goes to France, where the purchase of Louisiana is effected, and then takes the place of Rufus King in London. Here he was displeased because the British ministers did not return his calls; he was disgusted by some remarks made respecting America, and fancied the Queen passed him in the crowd intentionally. "It might not be so, as her drawing-room is without order, a confused multitude, and those are sooner dispatched who have most strength of body and nerves, and as she is old and might [not] see, or seeing not know me." The success of King's negotiations had left little for Monroe beyond the apparently insoluble problem of impressments. The commerce of the United States enjoyed great freedom through orders rather than through laws, and had more to fear from Spanish privateers and French brigandage than from English restrictions. He prepared Jefferson for a failure to obtain any redress in the case of the seamen, and rightly counselled a "firm, manly stile of conciliation." When, later, the English began to seize American ships, he gave up his plan of returning to the United States, and hung around London and the Ministers in a not very dignified manner, meeting rebuff after rebuff. From this attitude of expectancy he was rudely awakened by a rumor that "Senator" Adams was to succeed him—a rumor which called out an indignant and reproachful letter to Madison.

—His suspicious mind gave him much unhappiness, and not infrequently made him ridiculous. The glory of the Louisiana treaty was enough for two; and if either signer deserved the more credit, Livingston was the one. No sooner was that state paper completed than Monroe began to discount Livingston's merit, and in half-pitying tone to disparage his ability. He hinted at weaknesses, insinuated jealousy, and directly charged upon him the failure of the utterly impossible Spanish mission. Finally he denounced him in unmeasured terms. His acts were not attributable to folly alone, but to the "grossest iniquity." "Be assured that he will poison what he touches. . . . In short, he is the man of all others whom you should avoid, as most deserving the execrations of his country." It is difficult to see what Livingston had done to deserve such language. It was bad enough taste to write thus to Madison; but Monroe also sought to diminish Livingston's agency in letters to the Virginia Senators, and even to the British Ministers. Others fell under his displeasure. King, a far abler man and diplomat, had been "overreached" by the English, and "any old woman from our country" would have been equally successful in pre-

serving friendship. Monroe's ideas on the proper conduct of a Minister (p. 407) are characteristic, but these solemn and portentously long letters contain so little of merit from the official side, that it is reasonable to judge that Monroe fell far short of what was expected of a diplomat. They seem to have been written for political effect in the United States, and are marked throughout by narrow prejudices which easily explain why Monroe was not a success in his missions. The editing of this volume still shows carelessness and a deficient sense of proportion. Why omit Monroe's Spanish journal?

—The Fourth Annual Report of the Commissioners of Fisheries, Game and Forests of the State of New York is, like the earlier reports, a handsome volume, containing a number of colored illustrations of birds and fish. The report proper, with protracted schedules, occupies 193 pages, leaving 248 for contributed papers treating of Phthisis, Lobsters, Forest Fires, and other relevant topics. The final paper is called a "Bibliography of the Adirondacks," and includes such items as "Clipping from a newspaper, February, 1883," while it omits many of the State's own publications. The Chief Protector, with cautious optimism, "confidently asserts that all statements that the Fisheries, Game and Forest Laws are everywhere disregarded and violated are reckless statements." The Superintendent of Forests is more explicit, and reports that, except in case of disputed or mistaken boundaries, there has been no timber cutting or trespassing on State land during the year. Of results other than negative neither officer can tell us much. Like the English sovereign, the Forest Commission reigns but does not govern. The Forest Preserve Board buys land; the towns levy taxes and other charges on it and spend the money; fires are looked after, not to say nursed, on a per-diem basis; and little besides police powers are left to the Commission. In the Forest Preserve the lumberman is rapidly completing the removal of the merchantable spruce and hemlock. Even the small and crooked sticks which in former days were spared are now taken by the pulp mills. The balsamic woods are thus becoming a thing of the past, and the characteristic Adirondack forest is now composed of elderly hardwood trees, of no commercial value, which smother the new crop of soft wood. Most of the State's woodlands belong to this class of decrepit forests. Yet on State lands acts of forestry, properly so called—the thinning of the growth, the removal and sale of the ripe merchantable timber, the cutting of worthless or diseased trees, the prevention of fires, the planting of young trees—are all hampered, and most of them expressly prohibited, by law. It is expected that the present Legislature will establish a new Forest Board. If ample and undivided power and responsibility can be given to this Board, the State will have in the Adirondacks not merely a possession but a productive asset.

—The Archæological Report of the Egypt Exploration Fund for 1899-1900, edited by F. Ll. Griffith, M.A., is bewilderingly full for condensed notice. The work undertaken in behalf of the University of California by the well-known English scholars, Grenfell and Hunt, is described as "on the right lines, though hitherto not very successful." Under the head of "Foreign Relations," Mr. Arthur J. Evans reports on "The Palace of Knossos in its Egyptian Relations," pointing out the mutual interchange between Greece and Egypt in the pre-Mycenæan period. Incidentally he discusses the newly discovered Cretan writings, in their relation to the so-called Phœnician alphabet. He rejects entirely the lately prevalent theory of the Egyptian origin of that alphabet, first propounded by De Rougé, which, he thinks, must, as a result of his discoveries, "be definitely abandoned." "Taking the theoretic pictorial originals of the Phœnician forms, as indicated by their names, it appears that over two-thirds of them correspond with actual types of one or other of the Cretan systems," the earlier hieroglyphic, or the later and much more advanced linear system. Mr. Evans announces, by the way, that he has succeeded in elucidating the system of numeration in the linear inscriptions, and that it is decimal, like the Egyptian. He is of opinion that there was a parallel evolution of alphabetic writing on both sides of the Mediterranean basin, by the Semites of the Syrian coast on one side, and the Cretans on the other. Precisely what Mr. Evans means by the "theoretic pictorial originals of the Phœnician forms" we do not know. Whence were the names derived which have come down to us in both the Semitic and the Greek forms of the alphabet? The determination of the origin of those names will, we think, be final in the determination of the origin of the alphabet.

—With the views of Mr. Evans, expressed in the Archæological Report, it is interesting to compare those of Dr. Flinders Petrie, contained in his notes on the objects discovered at Abydos, in the last (eighteenth) Memoir of the Egypt Exploration Fund, "The Royal Tombs of the First Dynasty" (1900, Part I., page 31). He finds a definite system of signs, which he calls a "signary," quite separate from "the hieroglyphic writing and its hieratic and demotic derivations," in use "from about 6000 B. C. down to 1200 B. C. or later," which "it seems impossible to separate . . . from the similar forms found in other lands connected with Egypt from 800 B. C. down to later times; we may find many of these also in the Kretan inscriptions long before 800 B. C." He concludes that a great body of these signs (signary) were in use in the countries around the Mediterranean for "several thousand years," that the Phœnicians selected a short series of these signs for numerical purposes, that the use for numeration gave the series a fixed order and system, which ultimately forced it on all the countries with which the Phœnicians traded, driving out all other signs. A glance over this volume shows that although the royal tombs at Abydos had been explored four times before, very much valuable material had been overlooked. There are in this first half of the memoir sixty-seven pages of plates, of which fifteen are devoted to marks on pottery of the first dynasty, 1,465 different marks being represented, while more than thirty plates deal with the earliest rude inscriptions, seals, and the like, the whole forming a most valuable contribution to the study of the earliest forms of marking and writing.

—Next May's total eclipse of the sun, longer than any eclipse hitherto, will be observed from a track crossing Sumatra, Borneo, Celebes, and Ceram, in regions for the most part inhospitable and far from accessible. Not enheartening are the prospects of the clearest skies in the Dutch East Indies at noon on the 18th of May, but the astronomers of many nations will take the great and necessary risk, and already their parties are en route. Besides the three English parties, under the Astronomer Royal, Professor Turner, and Mr. Maunder, the probable French party led by M. Deslandres, and several expeditions under the enlightened patronage of the Netherlands Government, there will be at least four American parties, the most ambitious being that organized by Prof. S. J. Brown, astronomical director of the Naval Observatory at Washington. The astronomers and physicists of this expedition set out for Manila on February 23 on the transport *Sheridan*, and expect to reach the Philippines about the middle of March, whence a vessel of our navy will be told to convey them to Padang on the west coast of Sumatra, near which the total eclipse will last almost six and one-half minutes. Professor Skinner is in charge of the party, with the coöperation of Professor Eichelberger and Assistants Littell, Peters, Jewell, and Dinwiddie of the Observatory staff. Also, as invited members of the expedition, go Professor Barnard of the Yerkes Observatory, Dr. Humphreys and Dr. Curtis of the University of Virginia, Dr. Gilbert of the Johns Hopkins University, and Dr. Mitchell of Columbia. Their work will be in large part photographic, embracing also research with polariscopes and spectroscopes. For photographing the coronal spectrum simultaneously on both sides of the sun, a long plate will be used with the expectation of ascertaining whether the corona rotates bodily with the sun, as was inferred by M. Deslandres from the eclipse of 1893. A second party from the United States, organized by Professor Todd of Amherst College, sailed from New York on the 2d of March, directly for Singapore, expecting to establish itself on the island of Singkep, about 170 miles southeastward towards Batavia. Mr. Percy Wilson of the New York Botanical Museum accompanies this expedition as naturalist. A third party, the details of which have not yet come to hand, is equipped and sent out by Professor Campbell, director of the Lick Observatory; and the fourth is organized by Professor Burton of the Massachusetts Institute of Technology. A possible fifth party will consist of Mr. A. Lawrence Rotch of Boston and Professor Upton of Brown University, leaving for Padang via Genoa about April 1; their work will be largely meteorological.

WILKINSON'S MILITARY ESSAYS.

War and Policy. By Spenser Wilkinson. Dodd, Mead & Co. 1900.

Mr. Spenser Wilkinson has given an appropriate title to a series of essays which treat of statecraft in, and political consequences of, war, as well as the military science which is applied, neglected, or developed in its prosecution. In the first essay the writer—premising that neither the military writer who confines himself to strategy, tactics, marches, and battles, nor the political writer who, to avoid the professional discussion of war, assumes that, once begun, it is to run its course while policy remains suspended, gives a true picture of war—says that the chief difference between the wars of the nineteenth century and earlier

ones resulted rather from changes in the political world than from technical improvements in military science. The monarch of the eighteenth century would readily set in motion his little army of paid soldiers for some trivial question personal to himself or his house; but to-day there are no longer family or dynastic interests separable from those of the nation, and the ruler of a great nation, even if a monarchical state, conceives that he represents the national interests or will, and is impelled to, or restrained from, war by the vastness of the interests to be affected and the passions to be aroused by an appeal to its arbitrament. "A nation will not throw itself into a fight unless it is deeply moved, and it will not be aroused except by a cause profoundly affecting the sentiments or interests of the mass of the people." "The great characteristic of modern war is the inevitability which pervades it."

In the subsequent essays, which were written each for a specific occasion, the writer investigates the origin, motive, and conduct of most of the great wars of the nineteenth century, as well as those of Gustavus Adolphus and the French Revolution. As a whole, they furnish an interesting and instructive example of weaving politics with military narrative and science into the history of wars. The writer has not escaped the common failure of historians to include the character of the people engaged in war—an element which often upsets the formulæ upon which military experts forecast results. For example, the assumption that a force in earthworks sufficient to cover their front with rifle fire will inevitably repel the attack of a given number of men, does not always illuminate the past for the student, or establish a safe rule for the future for the soldier. The moral stamina of the rank and file, and the character of the officers, must be taken into account, They cannot be valued like chessmen.

The refrain which is constantly encountered in these essays is the warning to the English people that the penalty inflicted on the loser in modern war is limited only by the tolerance of neutral powers; that war between Great Britain and other great nations is inevitable; that she cannot depend upon the alliance or friendship of any Power; that "she is compelled either to be the first of nations and to lead mankind, or to lose, not merely her empire, but her very independence," and that her first and last duty is to prepare, and at all times remain prepared, for war. The author intimates his regret that the Government has on several occasions neglected to throw down the gauntlet to one great Power or another. It would be sadly disillusionizing to those of us who credited the action of Great Britain in the Venezuela affair to magnanimous forbearance, to accept his conclusion that it was a surrender "inexplicable except on the hypothesis" that the Cabinet "believed the army and navy unready to take up a quarrel." Unlike many of his countrymen, Mr. Wilkinson seems not to have a friendly sentiment aroused by the "tumultuous silence" which fell upon the Venezuela debate in Congress and in our press when the German Emperor seemed to seize our quarrel with England as an occasion for interfering in South Africa.

Upon the technical side, the learning in grand strategy which is shown in these essays is not always matched by familiarity with modern conditions in actual combat. Referring to the repulse of a charge of the Danes in 1864 by the rifle fire of a Prussian captain's command, it is said that this settled the question between the bayonet and the bullet; and later, in an essay written in 1900, this passage is encountered: "It must be at least a dozen years ago that the spade was adopted as an offensive weapon to enable the advancing rifleman to hold his own against counter attack." The supremacy of the rifle bullet over the bayonet was settled in the larger and fiercer combat of Fredericksburg in 1862; and thirty-six years ago at Spottsylvania, Cold Harbor, and Petersburg the art of covering the advance with the spade was displayed in effective form.

An admirable review of the events leading up to the American civil war, is followed by a masterly exposition on broad lines of the strategy developed in that war. In the chapter entitled "Retrospect" it is said that, while it is doubtful whether the plan on which the war was conducted was ever devised by a single mind, as a matter of fact, if a master in the art of war like Napoleon had approached the problem which was presented at the outset to the Northern armies, he would have adopted as his plan that which they, slowly and perhaps as the logic of events, put into practice, in blockading the ports, keeping the Confederate force on the frontier from the Mississippi to the Atlantic occupied in active hostilities, conquering the control of the Mississippi, penetrating by the Cumberland and Tennessee to Chattanooga and Atlanta, and sweeping thence through the Confederacy to the sea, and then up the coast to take its army in Virginia in the rear. It is the author's opinion that the possession of a navy by the North was the decisive factor in the war. Taken literally, this statement is inaccurate, because at the outbreak of the war the fleet consisted of only thirty-five serviceable ships, carrying four hundred and sixty-two guns—a force inadequate for the semblance of a blockade. Here is an instance where, to trace cause and effect, it is essential to estimate the character and genius of the opposing peoples. The South, equally with the North, had a coast on which to breed sailors, and coal, iron, timber, and all other materials with which navies are built and armed; but the North alone had the genius and mechanical skill to create the ships for a navy, and the sailors to man them. Between March, 1861, and December, 1864, 210 vessels and 1,675 guns were put into commission. It was this new navy that made the blockade effectual. It is not possible to disprove the assertion that the Confederacy could not have been overthrown without the use of the navy, but the same is true of the army, and it is no less accurate to describe it, than to describe the navy, as the decisive factor in the conflict. While the blockade caused the Confederates to suffer grievously for the materials of war, and the want of them greatly increased the disadvantage of disparity in numbers, yet in no important battle or campaign can their defeat be traced to a want of such materials. They were beaten only by the hard fighting of superior numbers, and the immediate cause of their surrender was the depletion of their ranks. Out of an enlistment estimated at 1,200,000, there were only 175,000 men left in the field throughout the Confederacy at the time of Lee's surrender. Without this fighting to a finish it may be doubted whether the South would have rested content not to try conclusions again.

In one of the essays, the author falls into the ways of the romantic novelists in estimating the value of service under fire in forming soldiers. He says of the army with which McClellan took the field in the spring of 1862, that it "at that time lacked the most essential quality of an army—the soldierly spirit. Enthusiasm, devotion, bravery, and obedience were not wanting, but the great organism had not yet received that breath of life which gives to the military community an almost indestructible vitality, but which no army possesses until it has been in the presence of the destroying angel." The record tells a different story. The force engaged at Williamsburg and Fair Oaks displayed the steadiness of veterans. The idea that a baptism of fire is necessary to make a steady soldier may be sound where an army drafted from peasantry is concerned, but it is not applicable to Americans. With them discipline, and discipline only, is essential. Disciplined they fight as well in their first as their second battle. A very recent example of this was seen at Santiago, where probably there was not a man in the ranks of the American army who had ever seen a pitched battle.

McClellan is termed "a good strategist," and it is said that the strained relations between the President and himself weakened his resolution and compelled him to be cautious, and "to avoid risks when the only way to success lay in risking everything," and that when he was recalled, the command was given to Pope, who "brought the army back to Acquia Creek," whereby "the inestimable advantages of unassailable communications" and of a base of operations not twenty-five miles from Richmond were "thrown away." It was not Pope but Burnside who, four months later, brought the army to Fredericksburg, with its base at Acquia Creek, and McClellan's caution was not compelled by his relations with the President. On the contrary, the latter again and again urged McClellan to strike. McClellan with 85,000 men besieged less than 25,000 at Yorktown, and neglected the opportunity to carry the lines by storm which was presented to him on April 16 at Lee's Mills, but later professed the desire to carry the stronghold at Richmond by direct attack. He had 115,000 men present for duty, and expressed the belief that the enemy's force was equal to his. He demanded McDowell's corps of 20,000 to insure success. His critics have accepted the issue thus made by him, and have condemned him for not attacking with the force which he had; but we now can see that this has been a false issue, for, although there were only about 70,000 men in the works at Richmond, the experience of 1864 at Spottsylvania, Cold Harbor, and Petersburg teaches that this number was ample to hold well-planned works against three times its number. Gen. Humphreys, one of the most accomplished soldiers and resolute commanders, in the light of his long experience and study, expressed the opinion in his 'Virginia Campaign' (page 75), that, in suitable intrenchments, the strength of the army sustaining the attack is more than quadrupled. As Grant learned this in the campaign of 1864, McClellan cannot be censured for not perceiving it in 1862. McClellan had no chance of winning at Richmond except in

the open field. When this chance was presented to him at Fair Oaks, at Gaines's Mill, and at Malvern Hill, he neglected it. On these fields, as well as in the Antietam campaign, he forfeited the right to be considered a good strategist or a good tactician.

Military writers who dwell upon the importance of the James River as a line of communication, are oblivious of the fact that the campaigns of three years proved that it was entirely feasible to maintain lines of communication in moving on Richmond from the Rappahannock, which river was reached by McClellan's advance in 1862. Lincoln, in his letter to McClellan of April 9, defined the strategic situation with great precision in this passage: "You will do me the justice to remember I always insisted that going down the bay in search of a field, instead of fighting at or near Manassas, was only shifting, and not surmounting, a difficulty; that we would find the same enemy and the same or equal intrenchments at either place." Humphreys, writing nearly twenty years after the war in the work above cited (page 8), pronounced the Rapidan route to have been preferable to the Peninsula, as "giving opportunities for flanking operations by the whole army, and a freer handling of it, with more opportunities of success in destroying the power of the Army of Northern Virginia," while covering Washington quite as well.

The author says that after Shiloh there seems to have been doubt at Northern headquarters as to what the next move in the West should be. In this he fails to observe that, at that period, events were shaped by considerations of state, which, as he well says, may sometimes overrule strategic principles. The fixed purpose of President Lincoln was to occupy West Tennessee, to protect the Unionists there; and to this end Buell was directed on Chattanooga in 1862. The advance of Bragg into Kentucky stopped him.

A remarkable want of perspective characterizes the author's view of Nashville and the Appomattox campaign. Nashville is described as "the most crushing defeat inflicted upon any army during the war," while the Appomattox campaign is adverted to as follows:

"Grant determined, while keeping an adequate garrison in his lines, to move part of his army westward on to the two lines of railway still open for Lee's use. At the same time Lee evacuated Richmond and Petersburg and marched westward. But Grant, prepared, was quickly on his track, and as Lee's army was worn out, half-clad and half-fed, it was overtaken in a few days. When Grant was approaching the remnant of Lee's army, he sent a note to Lee, which led to an interview at which it was agreed that the officers and men of northern Virginia should lay down their arms and go home to fight no more."

This passage might be set to the air of a shepherd's pipe, so completely does it suppress the suggestion of hostile conflict. At Nashville, Thomas with 50,000 attacked Hood's 23,000, who fled with slight loss in killed and wounded, leaving 4,462 prisoners in Thomas's hands. In the Appomattox campaign of twelve days, March 24-April 9, Grant with 113,000 attacked Lee's 50,000, and drove them from their works at Petersburg and Five Forks. The Union army, in hostile contact during seven of the twelve days, suffered a loss of 9,066 killed and wounded and 1,714 missing, and killed and wounded more than 6,000, captured 40,000, and dispersed the remainder of the 54,000 Confederates.

An ingenious parallel is drawn between the American civil war and the Boer war. It is pointed out that in each the quarrel was between two opposing political systems and of slow growth, and the author alleges that Great Britain in the Boer war is the champion of personal freedom, as was the North in the civil war. He deplores the misfortune that the fight of the Transvaal for independence causes the wrongful impression that Great Britain, belying her traditions, is playing the part of an oppressor, as the fight of the South for independence veiled from Englishmen the fact that the North's was the cause of freedom. The author also remarks that the British statesmen in charge at the outbreak of the Boer war, like President Lincoln, have had to learn the art of directing great military operations as the war has gone along. A fault in the parallel which is not noticed is the fact that, unlike the North in the civil war, Great Britain is conquering an alien people and seizing a land which is not hers. Notwithstanding this difference, there are not a few Americans who will agree that in other respects the parallel is a just one. More of us find reason for justifying the war with the Boers in the fact that it is the duty of a nation to protect its sons from oppression by foreign Powers.

STURGIS'S DICTIONARY OF ARCHITECTURE.

A Dictionary of Architecture and Building, Biographical, Historical, and Descriptive. Edited by Russell Sturgis. In 3 vols. Vol. I., A-E. Pp. ix, 471; 34 plates, illustrations. Macmillan Co.

There already exists in our language an important Dictionary of Architecture. It was begun in 1850 by an English society organized for the purpose of its publication, and was completed only about seven years ago. It is a folio of 2,300 pages, usually bound in six or eight volumes, and as issued in parts it costs the subscribers twenty guineas. But few copies of it have found their way to this country. There was also Audsley's less ambitious attempt, but that came to an untimely end, and since then the field for an architectural dictionary has been an open one.

The selection of Mr. Russell Sturgis as the editor of such a work was well advised. His previous experience in lexicographical work, as in the conduct of one of the departments of the Century Dictionary, had prepared him for his task, and enabled him to carry it forward with a speed unusual in such undertakings. That the publication of the present work is not to be drawn out over a period of forty years, as was that of the Architectural Publication Society's Dictionary, or to come to a standstill ere half its course is run as did Audsley's, we may well imagine, since the first volume is at hand, the second in type, and the third in manuscript. As the foremost writer in America upon architecture and allied subjects, Mr. Sturgis commands a respect that has earned him the assistance of men of the broadest training and highest technical skill. This corps of writers includes, among many others equally well known, Messrs. Edwin H. Blashfield, Frederic Crowinshield, and John La Farge, who write upon painting and painted decoration; Caryl Coleman on ecclesiology; F. S. Dellenbaugh on American archæology; William Paul Gerhard on sanitary science; William R. Hutton and Corydon Purdy on structural engineering; A. L. Frothingham and Allan Marquand on the archæology of art; Charles A. Platt on gardens, and R. Phené Spiers on Oriental architecture. In all there are some sixty contributors.

The work is not, on the one hand, a mere glossary, a series of words arranged alphabetically, each furnished with the briefest possible definition; nor is it, on the other hand, an encyclopædia in which lengthy articles appear under a few headings. It is rather a combination of the two—an encyclopædic dictionary, in which every word related to the principal subject is given and defined, while the more important are treated in articles of several hundred or several thousand words. Thus, "Dwang" is defined by five words, while "Egypt" is given five thousand. The scope of the work is not badly indicated by its sub-title as "Biographical, Historical, and Descriptive." Definition is certainly the first function of a dictionary; description is but an enlargement of that idea. Half, or more than half, of the terms receive mere definition, yet a sufficient treatment. Among these one notes a surprisingly large proportion of words in foreign languages—a fact that brings home to us the heavy indebtedness of the architecture of any country to that of other countries. Many of these, such as *allège, andron, dégagement, fondamenta*, have no exact English equivalent; therefore, careful definition is most useful.

Among the longer descriptive articles in the first volume one notes particularly the following: *Acoustics*, in which Prof. W. C. Sabine of Harvard, whose investigations have placed the whole subject of architectural acoustics in a new light, gives a résumé of the present knowledge of the subject as free from technicalities as the nature of the thing permits; *Architect*, in which the rôle that he has played in the erection of buildings in many lands and in many ages is discussed, and in which his education, duties, emoluments, etc., in America, France, England, and Italy are considered; *Church*, in which the sundry kinds of churches and the several parts of each, are defined, and to which Mr. Barr Ferree has added a list of the more important churches of Western Europe, with brief notes on each; *Design*, in which Mr. W. R. Lethaby offers an essay on the theory of architectural design not only from the usual points of view, such as proportion, symmetry, materials, etc., but from those of nature, adaptability, and tradition.

But enough as to the merely descriptive part of the book. Let us turn to the historical, which we find contained chiefly in a series of articles upon the architecture of various countries. Among these the vigorous and sympathetic handling of the history of architecture in England, by Mr. R. Clipston Sturgis, is one of the ablest, as it is one of the most readable. Professor Hamlin has written on both Byzantine and Egyptian architecture, and Mr. R. A. Cram has done his best to throw some light on the obscure history of architecture in China. It is articles such as these which especially give the work its encyclopædic character and make it more than a Dictionary.

Biographies of architects and of those

whose work was closely related to architecture, play a large part in the scheme of the work. Almost the whole of this has been in the hands of Mr. E. R. Smith of the Avery Architectural Library, who has contributed a greater volume of matter to the Dictionary than has any one else, who has, in fact, contributed one-third of its entire contents. His writing is marked by its thoroughness and its scholarly qualities. During the last twenty-five years the question of the authorship of important buildings, especially in Italy, has been greatly modified by the mass of original documentary evidence which has been made available. Mr. Smith has based his conclusions, wherever it was possible, on original sources. In view of the overturning of so many old ascriptions, it is very gratifying to have at last a book of reference from which one may feel reasonably sure of obtaining an account of the life of an architect and a list of his works representing the latest conclusions of scholarship. To each of these biographies has been appended a list of the works to which further reference may most profitably be made, and as this system has been pursued more or less consistently throughout the Dictionary, the notes to the articles form in themselves an *index librorum* of great utility.

It must be confessed that there are some things about this Dictionary that one would wish otherwise. In the first place, the reader gets no assistance as to either the pronunciation or derivation of the terms defined, nor, except in rare cases, are their equivalents in other languages given. Considering the fact that many of the words about which one seeks information are in foreign languages, such assistance would have been of great value. To this, however, it may fairly be answered that most men have at hand other dictionaries from which they can secure such information. In the second place, a somewhat obvious defect is lack of proportion. The longer articles stand in a place by themselves. The words which give rise to them have received a far more ample treatment than other words of apparently equal importance, and even among articles of equal length great differences of importance of subject exist. For instance, the word "Bar-room" has eleven lines, while "Coliseum" gets but twelve, and not even a reference to the literature of the subject, nor a cross-reference to "Amphitheatre." There is not a systematic and well-sustained attempt to describe important buildings by means of the names of the places in which they occur. Such a task would have been an enormous one, and wisdom was shown in not undertaking it, yet here and there we come across some slight attempt in that direction. Under the word "Abbey" we find an excellent definition of the word, near which occur the sub-headings, Abbaye-aux-Dames, Abbaye-aux-Hommes, Bath Abbey, Battle Abbey, Westminster Abbey, Abbey of St. George (Boscherville), Abbeys of Scotland, Abbeys of Yorkshire. It is a little puzzling to understand on what principle Bath and Battle Abbeys have been included where there is no mention of Glastonbury, Tewkesbury, Romsey, Tintern, or St. Albans, or why the Abbaye de St. Georges de Boscherville should be described where there is no mention of Citeaux, of Cluny, or of Mont Saint-Michel, or, indeed, why all the abbeys of Germany and Italy should have been ignored.

Without going far, one comes upon some curious examples of misinformation; as, for instance, where this same Battle Abbey is described as a ruined church. Now the excellent definition of Abbey to which we have referred, makes clear that an abbey is a monastic establishment, that its buildings are many, and that the use of the word to designate the church alone is erroneous. Particularly is this true of Battle, where the remains of the Abbey Church are most scanty—so scanty, in fact, that they consist of a few heaps of crumbling masonry, cropping up from a grassy lawn, and of some up-ended stones said to mark the position of the high altar, the spot where Harold is reputed to have fallen. The Dormitory is an interesting ruin, while other monastic buildings are so well preserved that, with suitable additions, they form so stately a country-seat that any one who has ever seen them, surrounded as they are by terraced gardens and overhung by cedars of Lebanon, associates the idea of Battle Abbey not with a ruined church, but with a fine old English mansion.

In a dictionary, of all books, the illustrations should be exactly to the point, and in a Dictionary of Architecture every point capable of illustration by a drawing should have one. Excepting the half-tone plates, which are both well made and well chosen, the illustrations in our present book are, in many ways, not satisfactory. They are engraved from line drawings, and almost without exception they present an antiquated appearance. One suspects that cuts have been got together, rather than made for the occasion, and used wherever they would best fit the case or often without exactly fitting it. It would seem, too, that generally, where no suitable cut was forthcoming, none was made. As an example of this, under the heading "Boss," we find four excellent illustrations drawn from French and English Gothic, but in a neighboring article, where eight kinds of brace are described, not one of the eight has the help of even a diagram. The somewhat ready-made character of the illustrations could scarcely be more clearly shown than in the article "Alhambra," which has the singular treatment of eight lines of text with no plan of the citadel or its surroundings, but with a small and rather coarsely drawn view of the group, and, most astonishing of all, with a full-page illustration of the wooden framing on which the plaster work of the Court of Lions is carried!

But it is not hard to pick flaws in the best of technical dictionaries, and this one, in spite of its defects, which are of omission rather than commission, will prove an eminently useful and, in the main, reliable work.

The Rulers of the South. Sicily, Calabria, Malta. By Francis Marion Crawford. With a hundred original drawings by Henry Brokman. In two volumes. The Macmillan Co. 1900.

Mr. Crawford's long residence in Italy and his well-known attachment to the country, make it seem natural that he should continue to publish novels drawn from Italian subjects, and not unnatural that he should write portions of Italian history. His 'Ave Roma Immortalis' of two years ago was a departure from fiction, though charged with imaginative sympathy, and it should be mentioned as a kind of prelude to 'Rulers of the South.' Both works are conceived in the same spirit, written in the same style, and illustrated in the same general manner. Mr. Crawford is copious, but we should hardly call him rhetorical. When his heart is touched by the memory of past scenes or departed heroes, he infuses a lyrical strain into his prose. The design is clearly to quicken a living interest in the distant episodes which are described, and all the author's literary skill is used to heighten the effect. Almost always the result is reached. If an occasional sentence glows too warmly, we find the explanation in honest enthusiasm for the art and life which have given those southern lands their classic character.

The title needs to be supplemented by two or three statements about the contents. For instance, the bulk of the book deals with Sicily and that part of the mainland which was contained in Magna Græcia. Malta is only a pendant, and its history is kept quite in the background. While Calabria is singled out in the title from the other districts of southern Italy, the term does not furnish an exact indication of what one may look for in the text, as Apulia stands forth prominently in the narrative of the Norman conquest. Finally, the title-page gives no hint of the chronological limits which are observed. Mr. Crawford really stops at 1282 with the Sicilian Vespers, though one short chapter brings on the story to the time of Charles V., and an essay on the Mafia is added in conclusion. We do not inveigh against the title for failing to furnish a synopsis of the contents, but the facts which we have given will show the scope of the two volumes a little more fully.

Mr. Crawford divides his space pretty evenly between the classical and the mediæval periods, devoting a volume to the first and nearly a volume to the second. Greeks, Romans, and Normans are the prominent races; Goths, Byzantines, and Saracens are remembered, but kept in the second rank. Mr. Crawford enjoys the great advantage of personal acquaintance with Italian and Sicilian topography. A sketch like his must be selective at every point. If one knows the ground well, he gains a sense of perspective and a feeling for the relative consequence of different places which seldom comes from reading alone. Especially is this the case in Sicily, where different civilizations are so stratified, and where, without a sure instinct, the historian will distort his proportions. Mr. Crawford says of this island at an early stage (vol. i., p. 25):

"Its history is confused by an enormous number of small details, and by such endless accounts of insignificant personages and of minor actions that the main stream of interest is divided into a thousand channels where no single rivulet has much strength or beauty left; and sometimes all the channels are quite dry. For Sicily has been the favorite ground of the specialist for a long time, and in the specialist's minute work the smallest detail may possess for him the very highest importance."

And he has avoided the danger which thus, at the outset, he perceives.

We must notice the way in which Mr. Crawford employs historical materials, for this is an important matter in the case of the picturesque writer. He has, apparently, done some work at first hand, and he follows good guides: Holm for the classical period, Ritter for Greek philosophy, Amari

for the Mohammedans in Sicily, Delarc for the Normans in Italy, Capecelatro for Neapolitan affairs, etc. His bibliography of twenty-eight titles is a good one, though we observe with a certain amount of amusement the absence of a reference to Freeman's books on Sicily, both to "big Sicily" and "little Sicily," as their author called them in his journal. This is one of the most severe criticisms which the late Oxford professor has received, for in later life Sicily was his great hobby. Mr. Crawford's aim is "to give a simple and true account of the successive dominations by which Sicily and the south of Italy have sometimes prospered and sometimes suffered." The structure is simple, though the style is now and then poetical, and it is plain that an attempt has been made to secure accuracy. At several points a pedant might quarrel with Mr. Crawford's statements, but we have found none that are very misleading. We give one or two instances of what we mean. Vol. i., p. 14: "Alaric meditated the passage [from Italy to Sicily], but withdrew." Vol. i., p. 370: "Had he [Alaric] lived, he would have conquered Sicily and his rule might have been good." These sentences need reconciliation. Vol. ii., pp. 360-861: Mr. Crawford contrasts the south of Italy with Venice, Lombardy, Tuscany, and Rome, and says: "The south was better worth winning and holding . . . from Henry the Sixth to Gonzalvo de Cordova." This is not uniformly true, because money was what the sovereigns of the Middle Ages and the Renaissance always sought, and when Charles VIII. entered Italy the revenue of Milan was double that of Naples, while the revenue of Venice was greater in the ratio of eight to three. The work is not free from minor slips, but it would be unfair to lay much emphasis upon them.

We could not in a single paragraph supply any satisfactory criticism of what Mr. Crawford writes about Greeks, Romans, and Normans, or even about Goths, Byzantines, and Saracens. There is nothing better in the book than the account of Greek life in Italy and Sicily, with its careful discrimination of values, its animated description of the Athenian catastrophe at Syracuse, and of Timoleon's exploits in behalf of the same town, its sympathetic view of Greek ideals. But we leave aside the classical and mediæval periods for a word about the smaller subject of the Mafia.

The Mafia might, with a show of reason, be called the curse of modern Sicily, but it is something more. It is the mirror in which the strongest traits of Sicilian character are reflected, some vicious and some honorable. A few months ago Signor Antonio Cutrera, Chief of Police at Palermo, summed up a long experience of fighting it in a book called 'La Mafia e i Mafiusi.' Mr. Crawford, using this as a storehouse of illustrations, depicts the system with the utmost clearness. The Mafia differs wholly from the Camorra of Naples, the aim of which is to make profit by pilfering, plundering, or any other means. It also differs from brigandage. The ordinary Sicilian, whose ancestors have for centuries suffered unjust robbery and death under the cloak of law, hates the police and the courts. Not only does a good Sicilian conceal his enemy's name from the police when he has himself been injured. "The obligation to conceal the name of the assassin or other offender extends to all those who chance to be witnesses of the crime, and it is even considered to be their duty to hide the criminal from the police if he is pursued. The code requires an innocent man to go to penal servitude for another rather than betray the culprit, and Signor Cutrera, who should know, if any one does, states that cases are not rare in which Sicilians, though innocent, have undergone long terms of imprisonment, and have even died in prison, rather than give information to the police." One proof of the ascendency which the Mafia has gained may be found in the method employed to protect the lemon and orange groves of the Conca d'Oro around Palermo. The guardians are all Mafiusi, and the owner who would dispense with their services loses his crop and probably his life. Their "despotism over the orange-growing regions is absolute." They levy tribute on land-owners when their funds run low, but do not molest strangers. "It is quite wrong," says Mr. Crawford, "to suppose that foreigners visiting Sicily and having no interests in the island are exposed to any danger from the Mafia or from any organized band of brigands; and with ordinary precautions, if the traveller is willing to avoid a few dangerous localities, he will not be more exposed to the attack of common thieves than in many other countries."

Mr. Crawford's 'Rulers of the South' is a bright, attractive sketch, and it should recommend historical studies to some who believe it quite right for the dead past to bury its dead. We must also praise the excellence of Mr. Brokman's drawings.

The Transit of Civilization from England to America in the Seventeenth Century. By Edward Eggleston. D. Appleton & Co. 1901. Pp. ix, 344.

A little more than four years ago, Dr. Eggleston's 'Beginners of a Nation' was favorably reviewed in these columns. He has now followed that initial study of the life and character of the American people with a second volume of equal value. Like its predecessor, it is terse and vivid in style and exceedingly compact in treatment. Three hundred and thirteen pages of text and notes suffice for the story. Dr. Eggleston's present volume is in no sense a narrative of colonial beginnings. It does not attempt to repeat the familiar tale. It presumes an acquaintance with the main facts of early colonial history. It is, rather, a series of six brief monographs designed to put vividly before the reader the point of view under which the early settlers of the United States conceived the world in which they lived, and estimated conduct and life. The first of these essays treats of the conceptions of Nature entertained by the colonists and of their superstitions. The astronomical, meteorological, and biological notions of the founders are touched with a skilful and illuminating pen. Their beliefs as to angelic or demoniac intervention in the affairs of life are graphically illustrated. Then follows a "Digression concerning Medical Notions at the Period of Settlement," that gives a striking impression of the rudimentary and erroneous condition of the healing art. This done, Dr. Eggleston discourses entertainingly on "Mother English, Folk-lore, and Literature," as affected by colonial surroundings; and, in a very suggestive chapter on "Weights and Measures of Conduct," illustrates the different judgments of that age as contrasted with those entertained in ours in regard to morals and religion. Education next claims his attention, and the book closes with a chapter on land and labor.

The result is a volume of decided interest and value. It is a real contribution to the literature of the well-worked field of American beginnings—a field in which Dr. Eggleston has been fortunate enough to discover an overlooked corner. The book, brief as it is, is a mine of recondite information, and bears witness on every page to wide and careful reading of sources outside those ordinarily drawn upon by writers on our colonial history. Nor are the general fairness and candor of the volume less conspicuous than its learning. Dr. Eggleston is certainly oftentimes unsympathetic with the weaknesses of a bygone age, but he is a conscientious guide. Instances of his sanity of judgment might be cited in abundance, but one quotation must suffice. Speaking of New England, he observes:

"Puritanism made one great contribution to human culture. More emphatically than any other movement of modern times, it taught the supremacy of conscience. . . . Conscience could not long remain at high tide; the ebb was inevitable. The last half of the seventeenth century saw a swift declension from primitive Puritan ideals. But through such temporary and aberrant exercises the moral nature of the race is developed; by such efforts to attain a visionary and impossible excellence is the sense of right and wrong made strenuous enough to refuse the bribes of sensuality and of worldly ambition. The successors of those who exercised their consciences on frivolous judgments about apparel, psalm-singing, and imaginary idolatries in the names of islands and days, may put their hereditary strenuousness or their traditional preference for ethical considerations into the promotion of substantial social betterments. The ferment may not be pleasant, but the brew is good at the last."

The volume has been provided, by Mr. Charles Alexander Nelson, with an index of much more than usual copiousness of reference.

L'Âme Américaine. Par Edmond de Nevers. 2 vols. Paris: Jouve et Boyer. 1900.

The ambitious character of the above title is somewhat modified in the preface to these volumes, for M. Edmond de Nevers there announces to his French-Canadian compatriots that his purpose is not so much an addition to the scientific psychology of peoples as an attempt to discover what conditions of life in the United States might in the future make this country an attractive settling-ground for his fellow-countrymen. From the safe refuge of an American domicile, he can thus express with more openness a number of feelings or tendencies which many of his friends across the border, in their quality of British subjects, might find it inopportune to publish in a British colony. His exposition and argument proceed on the assumption that it is desirable for the French-speaking element to preserve a quasi-racial, if not ethnical, distinctness while continuing to inhabit countries in which political rights are open to all. This aspect of the work is consequently that of racial particularism. This spirit rises to some intensity when M. de Nevers approaches the subject of Irish immigration and, as he puts it, the overwhelming of other factors in national development by the Celt. With the characteristic misgivings of his own racial com-

munity, the author views askance the growth of this power in the land, of which he professes to see signs in all directions; while he declares, with no less complacency (vol. ii., p. 368), that, during a three years' residence in Rhode Island, he found but four or five occasions for speaking English—a fact which may well give pause to native Americans still confident in the absorbing power of our national life. It is further admitted by M. de Nevers that the tenacity which French-Canadians continue to show in the preservation of their mother-tongue among themselves is mainly owing to the efforts of their clergy; usually, when a French-Canadian abjures, he promptly Anglicizes his name, educates his children in the common schools, and his representative in the third generation loosens the last tie by forgetting, or ignoring, both origin and language. To account for the alacrity shown in these transformations, much stress is laid on "assimilation by contempt," the implication being that those who cling to ancestral conditions possess more moral courage than the denationalized renegade. As for M. de Nevers's contention that settlers of common race and speech can, by clinging together, improve their chances of contributing to the intellectual production of the country more worthily than in the past, we fail to perceive its cogency. If, as he says, the majority of Americans "whose reputation has crossed the ocean on the waft of other titles than those of the millionaire or the soldier," are of Anglo-Saxon origin, we would add that much the best part of their inspiration came from their whole-hearted adherence to principles and sentiments essentially American; to their unswerving faith in a truly national unity.

The historical portion of this work, which occupies the first volume, serves as a setting for the discussions contained in the second. Though eminently readable and compiled from trustworthy authorities, official or unofficial, it discloses nothing new in the history of the commonwealth. Other divisions of the book take up, in not unfavorable review, millionairism, the spirit of social equality, the economic problem of the unequal distribution of wealth, etc.; and the treatment concludes with a hopeful outlook on the future. M. de Nevers appears to anticipate with some satisfaction a possible linguistic division of this country into zones determined by the respective predominance of English, French, and German, in already clearly defined regions. Certainly, if a fair proportion of his French fellow-citizens could write their mother-tongue with the same correctness and ease as their present mentor, the cause he pleads would stand a fairer chance of winning external sympathy; possibly, too, some measure of success.

Wisconsin's Deutsch-Amerikaner bis zum Schluss des Neunzehnten Jahrhunderts. Von Wilhelm Hense Jensen. Volume I. Milwaukee: Deutsche Gesellschaft. 1900. 8vo, pp. x, 400.

One does not look for finished literary style in a work like the one under review. Nor does experience warrant the expectation of historical perspective and proportion, or of an impersonal point of view, in a memorial produced under the auspices of a society organized for aid and advice to immigrants of the nationality involved; least of all, a sober apology in lieu of enthusiastic glorification. As a matter of fact, however, Herr Jensen's style is charming; brisk and concise to a degree rarely found in German. His descriptive powers are excellent. The saving quality of humor, moreover, is pervasive. Above all, his writing possesses that sympathetic quality which the German so aptly terms "anheimelnd." Herr Jensen writes with a zest infectious to the reader, and he is seldom wanting in tact.

Of this 'History of Wisconsin's German-Americans' we can say that it is almost void of personal puffery and of gingerly regard for personal prejudice—in the case of "personages of prominence" wholly; and Herr Jensen's few lapses are not only confined to the obscure, but are so obviously tendered as a good-natured *quid pro quo* for "favors extended" to the author in his often vain search after sources and data, that indulgence is readily granted. That his work has a *Tendenz*, however, is not disputed. He postulates that the spirit of Teutonism has left its impress upon the civilization of Wisconsin, and he proceeds so to marshal his facts as to prove his thesis, but in no spirit of vain race glorification. Thus, he does not hesitate to make very clear the fact that *au fond* the German's persistent championship of "persönliche Freiheit" has been practically no more than a selfish insistence upon the untrammelled consumption of beer. For a long time political questions of the profoundest ethical and intensest practical import were almost wholly ignored, but the "Trinkfrage" has never yet been lost sight of. It was but tardily and incidentally that the emancipation question agitated our German-American fellow-citizens; and even then but partially and temporarily. For while it is true that Wisconsin Germans quite generally were "War" Democrats, copperheads were numerous enough among them, and these of the most virulent type; while abolitionists were few and far between. Again, German Catholics, having, under stress of the Know-nothing agitation, become Democrats, the Lutherans flocked into the Republican ranks for no better reason than that the "Romanists" were in the other camp; while the "freethinking" element, the so-called "Forty-eighters," vacillated and oscillated between the two parties, according to the alternating intensity of their devotion to universal liberty in the abstract and to the demands of "personal liberty" in the concrete.

This lack of cohesive fealty to principle and of organized loyalty to party, the German's besetting sin at home no less than abroad; his almost childish resentment of "Yankee" criticism," and his quite womanish dread of the "nativist" bugaboo—in a word, his clannishness and his touchiness—are fearlessly exposed by Herr Jensen. Nor is there any undue attempt to exploit the German in his pet rôle of "Culturträger"; as an evangelist of the arts and sciences; as the missionary of culture among a race of matter-of-fact, money-worshipping barbarians.

"In political and public leadership German influence has been practically impotent," is Herr Jensen's final judgment. Due deference having been once for all paid by practical politicians to his almost fanatical insistence upon "personal liberty" in the matter of consuming beer at pleasure as to time, place, degree, and manner, and perfunctory representation having been accorded on both tickets (by common consent the treasurership for State, county, city, and town), Germans were otherwise habitually treated as mere "voting cattle"—to quote Herr Jensen's own words—and quite deservedly. Neither are there recorded any original achievements to boast of in the domain of art and science; nor of leadership in the professions.

In the present volume Herr Jensen thus carries the history of German-Americanism to about the year 1875, which practically concludes the successive periods of pioneer settlement and of formative development under the domination of men of foreign rather than of immigrant nativity—a period of something less than twoscore years, during which the immigrant himself was the ethical as well as ethnic factor; the second generation not really coming to the fore until the third had already begun to assert itself. In a word, since 1875 the Americanization of Germans in Wisconsin has been a patent fact, while it was prior to 1875 that the Teutonization of the "Yankee" took place. In what did this Teutonization consist? Little by little the inherited individualism and traditional separatism—characteristics best defined by the German's own terms of reproach: "Particularismus" and "Kleinstaatlerei"—gave way to a realization of immigrant consanguinity; so that long before Bismarck's policy of blood and iron had begun the fatherland's unification, its emigrant sons in Wisconsin, including Austrians and Switzers, had acquired a practical sense of national kinship. And, this once achieved, Germans as Germans could not fail powerfully to impress their habits and customs, their ways of life and manner of living, upon their environment. In scores of ways, no less subtly than manifestly, have "Gemüthlichkeit" and "Gemächlichkeit" affected the social customs of "native" Americans. The substitution of beer for whiskey; of leisurely conviviality for vertical "treating"; of the "Continental" Sunday for the insular "Sabbath"; of economical congregate for ostentatious individual sociability; of a sounder pedagogy and the professional teacher; of better music and real musicians; of professionalism for empiricism; of practical conservatism in commerce and finance; of patience and persistence on the farm and in the shop, in place of restless change and speculative hazard; of economy instead of prodigality—all this, in its best essence, the "Yankee" certainly owes to the "Dutchman." Along with this has come the realization, still more or less hazy, that our development as a nation politically also involves our evolution into a people racially, by gradual amalgamation rather than by statutory naturalization.

Apes and Monkeys, Their Life and Language. By R. L. Garner. With an Introduction by Edward Everett Hale. Boston: Ginn & Co. 12mo, pp. xii, 297, illustrated.

There appears to be no mention of the fact that this volume is in great part a reprint from 'The Speech of Monkeys,' 1892, by the same author, copyrighted by Charles L. Webster & Co. Evidence of this, in the less modified portions, is to be seen in chapters v., vi., and vii. of the present volume, copyrighted by Ginn & Co., which were chapters

iv., v., and viii. of the earlier book. The new material is principally gossip about captive partly trained monkeys and apes, with matter collected from the natives and traders in Africa, and some anatomical and other data, comparatively little of which is new to science. The outcome of the hundred and twelve days spent in an iron cage in the jungle was very small. From this distance it would appear that the author gained nothing that he might not have secured from a hammock under the trees. He might have obtained a great deal more if he had turned himself loose after the apes, like Du Chaillu, instead of wasting his time in waiting for them to call upon him. Some apes accidentally ventured near the cage, it is true, but they held their tongues and vanished at once. We have before us much talk around the subject, a considerable about what the author is yet going to do, and a notable display of the great I. The title of this book gives more latitude than that of its predecessor, but one can hardly see that the iron cage and the many years of Mr. Garner's time have greatly advanced our knowledge of the anthropoids.

Of the speech, he claims to have secured one hundred words, from different species, up to the present time; they are not recorded here, and whether they are available for anybody else is a question. Of the hundred, he says he has interpreted about thirty; of the remainder, he has not been able to determine the exact meanings, though he has an opinion concerning some of them if he has not yet reached a final conclusion about them—that is, he almost knows them. What he has learned, from captives, of course, has been tried on others, and the success is indicated by the remarks in the different cases: He refused to come any nearer and did not answer; I spoke to him, but he made no reply; he neither stopped nor answered; I called three or four times, but it neither stopped nor answered; I repeated the sound several times, but elicited no answer; he looked at me and again resumed his attitude of repose; he answered the call by looking around the corner of the house. The character of the words may be illustrated by one of the most satisfactory words learned, the *wh-oo-w* of the Capuchin; it was first translated milk, sometimes drink, then food, act of eating, hunger, etc., etc., and slight variations in the sound, he says, may indicate different kinds of food. The monkey talk is thus very like that of the horse, the whinny of which means thirst, hunger, hay, oats, corn, something to eat, or liquids, or solids, and may mean another horse, the owner, the hired man, or anything else desired; the intensity of the desire, possibly the kind, being indicated by the emphasis, accent, or other peculiarity of the whinny. Similarly, the startled snort of the pony means dog, wolf, Indian, bear, sheep, or whatever else may scare him; the translation being quite as broad as for the sounds of the monkey.

Among present conclusions, we note that it is impossible to represent sounds of monkey speech by any literal formula; that the speech of monkeys is not of a high order, but appears to have been developed from an inferior type; that their speech is usually limited to a single word or sound, and it is answered in the same manner; that all the sounds made by monkeys refer to their natural physical wants, and that the author did not foresee the difficulties. One of the most certain of his discoveries in 1892 was the negative shake of the monkey's head, in which sign the author then believed he had "found the psycho-physical basis of expression." In 1900 the climax is said to have been reached in training an ape to make a sound somewhat resembling the French word *feu*. A minor discovery is that miasma is necessary in order that gorillas may be kept in good health; another is that tobacco smoke is fatal to them; and a third is a slimy python. "Platarrhini" looks more like Catarrhini, but it should be spelled Platyrrhini, Geoff., 1812; because of the prior use of Platyrrhinus, Clairv., 1798, for insects, it should not be used for mammals. The introduction will do more in selling the book than in attesting its science; its author says Mr. Garner "has selected animals, which are certainly animals and not men."

Historical Primer of French Phonetics and Inflection. By Margaret S. Brittain. Oxford: Clarendon Press; New York: H. Frowde.

This primer was originally intended to serve as an introduction to Brachet's 'Grammaire historique de la langue française,' as translated and amplified by Paget Toynbee of Oxford. The latter is known to students of French principally through his 'Specimens of Old French'; his suggestion it was that led to the preparation of the Primer. Its usefulness, however, will depend largely not upon its relation to a grammar which is now more or less antiquated even in its revised form, as the translator and reviser practically admits in his introductory note to the Primer, but on its inherent merit. The author has consulted particularly the grammars of Meyer-Lübke, Schwan, Suchier, and Darmesteter; one would be hard put to it to find four better for her purpose. She has, indeed, as is intimated in the introductory note, profited by the recent advances in the science of phonetics, but along historical lines, not in the physiology and acoustics of the subject; these are quite overlooked, the latter not improperly in its present primitive state. However, a short statement of the physiological formation of the sounds, and the consistent employment of an adequate phonetic alphabet, whereby the letter might not all too frequently conceal the sound, would enhance decidedly the scientific value of the book.

A brief sketch of the development of the Romance languages in general, and of the dialect of the Île de France in particular, is followed by a history of the Latin sounds in their passage through Folk-Latin and Gallo-Roman into French. In spite of certain imperfections, especially on the more general and theoretical side, the pith of the matter is here. The Folk-Latin phonology is, in accordance with the prevailing practice, considered apart from the later Romance growth, but the latter is not subdivided into various periods, as is frequently the case; this change of method has its advantages in so condensed a treatise. Such dates as are determinable or reasonably conjecturable are for the most part given faithfully. The twenty-odd pages that are devoted to inflection contain necessarily but the barest outlines, yet here as elsewhere it is remarkable how much has been got into so limited a space. The concluding index of French words occurring in the text is a helpful addition.

This opuscule, with its scant hundred pages, is simple, surprisingly complete, and on the whole accurate and modern in essential details. Its uniqueness and compactness constitute its chief value, for at present there is in English no up-to-date primer of French phonology and inflection. "The want of some such elementary book has long been felt by English students," says Paget Toynbee. Few grammars published in America pay any attention to the linguistic antecedents of French: Edgren's, which has done yeoman service, contains but mere hints; Bevier's is somewhat better. In French, Clédat, Darmesteter, and Nyrop occur to one, but, superior as these are in many ways, none is nearly so compact as the Primer. Students of Romania will welcome this little book; it may well serve as a vademecum for the beginner in French historical grammar.

BOOKS OF THE WEEK.

American Engineering Competition. (From the London *Times*). Harpers. $1.
Andrews, I. W. Manual of the Constitution of the United States. Revised ed. American Book Co. $1.
Ayr, Landis. A Priest and a Woman. Abbey Press. $1.
Barrett, R. S. The Standard Guide to the City of Mexico. New ed. City of Mexico: Modern Mexico Pub. Co. 50 cents.
Bemis, E. W. Municipal Monopolies. (Library of Economics and Politics.) T. Y. Crowell & Co. $2.
Bennett, C. E., and Bristol, G. P. The Teaching of Latin and Greek in the Secondary School. Longmans, Green & Co.
Bloch, Camille. Etudes sur l'Histoire Economique de la France, 1760-1789. Paris: Alphonse Picard et Fils.
Bonafons, Raymond. L'Arioste: Extraits avec une Introduction et des Notes Explicatives. Paris: Garnier Frères.
Boone, H. B., and Brown, K. Eastover Court House. Harpers.
Boothby, Guy. A Cabinet Secret. Philadelphia: J. B. Lippincott Co. $1.50.

29 WEST 23D ST., NEW YORK,

Publish This Week:

DOWDEN'S PURITAN AND ANGLICAN. Studies in Literature.
341 pp., 8vo, $2.00, *net.*

The Speaker, London: "The reader need go no further than the first page in order to convince himself that Dowden has a grip on the whole subject. Professor Dowden as a great Shakespearian student has, in studying the Puritans and Cavaliers, the enormous advantage of thoroughly comprehending the fountainhead."

ST. JOHN'S THE CRIMSON WEED. 335 pp., 12mo, $1.50.

A powerful story of a modern Hamlet of English and Italian stock, who, however, was impeded by relations which Hamlet was free from.

MASON'S HYPNOTISM AND SUGGESTION in Therapeutics, Education, and Reform. 344 pp., 12mo, $1.50.

In this new work Dr. Mason, whose **Telepathy and the Subliminal Self** is already in its fourth impression, makes a strong plea in a popular vein for two very important though much abused curative agencies.

SELECTIONS FROM DANTE'S DIVINA COMMEDIA

Chosen, translated and edited by RICHARD JAMES CROSS. The original and translation on opposite pages, with red edges and white and gold covers. Florentine style. 16mo, $2.00.

This book, it is hoped, will enable those knowing very little Italian to read in the original all of this great poem that is of interest to the 20th Century reader. The translation, while probably as enjoyable as any that has been made, follows the Italian so closely that in nearly every instance the pages of the original and the translation turn at exactly the same word.

McCRACKAN'S RISE OF THE SWISS REPUBLIC. Revised and Enlarged.
423 pp., 8vo, $2.

KUHN'S GERMAN AND SWISS SETTLEMENTS OF PENNSYLVANIA.
268 pp., 12mo, $1.50.

3d Impression of THE COURTOT MEMOIRS. $2.

3d Impression of LAVIGNAC'S MUSIC AND MUSICIANS. $3.

IN PRESS FOR EARLY PUBLICATION.

GISSING'S A MAN WITH A FUTURE. 12mo.
MARNAN'S DAUGHTERS OF THE VELDT. 12mo.
BENNET'S THE POLAR PIT. A Romance. 12mo.
HOPE'S FATHER STAFFORD. New Edition. 12mo.

STUDIES IN HISTORY, ECONOMICS AND PUBLIC LAW.

Edited by the Faculty of Political Science, Columbia University. Vol. XIII. No. 1.

THE LEGAL PROPERTY RELATIONS OF MARRIED PARTIES.

A STUDY IN COMPARATIVE LEGISLATION.

By ISIDOR LOEB, Ph.D., *Prof. of History, Univ. of Mo. Sometime Fellow in Jurisprudence, Columbia University.*

Paper, $1.50.

THE COLUMBIA UNIVERSITY PRESS,
THE MACMILLAN COMPANY, Agents, N. Y.

New Volume of Mr. Gardiner's

History of the Commonwealth and Protectorate, 1649-1660.

By SAMUEL RAWSON GARDINER, M.A. Hon. D.C.L. Oxford, Litt. D. Cambridge, &c. Vol. III. 1654-1656. With 6 Maps 8vo. $7.00.

LONGMANS, GREEN, & CO.
91-93 Fifth Avenue, New York.

BEACON BIOGRAPHIES

of eminent Americans—Grant, Webster, Lowell, Emerson, Agassiz, etc. Photogravure portrait. Cloth, 75 cents each. Blue Lambskin, $1.00.

Thomas Y. Crowell & Co.'s
NEW PUBLICATIONS

PROBLEMS OF EVOLUTION

By F. W. HEADLEY, author of "Structure and Life of Birds." One vol., 8vo, XV.+373 pp., 14 illustrations, index, cloth, gilt top. $3.00.

AT the close of the last century, when a number of eminent critics were asked to name the books that were most influential in modifying human thought, nearly all agreed in taking Charles Darwin's "Origin of Species" as one of the most important. Mr. Headley has given a popular exposition and solution of the most difficult problems that puzzled Darwinians. The style is generally simple and direct, and the good temper of the author is shown on every page. It is a most valuable contribution to the literature of evolution.

RELIGION IN LITERATURE AND RELIGION IN LIFE.

By STOPFORD A. BROOKE, LL.D., author of "English Literature," etc. Printed at the Merrymount Press. One vol., 12mo, gilt top. 60 cents.

TWO lectures that have attracted wide attention, and have been revised by the lecturer for publication in book form. They are certainly among the notable and most inspiring utterances of the day.

LIFE BOOKLETS

By RALPH WALDO TRINE. New edition. Three vols., 16mo, in box. Per set, $1.00.

Character-Building Thought Power
Every Living Creature
Greatest Thing Ever Known

Volumes sold separately at 35 cents per volume.

THIS is the first time these three "Life Booklets," by the author of that now well-known book, "In Tune with the Infinite," have been published in a set. Not only are they published in a convenient form so that they can be taken in the pocket, but all have been printed entirely from new plates, and are bound in an exceedingly artistic and durable form in fine silk cloth bindings. In addition to their new typography and binding, two of them—"Character-Building Thought Power" and "Every Living Creature"—have been thoroughly revised and considerable new matter added to each.

For sale by all booksellers, or sent postpaid by the publishers on receipt of price.

THOMAS Y. CROWELL & CO.,
428 West Broadway, New York.

A. C. ARMSTRONG & SON HAVE NOW READY

2d Edition of George Adam Smith's

MODERN CRITICISM and the PREACHING of the OLD TESTAMENT

The Yale Lectures on Preaching. By GEORGE ADAM SMITH, D.D., author of Isaiah, 2 vols., and The 12 Prophets, 2 vols., in "The Expositor's Bible," and The Historical Geography of the Holy Land. One volume, crown octavo, cloth, $1.50.

DR. W. ROBERTSON NICOLL IN BRITISH WEEKLY.

"Dr. George Adam Smith has given us a fresh, brilliant, Christian book on a vital subject. Dr. Smith is as accurate as he is brilliant. The book is full of originality and suggestiveness and is alive and challenging from end to end. It is as powerful and ardent as anything Dr. Smith has written, and it is also spiritual and subtle. Best of all, it is profoundly and unreservedly Christian, rich in calming truth and in earnest and simple faith . . . one of the best contributions to Christian literature that have been published for many years, a book full of truth, tenderness, reverence and wisdom."

Sold by all Booksellers, or sent postpaid by the Publishers (note new address),

A. C. ARMSTRONG & SON, 3 & 5 W. 18th St. (NEAR 5TH AVE.) New York.

Short Story Writing

By Charles Raymond Barrett, Ph. B.
12mo, Cloth, $1.00

A PRACTICAL treatise on the art of the short story, designed to present concretely the rules of that art. It is a working manual, not a collection of untried theories. It tells how to write a story with reference to the requirements of contemporary editors.

"Both an interesting and a useful book. While it is concerned with the special application of rhetorical principles to a particular department of literary art, it carries a general application that all literary workers may profit by, as in its chapters on Titles, Style, and the Labor of Authorship."—*Outlook.*

STUDY AND PRACTICE OF FRENCH

by L.C.Boname, 258 S.16th St., Philadelphia, Pa.

A carefully graded series for preparatory schools, combining thorough study of the language with practice in conversation. *Part I.* (60 cts.) and *Part II.* (90 cts.) for primary and intermediate grades, contain subject matter adapted to the minds of young pupils. *Part III.* ($1.00, irregular verbs, idioms, syntax, and exercises) meets requirements for admission to college. *Part IV. Hand-book of Pronunciation* (35cts.), is a concise and comprehensive treatise for advanced grades, high schools and colleges.

THE VISITS OF ELIZABETH

Q. Who is this Elizabeth?
A. The prettiest, most fascinating, most charming, most lovable girl you ever saw.

Q. What has she done?
A. She has written an account of her visits to great English and French country houses.

Q. Why?
A. To tell you of the delightful times she had, and to make you acquainted with a new personality entirely.

Q. Did she write the German Garden book?
A. I don't know, but she is just the sort of woman who could easily do it.

Q. Where can I see her?
A. Buy a copy of "The Visits of Elizabeth," and you will have also a beautiful picture of her as frontispiece.

Q. Where can I get the book?
A. At any bookseller's. Price $1.50.

THE CARDINAL'S SNUFF-BOX

By HENRY HARLAND

SEVENTIETH THOUSAND — PRICE $1.50

"NO STORY SO PURE, SO CHARMING, SO APPEALING, IS TO BE FOUND IN ALL LITERATURE." "IT HAS ALL THE CHARM THAT IS IN LOVE ITSELF." "THE AUTHOR GIVES US THE INEFFABLY SWEET STORY WITH A WIT, A TACT, A MANNER THAT MAKE ONE WONDER WE EVER THOUGHT OF LOVE AS A TALE THAT WAS OLD AND STALE."

JOHN LANE, 251 Fifth Ave., N. Y.

Pocket Size Standard Novels.

Thackeray's Works and Dickens' and Scott's Novels. Thinnest printing paper in the world used. Large type, easy to read. Size 4¼ by 6¼ inches and not thicker than a monthly magazine. Bound in cloth, $1.00 each. Prospectus mailed free on request, or books sent prepaid on receipt of price. THOS. NELSON & SONS, 37 East 18th St., New York.

William Lloyd Garrison, 1805-1879.

The Story of his Life, told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net*.

This important work (originally published by the Century Company) has been reduced in price from $12.00 to $8.00, a remarkably low sum for what is unquestionably one of the handsomest products of the American press.

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

*** *For sale by booksellers. Sent, postpaid, on receipt of price by the publishers.*

HOUGHTON, MIFFLIN & CO.,
BOSTON AND NEW YORK.

The Constitutional History and Government of the United States

By JUDSON S. LANDON, LL.D. *Revised Edition.* 8vo, gilt top, $3.00.

"An exceptionally clear exposition of the growth of our constitutional liberty from its original root in the religious faith of the Puritans. Only four chapters, however, are devoted to colonial conditions, and the body of the work deals with our constitutional development as it has been molded by the Federal instrument and the judicial decisions thereon. . . . In the present revised edition of his work, the author considers the constitutional issues growing out of the Spanish war, and reaches the conclusion that the Federal Government may exercise in Puerto Rico and the Philippines all the powers of both the State and National Governments, but nevertheless will be subject to all the limitations of the Constitution."—*The Outlook*, New York.

Sold by all Booksellers. Sent, postpaid, by

J. F. Taylor & Company, New York.

Balzac's Rival.

Balzac had no rival but George Sand; some critics consider them twin stars.

This woman, acknowledged by all the world as the second, if not the first, of French novelists, was certainly the most remarkable woman of her age, and the greatest authoress in the world's history.

The story of her own life is as romantic and eventful as that of any of her heroines; the revelations made in her *Histoire de ma vie* would furnish material for a dozen novels of the present day. An interesting pamphlet giving outline of her life will be sent on request.

GEORGE BARRIE & SON, 1313 Walnut Street, Philadelphia

Scotch Madras Shirtings

At "The Linen Store."

Four distinct ranges of these popular shirtings aggregating nearly four hundred designs and colorings are shown at The Linen Store. Colored grounds with stripes and checks of white predominate, but there is a very marked display of designs into which black has been very effectively introduced in combination with pink, blue, red, helio, and gray. Red with green and red with blue are also exceedingly effective.

Price 30c, 40c, 45c, and 50c

THREE REMARKABLE WORKS

A HISTORY OF CRITICISM

By GEORGE SAINTSBURY.

Complete in 2 vols. Vol. I. now ready. 8vo, cloth, each volume, *net*, $3.50.

The announcement of "A History of Criticism" by one of the most distinguished critics of the time is a literary event of the first importance. Mr. Saintsbury brings to the subject the experience of a long literary life and a vast accumulation of learning, and the result should be a standard history of criticism.

There is at present no work in the English language which so much as attempts the task Professor Saintsbury has set himself to accomplish. For the first time the student of criticism is now presented with a continuous history of the subject, ancient, mediæval, and modern, and that not in the form of separate essays on various critical tendencies and theories, but in the shape of a minute and thoroughgoing history based on a detailed examination of each separate text. The student will find in it an exhaustive analysis and commentary of every critical dogma from Aristotle and Longinus to Matthew Arnold and Sainte-Beuve. SUMMARY OF CONTENTS:

GREEK CRITICISM: Introductory. Greek Criticism before Aristotle—Aristotle. Greek Criticism after Aristotle—Scholastic and Miscellaneous. Dionysius of Halicarnassus, Plutarch, Lucian, Longinus. Byzantine Criticism.

LATIN CRITICISM: Before Quintilian—Cicero, Horace, Seneca the Elder, Varro. The Contemporaries of Quintilian. Quintilian. Later Writers.

MEDIÆVAL CRITICISM. Before Dante. Dante. The Fourteenth and Fifteenth Centuries.

THE STORY OF MY LIFE

By AUGUSTUS J. C. HARE.

2 new volumes, III. and IV. 8vo, cloth. Illustrated with wood-cuts and photogravures. $7.50

The autobiography of the author of "Memorials of a Quiet Life" and other delightful books has been in preparation for a number of years. Half of it was published in two volumes in 1898. The remainder has been delayed until the death of persons mentioned should remove possible objections to its publication. The author has, during a long life of distinguished position and usefulness, come into contact with a great number of celebrated people, and the book is replete with anecdote about and comment upon people and subjects of interest.

NEW YORK IN FICTION

By ARTHUR BARTLETT MAURICE.

12mo, cloth. Fully illustrated from photographs of well-known houses and places, *net*, $1.35

This book is one which should appeal to many people of varied tastes. It should have an interest for every one, from no matter what section of the country, who likes the American novels of the past and believes in the American novel of the future.

Since the articles ran serially under this title in the pages of *The Bookman*, the writer has been able to gather a great amount of interesting new material. An idea of the scope and interest of this book can best be had by a glance at the following TABLE OF CONTENTS:

OLD AND PROLETARIAN NEW YORK.—The Novelists Topographically Considered.—About the Battery and Bowling Green.—Lower Broadway and Park Row.—The Politician as Literary Material.—The Great East Side.

ABOUT WASHINGTON SQUARE.—The Historical Novel of the Future.—Washington Square.—Bohemia.—Greenwich Village, the New York of Davis and Fawcett.—Crawford's New York, Old Second Avenue, Gramercy Park, West Tenth Street.

THE NEW CITY AND SUBURBAN NEW YORK.—Neglected Phases of New York Life.—About Madison Square.—The Park and the Upper East and West Sides.—The Literary Associations of Westchester.—Greenpoint, Staten Island, and New Jersey.

NO. 59 WALL STREET, NEW YORK.

Houghton, Mifflin & Co.'s New Books

AUTOBIOGRAPHY OF A JOURNALIST

By WILLIAM J. STILLMAN. With two portraits. 2 vols. 8vo, gilt top, $6.00.

A notable addition to the attractive volumes of biography and reminiscence which have lately appeared. It is one of the richest and fullest, for Mr. Stillman is one of the most picturesque characters of our time. A large and distinguished group of friends figure in these volumes—Bryant, Lowell, Emerson, Norton, Judge Hoar, Agassiz, Ruskin, Turner, the Rossettis; and Italians and Greeks of great distinction. Mr. Stillman writes of his experiences while U. S. Consul at Rome and Crete, and while correspondent of the *London Times*. He writes with perfect frankness and much literary charm.

A SOLDIER OF VIRGINIA

By BURTON EGBERT STEVENSON. Illustrated. Crown 8vo, $1.50.

A strong historical romance of the time of Braddock's ill-fated expedition to Fort Duquesne. The hero is a soldier under Washington, and has a long experience of perils and hardships. A love-story is threaded throughout the narrative, which describes admirably the times, Washington, and a finely attractive hero and heroine.

DOG-WATCHES AT SEA

By STANTON H. KING. Illustrated. 12mo, $1.50.

This book has an interest like that of Dana's world-famous "Two Years Before the Mast." It is a plain tale of twelve years in the merchant and naval marine, simple in style and presenting the realistic side of sea life. The writer sailed in many ships and visited many ports of the world.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston; 11 East 17th Street, New York.

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, New York.

For Early Spring Publication

A SUMMER HYMNAL. A Romance of Tennessee.

By JOHN TROTWOOD MOORE. Illustrated by STANLEY M. ARTHURS. 12mo. Cloth extra $1.25

Mr. Moore has much of the quality displayed by James Lane Allen in his earlier work, "A Kentucky Cardinal." The scene of his romance is laid in the blue-grass region of Tennessee, and his pages are rich with tender sentiment, shrewd philosophy, poetic feeling and an exquisite humor. Those who have read his charming short story, "Ole Mistis," will warmly welcome his first novel, and new readers are sure to be delighted. "Old Wash," the negro character, who figures in some of Mr. Moore's short stories, reappears in this book.

THE TOWER OF WYE. A Romance.

By WILLIAM HENRY BABCOCK. Illustrated by GEORGE GIBBS. 12mo. Cloth extra $1.50

This is a story of early Maryland colonial life, full of incident and interest. Mr. Babcock has, more artistically than any other writer, caught the atmosphere of haze and marvel through which newcomers to the Western World saw all things. His book is new in treatment and holds the reader's attention fascinated from beginning to end.

IN SEARCH OF MADEMOISELLE.

By GEORGE GIBBS. Illustrated by the Author. 12mo. Cloth extra, ornamental $1.50

Mr. Gibbs, the artist, in this his first novel, deals with the romantic and highly picturesque episode in American history of the struggle between the French and Spanish for the possession of Florida. This furnishes the background for a charming story of the love of an Englishman for Diane de la Notte, a French Huguenot of noble family, who has been exiled from her native land.

DEAR DAYS. A Story of Washington School Life.

By ARMOUR STRONG. Illustrated. 12mo. Cloth extra $1.00

A book for girls, told in an unusually fresh, natural way; and with the local color connected with the Nation's Capital. The author knows Washington thoroughly, and it will be of profit, as well as interest, to children all over the country to obtain glimpses of life in the political centre of the United States. The school-girls of the story act and talk as real children do, in a very natural and attractive way.

THE KING'S RUBIES. A Story for Boys and Girls.

By ADELAIDE FULLER BELL. Illustrated. 12mo. Cloth, ornamental $1.00

A charming story woven around the romance of "The King's Rubies," and how they came to America. Girls, and boys too, will like the healthy, natural children who figure in the book, and the idiosyncrasies of "Mose," the old negro character, will be found very amusing. The book is wholesome, strong in incident, and written in excellent style.

LIBRARY EDITION of the novels of **Elizabeth Stoddard.**

(MRS. RICHARD HENRY STODDARD.)

TWO MEN. TEMPLE HOUSE. THE MORGESONS. Each $1.50

12mo, with photogravure portraits.

"They are essentially modern and in keeping with the choicest types of recent fiction . . . the pioneers of something new and real in the novelist's art. Mrs. Stoddard's novels appeal to us through a quality of their own. Style, insight, originality, make books like 'Two Men' and 'Temple House' additions not merely to the bulk of reading but to literature itself."—*Edmund Clarence Stedman.*

HENRY T. COATES & CO., Publishers, Philadelphia

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Siege of Kumassi

By LADY HODGSON, wife of the late Governor of the Gold Coast. 8vo, with 32 Illustrations, a Map and a Plan, $4.00 *net.*

NEW BOOKS BY BRANDER MATTHEWS

Professor of Dramatic Literature in Columbia University.

The Philosophy of the Short-Story

By BRANDER MATTHEWS, D.C.L. 16mo, 50 cents.

". . . Mr. Matthews has long studied the short story, has often written about it, and has successfully practised the art. What he has to say is practical rather than theoretical, and yet betrays thorough knowledge of the theory and art of short-story writing."—*The Outlook, N. Y.*

Notes on Speech-Making

By BRANDER MATTHEWS, D.C.L. 16mo, 50 cents.

". . . The volume on speech-making is admirable for its compressed wisdom, its condensed common sense, its pith and point. No little book of the same compass presents the subject more clearly or with better adaptation to the practical needs of those who are just beginning to learn the difficult art of speaking."

NEW NOVEL BY LADY RIDLEY

Anne Mainwaring

By ALICE RIDLEY, author of "The Story of Aline." Crown 8vo, $1.50.

The French Revolution

A SKETCH

By SHAILER MATHEWS, A.M., Professor in the University of Chicago. With a Portrait of Mirabeau. 12mo, $1.25.

The Human Nature Club:

AN INTRODUCTION TO THE STUDY OF MENTAL LIFE

By EDWARD THORNDIKE, Ph.D., Instructor in Genetic Psychology, Teachers' College, Columbia University, New York. 12mo, $1.25.

Living Anatomy

By CECIL L. BURNS, R.B.A., and ROBERT J. COLENSO, M.D. 40 Plates with descriptive letter-press. Demy 4to, in portfolio, $2.50 *net.*

*** These plates are designed to supplement existing treatises on Art Anatomy, and to form a convenient means of reference for painters, modellers, and designers. The figures are all photographed from the living model, and the letterpress is sufficient only to elucidate the illustrations.

A Prospectus may be had upon application to the publishers.

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, MARCH 21, 1901.

The Week.

Even the doggedly optimistic Administration newspapers are now forced to admit that the Cuban Convention is not going to accept the terms laid down by Congress. Havana dispatches show that the delegates are almost unanimously against such a surrender of Cuban independence. The question is, What are we going to do next? Shall we dispatch a squadron to enforce our Cuban ultimatum as we did in the case of the Spanish ultimatum? Shall we pay national honors to the dead Gen. Harrison on Sunday, and then on Monday proceed to do what the living Gen. Harrison said would be a national disgrace? Disguise the situation as we will, it is an unpleasant one. Both the Administration and Congress have been badly misled by the official advices from Havana. The Cubans were going to do meekly everything asked of them; they would agree to our demands with positive joy. Well, we see now that they are going to do nothing of the kind. It is not enough for us to have threatened force; we must use force. Military compulsion of a people who, we solemnly vowed, were free and independent, and over whom we swore to high heaven we would never attempt to exercise "control," is clearly the next step which the President will have to take.

We cannot say that we have been much surprised to find the religious press—and those weeklies which once used to be called religious, but which now prefer to be considered journals with a less restricted purpose—accepting the breaking of our national pledges to Cuba without any evidence of discomposure. Many, it is true, have the shame to keep silent about the matter rather than openly commend the repudiation of solemn promises. The *Outlook*, however, as was to have been expected, has no compunctions about defending and justifying the course pursued by the Republican managers at Washington. It has discovered that "falsehood" and "ambiguity" characterized the famous Congressional resolution of April 20, 1898, and it accepts the theory that our present demands "are not only not inconsistent with the independence of Cuba, but are required to secure, establish, and maintain that independence." The *Independent*, on the other hand, considers national good faith at stake in this matter, and does not hesitate to say so. In the Boston *Watchman*, too, an organ of the Baptist denomination in the East, and the Chicago *Advance*, an organ of the Congregational denomination in the Middle West, there is evidence that conscience is at work, that there are Christians who recognize it as the first duty of a nation which professes to be a Christian nation, to keep its word. The *Watchman* and the *Advance* make short work of the pleas for breaking our pledges which are put forth, and they rest the case on the simple issue of national morality.

That the Porto Ricans have a real grievance in the Hollander Tax Law, which has been practically imposed upon them from without, is prima facie probable. Nearly 3,000 delegates from all over the island, representing bankers, merchants, planters, manufacturers, met in San Juan to protest against the law. They declared that the measure was unnecessary, since the needed revenue could be raised more easily and fairly in other ways. They asserted, and seemingly demonstrated, that the law would surely be, in some of its features, both unjust and ruinous in operation. On none of these points can an outsider speak with confidence; but what any outsider is bound to say, especially if the outsider is an alien Government exercising sovereignty in the island, is, that a whole people, rising in a mass to object to an oppressive law, itself constitutes a grievance. An American newspaper, the San Juan *News*, testifies that there is "universal opposition" in Porto Rico to the Hollander Tax Law. That is argument enough to prove its unwisdom. You must make your measures healing, said Burke. We have from the first made our measures in Porto Rico of a kind to exasperate the disease; and the inhabitants either emigrate, or cheer for Spain. A truly ungrateful set!

Our latest sincere flattery of Spain is our imitation of her reconcentrado policy. Perhaps the ingenuous reader has already forgotten what that is, and how he raged at it in fiery indignation when Gen. Weyler applied it in Cuba. It consists in compelling the inhabitants of a given region to come into the towns and stay within the military lines. The object is, of course, to prevent the raising of supplies for the use of insurgents. Weyler did this in Cuba; Kitchener has done it in the Transvaal; we are doing it in the Philippines. The latest dispatches from the island of Marinduque report: "Major Smith, commanding the American garrisons on this island, has issued an order requiring all natives to live in the five principal towns where American troops are stationed. Those natives who continue to live in the country will be considered insurgents." That, unsuspecting friends, is nothing more nor less than the good old Spanish plan of *reconcentración*.

To give Gen. MacArthur the troops that he needs, the War Department has been forced to order to the Philippines the home battalions of the First and Seventh Infantry and the Third, Sixth, Ninth, and Tenth Cavalry. These home battalions, it was solemnly declared a short time ago, were to remain in this country to serve as recruiting and recuperating headquarters for the two active battalions. But Gen. MacArthur's necessities are evidently too great to permit the continuance of this desirable arrangement. When these troops and the Tenth and Eleventh Infantry and Fifth Cavalry are on transports, there will be scarcely a battalion of the old regular organizations, outside of the artillery, left in the proper limits of the United States. Meanwhile the organization of the new regiments goes on slowly, a horse famine threatening serious delay in the mounting of the five new cavalry organizations. Not only are these regiments greatly needed in the Philippines to take the place of the returning volunteers, but they must soon relieve regular regiments which have long been in the Philippines. Several of these, notably the Fourteenth, Eighteenth, and Twenty-third Infantry, have now been over two and one-half years in the tropics, and it is extremely doubtful whether they can stay there much longer without serious injury to the health of officers and men. No other nation attempts to keep troops in the Far East for a much longer period without transfers to mountain stations to give them the benefit of a more bracing climate.

The signs of friction among the Powers in China are ominously multiplying. We do not suppose that there is any real likelihood of an open clash between the Russian and British forces at Tientsin, whose mutually threatening attitude so excites the newspaper correspondents. Far more serious, because indicative of lack of harmony in inner councils, is the speech of the German Chancellor. He practically admits grave divergence of view among the countries concerned. Of course, he says, Germany wants nothing except an indemnity and guarantees for the future, but she does not propose to be edged into the shade by any other nation. That is, if Russia or Japan takes territory, Germany will insist upon having her share, too. This is the kind of feeling that will redouble the fears of Chinamen, lest, after all the protests, their land is to be taken

from them. The intelligent Sheng has lately declared that the partition of China seemed nearer than ever. However this may be, the resolute withdrawal of our own troops is an evidence to the world that we do not intend to be among the eagles gathered to despoil the Chinese carcass.

The way to withdraw from China is to withdraw. That is the moral of the orders which have already been sent to Gen. Chaffee to proceed to Manila without delay, taking all his troops with him except a legation guard of 150 men. The movement can hardly be effected before the end of April. The Government's motives for the order were probably mixed. Secretary Root may have been only too glad to get even the small contingent in China for use in the Philippines, pending the slow organization of volunteer regiments to take the place of those which must soon be mustered out; but the main motive was presumably the desire of the State Department to mark its impatience at the dilatory proceedings in Pekin, and especially the disfavor with which it looks upon further punitive expeditions in China. From Pekin direct we get word of the pressure which the American agent, Mr. Rockhill, is putting upon the other diplomats in order to hasten a final decision. Delay is poisoning the whole negotiation. The longer the foreigners stay, the longer they will want to stay, the more exigent will they make their terms of withdrawal, the more likely will they be to insist upon slices of territory to pay them for their humane trouble. The one diplomatic injunction which the situation calls for loudly is, Agree with thine adversary quickly. Moderation in demand and a swift settlement of the whole matter are the true watchwords of our Chinese policy.

It is a little hard on the Christian nations to be reminded of their Christian duties by a mere Japanese editor. The *Niroku Shinpo*, a popular journal of Tokio, feels the awkwardness of its position in appealing, for the sake of common humanity, against the outrages of the allies in China. To this course it finds itself constrained, since the reports of the pillage and nameless outrages inflicted upon Chinese non-combatants have reached the Western nations only in mitigated form. It has waited in vain for the protests of Western journals, and now speaks awkwardly, but with the eloquence of emotion. It is, of course, no longer news that peaceful Chinese have been wantonly slain, and women and girls of tender years outraged by the representatives of Western civilization, while possibly the form of the *Niroku Shinpo's* appeal, courteously addressed as it is to "ladies and gentlemen," will provoke a smile. And yet the appeal of the newest of the world Powers against the inhumanity of the older Powers cannot but be impressive. When a Japanese editor pleads in the name of Burke and of Lincoln for "the principle of the sacredness of humanity," is it not well that this country, with Japan, has had little part and no heart in that policy of savage reprisals which has seemed good to our Christian allies?

Col. Sanger's appointment as Assistant Secretary of War undoubtedly gives us an official of greater technical fitness for his position than that of any man who has filled it for a generation. His personal qualifications are also admittedly of the highest. As for Platt, the appointment is evidently one more cup of humiliation for him. He professes to like it, but the wry faces he makes as he drains it off are more eloquent than words. Never was an arrogant boss compelled so openly to stultify himself. Up and down, in public and in private, he had declared that Col. Sanger would not and could not be named for the Assistant Secretaryship; that if he was, he could not be confirmed by the Senate. With a rashness of which he would not have been guilty in his more astute days, he committed himself in the most hard-and-fast way, and risked his entire prestige as an autocratic dispenser of New York patronage on this single cast. He has lost, and the watchful politicians will see in it still another reason for shaking their heads sorrowfully and writing "Ichabod" after the name of the once all-powerful boss. Senator Depew, of course, now laughs merrily at the whole affair. His furibund airs were all a joke, it appears. He must have been winking all the time when he explained to the reporters how it was his solemn duty, his sworn Constitutional obligation, to oppose the Sanger appointment. "My oath, my oath," he said tragically, "do not ask me to violate that!" Alack, it was only his excellent fooling. If we ever take him seriously again, may we be condemned to hear his old stories.

In no public utterance hitherto has Senator Hanna so plainly revealed his true character as in the *Tribune's* interview with him on Thursday morning in regard to the Senatorial deadlock in Delaware. There is not a word of sympathy or praise for those seven unpurchasable, honorable, and high-minded Republicans who declined to vote for Addicks, the corruptionist, even at the cost of having their State unrepresented in the Senate for two years to come. Nowhere is there even the faintest criticism of Addicks himself or of what he stands for. The Dupont men should have given in and contented themselves with one Senatorship, Senator Hanna contends, because Addicks had twenty votes to Dupont's seven, and he thinks that it was unreasonable to expect Addicks to throw his votes to Dupont "after all his [Addicks's] hard work in carrying the Legislature." Here we have Senator Hanna's reason for favoring the man who has been and is the bane of Delaware's political life—"he worked hard and carried the Legislature." And that is sufficient to condone every one of Addicks's offences against political decency. Senator Hanna's statement reveals him more than ever the narrow, partisan political leader, bent upon achieving his ends at any cost, without the faintest acknowledgment that such things as morality and principle and enlightened citizenship exist. It is a cause for national rejoicing that he failed to bring about the unworthy compromise for which he labored, and that his party is to be punished for sitting with Addicks in the Convention of 1900 by the loss for two years, and probably longer, of two Senatorships. How much this hurts, Senator Hanna's interview reveals.

The evil-intentioned disfranchising bill which has just passed the Maryland Legislature has had at least this good effect, that the Republicans of the State find themselves driven to undertake a campaign of education among the negro illiterates. The Gorman Democrats have prescribed a ballot deliberately contrived to confuse the illiterate voter; the Republicans, in turn, will teach the illiterates of their party to read and to master the intricacies of that ballot. Since there are in Maryland more than 26,000 negroes, mostly Republicans, who cannot read, and about 18,000 whites, mostly Democrats, in the same case, it will be seen that by a vigorous educational movement the Republicans might actually gain largely under the workings of a law intended to reduce their vote, and all the more that the blacks generally are eager to learn, while the illiterate whites are quite content with their condition. It appears possible that the State of Maryland may, on the whole, gain from this attempt to restrict the ballot unfairly.

More discouraging than the frequency of lynching is the apparent helplessness or indifference of the State and local authorities before this form of violence. The savage deed at Corsicana, Tex., on Wednesday week had been foreseen, and some efforts had been made to keep the prisoner from the hands of the mob, but, whether by mere carelessness, or, as is charged, through the connivance of the local authorities with the lynchers, the victim was captured and burnt at the stake. This is a twice-told tale, nor is there greater novelty in a Governor who accuses the local authorities of complici-

ty in the crime and promises to bring the offenders to trial. Could we point to a sheriff or deputy who had died rather than surrender his prisoner to a mob, to other than isolated instances of lynchers brought to court and condign punishment, we should be glad to believe, with more optimistic or more indifferent observers, that the whole thing was a mere accident of our civilization. It seemed incredible that the negro who was burned at Corsicana had been condemned to the stake by a kind of vigilance committee, while an officer of the law had officially approved the manner of his death; yet the reports in the local newspapers show that these are the facts. The coroner's verdict was too extraordinary and valuable a comment on the officer of justice who penned it, and upon the moral ideas of the public to which it is addressed, to be passed over in silence. Here, then, are the very words of Justice Roberts:

"I find that the deceased came to his just death at the hands of the incensed and outraged feelings of the best people of the United States, the citizens of Navarro and adjoining counties. The evidence, as well as confession of guilt by the deceased, show that his punishment was fully merited and commendable.

"Given under my hand and seal of office at Corsicana, Tex., this the 13th day of March, A. D. 1901. H. G. ROBERTS,
"Justice Peace, Precinct No. 1, Navarro County, Tex., and Acting Coroner."

How absurd it is to call lynching "a rude form of justice" was shown in the atrocious affair at Rome, Tenn. Not brutal crime aroused the village to the killing point, but a somewhat doubtful case of theft involving a petty sum. The "rude justice" of the mob did not even fall upon the negro who was suspected of the crime, but, when he had escaped their hands, upon his sister, whose complicity in the theft was only conjectured. It was a case of simple, bestial infuriation—a body of American citizens and voters who had to kill somebody, and, failing of their intended victim, finally killed a woman for a matter of a hundred dollars. Recriminations do no good in a case like this. It is a matter for profound humiliation and self-searching. Could there be any nobler work, any finer policy of expansion, than to extend the blessings of our civilization to Rome, Tenn., and to the hundreds of other communities which have forgotten or disregarded the lesson of civilization?

In vetoing the so-called Polygamy Bill, the Governor of Utah has saved his State from a reckless action which threatened only disgrace. His act was the more creditable because the bill was urged on the specious ground of saving the older Mormons from frivolous prosecutions for adultery, brought by persons not immediately concerned in the case. Gov. Wells was brave and far-sighted enough to see that it was far better that an occasional polygamist or suspected polygamist should be persecuted than that the State of Utah should be in the position before the country of protecting polygamous marriages. That it took hard thinking for a man of Mormon antecedents to view so clearly both the moral issue and the question of political expediency, Gov. Wells's eloquent message to the State Legislature plainly shows. The Legislature can only sustain the Governor's veto, and the question therefore appears to be settled in the right way.

A bill repealing the charter of the Ramapo Water Company has passed the Legislature, and with the Governor's approval gone upon the statute-book. The Senate and the Assembly had each passed such a bill, but not the same bill, and it looked for twenty-four hours as though a last desperate attempt might yet be made to protect the interests of the jobbers concerned, but if such a hope was cherished, it had to be relinquished. The Senate, on Thursday, by a unanimous vote, concurred in the action which the Assembly had taken all but unanimously two days before, and the incident is closed so far as legislative action is concerned. This result is a conspicuous triumph for public opinion, as was ungraciously confessed by Senator Brown, when he characterized the demand for repeal as "public clamor." And in one sense of the word he was right. The demand was not "a great outcry or vociferation," as the International Dictionary's first definition runs; but it was "a continued expression of dissatisfaction or discontent," as its meaning is further explained. It was the continuance of the feeling and of its expression which rendered it finally irresistible.

Mr. Andrew Carnegie's splendid offer of more than $5,000,000 to New York city for library purposes follows almost immediately upon his gift of $4,000,000 for the establishment of a relief and pension system for the employees of the Carnegie Company, and $1,000,000 for the maintenance of libraries already established in three places, Braddock, Homestead, and Duquesne, where this company has large works—to say nothing of a number of smaller offers for library foundations in towns and cities East and West. The whole constitutes a week's record for a single philanthropic donor which is without a parallel, and which proves that Mr. Carnegie was thoroughly in earnest when he declared his purpose to devote the vast fortune which he has accumulated to public ends. The response which his generosity has awakened in many communities is already remarkable. Here in New York eight citizens have offered to give library sites in whole or in part, and there is a hopeful outlook that the libraries may bring no further charge to the city treasury than the cost of their maintenance. Similar news comes from St. Louis, where four citizens have purchased a suitable site for the great library offered by Mr. Carnegie. It is the complete justification of Mr. Carnegie's theory that there is a contagiousness in well-doing, and that no gift is really valuable unless its acceptance involves some corresponding activity on the part of the beneficiary. He has, in the face of occasional disappointment and rebuffs, made it his pride to be a cause of giving in others. In this he has eminently succeeded.

The late Queen of England knew well the value of sentiment, and the tour of the British colonies just begun by the present heir apparent was one of her favorite ideas. The royal progress is admirably timed for its purpose, coming as it does just before the waning of the war-fever in the colonies. The Duke of Cornwall, too, will make his official visit to the new Australian Commonwealth at a time when the tariff relations between the colony and the mother country will be under discussion. But of course the royal visit has not the immediate end of securing material advantage for England or for the throne. It is rather the natural act of one who is to be sovereign; and in acquainting himself with the whole of the empire over which he is to rule, the Duke of Cornwall simply follows his father's example before him. It is only the doubt as to the tendency of English Imperialism of to-day that clouds for thoughtful observers—English as well as those of other nations—the brilliant ceremony of Saturday.

The Opposition leaders in Parliament did their duty on Thursday in recording their protests against the increase of the British army as proposed by the Government. Veiled conscription and increased danger to England's mercan tile supremacy are some of the things they see behind the plan for more troops, and Sir William Vernon-Harcourt well asked how a nation already hated by all its nearest neighbors could expect different feelings in the face of its Jingo policy and patriotism of the music-hall type. If the English Opposition is now as ineffective as the American, it at least has men who are sincere and honest in their attacks upon Imperialism, and to whom questions of morals and ethics still have a meaning. Mr. Balfour's generalities as to increased responsibilities as the result of war might well have emanated from the White House. If Duty and Destiny command, the English taxpayer and the humanitarian, too, may protest as they please. But on the other side at least the public has the advantage now and then of getting a peep behind the scenes.

SECRECY IN THE "PUBLIC INTEREST."

In transmitting to the Senate the other day a bundle of Philippine documents, the President spoke of some related correspondence which he must still withhold as "inconsistent with the public interest to communicate." But the very papers from which he now removes the seal of secrecy, he had before refused to divulge on the same plea. More than once had the Senate asked for a copy of the President's instructions to the Paris Commissioners, and for kindred information. It was not given. The "public interest" did not allow it to be given, was the stereotyped answer.

Now the question we would ask, and which we should like to have answered, is, What was the public interest which would not permit Congress and the people to know facts in 1899 and 1900 which they may be trusted with in 1901? Scan the now published documents, page by page, and phrase by phrase. Is there a line in them which could have prejudiced a foreign negotiation if published a year ago, two years ago? We have not been able to find one. If any man says that one exists, let him point it out. What we do find is a vast amount of matter which it would have been highly inconsistent with Mr. McKinley's personal interest to communicate. There are in the correspondence whole telegrams and separate sentences of which party interest certainly required the suppression during a political compaign; but any purely public interest which would have been imperilled we challenge all comers to specify.

In 1899 and again in 1900, the Republican party and its President and candidate were put on their political trial for having, in the annexation of the Philippines, launched the country upon a tempestuous and uncharted sea. What was their defence? Why, that their course had been consistent and statesmanlike, and that there had "never been a moment" (this was their favorits phrase) after Dewey's victory when anything but the annexation of the Philippines was possible. Yes, but there, all the while, was the President's own solemn warning to his Commissioners not to annex the Philippines, since to do so would be an "adventurous departure on untried paths." There also lay hidden through both those critical political campaigns the formal protest of the President's near friend and Secretary of State, Judge Day, against the course finally adopted. In a time when laboring men were asked to pass upon the advisability of keeping the Philippines, the President, who was seeking their votes, withheld from them the knowledge that Gen. Merritt thought Philippine annexation desirable on account of "the *cheap labor* in the Philippines, costing only from 20 to 80 cents a day." One can see that there was political dynamite in this, and that it was no wonder Mr. McKinley kept it carefully packed away in cotton. It is easy to understand, also, how he shrank from letting the country see that he himself and Judge Day had gone on record in condemnation of the very policy for which Democrats and Anti-Imperialist Republicans were denouncing him. But what is hard to see is how he could have had the effrontery to say that his concealment of all these facts was in the "public interest." They were all facts vital to the questions before the people. Their publication would have touched no foreign relation of the country. They bore simply and solely upon our domestic politics, and yet they were kept secret in the public interest! Plainly, the President confounded the public interest with his personal fortunes and the success of the Republican party.

This is something wholly different from the "public interest" which justifies a Minister for Foreign Affairs or a Secretary of State in refusing to give Parliament or Congress information concerning negotiations pending with another country. That practice we have always defended. It is of the essence of diplomacy to be guarded. A delicate adjustment of an international difficulty may be ruined by publicity. Such work must, of necessity, be in the hands of the fewest possible men, and be carried on in secrecy. When it is completed, the popular assembly and the public are entitled to know what has been done, but not till then. The case we have before us, however, is wholly of another color. It was not a foreign question, but a domestic question. The country was asked to pass on a certain work, but was not allowed to know what the work was, or how it had been performed. The dear people must be kept in ignorance lest they vote wrong. That, in sum and substance, was the reason, and the only reason, for thinking that the "public interest" demanded the withholding of public documents before an election, although they became perfectly proper and harmless after the occasion to which they would have been most pertinent, and on which they could have been used with greatest effect, had safely passed.

How serious an infringement upon the customs and rights of free government this tricky secrecy is, any one may see who will observe the recent indignation of the House of Commons when the Ministry proposed a rule to hamper inquiry respecting affairs of public interest. It was but a small point. Nothing more was in debate than the right of an under-secretary to refuse to answer supplementary questions, put to him without notice. Yet the Commons fairly flamed at this impairment of their historic privileges, and the most powerful Government of modern times was so nearly beaten on division that, it is safe to say, the obnoxious rule in favor of concealment will be dropped. The thing is really elementary. A body that must legislate has a right to know. Yet Congress has voted millions into the Philippine sewer absolutely in the dark. Even now we are but groping in the whole business. "Give us the facts," cries a defender of the President in the *Atlantic*—a defender, that is, of the President's Philippine policy in all but this matter of secrecy. But why should Mr. McKinley give one disagreeable fact? He has not yet consented to publish his correspondence with Spain in 1897, though the extracts from it which leaked out at Madrid give a fair inkling of the personal humiliations for him which it will reveal when it does see the light. Why should he depart from his policy of concealment? Congress in the dark gives him all he wants, so why turn on the light?

Secrecy, with the judicious garbling of public documents, for personal and party ends, is one of the clearest notes of Imperialism. Mr. Goldwin Smith has just pointed this out to the English Liberals. They complain of the growing disrespect with which the House of Commons is treated by the Government. It is because, says Mr. Smith, war and an Imperialistic mania have caused power to pass from the hands of the Commons into the hands of the Ministers of the Crown. Instead of a free and responsible Government, the result is an autocratic and irresponsible Government. That is Imperialism in its most dangerous form. The people are fools, and must be allowed to know only what *we*, their wise and Imperial rulers, think is good for them. And the final rule is, as we have seen in the hollow reasons given by Mr. McKinley for keeping back critical information, that nothing can be good for them to know which would do *us* and our little clique any harm.

BENJAMIN HARRISON.

"An ex-Congressman," wrote John Quincy Adams in his Diary, "is a wasp that has lost its sting." A similar enfeeblement is commonly associated with ex-Presidents. It is, however, the singular distinction of Benjamin Harrison that, as ex-President, he bulked larger in the esteem and admiration of his fellow-countrymen than he did as President. This, perhaps, was partly the result of the routine nature of his Administration, falling as it did on humdrum times. But it was more the consequence of the fact that his personality seemed to find larger room and verge out of office than in it. Consciously or unconsciously, he left the Presidency as one who threw off a great and cramping weight. It was not un-

til he ceased to be the politician and became the citizen, not until the partisan passed into the patriot, that the people got the full measure of the man and felt their debt to him.

"You can almost hear him grow," said Lowell of Seward, as the latter's anti-slavery note rose higher and clearer. So the eight years after Gen. Harrison left the White House were for him years of almost audible growth. It was a remarkable thing to be true of any man at his age. His whole mind and character seemed to expand and broaden. His activities as a lawyer were never more vigorous and fruitful. Instead of a merely perfunctory return to his profession, he took it up, not only with the utmost simplicity of an American whom the fact of having held the highest office of the land did not exempt from the duty of earning his daily bread, but with zest and eagerness, flinging himself into legal contests with the energy and enthusiasm of youth. And how he became, for felicity and force combined, our first occasional speaker—winning the highest praise from the foreigners at the Œcumenical Conference for the grace, dignity, and thrilling power of his addresses as presiding officer—how he gave his time and strength to worthy causes, and how, finally, in the last months of his life, he rose above the trammels of party, despised the terrorism of a time of national mania, and with voice and pen fearlessly undertook to correct and guide public opinion in matters of the most vital concern—all this is too fresh in the memories of all to require recapitulation here.

We hasten to add that we do not call this course of ex-President Harrison's patriotic simply because he happened to agree, on the whole question of the American Constitution and a colonial policy, with the views steadily advocated by this journal. What we are now singling out for admiration is his attitude. Every one must admit that this was disinterested, that it was bold, that Gen. Harrison was prepared to give the reasons for the political faith that was in him, and that he put the obligations of country above those of party. It is to the type of citizen which he exemplified, not to his particular doctrines, that we take off our hat. The reason is that he took his citizenship seriously. He felt it the duty of an American to form his political convictions for himself, not pick them up in the street or borrow them from a newspaper, still less take them at the dictation of a party caucus, and then to be ready to maintain them whether his fellows would hear or forbear. In other words, Gen. Harrison showed himself the brave, independent, thoughtful, and earnest American who alone can truly lead public opinion.

His career suggests the question whether just such an influence as his can longer be wielded by any man in office, or in quest of office. Is it not true that we have come to discount everything that an office-holder or an office-seeker says? We know what they will say before they say it. Their opinions are machine-made, and all of a pattern. The result is that nobody pays any attention to them. Like the "Northern Farmer" in church, we do not listen because we "thowt a said whot a owt to 'a said." A certain amount of independence, so as "freely to utter" what a man really thinks, is not only one of the requisites of liberty, as in Milton's conception, but is also one of the conditions of shaping public opinion at all. It is safe to say that nothing that Mr. Harrison ever said, or could say, as party leader, as party President, could have exercised one-tenth the influence on the national mind that his recent Ann Arbor address had. It is, after all, independence, fearlessness, the absence of all suspicion of being a paid advocate, which give momentum to the written or spoken word.

It is unhappily true that men of ability in this country are now too generally shut up to the choice between being a nullity in office and being a free man out of it. When we see a freedom from partisan bonds such as was acquired and improved in the case of Mr. Harrison, we are almost tempted to propose a change in the Constitution so that men of virile force could be put in the category of ex-Presidents without having first to go through the prison-house of the Presidency. It would mean just so many years more to them of unfettered utterance, and of that highest service to their countrymen which consists in telling them the unvarnished truth. But a larger hope, in which we may faintly trust, is that we may yet work back to our older conception of high office, so that a free mind and heart unafraid may again be possible for men holding it, and so that they may make it a pedestal from which conspicuously to present to their fellow-countrymen an example of fidelity and fearlessness in thought, word, and deed.

Gen. Harrison performed his last great public services with a fine sense of honor. He also succeeded in the difficult task of preventing even slanderous tongues from charging him with personal pique and bitterness in the condemnation which he felt compelled to visit upon his party. The secret lay partly in his buoyant and hopeful nature, and in his ultimate trust in the moral and political soundness of the American people. With him, as with the poet Gray, *desperare de republica* was a deadly sin in politics; and his cheerful, kindly, even humorous confronting of an overwhelming majority temporarily against him, together with his unwavering faith in the future righting of present wrongs, was not the least part of his equipment for the work he had to do.

REGULATED MONOPOLY.

It is a singular fact, in view of the public interest in the question of monopolies, that several very successful expedients for their control should have attracted little attention. There are rumors of a coming consolidation of the gas and electric-light companies of New York, and if it takes place, it will be essentially without regulation by the Government. The men controlling the companies may determine the amount of the capital stock which they will issue according to their own will, and without any regard to the actual value of their properties. No doubt the value of shares of stock tends to approximate to that of the property which they represent; but the deviations are frequently so wide as to cause a general belief that, if practicable, it is desirable to prevent the "watering" of stock. It so happens that we are in possession of evidence tending to show that such regulation is practicable. We do not now refer to the system which has been adopted in London, whereby the dividends of gas companies can be increased only as the price of gas is reduced, although that system has worked so admirably as to make it surprising that it has not been copied. What we have in mind is the expedient adopted in Massachusetts about fifteen years ago, some account of which has been given by Prof. John H. Gray in the *Quarterly Journal of Economics*.

As the experience of New York city shows, the supply of gas is not an industry that is open to competition. To lay several sets of gas-pipes in the same streets, when one set is enough, is obviously wasteful, and is for other reasons objectionable. The result of this process is always the combination of the competing companies, and in that event the concern is burdened with a quantity of superfluous and unproductive plant. Nevertheless, these worthless assets are included in the capital stock, and in order to keep up dividends, the price of gas must be kept up. It may be laid down as an elementary proposition that the use of the highways for the supply of gas must be confined to one agency. Some people think that the city Government should be that agency; others, that it should be a private corporation. But such questions have nothing to do with this proposition, provided the corporation exercising the monopoly is subjected to proper restraints. What the people want is to obtain gas at a reasonable price. This they cannot do if new gas companies may be continually formed to compete with existing ones for a business that requires no additional capital. And if additional capital is required, it should

be employed by the existing agency, and not by competitors, while its amount should be no more than sufficient for the new requirements. These truths have been grasped, to a certain extent, by the Government of Massachusetts, and with encouraging results.

By the act of 1885, the laying of gas-pipes in any city or town already served by a gas company, by any other company, was prohibited, unless the consent of the city authorities, after a public hearing, was obtained. But this consent was subject to review by a Gas Commission created by the State, as an appellate court, and the result has been to vest in this Commission the control of the whole subject of lighting; for its jurisdiction was early extended to lighting by electricity. The Commission declared its policy to be to authorize existing gas companies to furnish electric light also, as generally the most economical results would be thus obtained; and it did not hesitate to encourage the consolidation of existing companies. During fifteen years eighteen cases directly involving competition have been decided by the Commission, and in none has the decision been in favor of the general principles of competition. In some cases, however, where existing companies could not agree, or where combination promised no economy, the Commission decided to allow existing competitive conditions to endure. In carrying out this policy, the Commission has frequently revoked the permits given to competing companies by local governments. These permits were in some cases obtained by new companies through tempting offers of reduced prices; but the Commission detected the illusory character of these proposals.

As the Commission favored the elimination of competition, not in the interest of the lighting companies, but in that of the public, it was a necessary feature of its policy to prevent over-capitalization. It refused to allow companies to make expenditures which their customers would have to pay for if they proved unproductive. On the other hand, it endeavored to secure a fair return to capital honestly invested and skilfully managed, by prohibiting unfair competition. The city of Boston granted a private citizen permission to take a wire across a highway, that he might dispose of his surplus power, which he did at lower rates than those of the company authorized to supply the community. But the Commission revoked the permit, because the company was subject to many public obligations from which its competitor was exempt. For instance, the company was obliged to supply the whole territory at reasonable rates, and, as it supplied remote customers at a loss, it would have been driven out of business had the profitable regions been captured by persons carrying no such handicap. So far as legal contests are concerned, the policy of the Commission is no longer the subject of controversy. It has been sustained in its claim that "the Legislature intended by the recent acts that all the reasonable and permanent advantages of competition are to be gained through the regulating powers conferred upon it."

The great pressure to form electric-lighting companies, about ten years ago, and some scandalous cases of over-capitalization, led, in 1894, to the passage of an act which put the capitalization of all lighting companies completely in the hands of the Commission. No such company can now declare any stock or scrip dividend, or divide the proceeds of the sale of stock or scrip among its stockholders. Nor can it issue stock or bonds without the consent of the Commission, after a public hearing; and the Commission must fix the rate of interest and the price of the securities, and define minutely the purposes for which the proceeds must be expended. Under this law all attempts at downright stock-watering in Massachusetts have failed. The severe rule has even been applied that when companies find that their plant can be duplicated for less than it cost, they are not to issue new stock until the deficiency is made up out of dividends. Owing to the rapid progress of the electrical arts, most lighting companies are over-capitalized, according to this standard; but the Commission holds that to capitalize floating debt incurred to make up depreciation, is to capitalize a loss, and the companies have had to reduce their dividends to make up their deficits. However grievous this may be to speculators, it is perhaps on the whole satisfactory to investors, and meets the demands of public opinion. The application of this policy in Massachusetts shows that, if Legislatures really wish to regulate monopolies in municipalities and prevent over-capitalization, they can do so. It is not the way that is wanting, but the will.

RUSSIA IN THE EAST AND AT HOME.

If journalism were not so modest, ever preferring to hide its light under a bushel, it might make a great ado over that simple newspaper correspondent in Pekin who is a considerably "biger man" than any diplomat there. Dr. Morrison has, indeed, as correspondent in China of the London *Times*, made a remarkable reputation for himself. He is usually about a week ahead of the British Government in getting wind of important negotiations between the Chinese and the Russians, or the Japanese. His latest feat was the telegraphing on February 27 of the text of the convention respecting Mantchuria which Russia was urging the Chinese plenipotentiaries to sign. He had later to make a few corrections in detail, due, as he explained, to the "clumsiness and obscurity of the Chinese translation of the Russian document." Fancy a newspaper correspondent who could so much as be misled by a faulty Chinese translation from the Russian! The horn of journalism might well think itself exalted.

The terms of this Russo-Chinese convention respecting Mantchuria breathe only good faith and neighborly feeling. Russia desires simply to hasten the resumption by China of "the entire civil government of Mantchuria as before." But when we come to look narrowly at the conditions of Russian withdrawal, we find that the withdrawal contemplated is very like that of England from Egypt—a solemn promise to be made good only at the Greek Kalends. Russian garrisons are to remain. No other foreigners shall be allowed to hold office, or to obtain a mining or railway concession. Russia is to be given the right to build a railroad straight to Pekin. China herself is not to construct a railroad in Mantchuria, nor in Mongolia, nor in any place adjoining the Russian frontier, "without the previous assent of Russia." All these little arrangements once completed, and an indemnity satisfactory to Russia paid over, the Czar will be happy to restore the province to its "former admirable government."

All this is in perfect harmony with Russia's historic and avowed policy. Mantchuria has, in fact, been practically ear-marked as Russian territory for a long time. Mr. Balfour, speaking for the British Government, has said that England would have no objection to Russia's acquiring permanently an ice-free port on the Chinese coast. That means, of course, Port Arthur, and Port Arthur means a Russian railway to Mukden and thence to the main line of the Trans-Siberian—that is, an infallible Russian exploitation and colonization of Mantchuria. That this has been tacitly contemplated and countenanced by the other Powers, the Anglo-German agreement of last year is a witness. It did not cover Russian aspirations in Mantchuria, which were thus in a way legitimated.

What, then, is all the row about? Why did Dr. Morrison call upon the English Ministry to oppose the schemes of Russia, and why has there been so much growling among the young lions of the British press? There are several reasons. One is that it has been thought indecent if not dishonorable for Russia to press this private business of her own while the Powers were trying to come to a comprehensive settlement of the whole Chinese question. It looked like taking an unfair advantage both of China and of the other countries concerned. It was too much like offering a bribe to the Chinese plenipotentiaries; if they would play Russia's game in Mantchuria, she would play theirs on the main question.

But there was something more inflammatory than this. Russia was bespeaking a preponderant and exclusive influence in Mongolia and Chinese Turkestan, as well as in Mantchuria. That, in Russophobe eyes, was an insidious attempt to "turn the flank" of England in India, as Capt. Mahan would put it. To strengthen the Russian frontier was, cried the alarmed English "Forwards," *ipso facto* to weaken the British frontier. Hence their call to arms—or, rather, call for the fleet to put to sea, as the English arms, in the sense of armies, are confessedly occupied elsewhere. But the latest dispatches from Dr. Morrison allege that Russia has waived her rights or pretensions in Turkestan, so that Great Britain, thanks to him, may breathe again. To the really devout Russophobe, we do not see why this should make any difference, since it is a leading article of his creed that no promise of Russia is binding. Russian diplomacy recoils for the moment, when forced to do so, but moves on steadily thereafter on its unscrupulous and secular course—towards the very objective which it had renounced.

It may be granted, in fact, that Russia is not likely to meet with any serious or prolonged check in her territorial ambitions in the Orient. Time, distance, the steady push of a colonizing race, are all on her side, and will prove invincible, unless some impairment of her governmental vigor develop from within. And here we cannot fail to see a high significance in the signs of a ferment of progress at work in Russia proper. The universities in revolt carry one back to the stirring of young intellectual life against reactionary government which Europe saw in '48. No radical change may result, but the phenomenon shows that in Russia, too, there is an expansive power in new ideas. It may prove an explosive power, if too autocratically and roughly confined. The new industrial life of Russia is also an element of her modern life, bound to work great transformations. Prince Kropotkin has described, with a kind of solemn joy of anticipation, the process of changing the stolid muzhik into the workingman, in touch with his fellows, giving and receiving new notions of society and government, and creating slowly the raw material of political life as it is known to Western nations. M. de Witte, with his policy of "educational protection," drawing as it does to Russia foreign manufacturers and developing native industries, is in a fair way to build up in his country a working class which will one day realize its power and effect a sweeping decentralization and liberalizing of the huge machine of Russian government. From without, so far as one can see, Russia has nothing to dread. She can push on to the Pacific with none to stay her hand. Her real foes will be those of her own household, unless she knows how, by wise concessions, by readjustments of political power, to give her own people a larger voice in the control of national destinies.

VERDI THE PATRIOT.

FLORENCE, February 28, 1901.

Verdi breathed his last on January 27, not in his favorite Villa di S. Agata, but at the modest hotel in Milan which was his usual sojourn when in that city. On New Year's day he had written what proved to be his last letter to his intimate friend Comm. G. Amicis in Genoa, telling him that in February he should return to that city; but adding that, though the doctors assured him he was not ill, he felt so tired that he could neither read nor write, and scarcely walk. "I do not live, I vegetate; what have I more to do in this world?"

It is not strange that Italy should feel this loss deeply—the loss of the last genius of her renaissance; of the man who, as much as Joseph Mazzini and Joseph Garibaldi, contributed to inspire the people with the will to be a nation, and the belief that their will would triumph. When Goffreddo Mameli composed his war hymn, "Fratelli d'Italia," it was to Verdi that Mazzini wrote, begging him to set it to music. From Paris, October 18, 1848, the composer replied as follows, with advice which the soldier-poet seems to have followed:

"DEAR SIGNOR MAZZINI: I send you the hymn: and, although somewhat late, I hope it will arrive in time. I have tried to be as popular and easy as possible. Use my musical rendering as you please, and burn it if you think it unworthy of the hymn. If you publish it, ask the poet to change a few words at the beginning of the first and second strophes, in which it would be well to alter thus, 'Noi lo giuriamo, . . . Suona la tromba,' etc., etc. Then, of course, end the verse with the *sdrucciolo*. In the fourth line of the second verse it would be necessary to strike out the note of interrogation.

"I could have set it to music even as it stands, but the music would have been much less popular, and hence would not have attained the desired end. God grant that this hymn, set to the music of cannon, may soon be chanted on the Lombard plains. Take a cordial salutation from one who has for you a complete veneration.—Your devoted,

"G. VERDI."

When the hopes of the nation were reawakened in 1859, and the King of Piedmont announced that he would head in person the army which, since the fatal defeat of Novara, it had been his chief care to organize for victory in the renewed war against Austria, the Milanese, seemingly without rhyme or reason, placarded the walls with "Viva VERDI," understood by the patriots to stand for "Viva *V*ittorio *E*manuele *R*e *d'I*talia." When Venice, for the third time betrayed by France and neglected by Italy, was crushed and bound down under the "iron hoof of Austria," she found vent for her outraged patriotism at the Fenice Theatre, where the whole audience rose up to applaud the actors who appeared on the scene with tricolor scarfs and cockades, and chanted the chorus, "La patria tradita piangendo c'invita, Fratelli gli oppressi corriamo a salvar!"

While the remains of the Maestro were being transported, "all Milan" present, to the tomb prepared by himself behind the House of Rest founded by Verdi for musicians, where he elected to lie beside his second wife, the students of Florence arranged their own celebration by inviting Gabriele D'Annunzio, who only last week intoned his wondrous "Song of Garibaldi" here, to recite the song composed for Giuseppe Verdi. In the Aula Magna of the University, which was crowded before noon though the ceremony commenced only at 3 P. M., the aristocratic dames and authorities, artists, men of letters, the very professors, had to take their chance for seats which the students had taken care to secure in great numbers for themselves and their friends. Gabriele is a great favorite with the youth and the advanced party in Florence. Insignificant in person, he is a genial and accomplished speaker, and the way in which he alluded to the great and unfortunate sculptor Gernito, who was saved from the conscription by Verdi, and in his grand life-sized figure chiselled the form and features of the beloved master as none can do again, touched the audience deeply. This young genius was "redeemed from military servitude to save him for the liberty of art," alas! only to end his last days in living death in the madhouse. D'Annunzio then rapidly portrayed Verdi as the artist, the inspired musician, the essence of Italianhood—which most assuredly he was, both in his ideality, his practicality, his broad, deep-orbed humanity.

"The song I shall recite to you," he said, addressing chiefly the students, "is at once a memory and a hope. You assembled here form the hope of Italy. May there not be among you the man of to-morrow who is charged with glad tidings for the future; who may unite in our supreme Italian ideal great actions and great thought? Perhaps some of you even now exult with a secret hope in yourselves, a belief that you have some word to say, some act to perform, which shall redound to the honor and glory of your country! Perhaps some of you, succeeding in a first modest work, will feel the strength to say, 'Onward! Something better, greater, more difficult there is yet to be accomplished.' You are the spring of Italy! My faith, my constancy in following up my dream of Italian Greatness, makes me feel worthy to announce the future victory of your united wills."

The cheers that burst forth from time to time and the final applause were hushed as the speaker, in a quiet, vibrating voice, began to read his "Canzone" to Verdi, composed in the traditional form of the rhymed canzoni of Petrarch, and which recounts the glories of the artist who was faithful unto death to the Italian musical traditions; nay, who may be said to have summed them all up in his works. Over the great one dead, Dante, Leonardo, and Michelangelo bend their "vast and terrible foreheads," "col pondo degli eterni pensieri e del dolore." I will quote only the *envoi* of this remarkable production, which earned from Carducci a magnificent telegram recognizing the author as "the pure continuator of Italian genius":

"Canzon, per i tre mari
vola dal cuor che spera oltre il destino,
recando il buon messaggio a chi l'aspetta.
Aquila giovinetta,
batti le penne su per l'Apennine;
per l'aere latino
rapidamente vola,
poi discendi con impeto nei piani
sacri ove Roma è sola,
getta il più fiero grido e là rimani."

J. W. M.

THE EIGHTEENTH BRUMAIRE.—II.

PARIS, March 2, 1901.

Everything was well prepared. Sieyès's

plan had been made with great ability; the Constitution was to be modified by Constitutional and apparently legal means. The execution of the plan met, however, with unexpected difficulties, and legality was to be superseded by force. It could hardly be expected that the revolutionary elements of the Lower Chamber (the Five Hundred) should submit without opposition to resolutions which tended to destroy or to diminish their influence; the calm and rural atmosphere of Saint-Cloud could not operate to such a degree that the Jacobins should be suddenly transformed.

On the morning of the 18th Brumaire, at dawn, the *Anciens* were convened at the Tuileries, which was the place of their meeting. They arrived one by one, through the deserted streets; the sitting began between seven and eight o'clock. Cornet, one of the inspectors, read a long report, full of the phraseology of the time, denouncing horrible plots against the Republic and the country, terrible preparations of the Jacobins; a decree was proposed transferring the legislative bodies to Saint-Cloud, confiding the execution of the decree to Gen. Bonaparte, and giving him in consequence command of all the troops of Paris and its neighborhood. Bonaparte was at his house in the Rue de la Victoire, receiving numerous officers in uniform—Moreau, Macdonald, Lefebvre (him of Sardou's "Madame Sans-Gêne"). Lefebvre arrived among the first, thinking that he had simply to conduct Bonaparte to a review. He was the commander of Paris, and was surprised at seeing what was going on, but Bonaparte soon won him over.

"Lefebvre," says M. Vandal, "was the Alsatian patriot, full of sensibility under a rough exterior, more French at heart than in his language. . . . When Bonaparte showed him the Republic given over to the lawyers who were ruining her, he became indignant; when Bonaparte gave him the sword which he himself bore in Egypt, he was beside himself; tears came to his eyes. Crying and swearing at the same time, he declared himself ready to throw all those lawyers into the river."

Bernadotte arrived, but not in military, in civilian clothes. Bonaparte, he said afterwards, tried in every way to win him over to his cause; but Bernadotte would not yield completely to him. He had his doubts and his own ambitions. The decree of the *Anciens* was brought in by a state messenger in full uniform—one of those extraordinary uniforms designed by the famous painter David. Bonaparte, surrounded by an immense staff, went on horseback to the Tuileries; the regiments were pouring from all sides into the Place de la Concorde and the Champs Élysées. Barras, meanwhile, was at the Luxembourg, already abandoned by the Directorial guard; he tells us in his Memoirs (which have been only lately published) that he found all resistance on the part of the Directory impossible. "His reunion with his two faithful colleagues would alone," says M. Vandal, "have maintained the legal government and given a centre to resistance. But he seized the pretext of an indisposition for not appearing. He continued to remain passive, to isolate himself, perfectly resolved as he was to betray Gohier and Moulins, as he had betrayed, on the 30th Prairial, Merlin and Larévellière, and to enter into the movement on condition that he should be well paid for it." Bonaparte sent him no message, no letter; Barras became uneasy, and dispatched his secretary for news to the Tuileries. Bonaparte entered the hall of the *Anciens*, and, for the first time, spoke in public before a Parliamentary assembly. He had to give his oath to the Constitution; he did not do so in a dry formula, but made a speech.

"The Republic was dying; you perceived it, and passed a decree which is going to save it. . . . Aided by all the friends of liberty, of those who founded it, of those who have defended it, I will maintain it. Gens. Berthier, Lefebvre, and the brave soldiers who are under my orders share my sentiment. You have passed a law which promises us public salvation; our arms will execute it. We wish for a republic founded on liberty, on equality, on the sacred principles of national representation. We shall have it. I swear it."

Bonaparte left the *Anciens*, and was recognized in the garden of the Tuileries as Supreme Commander of the troops. The presence of Barras's secretary, who had arrived, gave him the occasion for making a public indictment of the policy of the Directory.

" 'What have you done,' said he with animation and a calculated anger, 'with this France which I left so brilliant in your hands? I left you peace, I have found war on my return. I left you victories, I have found reverses. I left you the millions of Italy, I find laws of spoliation and misery. What have you done with the hundred thousand Frenchmen whom I knew, my companions in glory? They are dead. This state of things cannot last.' "

These burning words made a profound impression on the bystanders.

"These words," says M. Vandal, "in which certain false traits disappear in the crushing truth of the whole, have resounded through a century, and have marked the Directory for ever with a sign of opprobrium. Why must it be that the greatest scenes in history have their petty and prosaic sides? Bonaparte had not even improvised in a sudden inspiration or taken from his own stock his magnificent diatribe. He had taken the first elements of it, and even some expressions, from an address which had been sent him a few days before by the Jacobin Club of Grenoble, a provincial society, enraged against the Directorial oppression and corruption. [This address was published in the *Enemy of Oppressors*, number of the 14th Brumaire.]"

Bonaparte, after his oration, passed in review his troops, followed by one hundred and fifty officers, in the garden of the Tuileries. Meanwhile, the Five Hundred had their meeting at the usual hour, between eleven and twelve o'clock, at the Palais Bourbon. Lucien Bonaparte presided; he read the decree transferring the Chambers, and immediately adjourned the House to the new date, at the palace of Saint-Cloud.

Barras was still waiting impatiently at the Luxembourg. Talleyrand arrived at twelve o'clock; he had in his pocket a letter of resignation which he had prepared, and which Barras was to sign. Rœderer, in his Memoirs, gives the text of this extraordinary letter. Barras says in it that "he had engaged in public affairs only because of his passion for liberty; he had consented to share the first magistracy of the state only in order to assist it against all dangers." He adds:

"The glory which accompanies the return of the illustrious warrior to whom I was so fortunate as to open the way to victory, the striking marks of confidence which the Legislative Body gives him, and the decree of the national representatives have convinced me that whatever be the post to which he may be called by the public interest, the dangers to liberty are surmounted and the interests of the armies are guaranteed. I go back with joy into the ranks of simple citizens, happy, after so many storms, to leave the destinies of the Republic more respectable than ever."

All the historians of the period seem to believe that the presentation of this letter of resignation to Barras by Talleyrand was accompanied by the offer of a good round sum. And Barras, in his Memoirs, alluding to what was said at the time, does not give it a flat denial; he suggests that that sum of money remained in the hands of Talleyrand, and that he had neither to refuse nor accept it. *Adhuc sub judice lis est.* M. Vandal suggests that Talleyrand had in his hands papers which compromised Barras and were very damaging to him. What is certain is that Barras left the Luxembourg immediately and set out for his estate at Grosbois, where he wished to remain in obscurity. The two other Directors, Gohier and Moulins, protested for a while, but the Luxembourg was surrounded by troops, they were virtually imprisoned, and nobody was allowed to see them. Bonaparte at the Tuileries received visits the whole day, and prepared himself for the crisis which was to come the next day. "It has gone not badly to-day," said he to Bourrienne, on his return to the Rue de la Victoire, where he slept; "we shall see to-morrow."

M. Vandal is particularly interesting in his account of the day at Saint-Cloud. He shows very clearly how the execution of a plan which had been so well prepared was in reality difficult, and how uncertain the issue remained up to the last moment. If Bonaparte had failed in his attempt, there is very little doubt that he would, with some of his accomplices, have been sent to the scaffold or transported to a distant French colony. There is no *if* in history; still, one cannot help asking what turn the history of France would have taken if Bonaparte had been carried off the stage.

The road from Paris to Saint-Cloud was thronged with carriages on the morning of the 19th Brumaire. Saint-Cloud had become for a single day what we saw Versailles become during the days of the Commune. The *Anciens* and the *Cinq Cents* assembled in the improvised rooms prepared for them. M. Vandal relates, with the most minute details, all the incidents of this famous day. The difficulties arose in the chamber of the Five Hundred. Thiébault tells, in his Memoirs, how Bonaparte was waiting for the result, receiving news in the Chambers. Thiébault himself made a pretence of some brutality of an officer, and went back to Paris before the crisis was over. Jacobin emissaries had arrived from the capital; Jourdan and Augereau were wavering. Bonaparte felt that every minute lost was a danger; he left in person for the hall of the *Anciens*, making there a speech which was coldly received. He ended, however, by saying that he counted solely upon the *Anciens*. "I have not counted upon the Council of the Five Hundred, where there are men who wish to return to the Revolutionary committees and the scaffold." On leaving the *Anciens*, he boldly went to the Five Hundred, and there began the extraordinary scene of confusion which has often been described. "Down with the Dictator! Down with the tyrant!" were the cries which greeted him. "Hors la loi!" resounded on every side; and "Hors la loi!" meant immediate arrest and judgment. The

day was saved for Bonaparte by his brother Lucien; Lucien left the chair to notify the soldiers that Napoleon's life was threatened, that the Five Hundred were armed with poniards. The presence of Lucien, the President of the Five Hundred, gave a semblance of legality to his orders. The grenadiers entered the hall of the Five Hundred and cleared it; the Five Hundred threw away their gowns, running in every direction. They were never to meet again. It is clearly shown by M. Vandal that Lucien's action was decisive; that without him the *coup d'état* might never have succeeded, and might have ended with the triumph of the Jacobin section.

Correspondence.

ART INSTRUCTION IN ITALY.

To the Editor of The Nation:

Sir: This autumn I begged leave of a stern parent to go to Paris to study drawing and sculpture. The permission was not refused, and forthwith several eminent artists and critics, who were kind enough to be interested in my future, were asked for advice about schools, masters, etc. Much to my disheartenment, came the uniform reply, "No young woman should go to Paris to study. We have lived and worked there." The blow was made even more crushing by a letter appearing in the *Nation* at about the same time, voicing much the same view.

Where to go; what to do? Florence with its sunshine and its galleries (a rare combination) allured me, and here I am. The modern picture and statue-shops reduced me to melancholy, as did some of the charming artists' studios. The Royal Academy and the young ladies' drawing and painting classes (patronized by the Italian aristocracy) also enveloped me in gloom. Yet I finally found a life-class for women, *well ventilated* and lighted. There I spend the light hours of the day with a wholesome lot of girls collected from all corners of the earth and earnest in their study. Our master is Filadelfo Simi, and worthy of a wider reputation than his modest personality has brought him. Suffice it here to say that in versatility he has followed the great Florentines of 1500. He paints good pictures, and can make a bas-relief to awaken the envy of any modern. Besides, he is well founded, and delights in the ancient and modern literature of his art. Signor Simi studied as a boy in Florence, and later went to Paris. There he entered the Beaux-Arts and was for four years under Gérôme. After that he worked at Fontainebleau, whence he sent two pictures to the Salon which brought him much commendation. Since then the Italian Government has decorated him and bought one of his pictures. In London, where Italy chose him to represent her modern art at an exhibition, he won the name of the Bastien-Lepage of Italy. I have been under many masters, but never have found such a teacher as Simi.

Well, the stern parent is pleased. I wish that this same pleasure could be given to many other parents who worry about their innocent offspring in wicked Paris. Here life for the foreigner at least is clean and of a healthful spirit. Board and lodging are cheap. The winter is short, and the sun *does* shine.—Respectfully yours,

E. W. H.

P. S.—Signor Simi also has another studio, where there are men's classes.

E. W. H.

Florence, February 12, 1901.

GROUCHY.

To the Editor of The Nation:

Sir: If your correspondent, "W.R.B." (March 7), will look in the 'Century Dictionary' under the word *grudge*, he will there find the origin of "grouchy," "grouch." Among the various forms the word has assumed in early and middle English will be found *grouchen, gruchen, grutchen;* in old French *groucher, gruchier*, etc. Examples of its use are given, meaning "to be unwilling, reluctant," "to cherish ill will, bear a grudge," "to be sorry, to grieve," and, finally, "to murmur, to grumble," *e. g.*,

> "——and they *grucchiden* agens hir."
> —Wyclif, Mark xiv., 5.
>
> "He gan to *grucche* and blamed it a lite."
> —Chaucer, Prol. to Reeve's Tale, 1. 9.

These last seem to correspond with our use of the word.—Yours very truly,

E. P. G.

Baltimore, March 16, 1901.

Notes.

D. Appleton & Co.'s March announcements include 'The Spanish People: Their Origin, Growth, and Influence,' by Martin A. S. Hume; 'War's Brighter Side,' stories, poems and sketches, by Kipling, Conan Doyle, Julian Ralph, and others, with an introduction by Lord Roberts; 'General Meade,' by Isaac R. Pennypacker; 'A Sailor's Log: Recollections of Forty Years of Naval Life,' by Admiral Robley D. Evans; 'A Landmark History of New York,' by Albert Ulmann; 'Pleasures of the Telescope,' by Garrett P. Serviss; and 'The Play of Man,' translated by Elizabeth Baldwin from the German of Prof. Karl Groos.

A one-volume 'History of the American People,' by Prof. Francis Newton Thorpe, is about to be published by A. C. McClurg & Co., Chicago.

'D'ri and I,' by Irving Bacheller, author of 'Eben Holden,' is in the press of the Lothrop Publishing Company.

The thirteenth volume in Dr. Horace Howard Furness's Variorum Shakspere, "Twelfth Night," is in the press of J. B. Lippincott Co., Philadelphia.

An illustrated work, 'The Scotch-Irish Quakers: Immigration of the Irish Quakers into Pennsylvania, 1682-1750, with their Early History in Ireland,' is to be published shortly by the author, Mr. Albert Cook Myers of Swarthmore College, Swarthmore, Pa., whose researches have been conducted on both sides of the water. It will be furnished with a bibliography and an index.

Leo Wise & Co., Cincinnati, will bring out directly 'The Reminiscences of Isaac Mayer Wise,' translated from the German, and edited, with an introduction, by David Philipson.

Marie Ward Brown, West End, Long Branch, N. J., will issue in April a 'Life of Col. Dan Rice,' clown and showman, with many illustrations.

James Clegg, Aldine Press, Rochdale, England, will publish by subscription 'The Writings of Oliver Ormerod,' in the Lancashire dialect. Ormerod was a friend and neighbor of John Bright, and figures in Thomas Newbigging's 'Lancashire Humor,' also one of Mr. Clegg's imprints.

The late Dr. Israel Ward Andrews's 'Manual of the Constitution of the United States' (American Book Co.) took an assured place at once as a convenient and authoritative text-book and book of reference. This was twenty-seven years ago, and in the interval some of the greatest Constitutional questions have arisen and been passed upon. The work has accordingly been revised to date by Homer Morris, of the Cincinnati bar (the book is of Ohio origin), and furnished with a portrait of President Andrews, with lists of Presidents, Vice-Presidents, and Cabinet officers. "Chinese excluded from citizenship," "Income tax," "Legal-tender notes," are some of the new topics which strike the eye in the index.

'The Nineteenth Century' is the caption given by G. P. Putnam's Sons to the *Evening Post's* review of the past hundred years, by thirty-seven hands, American and English, all competent and some very eminent indeed. Eight divisions are provided, for Law and Government, History, Sociology, Literature and Fine Arts, Education and Science, Applied Science, Transportation, the Science of War. Entire comprehensiveness was, of course, out of the question, and under History, for example, only England, Germany, Russia, China and Japan, Canada and Mexico receive attention. Judge Charles C. Nott and Prof. John Bassett Moore lead off with "The Immutability of the Constitution" and "Progress of International Law." Other notable articles are "Geographical Conquests," by Louis Heilprin; "Library Development," by Charles A. Cutter; "Progress of American Architecture," by Russell Sturgis; "Painting," by Kenyon Cox; "Scope and Tendencies of Physics," by Prof. Oliver Lodge; "Evolution and Religious Conception," by Leslie Stephen; "Printing," by Theodore L. De Vinne; "Advance in Astronomical Science," by Simon Newcomb; "Great Men in Science," by Charles S. Peirce; "Psychical Research," by Andrew Lang; "Changes in the Legal and Political Status of Women," by Julia Ward Howe, and not a few besides. Altogether they form a volume of 500 pages of open print, interesting *per se* and as illustrating the grasp and power of condensation of the respective writers in the performance of a task pretty much the same for all in the limitation of space prescribed.

The third volume of Prof. A. B. Hart's 'American History told by Contemporaries' (Macmillan) bears the title 'National Expansion,' meaning thereby the period from 1788 to 1845. No period of our history is more crowded with incident, and Professor Hart's selections present its various phases skilfully, and, on the whole, adequately. Beginning with extracts illustrating social, economic, and political conditions and frontier life in the years just before 1800, the selections pass on to the problems of the Confederation, the framing and adoption of the Constitution, the Federalist régime, and "Jeffersonian supremacy." To the years 1815-1830, Professor Hart gives the sub-title "National Consciousness," classifying his matter under the three heads of National Spirit, the Great West, and Foreign Policy. Three chapters on social and political read-

justment (1830-1845) are followed by three on slavery and abolition, with a final chapter on Texas. The material continues to show the same wide range as in the previous volumes, and the selections themselves, though almost excessively brief, are well chosen and genuinely illustrative. There are some omissions and some curious apportionings: the nullification controversy, for example, appears only in an extract from one of Calhoun's speeches, and Jackson's financial exploits are not touched upon at all. As contrasted with the earlier volumes, the proportionate representation of messages, speeches, diplomatic correspondence, and the like is naturally larger; but legal and constitutional documents continue to be, very properly, excluded, while letters, journals, poems, books of travel, and newspapers are liberally drawn upon. The series has made too sure a place for itself among elementary collections of historical material to need further commendation on that score.

Mr. Charles A. Hanna has printed privately, at No. 43 West Thirty-second Street, New York, an octavo volume of nearly 650 pages, entitled 'Historical Collections of Harrison County, Ohio.' The readable portion of it is contained within the first two hundred pages, beginning with a discussion of the leading elements of the population, the Scotch-Irish (for whom Mr. Hanna holds a brief, with a witness), the Quakers (anti-slavery emigrants from North Carolina), Germans ("Pennsylvania Dutch"), and Virginians—the first three well typified in a portrait vignette-group embracing also the New Englander. Details of pioneer life, of early settlements, of church organization, fill out Part one. Part two is an exceptionally meritorious collection, in alphabetical arrangement, of land patents, early marriages, graveyard records, and, above all, will abstracts from 1813 to 1860. This last feature is, so far as we know, unique in works of this character. Part three, finally, presents 130 pages of genealogies, and this section has been reprinted as a separate volume by the compiler, with a portion of Part one prefixed. Such an undertaking as this, so laboriously and intelligently carried out, does not lend itself to quotation or to criticism. It can only be highly praised, and will appeal irresistibly "to those whom it may concern."

No one is happier in the light gymnastics of philosophy than Mr. E. S. Martin, unless it be his readers. His early inimitable verses amuse by their cynical playfulness. His essays impress by their playful cynicism—an even more healthful and warming form of exercise. His latest volume, 'Lucid Intervals' (Harpers), is his ripest and best; it thoroughly pleases, and it goes deeper than pleasing in a kindly, delicate fashion, touching on children, family relations, riches, popular theologies, and other topics of like general concern. The point of view is the reformer's, but the attitude and weapons are those of the gentle and humorous observer. We have not found personal nourishment in the illustrations, but would fain emulate Mr. Martin's catholic spirit in adverting to them.

Dr. Rodkinson's English translation of the Babylonian Talmud is making rapid progress. He is publishing at present the fourth of the great divisions, or *Seders*, which deals with civil and criminal law, and we have already drawn attention to the interest which it possesses for students of comparative jurisprudence, and especially of systems of casuistry. The present volume contains the last two chapters of *Baba Qamma*, the first section of the *Seder*, and the first four chapters of *Baba Metsi'a*, the second section. The book is like a sheep's head, "of a fine mixed feeding"; and not only the jurist, but the student of folk-lore and of human nature generally, will find advantage and entertainment in it. The somewhat sardonic humor of the Semite is well represented, and the story on page 140 goes far to explain Heine's view of the humorous relation between Israel and its God.

At the expense and under the auspices of the Commission for the Arnamagnæan Legacy in Copenhagen has recently appeared a work of great interest to students of Germanic, and particularly of Scandinavian, philology, viz., the 'Catalogue of Old Norwegian and Icelandic Manuscripts' in the Great Royal Library and the University Library of Copenhagen (outside of the Arnamagnæan Collection of Manuscripts). This stately grand-octavo volume has been prepared by the librarian of the Arnamagnæan Collection, Dr. Kr. Kaalund, and evidences the same accuracy and scholarship that characterize the 'Catalogue of the Arnamagnæan Collection of Manuscripts,' a work in two volumes, previously published by the same author under the same auspices (1889 and 1894). Together, these two catalogues form a complete key to the invaluable manuscript treasures gathered in these two great Danish libraries. The author has added to the present catalogue an introduction setting forth in historical detail how the Old Norwegian and Icelandic literature has been collected and preserved, not only in the Copenhagen libraries, but also in Stockholm, Upsala, Christiania, the British Museum, Utrecht, Wolfenbüttel, etc. The Commission, having thus completed this task, is now preparing a palæographic Atlas, which in two series (one Old Danish and one Old Norwegian-Icelandic) is to contain phototype specimens of the more important manuscripts (as a rule one page of each) with a reprint of the text on the opposite page, chronologically arranged; the series published by the Palæographical Society of London serving as a model.

It is a not insignificant event that the General Assembly of Alabama lately established a Department of Archives and History in the State Capitol, with exploration, collection, and preservation and publication among its objects, as well as "the diffusion of knowledge in reference to the history and resources of the State, and the encouragement of historical work and research." Nine trustees are provided from as many Congressional districts. Mr. Thomas M. Owen is their choice for Director.

When Japan's "grand old man," Fukuzawa, died in Tokio on the 3d of February, there passed from view one of the mightiest personal forces in the training of that nation, the "child of the world's old age." Born about 1836, he was among the first to see Perry's marines and to visit the countries of the world lying beyond hermit Japan. His book on Western countries, manners, and usages was very popular, and tremendously potent in letting the "frogs in a well"—as the Japanese began to call themselves—see how small was their environment, and how large the world beyond the great ocean. Fukuzawa, one of the first employers of the modern natural style, instead of the stilted diction copied from Chinese models, was the most widely read of recent Japanese authors. His books, reaching the enormous sale of four million copies, and his newspaper (*Jiji Shimpo*), having perhaps the largest circulation in Japan, have made him, as Professor Chamberlain said, "the intellectual father of half the young men who now fill the middle and lower posts in the Government of Japan." Over thirty years ago, he founded in Tokio a college which has been a worthy rival of the Imperial University. Fukuzawa scorned rank, office, and official honor, and refused a patent of nobility, all of which were freely offered him; but he did accept a handsome endowment of his school at the hands of the Emperor. The great commoner was rather ostentatious in denying the importance of any religious dogmas, but he was ever forward in discussing ethical problems and practising what he so nobly preached. His rarely pure and useful life was a grand expression of true morality. A letter received from him, by the writer, only a few days before his death, expressed his high appreciation of the attempts of American writers to interpret Japan to the world. Curiously enough, the service over his remains was at the temple of Zempukuji, so long in the sixties and early seventies occupied by the American legation. The Emperor honored his great servant by paying the expenses of his funeral, and ten thousand persons followed on foot his remains to the grave.

At a meeting of the Executive Committee on the Sidgwick Memorial held at Cambridge, England, on January 24, it was agreed that the scheme of founding a Sidgwick lectureship was "to be preferred" to the other schemes proposed. It is hoped that the fund will amount to at least two thousand pounds sterling. The list of "first subscriptions" announced by the committee is in excess of £600. As we have before announced, Prof. J. Mark Baldwin of Princeton, N. J., is the member of the Executive Committee for this country and Canada, and will forward American subscriptions.

In our notice last week of Sturgis's 'Dictionary of Architecture and Building,' we find that we erred in ascribing one-third of the contents of volume i. to Mr. E. R. Smith. We should have written "one-sixth."

—Perhaps the article in the *Atlantic* for March which has attracted most attention is a eulogy of Mr. McKinley by Henry B. F. MacFarland. The writer takes the bull by the horns, and frankly insists that the President is a great man, a great ruler of men, a great President. In order to make his remarks convincing, he is obliged to deal roughly with his readers' intelligence; and he does so. He declares, for instance, that the common belief that Mr. McKinley has been and still is "more or less under the influence of Senator Hanna" is an "astounding delusion"; that the idea that he is "stolid and solemn" comes from the fact that he "keeps his humor for private conversation." Such articles mark the rising tide of Imperialism. Four years ago we were asked to believe Mr. McKinley to be a great and good man because his intimate friends knew him privately to be one; now we are invited to consider his record if we would know what a great and good man is. If Mr. MacFarland's view is

correct, what must we think of such detractors as Carl Schurz, Moorfield Storey, and others, who denounce our patient and long-suffering Chief Magistrate as a public malefactor? But we must not take the *Atlantic* too seriously. There is still humor in private conversation, even in Boston. It no doubt publishes such articles in order to give both sides a fair hearing and to counteract the effect of Dooley. Another political article, on "Democracy and Efficiency," by Prof. Woodrow Wilson, gravely deplores the fact that the people of the United States "have forgotten the discipline which preceded the founding of the colonies, the long drill in order and in obedience to law, the long subjection to kings and to Parliaments which were not, in fact, of the people's choosing. They have forgotten how many generations were once in tutelage in order that the generations which discovered and settled the coasts of America might be mature and free." The implication here evidently is that what produces or causes freedom is oppression, and that we shall only have to apply a good long course of it in the Philippines in order to evolve an Oriental Faneuil Hall and free institutions. The difficulty with the Filipinos is that, like the stupid fools they are, they want liberty "right now," without going through the necessary preliminaries. The most readable article in the number is Prof. James Bradley Thayer's collection of *ana* relating to John Marshall.

—The *Century* has for its leading article an illustrated paper on "Shopping in New York," by Lillie Hamilton French, with pictures by Henry Hutt. It is written from a distinctly feminine point of observation, as may be inferred from the fact that, to the writer, one of the grand features in the best modern shops is that the shopper is allowed to return and exchange as fast as she buys; the right to get something totally different from what is bought—held in reserve—adding a distinct zest to the pleasure of purchasing. To this writer the shop-girl ("not the saleslady, but the shop-girl"), "with her patience, her intelligence, her tact, her ready sweetness, her responsiveness, and a certain friendliness that is touching," is "an unending source of interest." Bishop Potter's "Impressions of Japan" are worth reading, as it is always interesting to see the East reflected in the Western mind. To a Japanese reader the article would probably be very amusing. The Bishop declares it to be his opinion that the Japanese can never come to the front rank among nations until they adopt Christianity, but he remarks no disposition on their part to do so, while, without adopting it, they are already in the ranks of the second-class Christian nations, so far as battle-ships go; and as for education, politeness, and urbanity, they appear to be not far behind some first-class communities that could be mentioned. It seems that one difficulty in Christianizing them is that, according to their own account, the educated class has "for centuries lived and died under a system of morality which inculcates virtue for virtue's sake, and entirely dispenses with supernatural sanctions of any sort." It is hard to see why a *classe dirigeante* which has reached a point that, in the Western world, is attained only by an isolated sage here and there, should be much inclined to look up with awe and wonder to the votaries of a system which is dependent on supernatural sanctions. George Henschel's "Personal Recollections of Johannes Brahms," with portraits, is interesting, and Augustine Birrell's "Down the Rhine," this time from Worms to Coblenz, with pictures by André Castaigne, is worth looking through; but Mr. Birrell is not the man to write about Germany. He is, like many another Englishman, much more in sympathy with French ways of thought than with German, and to thoroughly enjoy the Rhine without a considerable tinge of Teutonic sentiment and naïveté, is, we hold, absolutely impossible. To hear the Lorelei's song, the boatman must not see the reef and the cliff quite so distinctly as Mr. Birrell does.

—*Harper's* first article is an account of Seville, by Arthur Symonds, illustrated by Lucius Hitchcock. To Seville those should go, we are told, who wish to understand how thoroughly dramatic in character a mass may be. A very peculiar religious ceremony is the "dance of the Seises," which must be of great antiquity. It is performed in the cathedral, as a part of the feast of the Immaculate Conception. Sixteen boys in blue and white costume, with plumed hats, dance and sing in front of the altar to the music of an unseen orchestra, the priests kneeling in a semicircle around them. The dance is a kind of solemn minuet, in which a central square forms, divides, one line passing through the opposite line, "the outer ends then repeating one another's movements," while the others form and divide again—evolutions such as we connect involuntarily with dramatic performances of a quite different sort. There is an accompaniment of castanets, and at the end a benediction by the Archbishop. "The Moving Finger" is a short story by Edith Wharton, of a kind which she has made her own, with the aid of inspiration partly original, partly derived from Henry James. Some future Barrett Wendell may inquire also whether there is not a connection between this *genre* of writing and Hawthorne in his most mystical vein. The mystical, the mystico-allegorical, the fantastic, and the phantasmic are all akin. If we attempt differentiation, we shall perhaps say that Mrs. Wharton deals with phantasms of the feminine brain, in which the allegory, if any there be, calls for a key when the masculine reader is concerned. We say this, however, with all reserve and humility, as there is nothing more odious than the imputation of an allegorical design where none was intended. But, however this may be, the people in "The Moving Finger" are phantasmic rather than real. The best critical writing in the number is Mr. Howells's little essay on Sarah Bernhardt's *Hamlet*, in the "Easy Chair." In three pages and a half he says more than all the other critics put together have said in a thousand. It is not so much that what he says is new, for every critic has complained of the sex of the actress and her French version (Mr. Howells adds, however, another point, that the royal Dane ought not to be a Jewess), as that every point is made with such delicacy and humor that the reader feels quite confident that Bernhardt herself would agree with what is said if she read it. The only possible reply would be the one which she would no doubt make—that the reason she did it was because she knew it was wrong.

—*Scribner's* African article, "Along the East Coast of Africa," by Richard Harding Davis, gives glimpses of little-known places, among others Zanzibar. The Sultan lives in a palace, the piazzas of which, to an American eye, look as if his architect had studied in Long Branch, New Jersey; while the city itself, Mr. Davis declares, is, in appearance and in its highly scenic inhabitants, a "comic-opera capital." "The charm of Zanzibar lies in the fact that, while the white men have made it healthy and clean, have given it good roads, good laws, protection for the slaves, quick punishment for the slave-dealers, and a firm government under a benign and gentle Sultan, they have done all this without destroying one flash of its local color, or one throb of its barbaric life, which is the showy, sunshiny, and sumptuous life of the Far East." In the fifth instalment of his "Russia of To-day," Mr. Henry Norman gives an account of M. de Witte and the new economic régime in Russia. The article is accompanied by what looks like a good portrait of the economist. The key to De Witte's economic views, according to Mr. Norman, is what he seems to think the American principle of "educational protection." But we are strongly inclined, from internal evidence, to believe that the Russian financier is not troubled with any delusions about protection, educational or otherwise, but is an opportunist economist who has a firm hold of the scientific principles which lie at the bottom of political economy, and applies them as fast as he can to Russian affairs, trimming his sails to the wind of court favor and popular delusion, so far as necessary. But if Mr. Norman's view is correct, and M. de Witte really began as a believer in assignats and irredeemable paper money, the fact only makes his career the more remarkable. "The Transformation of the Map" (1825-1900), by Joseph Sohn, accompanied by comparative maps of the world, showing the extraordinary changes accomplished in the nineteenth century, will repay examination. When made visible to the eye, the changes in seventy-five years are startling. Mr. Brander Matthews contributes an article on "The English Language in America," a subject about which it is very difficult to say anything new. There is, to our perception, an undue uneasiness about the English language in Mr. Matthews's mind—a sensitiveness which recalls that now far-distant period in which we resented much and at the same time expected much to be overlooked. Does any one of importance dispute Mr. Matthews's contention that as soon as, or so far as, people of cultivation believe that American usage is superior to British, they will make American usage the standard? So they will also for clothes, manners, and other things. On one point we are certainly at odds with Mr. Matthews. He seems to think that the language is enriched and strengthened by the modern hospitality of common speech and writing to mere slang. It would not be a bad subject for a college debate whether it is not at exactly this point that the language is being plainly debauched and weakened.

—Hebrew fashion, one must turn to the end for the beginning of the little volume published by McClure, Phillips & Co., entitled 'Abraham Lincoln: His Book.' In this lat-

ter portion Mr. J. McCan Davis elucidates the origin and use of what goes before, which proves to be a scrap-book made up by Lincoln from newspaper reports of his speeches, chosen with a view to showing how far he went in advocating freedom for the black man. The right to the fruits of his own labor was firmly insisted upon, but neither social nor political equality was demanded for him or even favored. These clippings are reproduced in facsimile along with Lincoln's own hand explaining the source of each—all for the benefit of Capt. J. N. Brown, who was running for the Illinois House in 1858, and was handicapped by his known friendship for Lincoln and the Democratic misrepresentation of the latter's views on negro equality. What we have, then, is a close copy, even to the rubbed cover, of Capt. Brown's pocket companion in the campaign which went against him. Mr. Lincoln, it need not be said, appears in this series of extracts both candid and consistent, but far below the humane height reached in his second inaugural. One from his debate at Charleston with Douglas on September 18, 1858, stands last and lowest, as he would deny the negro the right either to vote, to hold office, to sit on a jury, or to intermarry with white people, and would have him always kept in the inferior position designated by nature. In a striking passage from the Chicago address of July 10, 1858, which parallels the "perfectionism" of Garrison, Lincoln holds up the Declaration, with its assertion of human equality, as the ideal to be pursued; but in the accompanying note to Capt. Brown he halts at attainment, while insisting that Congress has a free hand in the Territories, where, politically speaking, "a state of nature *does* exist. In them, Congress lays the foundation of society." He would, with Henry Clay, keep the declaration of equality "in view as a great fundamental principle," but only to the extent of refusing to incorporate slavery in a new commonwealth. Whoever will study this collection will prize the volume not merely as a curiosity of manufacture, but as an aid to reflection on a national doctrine to which only lip-service is still rendered.

—Prof. Maxwell Sommerville's 'Sands of Sahara' (Philadelphia: J. B. Lippincott Co.) is one of those perplexing books which, with Rob Roy, are "ower gude for banning and ower bad for blessing." The author is Professor of Glyptology in the University of Pennsylvania, and his specialty is amulets. Apparently it was the hunt for amulets which took him into Algeria; but, being there, he describes what he saw in a very naïve and refreshing, if absolutely unscientific fashion. The book begins far enough away, in the ancient Greek theatre at Syracuse, and it is not till page 93 that Biskra is left behind and the author turns in any sense at all towards the Sahara. As the farthest southing was only Temassin, well up to 33 degrees north, the "sands" in the title narrowly miss being a figure of speech; it was the merest fringe of the Sahara which was touched. Yet, so far as he did go, Professor Sommerville kept his eyes open, and has passed on to us many interesting bits of life and usage and superstition, touching all with a serious and simple lightness almost French in its effect. Beyond what he strictly saw, he was guided apparently by somewhat untrustworthy dragoman information, and by a constructive imagination of his own not always well based. When the Muslims of Algeria sit around in groups in the shade, they are not always talking about "the Prophet," and it is not "the presence of the Prophet" that they enter by prayer. Even his dragoman should have been able to tell him what an awful blasphemy that was. It is evident that the devout ejaculations which he heard so often, stirred his own natural piety and made him construct the life he saw round ideas which were not really in it. Probably it is the dragoman's fault that Fatma *(sic)* on page 87 is the favorite wife of Muhammad and not his daughter; but it is to be feared that the statement on page 102, that the active principle of Indian hemp is correctly called *hasheesh* in Arabic, but *kiff* by the Arabs of the desert, is due to Professor Sommerville himself. *Hasheesh* means in Arabic hay or any dried herbage, and is secondarily applied to Indian hemp itself; "kiff" can only be *kayf*, the state of languid enjoyment produced by the use of hemp or opium. The book is illustrated by thirty-two really beautiful photographs, excellently reproduced. They and the kindly spirit of the writer are its chief attractions. There is also a list of talismans secured on the journey and a good index.

—Two Treasury decisions under the Copyright Law have been sent out from the Library of Congress, and deserve the attention of authors and publishers. The Customs Law of 1890 says distinctly and without qualification that books printed exclusively in languages other than English shall be admitted free of duty. The Copyright Law declares that, with the above exception, no book copyrighted in the United States shall be imported, "Provided, nevertheless, that in the case of books in foreign languages, of which *only* translations in English are copyrighted, the prohibition of importation shall apply only to the translation of the same, and the importation of the books in the original language shall be permitted." It seems that Brentano has obtained copyright in the United States for "L'Aiglon," and has issued an edition in French, while some other persons have undertaken to import copies of a Paris edition, relying on the exemption from duty above cited. The Attorney-General holds that this cannot be done, and maintains the exclusive right of Brentano. His decision turns on the word "only," which we have italicized. The law permits the importation of books in foreign tongues when "only translations in English are copyrighted," and this is held to imply that when the copyright extends to the book in the foreign tongue, importations are forbidden. The laws are obviously conflicting, and while the construction of the Attorney-General may seem strained, he supports it with very ingenious arguments. The purpose of the Copyright Law, he says, was to grant to foreign authors some recognition of their rights of property; and also "the protection of American labor, especially in the printing trade." Whether this decision effectuates the former purpose or not, it evidently does the latter. The importation of any book in a foreign language is now, therefore, absolutely prohibited whenever the book is copyrighted here.

—The other decision suggests that the protection of American labor, as has happened before, means the labor of the employer and not of the workman. The American Book Company, owning, by assignment, prior to the existing law, the copyright of Liddell and Scott's Greek-English Lexicon, undertook to import a number of copies in sheets printed abroad. The Attorney-General holds that these importations cannot be prevented. The existing law applies to copyrights obtained after its passage. This book was copyrighted in 1882. "The status of a copyright then in existence with respect to the new policy (in copyright) of protection to American labor seems to have been a *casus omissus* in the act of 1891. We must keep clearly in view vested rights as well as the demands of protective tariff or protective prohibitions of importation." This decision, if sustained, is obviously of the greatest importance to publishers, who can now make abroad such books as are protected by copyrights issued before March 3, 1891. It will not commend itself to the typographical unions, who will prefer the opinion of Solicitor-General Conrad, to the effect that the same rule applies to books copyrighted before and after the present act. The Attorney-General endeavors to explain this away, but with indifferent success. The controversy is one in which the withers of authors are, happily, unwrung.

STEPHEN'S ENGLISH UTILITARIANS.—I.

The English Utilitarians. By Leslie Stephen. In three volumes. London: Duckworth & Co.; New York: Putnams. 1900.

No writer of our time has a more creditable record of sound and valuable work than Mr. Leslie Stephen. Though he is the master of a lucid and effective style, and has a notable gift of humor, he has never sought the popularity of the circulating library, but has devoted his most serious efforts to inquiries which comparatively few persons are qualified to appreciate fully, though every reader can recognize their vigor. His 'English Thought in the Eighteenth Century' is a book of sterling and permanent worth, and the present treatise, which may be deemed a sort of continuation of that book, is fully equal to it in plan and execution, while perhaps more generally interesting, because it deals with men and movements nearer our own time. It is marked by the same thoroughness, the same detachment and fairness of judgment, the same concentration upon the vital parts of a question, the same precision of thinking, the same gift for applying common sense to philosophical problems and for handling them in untechnical language. Whether or no you agree with the author, you feel that he has put the whole force of his mind into every discussion, and has never slurred over or evaded a difficulty.

With this merit there is another even less common among those who deal with metaphysics or ethics. Mr. Stephen never loses sight of what may be called the environment of a philosophical school or body of doctrine. He studies the mind and tenets of each thinker in their relation to the conditions of the thinker's own time, to the opinions of his contemporaries, to the tendencies of society, to the movements of politics. He examines doctrines by the light of the character and habits of the man who promulgates them, not as if these could supply a complete explanation of the doctrines, but because temperament and surroundings not only tinge the man's views, but affect the influence he exerts upon others and the propa-

gation of his opinions through the world. Mr. Stephen has in an eminent degree the talent of the biographer, as is indeed shown by his admirable contributions to the great 'Dictionary of National Biography'; and he has applied the biographical method with singular skill and success in the volumes now before us. They contain the history of a school of thought whose rise, influence, and decline cover a period of about one hundred years—a period of the utmost significance in the annals of England, for it is the period in which that peaceful revolution was in progress which has turned the country from an oligarchy of landowners into a democracy modified by the power of wealth; which has seen an enormous growth of industry and commerce; which has brought down the ancient dominant Church till it is merely the richest and most socially influential denomination; which has emancipated theological opinion and religious practice from all the old constraints whether of law or of custom. The Utilitarians were only one among a number of forces which contributed to effect these changes. But they were important enough to deserve separate study, and this study, conducted with the penetrating clearness and precision which Mr. Stephen brings to it, throws a flood of light upon the process of transition generally which has made a new England out of the old one.

The bloom or creative strength of the school covers three generations. Each generation has its representative leader. First comes Jeremy Bentham, the founder of the sect, who may be distinguished as the man of Invention. Next is James Mill, the Scottish disciple of Bentham, who is preëminently, as befits a Scotchman, the man of Logic. Last is John Stuart Mill, brought up by his father, James, at the feet of old Jeremy, who, though he does not cease to be logical, is in a special way the man of Sensibility. Each of these three prophets—a name which, however otherwise unsuitable, may perhaps be justified by the dogmatic confidence of the two former and the gift of edification which belonged to the third—had his peculiar talent. Bentham was by far the most original, an intellect of endless variety and fertility. James Mill was thoroughgoing, cogent, exact, systematic, the man qualified to provide the school with a philosophical basis and a body of definite dogmas. John Stuart Mill had a broader culture and a wider outlook, so that he was able, with less freshness than Bentham and less force than his father James, to exert during some twenty years (1850 to 1870) an intellectual and moral influence over his younger contemporaries more extended than had been that of either of his predecessors. Of each of these three Mr. Stephen gives a biographical sketch, which, though brief, is in the highest degree interesting and instructive. He has the Carlylean art of picking out the points which make a man live before us. His personal detachment does not make him unsympathetic. His philosophical agreement does not blind him either to faults of character or to weaknesses of argument. Round these three leading figures he has grouped the most prominent adherents of the school, including some of the political or legal reformers of George the Third's time, and such men, nearer our own days, as George Grote, John Austin, and Henry Thomas Buckle; while incidentally to the treatment of the philosophical views of the younger Mill, we have glimpses of Sir William Hamilton, Dean Mansel, F. D. Maurice, John George Ward, and above all Thomas Carlyle. Thus the account of the Utilitarians really connects itself with almost all the movements of English politics from 1780 to 1832, and almost all the phases of English speculation from 1820 to 1870.

Of its philosophical side we have no space here to say more than that the discussion is singularly fair, and conducted in as plain, direct, and untechnical a way as the nature of the subject permits. The political side of utilitarianism occupies a smaller space. But in that space there is to be found the clearest discrimination we have anywhere met with of the various schools or tendencies which were at work in English politics from the days of Burke down to the "Victorian Age." Besides the Utilitarians themselves, who came to be later known as the "Philosophical Radicals" of 1830-50 (the Grote and Molesworth group), and who were always friends of order, strictly constitutional in their methods, there were the revolutionary Radicals, among whom Place and Godwin are familiar figures, and the orthodox Whigs, members of the old governing class, who profited by the efforts of both the other sections, stepping promptly into the Pool of Siloam when the water had been troubled for their benefit. The Utilitarians, standing between these two mutually distrustful sections, did a good deal of the thinking for each section, yet had never more than a temporary alliance with either. It is interesting to note that all three finally melted away much about the same time. The revolutionary Radicals passed into the Chartists of 1848, and were extinct, as a section, before 1860. The Whigs died harder, but may be said to have vanished both as a personal group and as the representatives of a political tradition in 1868, when Mr. Gladstone took the leadership of the Liberal party after the extension of the franchise in 1867. Utilitarianism expired with John Stuart Mill in 1873, having really ceased more than ten years before to be a definite school of thought, since some of its most characteristic positions had been so modified and sublimated as to lose their essential character, while others had been tacitly dropped. It had done its work in the way of practical reforms; and the stream of popular tendency had been turned into other channels by teachers of quite other types—teachers such as Carlyle, Newman, and Maurice, who, agreeing in little else, agreed in aversion to the methods no less than to the results of Bentham and the two Mills.

The same hundred years saw the rise, the brilliant development, and the virtual extinction of a philosophical movement in Germany, the movement which may be said to begin with Immanuel Kant and to end with Arthur Schopenhauer. It would be interesting to follow out in detail the striking contrasts between England and Germany which the progress of these parallel movements reveals, and whoever attempts this will find immense help in Mr. Stephen's book. Very characteristically, the speculations of the Germans left their deepest mark upon theology and history; those of the Englishmen upon politics and legislation.

MORRIS'S HISTORY OF COLONIZATION.

The History of Colonization, from the Earliest Times to the Present Day. By Henry C. Morris. 2 vols. Macmillan Co. 1900.

A comprehensive and readable survey of the history of colonization undoubtedly meets a present want; and as Mr. Morris's book is both comprehensive and readable, it is insured a certain measure of popular approval. That his labors will prove of service in opening the eyes of many readers to the range and importance of the part colonization has played in the history of civilization, we are not disposed to deny, but that he has produced a work of genuine historical scholarship will hardly be maintained by any competent judge.

The author's interest in the subject was aroused by the results of the Spanish war, and upon looking into the literature of colonization he found that there was room for a general historical review of this phase of human activity. Possessing a reading knowledge of several languages, and having access to a large library, but without historical training and unaware that it was necessary, he began his labors with great energy. In a little over two years he signs the preface to a work of eight hundred pages covering in time the entire range of recorded history. It would be a remarkable achievement for a highly trained scholar to produce a compendium of value embracing such a range of study in so short a time. Mr. Morris's pages only too surely reveal, not the trained scholar, but the ready compiler. His notes conscientiously acknowledge the sources of his information, and testify that he has devoured histories with unremitting diligence during these busy months, and also that the mass has not been assimilated. There is little evidence of careful thought, and in many cases he seems not to have had the time to decide whether the material in his notes was immediately relevant to his subject.

As so serious a criticism should not be preferred without proof, some specific examples of these defects must be given. On p. 31 the reader is referred for an account of the beginnings of trade to De Goguet on 'The Origin of Laws, Arts, and Sciences'; and, later, the references on the history of Egypt, while in the main to Maspero and Petrie, still cite De Goguet as apparently of supplementary value. De Goguet's work was published in 1758, half a century before the beginning of scientific Egyptology. The chapter on Phœnician colonization starts out with a reference to Rollin's 'Ancient History,' which was published one hundred and seventy years ago, and even then was but a popular compilation, not a work of first-hand scholarship. Mr. Morris will wonder, no doubt, why it is, when he has consulted Duncker and Meyer, that we take a few references to Rollin so seriously. If, however, he had really assimilated Meyer, he would as soon go to the elder Pliny for African ethnology as to Rollin for ancient Oriental history. Again, what do many references to Grote, Busolt, or Holm signify when he can write, as on page 89, "History fixes the earliest record of Greek colonization about 1124 B. C."?

Turning to the Middle Ages, one finds that Cantù's eloquent compilation, the 'Storia Universale,' written in great haste two generations ago, occupies a post of honor; that Hallam and Sismondi renew a youth of a yet earlier date, and that even Robertson's 'View of the State of Europe,' written before the American Revolution, is once more drafted, disguised as Prescott's 'Charles V.,' to dispense instruction on the history of the Middle Ages. Does the case

stand any better with the chapters on Modern Times? Hardly, for here the reader will find on nearly every page reassuring references to the eloquent and philosophic favorite of his Revolutionary ancestors, the Abbé Raynal. Or, again, to take a field where the primary sources are so few as to be easier to examine than to go over half the secondary works quoted by the author—the beginnings of Portuguese colonization—even here there is not a first-hand reference to a single source, but, instead, a maze of references to Cantù, Raynal, Heeren, Fiske, Major, and others. Is it a question of Prince Henry's birth? (p. 201). It is left in the dark with this learned note: "Johnston says Prince Henry was the second son of King John I., Winsor makes him the third, and Fiske thinks he was the fourth, and Zimmermann declares him to be the fifth." Why not turn to Azurara and settle the discrepancy? Some of the time spent on Raynal would have sufficed. Similarly, for a description of Henry's person and character Mr. Morris draws on Zimmermann, who had no sources of information not open to himself, when it would really have been just as easy to quote Azurara, who knew the Prince personally. On the important subject of the origin of the Spanish colonial system, p. 242, a note directs us: "For privileges accorded to Columbus, cf. R. and J. 4, who cite Herrera, Decadas, I., 1, 9." Any good library contains half-a-dozen books in which either the original text or a translation of the Privileges of Columbus may be found.

These examples make it clear that Mr. Morris has no adequate training for the ambitious task which he undertook. It would, of course, be a life-work to write the history of colonization from the sources, and nobody could reasonably exact such thoroughness. But, on the other hand, until a student has actually tried to write up some subject from the sources and acquired some personal knowledge of the processes of historical composition and of the elements of criticism, it is practically impossible for him to make a compilation of any real value from secondary writers. In Mr. Morris's case not a single chapter is based on first-hand study of the sources. It is not altogether surprising, then, to find that not a chapter relating to a period earlier than the nineteenth century reveals any trained discrimination between good and bad secondary authorities.

No small part of the material which Mr. Morris has so industriously gathered relates to the history of commerce rather than to colonization. For example, on p. 38, a paragraph near the end of nine pages on Egyptian commerce begins with the remark: "Whether or not Egypt owned distant possessions cannot be definitely determined. Probably, in the real sense of the word, not any colony—unless, possibly, the Sinaitic mining establishments and Cyprus—can ever be said to have existed." In spite of this fact, however, Egyptian colonization receives two-thirds as much space as Roman colonization! Similarly, in the chapter on Phœnician colonization, where a brief and clear statement of the little that is known about Phœnician colonization, with precise references, would have been very serviceable, the reader finds eighteen pages on Phœnician commerce, closing with the tantalizing assurance that not the least of the lessons which the Phœnicians taught is the theory of colonization. The same defect is even more conspicuous in the chapters on the Italian cities. The history of their commerce is compiled mainly from antiquated authorities, like Sismondi, Michaud, and Hallam, instead of from Heyd, while the colonial policy and administration and the actual history of the trading colonies are hurried over in a page or even a few lines, as in the case of Pisa.

In fact, Mr. Morris has given so little critical attention to his real subject in the parts of his book relating to ancient and mediæval times that one cannot help feeling that he would have done far better to devote his entire attention to the modern period, in which, on the whole, he has been much more successful. In regard to this part of his work the main faults come from haste and lack of discrimination in the choice of authorities. If he had only confined himself to a few first-rate books, like Roscher, Leroy-Beaulieu, Parkman, Lucas, and Egerton, checked by consultation of the sources on doubtful points, he would have produced a better piece of work with less labor, his text would have been better digested, and his notes less encumbered with citations from out-of-date authorities. Barring these shortcomings and the inevitable inaccuracies arising from the lack of critical method, the chapters on Portuguese, Spanish, Dutch, and French colonization provide a good body of facts readably presented. The same is true, in a somewhat larger measure, of the history of English colonization in the second volume, and of the brief surveys of Danish, Swedish, German, Italian, and Russian colonization.

At the end of the second volume Mr. Morris has appended a bibliography of thirty pages, which will prove of service to students, although a rigorous sifting would improve it. For example, he could omit without blame every eighteenth-century work that he includes. On the other hand, the briefest bibliography should contain the following titles: On Spanish colonization, H. H. Bancroft's 'Central America' and 'Mexico'; on French, Petit, 'Organisation des Colonies Françaises'; on English, Egerton, 'Short History of British Colonial Policy'; on Dutch, Pierson, 'Koloniale Politik,' and De Louter, 'Staats-en Administratief Recht'; on Italian, Brunialti, 'Le Colonie degli Italiani.'

Mr. Morris's book will undoubtedly be used, as it is already, in connection with the new college and university courses on colonial policy; but if, with such use in view, he would select the chapters on Portuguese, Spanish, Dutch, French, Italian, German, Russian, and English colonization, outside of the old thirteen colonies, subject them to a careful revision with the assistance of a trained scholar in that field of knowledge, and add a less extensive but more carefully selected bibliography, he would put the college teachers under a great obligation to him and supply a text-book inviting and deserving wide use.

The Life of Edward FitzGerald. By John Glyde. Chicago and New York: Herbert S. Stone & Co. Pp. xvi, 395. 1900.

Mr. Glyde's Life must be welcomed; it is not a masterly work, and but little more than a compilation, but is is well-intentioned, and the subject was perhaps difficult. FitzGerald had no Boswell, and could not have tolerated one. He was not given to self-disclosures, and those who saw most of him seldom made notes of his words and ways. His life was eminently uneventful, apparently barren of matter for the biographer; he was in some sense a bundle of contradictions, and not to be easily classified. A man of good birth and fortune, who despised or hated the usual appendages of these, with nominally no one but himself to care for, yet living in dust and discomfort, and promiscuously sacrificing himself for others; owning lands and a tolerable house, while lodging for years over a shop; apparently morose, often unapproachable, sometimes wantonly discourteous, yet the soul of generosity, abounding in private charities and kindnesses, doing good literally by stealth; solitary by choice, yet loving and needing the company of friends; married, without a wife's society or affection; childless, but a lover of children; a scholar, content with a meagre library of a thousand volumes; an agnostic, whose closest friends were clergymen; proud, but doubtful of his powers, his modesty receiving "a rude shock" when Spain awarded him the Calderon medal for his translations from that dramatist—as this halting figure is sketched in Mr. Glyde's pages, we do not easily connect it with the splendid fabric which he reared from Omar's quarry. The original consists of detached stanzas; he culled, arranged, and improved, till an ordered argument, the continuous presentment of a soul-episode, is before us. His personal vices were indolence and indecision; there is no trace of these in his bold arraignment of earth and heaven. It is strange that his inward fires should ever have found vent; that so aimless, slouching, drifting a life should bring forth such brilliant, positive, passionate verses.

After the 'Rubáiyát,' it seems a sacrilege to dwell on prosaic incidents of its author's life; to read of the young parish ladies who asked a shilling for charity, and were told "to go home and mend their stockings"; or of the unhappy man who, being invited to dinner, drove over from Ipswich, was refused admittance, and next day received a note from the poet: "I saw you when you called, but I was not fit for company, and felt I could not be bothered." Yet eccentricities of conduct and opinion were part and parcel of the man. Tennyson and Thackeray were two of his oldest and dearest friends, but he disapproved of their later works. Crabbe, a talent far removed from his own, was his chief poet, his dear and reverend master. His favorite novelists were Scott, Dickens, and Trollope, a strange assortment. The present Lord Tennyson, who with the Laureate visited "Old Fitz" in 1876, thus describes his mental isolation:

"The old man never got off his own platform to look at the work of modern authors. He had always wanted men like Thackeray and my father to go along with his crotchets, which were many. He had not been carried away by their genius out of himself and out of his own Cambridge critical groove, and had not, like them, grown with the times."

Browning he abhorred, and probably never met. By a queer inconsistency, worse than Byron's regard for Pope, this writer of the most intensely modern of all poems could not endure modernness in others. He had "shut up his mind" on some sides, and his life was shut in, so to speak—partly by fault of nature, largely for want of a plan. His early dislike of society and con-

tempt for shams thrust him to one side; he could not be "in the swim." Poverty might have enriched him; but he had no outward incentive to industry, and no inward stirring of ambition. His fine face, preserved in the familiar portrait, bears the stamp of aloofness, of detachment from either earthly or heavenly interests, ties, and hopes.

The great mistake and misfortune of his life was his marriage to Lucy Barton in 1856, when both were nearing fifty. She had brains, culture, and character. She was older than he, and they had known each other well, if not intimately, for many years. There was no sign of sentiment in the affair, and no call on his self-sacrificing chivalry, for she was comfortably settled with the Gurneys of Norwich. Why they united, nobody knew; and they very soon separated. The facts were widely misunderstood and seriously misrepresented, to FitzGerald's injury; the only fault was in not seeing that they were wholly unsuited to each other, if fitted for matrimony at all. He provided handsomely for her, of course; had there been need, he would have given her nine-tenths of his income, though he asked nothing of her, and had neither expectation nor desire to see her again.

Such was the "old Fitz" whom two of the greatest and best men of his day, and many of lesser note, loved through all changes of time and circumstance. So far as heard from, beyond momentary annoyance at his bluntness or thoughtlessness, no man and no woman was ever the worse for him, while many were the better. He was careless and inefficient, perhaps; he had no gift for the conduct of life; but he was a man, made of no base earth, with a man's hatred for meanness and lies. Genius apart, he stands a sad and lonely figure, pathetic as years and infirmities increased, but uncomplaining and unafraid, though comforted by no knowledge that for his one great legacy men would not let his memory die. His end was happy, being sudden and painless, so that "he troubled no one," nor was troubled with deathbed conventionalities.

Mr. Glyde is to be blamed for a most inadequate index; not further, having done what he could. An abler hand might have painted his subject more vividly, and of such there is no lack among those who honor FitzGerald; but they have shrunk from the task; and it would have been an injustice to the dead and the living if we had no honest presentment, in his habit as he lived, of the second Omar.

History of the Archæological Society of Athens. [Ἱστορία τῆς Ἀρχαιολογικῆς Ἑταιρείας.] 1900.

This recently published sketch has been compiled by Kabbadias, who has been the society's Secretary since 1895, and the efficient Ephor-General of Antiquities since 1885, and who has conducted in person the most important undertakings of the Society, viz., the excavations at Epidaurus since 1881 and those on the Athenian Acropolis. The life of the Society is divided into three eras—from its founding in 1837 to its cessation from active work in 1855, from its resuscitation in 1858 to the revision of its constitution in 1894, and from January, 1895, to the close of the century. As in some other organizations, the office of Secretary has proved more permanent and important than that of President. The Society has had but four Secretaries since its foundation more than sixty years ago, and the names of A. R. Rangabé, Pittákis, Kumanudes, and Kabbadias, are familiar to all classical archæologists and epigraphists. The government of King Otho had been established but four years in Athens when the Archæological Society was founded there, with a view to the discovery and restoration of antiquities. The Greek Government and people were poor and in debt; the country had been sadly devastated during the long war for independence, which was just over. Roads were more needed than museums. Those who felt an intelligent interest in the monuments of antiquity were few, and the "science of the spade" was as yet in its cradle. No one can wonder that the income of the Society was small during its first stage of existence. The total receipts from 1837 to the close of 1855 were about 64,000 drachmæ (roughly equivalent to $10,000), about one-third being from ordinary dues. Nearly two-thirds of the expenditures were for excavations and other work on the monuments; about one-third went for the support of publications. Nearly one-third of the moderate sum received was reserved as a permanent fund, including a house and some bank stock. An effort was made to float a lottery for a house which was given to the Society, but, after a number of tickets had been sold, the donor protested that he had given the house not for sale, but for rent. Fortunately for the Society, not all purchasers of tickets demanded the return of their money, and its small fund was slightly increased.

In the second period of its existence, from 1858 to 1894, the Society enjoyed a larger income. In 1869 it received from a committee of friends of archæology 150,000 drachmæ as a permanent fund. At times, also, the Government of Greece contributed 4,000 or 5,000 drachmæ a year towards its work, and in 1874 granted to it the privilege of conducting an annual lottery, which in 1887 was made exclusive for the kingdom. This concession reminds us of the time when the Legislature of the State of Connecticut, free from all spirit of jealous rivalry, authorized a lottery for the benefit of the College of New Jersey at Princeton. The receipts from its lottery now constitute more than nine-tenths of the income of the Society. The profits are large. Tickets are issued for 450,000 drachmæ. One-third, or 150,000 drachmæ, is returned in prizes, about one-ninth seems to be needed for expenses, and thus in favorable years a profit remains of 250,000 drachmæ, or about $40,000—a limit which is not often reached. This sum is not enormous, but for ordinary labor it is worth more than twice the amount in America. The total receipts of the Society in its second period amounted to about $360,000. Its most important works were the excavations of the Theatre of Dionysus at Athens, at a cost of about $5,000; in the Ceramicus (1860-90), at a cost of $22,000; of the Asclepieum (1876-98), on the slope of the Acropolis, and of the Acropolis itself (1882-88), each at a cost of less than $20,000; of the Sanctuary at Epidaurus (1881 ff.), for a little more than $10,000; at Eleusis (1882-94), for about $23,000; and at Mycenæ (1886-93), for about $8,000. Seventy-five thousand drachmæ, or about $12,000, was devoted to the support of the Society's organ, the *Ephemeris Archaiologiké*, which now ranks with the best archæological periodicals of the world.

The Society has performed an important part, also, in the formation of collections of antiquities, the establishment of museums, and the protection and preservation of the monuments of antiquity which have been uncovered. The necessity of this care has been learned only after bitter experience. Far too many enterprises of excavation have resulted only in gratifying a little curiosity, and the exposure of remains of antiquity to the destructive influences of the elements and the wantonness of ignorant neighbors. The great architectural remains of Greece, too, need care if they are not to fall into a still more ruinous condition. For the most part the Greek public servants for the care of antiquities have been appointed by the Government on the nomination of the Society, and have been an object-lesson in civil-service reform which has been of real value to the kingdom. Thirty years ago the civil service of Greece was even worse than that of the United States. The average life of a ministry lasted hardly more than a year, and, with the ministry, not only postmasters but even school-teachers were changed. But, for the care of antiquities, trained and experienced men were particularly needed, and their positions were made permanent. Thus Pittákis was Ephor-General of Antiquities for a long series of years, and Kabbadias has been in the same office since 1885.

A wider scope to the work of the Society, with a stricter limitation to scientific principles, was provided by its new constitution, which has been in force since 1895. At first the Society aimed only to discover and restore antiquities; in its next period, it encouraged scientific investigation, and now it gives a part of its means and energies to the publication and dissemination of archæological knowledge. Thus, in addition to its publication of the *Ephemeris*, it has published the first volume of a catalogue of the very important Epigraphical Museum at Athens, and a volume by Kabbadias on the Sanctuary at Epidaurus; and it plans another, for wide distribution in the kingdom, on the monuments of Greece. Since 1895, its most important excavations have been at Thermon, the ancient capital of the Aetolian League, where painted terracotta metopes and other objects have been found, remains of what is apparently the oldest of all Greek temples yet discovered; and on Sunium's "marbled steep," "Colonna's cliff," where the well-known columns which gave the modern name to the promontory are found to be of a temple of Poseidon, not of Athena, while the smaller temple of Athena lay a hundred yards away. The Society's extensive collections of antiquities have been given to the Greek National Museum. A library of archæology has been formed. A building for the use of the Society has been erected on University Street. The Parthenon, the most beautiful of all architectural remains of antiquity, has been repaired after the serious injury caused by the earthquakes of 1894-95, at a cost up to the close of 1899 of more than the Society has spent on any of its excavations. Important work has been done in strengthening one corner of the ancient wall of the Acropolis, the walls of the citadel of Mycenæ, the epistyle of the temple of Olympian Zeus, the mediæval mosaics of the monastery at Daphne, and in the liberation of ancient sites from offensive remind-

ers of modern work. Thus, the Society has filled the great gap left by the excavations of a few years ago in the mound erected over those who fell in the battle of Marathon, and the unseemly piles of rubbish which were the results of other excavations have been removed. The Society has made five Americans its honorary members, representing the universities of Harvard, Yale, and Johns Hopkins, and the American School at Athens.

Where Black Rules White. A Journey across and about Haiti. By Hesketh Pritchard. Charles Scribner's Sons. 1900. 8vo, pp. 288; 15 half-tone plates.

The tragedies of Haiti have been so numerous and degrading that the public ear has become dulled to the narration of them. Within the brief span compassed by our own existence as an independent people, Haitian affairs have undergone convulsions, revolutions, massacre, and anarchy, any detailed instance of which would suffice for the entire history of any ordinary country. The original uprising of the blacks, stirred to revolt by the avarice and licentiousness of their French masters, the ascendancy of Toussaint, the freeing of the slaves by the decree of the French National Assembly, Bonaparte's subsequent attempt to restore them to their former masters, the destruction of Leclerc's army of 25,000 Napoleonic veterans by fever, the treacherous abduction of Toussaint and his immolation in France, the savage revenge awakened by the latter act, and the subsequent cruelties of Dessalines, including the massacre in a single night of the remaining Frenchmen, in 1803, followed by nearly a hundred years of internecine revolutions, massacres, burnings, assassinations, and other cruelties, have been partially related by many writers. Fortunately for mankind, hundreds of incidents have passed unnoticed. The natural outcome of such conditions is Haiti of to-day—a beautiful country, capable of great agricultural and industrial production, but ruined by the capricious rivalry of African chieftains in Parisian dress.

Owing to the dominating evidence of the serious side of Haitian history, which everywhere forces itself upon the traveller, it is difficult for one to write a book upon Haiti without subordinating his descriptions of life, scenery, and customs to historic retrospect. In the above volume Mr. Pritchard seems to have succeeded to an admirable degree in giving a description of Haiti of to-day—the beautiful, the picturesque, the comical, the superstitious, and the filthy. He tells us of the dilapidated towns and cities, highway travel along the marvellous streams and across the great mountain ranges. The customs, dress, and occupations of Haitian life are so graphically presented that the present reviewer, who has just returned from the republic, feels that Mr. Pritchard has left nothing to be said concerning the topics treated in this book. The descriptions of the farcical Haitian army, with its thousands of generals, the repulsive Voodoo worship and sacrifice, the police, prisons, and hospitals, are vivid and entertaining. Picturesque Cape Haitien, which our author appropriately terms a "living city within a dead one," the Citadel of La Ferrière, a structure which vies with the pyramids of Egypt as a monument to the wasteful expenditure of human life and labor, are described in terms sometimes poetical, and far more pleasing than the rather poor half-tones which are freely distributed throughout the volume.

The chapters upon "The Justice and the Status of the White," "The Haitian People as I Knew Them," "Haiti, the Puff-ball," "Can the Negro Rule Himself?" are fair presentations of the political and social conditions. Mr. Pritchard concludes that the Haitian Government, as a representative of negro opportunity, has not given any convincing proof of the capability of the race for self-government. "The Haitian has never for six consecutive months governed himself in any accepted sense of the word to-day, and as matters stand he cannot rule himself."

It may be truly said that the reader of this book, under the influence of its rather charming literary presentation, will have exactly the impression of the Government and its people which invariably strikes the white traveller in Haiti. There are two sides to Haiti, however. Spencer St. John, in his 'Black Republic,' has presented the dark side with a directness that causes the reader to shudder. Though we have never found in his pages a statement which we could disprove, we have nevertheless been unable to accept the complete indictment of the Haitians which it presents. The progress of a people from savagery to civilization is not a straight line, but a series of oscillations. Neither St. John, Pritchard, nor other writers on Haiti give the people sufficient credit for what they have done and are doing. They seem to forget that the blacks in Haiti under the French régime were almost as primitive in their savagery as the native Africans which many of them were. They also forget that they are not retrograding towards the ceremonials and customs of their ancestors, but that the Voodoo rites are merely a survival of those customs; and that French colonial life in Haiti, as in Louisiana and Martinique a century ago and Guadeloupe to-day, presented no examples of high thinking or high living tending to eliminate the natural African animalism. The process of civilization is one in which the aborigine, like the student of sculpture, must have a model, and the Haitian atelier so far has produced only a figure of crudest African clay veiled in flimsy French drapery. Mr. Pritchard judiciously omits any comparison of the blacks of Haiti with those of the adjacent British colonies, and neglects to note that the latter are gradually drifting towards a country where the superstitions are no greater, and the conditions of life, so far as concern the laborer—food, pay, and leisure—are infinitely better.

The book has some imperfections which will be apparent. There are many unreliable sayings, repeated without quotation marks, which may be said to have reached venerable age. The usual sport is made of the ducal names of Limonade and Marmalade, under the impression that they were derived from the popular drink and world-wide jam, instead of from two of the old French districts of Haiti which constituted the ducal realms of the Haitian nobility. Incidentally, it may be remarked that these ducal titles were given by King Christophe, and not by the Emperor Soulouque, as alleged.

The Diplomatic Relations of the United States and Spanish America. By John H. Latané, Ph.D. Baltimore: The Johns Hopkins Press. 1900. Pp. 294.

About a year and a half ago we reviewed with commendation a volume of lectures delivered by Dr. James M. Callahan at Johns Hopkins University, on the Albert Shaw foundation, and published under the title of 'Cuba and International Relations.' Professor Latané's book is a second product of the same lectureship. There is marked contrast between the two works, however. Dr. Callahan's book, a substantial octavo of 500 pages, was devoted to the history of Cuba, mainly in its diplomatic relations with the United States. The work of Professor Latané, with less than half the matter contained in its predecessor, apparently seeks to cover the whole field of diplomatic relations between this country and the Spanish-American States. The result is a summary narrative, based, so far as indications go, upon English and American authorities, and, while agreeably written, not a large contribution to the subject.

The titles of the chapters indicate pretty well the scope of Professor Latané's inquiry. An introductory account of the revolt of the Spanish-American colonies is followed by a chapter on the part played by the United States and England in launching the new republics. A long chapter on the diplomacy of the United States in regard to Cuba gives a good summary of events, though without mention of the fuller treatment to be found in Dr. Callahan's work. The chapters on the proposed Central American canal and French intervention in Mexico are, on the whole, the most valuable in the book; the latter, particularly, dealing with a phase of the general subject not, of late, much discussed. A final chapter on the present status of the Monroe Doctrine affords opportunity for some sensible reflections on the value and stability of that article of faith.

Professor Latané's book is so pleasantly written, and compresses so much information into convenient bounds, that it deserves a wide reading among those who have no time to acquaint themselves with more elaborate works. Its positive contributions, however, whether explanatory or critical, are, as we have said, not many. Most noticeable, perhaps, are the author's strictures on Secretaries Fish, Blaine, and Frelinghuysen for their conduct of negotiations during their respective terms as heads of the Department of State. When, in December, 1875, the House of Representatives called for the correspondence which had passed in connection with Fish's letter of November 5, intimating a disposition to intervene in Cuba, copies of which letter had also been communicated to the American Ministers at other European capitals, Fish transmitted the note, "together with a few carefully chosen extracts from the correspondence between himself and Mr. Cushing; but nothing was given that might indicate that the United States had appealed to the Powers of Europe to countenance intervention." Moved, however, by the rumors to which the unofficial publication of the substance of Fish's letter, in the European and American press, had given rise, the House on the next day called for all the correspondence relating to Cuba. Fish replied that " 'no correspondence has taken place during the past year with any European Government, other than Spain, in regard to the island of Cuba,' but that the note of November 5 had been orally commu-

nicated to several European Governments by reading the same." This, says Professor Latané,

"was putting a very strict and a very unusual construction upon the term 'correspondence,' to say the least. The dispatches, notes, and telegrams that pass between a government and its representatives abroad are the only recognized means of communicating with foreign Powers, and are always spoken of as the correspondence with those Powers. The whole affair reveals a curious lack of candor and of courage on the part of Mr. Fish. He was trying to shield either the Administration or himself, and did not wish the American public to know that he had reversed the time-honored policy of the State Department by appealing to the Powers of Europe to intervene in what had been uniformly treated, from the days of John Quincy Adams and Henry Clay, as a purely American question" (pp. 171, 172).

It is to be noticed that Dr. Callahan, in discussing the incident, passes no criticism on Secretary Fish. The full correspondence on the subject was not published until 1896, when it was transmitted to the Senate by President Cleveland.

Secretary Blaine's part in the discussion of an Isthmian canal was not very creditable to him or to this country. In reviewing, in his dispatch of November 19, 1881, the debates over the Clayton-Bulwer treaty, and attempting to show the unsatisfactoriness of the treaty to the United States, he failed, says Professor Latané, "to make mention of the settlement of 1860, and the declaration of President Buchanan that the United States was satisfied with that adjustment" (p. 208). Lord Granville's two dispatches in reply to Blaine were answered by Secretary Frelinghuysen, Blaine's official successor. On May 8, 1882, in a long communication, after arguing at length to show that the treaty "was a special contract for the accomplishment of a specific object, which had never been achieved, and was no longer binding," Frelinghuysen committed himself to the interesting proposition that "the doctrine of non-intervention by European Powers in American affairs arose from complications in South America, and was announced by Mr. Monroe on the suggestion of the official representative of Great Britain" (p. 209). As to the merits of the case, Professor Latané curtly remarks:

"It must be admitted that the arguments presented by Mr. Blaine and Mr. Frelinghuysen in support of their policy were disingenuous and flimsy. It may be safely said that no state papers have ever emanated from our Government on so serious a question equally lacking in logical consistency and moral force" (p. 211).

It may be added that Professor Latané declares himself in favor of a canal whose neutralization (not "neutrality," as Blaine ignorantly insisted) shall be secured by international agreement.

The Poems of Leopardi, Done into English. By J. M. Morrison, M.A. London: Gay & Bird. 1900.

Lovers of Italian literature have long felt that a greater knowledge, among English readers, of the writings of Giacomo Leopardi was a consummation devoutly to be wished. In spite of his ill-health and pessimism Leopardi was a very engaging personality, and, by reason of the method of his art, he was one of the world's great typical lyric poets. In him the sadness characteristic of the lyric mood was reinforced by a very living sense of the woes of the oppressed Italy of his day, by the melancholy of the scholar who has learned the transience of greatness, and by an actual physical malady within him—a kind of slowly cumulative atrophy of sensation which makes the current secular malady of his time seem slight and unreal. But morbid material was never more perfectly sublimated, or siderealized, by art. His dominant faculty was the æsthetic sense; yet he was also the first Italian philologian of his day, and so great were his attainments in philosophy that, at the age of twenty-five, the chair of Greek philosophy in the University of Berlin was offered to him. But his linguistic and philosophical studies merely served to give distinction to his style; they never made it bookish. He wrote as perfectly light and flexible prose as is to be found in any modern tongue, and the chief characteristics of his verse, despite its subtle involutions of mood, are impeccability and melody. A great part of his peculiar charm lay in the precise and classic expression of troubled romantic moods; and this was made possible by the singular capabilities of the Italian speech. His *Annotazioni Filologiche*, appended to some of his own poems, show how diligently he had studied the masters of his speech, and how easily he controlled its rich resources. He was especially skilful in availing himself of the close affinity between Latin and Italian, often taking over, almost unchanged, phrases from Horace and other Roman poets, with an admirably effective suggestion. Furthermore, no poet ever wrote Italian more musically. His poetry is truly

"Un canto che s'udia per li sentieri
Lontanando morire a poco a poco."

It is hard for one who has cared for Leopardi in his vernacular to know just what to make of such a well-meaning but hopelessly pedestrian version as this of Mr. Morrison. The somewhat bald biographical and critical "Translator's Preface" arouses little enthusiasm. In view of the copious collection of Leopardiana, full of significant detail and critical insight, which has grown up in Italy within the last few years, a short essay towards a summary account and appreciation would have been a useful service. Instead of this, there is in the preface no fact nor opinion which is not to be found in the article upon Leopardi in the last edition of the 'Encyclopædia Britannica.' This, however, would be a matter too slight to deserve mention were it not that this preface also fails to inspire absolute confidence. In adapting Mr. Garnett's accurate and concisely phrased article, Mr. Morrison makes at least one actual mistake in transcription. He says (p. iv.): "In 1825 Leopardi left Recanati a second time for Bologna and Milan, having been engaged by a publishing-house of the latter city to edit Cicero and Plutarch for them." No one, of course, can now be in a position to state positively that Leopardi never *agreed* to edit Plutarch; but it is a well-known fact, as Mr. Morrison's authority, the 'Britannica,' affirms quite correctly, that the authors undertaken by Leopardi in 1825 were Cicero and *Petrarch*. Indeed, his close and pregnant commentary upon the latter is still helpful to the Petrarchian specialist. It may be, however, that this error is to be laid to the doors of printer and proof-reader. Such slips as *νέος* for *νέος* (p. 107), and others hereafter to be noted, lend some color to this more charitable interpretation.

Further along in his prefatory remarks, having mentioned that the *Canti* have been effectively translated into German, Mr. Morrison says "they have been practically ignored in England"; and then he adds: "It seemed to me strange that England should be left behind in an honest attempt at least to interpret the great Italian classic of the nineteenth century to a wider public than those who can approach him in the original." Can Mr. Morrison, who must mean English and not England, be unacquainted with the excellent renderings of Leopardi which already exist? Many of the odes and lyrics have been very satisfactorily translated by the late T. W. Parsons, and by Mr. Howells; and in 1887 the Putnams published a complete version by the late Frederick Townsend, which was much acclaimed by the reviews, and is, at many points, superior to Mr. Morrison's own. At any rate, it is almost inconceivable that he should have been ignorant of the existence of that painstaking and useful version by Mr. F. H. Cliffe, published in London in 1893.

But a poetical translator has a right to be judged on the merits of his actual performance rather than by his introduction, and it is with Mr. Morrison's success in translated verse that we are now especially concerned. In adopting for his version the fluid, irregularly rhymed metrical form of the original, he has shown sound literary taste. He has studied his author's meaning diligently, and has been, as a whole, fairly successful in presenting Leopardi's sometimes very intricate concatenation of ideas. Therein his work will be useful to the student of the philosophic aspects of the poet; and, by its close, line-for-line adjustment, his translation should prove a blessing to the young student of Italian. But in avoiding both suggestive paraphrase and "servile" fidelity, we are inclined to think that most readers of taste will decide that Mr. Morrison has fallen between two stools. He makes a few of the odes move with commendable vigor, but more often his line-for-line method fills his verse too full of consonants, and involves him in awkward syntactical tangles. His version, though closer, perhaps, to Leopardi's general meaning, fails to suggest the Leopardian cadence even so well as Townsend's. Moreover, in endeavoring to constrain Leopardi's thought into the English analogue of his metre, without the use of paraphrase, he sometimes employs somewhat disconcerting contractions. "Thou'st" (p. 112) for thou hast, "in's" (p. 48) for in his, "when's" (p. 49) for when is, "of's" (p. 25) for of his, and "to'ts" (p. 63) for to its, have some authority in usage, but strike one unpleasantly in the rendering of such an easy master of language as Leopardi.

On the other hand, in eschewing, likewise, "servility" of translation, Mr. Morrison allows to escape many nice felicities of intention which might easily have been preserved. Thus, *aiuole* is baldly translated "grass" (p. 82), where the proper meaning, "bird net," lends a touch of picturesque realism very essential to the evening scene which the poet is compelling one of his own twilight moods to express. Sometimes Mr. Morrison errs by an unhappy specialization of meaning, as, for example, where *fredda mano* is infelicitously rendered "clammy hand" (p. 60), or *cara beltà* is lamely turned to "dear sweet," or a maid, *lieta e pensosa*,

is termed "coyly gay" (p. 79), something a little different.

Leopardi illustrates exceptionally that ideal lyrical unity in which the poet, contemplating a fair landscape, identifies it with himself until the objective world comes to seem "sad and strange," and is spiritualized so, under one's very eyes. By an obvious mistranslation Mr. Morrison loses this nice and subtle effect in at least two poems. At pages 50 and 54 he translates *questo* by "that" instead of "this," where, in each case, the demonstrative refers to the poet's actual position in the scene he describes; thus the translator makes the lyric seem an act of recollection, rather than the spontaneous and unpremeditated outpouring of a poetic mood which the original was artfully designed to represent. Perhaps one other instance is all that need be cited to show the slight but annoying shortcomings of this book. On page 82 "along the edges" is offered as the translation of *appo le siepi*. Inasmuch as the context strongly demands the strict meaning, "hedges," this is presumably another misprint; unless, indeed, it be an exact, phonetic reproduction from Mr. Morrison's dictation. But in that case "'edges" would have been preferable.

In face of all this, we admit the usefulness of Mr. Morrison's work to certain special classes of readers, and are grateful accordingly.

Canada under British Rule. By Sir John G. Bourinot. Macmillan. 1901.

Recent Canadian history is now given a place in that valuable set, the Cambridge Historical Series. The dates chosen, 1760-1900, are completely inclusive, and there is besides an introductory chapter on the general characteristics of the French régime. The work as a whole is a very useful narrative, though the author is less good at original observations than when following the sequence of events. For example, in the following passage (pp. 280-281), one meets with a tone of provincialism which is not uncommon in Canada, and a disposition to cherish a sense of superior virtue when contemplating the political iniquities of the United States:

"Of course, in the methods of party government we can see in Canada at times an attempt to follow the example of the United States, and to introduce the party machine with its professional politicians and all those influences that have degraded politics since the days of Jackson and Van Buren. Happily, so far, the people of Canada have shown themselves fully capable of removing those blots that show themselves from time to time on the body politic. Justice has soon seized those men who have betrayed their trust in the administration of public affairs."

Sir John Bourinot proceeds very properly to praise the excellence of the Canadian judicial system, but if he thinks that "the people of Canada have shown themselves fully capable of removing those blots that show themselves from time to time on the body politic," he must keep his eyes tightly shut whenever there is an election. However, the most serious fault which we find with this book springs from the inadequacy of what it says concerning the Quebec Act, a measure hardly equalled for importance by any in the Constitutional history of Canada, and one which should suggest full criticism, as it still affects the country most profoundly. It is here taken up, discussed, and dismissed in four pages, which will give the reader at a distance a quite imperfect idea of the issue at stake. The statement is indeed made (p. 45) that the Quebec Act "has always been considered the charter of the special privileges which the French Canadians have enjoyed ever since"; but no one could gather therefrom how the policy of the Act was censured in Lord Durham's Report, how it has been condemned by Goldwin Smith, and how the careful examination undertaken by Dr. Coffin shows that the measure was a prodigious blunder. Sir John Bourinot commits himself to no view besides saying that the home Government "had the advantage of the wise experience of Sir Guy Carleton"; but by this single phrase he implies that the action of the measure has been beneficent. On the contrary, Lord Durham's Report says: "Had the sounder policy of making the province English in all its institutions been adopted from the first and steadily persevered in, the French would probably have been speedily outnumbered, and the beneficial operation of the free institutions of England would never have been impeded by the animosities of origin." We do not blame Sir John Bourinot for avoiding a controversy on the subject, but he should have indicated more clearly the bearings and results of this all-important Act. While we have expressed a frank opinion upon the foregoing points, we would not for a moment deny that the book, considered altogether, is a commendable and well-wrought sketch.

The Jew in London. By C. Russell and H. S. Lewis. Thomas Y. Crowell & Co. 1901.

Some years ago the large immigration of foreign Jews into England, due to the outbreak of Russian anti-Semitism in 1881, attracted much attention and even apprehension. It was asserted that such an influx must tend to degrade the condition of the working classes, and some writers declared that England should adopt the policy of the Chinese exclusion acts of the United States. No doubt the invaders were dirty and destitute, having been degraded morally and physically by centuries of persecution; and had it been practicable to legislate for their exclusion, Parliament might have been induced to act. The objections to a policy of exclusion were, however, insuperable, and the agitation presently subsided. The authors of this book have now undertaken to ascertain what the results of this immigration really are. They have examined the condition of the immigrants and that of the classes with whom they came into competition; and they have particularly inquired into the probability of the London Jews becoming a permanent alien community. A brief preface is contributed by Mr. James Bryce, in which he dwells on the conflict between orthodox Judaism and the modern neological tendencies, and points out that the permanency of Jewish nationality depends on the permanency of the Jewish religion.

While we are not called on to notice particularly the local conditions under which the London Jews exist, we cannot fail to observe that the situation in the city of New York so closely resembles that in the older metropolis as to make these conditions instructive to American students of similar problems. An elaborate map shows where, and to what extent, the Jewish population is concentrated; where it has expelled other races, and where other races have resisted its entrance. In general, it may be said that if the Jews begin to inhabit a certain district, they will expel other races. A Ghetto is thus created, not by law, but by race prejudice. At the same time, many Jews are becoming denationalized, and, dropping their distinctive characteristics, are merged in the general population. The dispersive tendency, however, has hitherto had comparatively little effect. As the Jewish population in London is estimated at 110,000, of whom 60,000 are of foreign birth, little progress in assimilation could be expected.

In spite of their degradation, the foreign Jews are in some respects more desirable citizens than those whom they have displaced. They are not given to drunkenness, nor to crimes of violence, and the districts which they occupy become quiet and orderly. They overcrowd their houses, but this is because they have been used to overcrowding, and because there have not been houses enough for the immigrants. As their wealth increases, they expend it in better accommodations, if they can find them. And their wealth does increase at such a rate as to dispel the fear that they will add to the burden of pauperism. Their own people have relieved their pressing wants, and their industry and intelligence have insured their future welfare. The apprehension that wages would be lowered by their influx has not been justified. The immigrants at first take whatever wages they can get; but the competition of employers soon gives them the market rate. They have revolutionized the tailoring trade, and clothing of low grade can no longer be profitably made by handwork; but as the revolution has been brought about by the use of machinery, ordinary clothing is cheaper than before, and, therefore, more largely consumed. Certain kinds of goods which were formerly imported are now made in London, so that, in a sense, the immigrants have brought their industries with them. No doubt there has been some suffering among displaced laborers; but, as Mr. Bryce says, one can dwell with unmixed satisfaction upon the absence of any recrudescence of mediæval intolerance, under circumstances which might well occasion it.

Mr. Russell inclines to the opinion that the Jews will gradually give up their religion and become Anglicized; a process not without demoralization, but which he thinks necessary if they are to be English citizens. Mr. Lewis, a highly educated Jew, who has lived for many years in Toynbee Hall, vigorously opposes this opinion. He contends that the Jewish race, as a separate entity, has a future, and that the evidence justifies the belief that it will continue to be able to resist assimilation. His argument is powerful and eloquent; we had almost said, convincing. No one can despise the religion of the Jews, and their ritual is interesting and in many respects beautiful. It is hardly possible to deny that among no people has the institution of the family been more carefully guarded; and the people that best guards that institution best deserves to endure. As to the notion that the Jews must give up their nationality if they are to be English citizens, Mr. Lewis dismisses it as absurd. It would be difficult to conceive circumstances under which the two obligations could conflict; much more difficult than in

the case of Roman Catholics. "For practical men," Mr. Lewis says, "it is enough that our adopted country, to which we owe so great a debt of gratitude, does not require us to be worse Jews in order that we may be better Englishmen." Nevertheless he hopes much from the "Zionist" movement, believing that the genius of the Jewish race will be best developed on Jewish soil, and that the Holy Land may at least be the centre of Jewish life.

The Handy Man Afloat and Ashore. By the Rev. G. Goodenough, R.N. Illustrated. Boston: Small, Maynard & Co.

Nothing reveals more clearly the disappearance of the picturesque in the man-of-war's man than Mr. Goodenough's narrative of the training and habits of the blue-jacket of the British navy of to-day. He is no longer the seaman pure and simple, learned in the handling of sails, alert to avail of every slant of wind, and keen to avert the perils that formerly encompassed him day and night. In the powerful, machine-driven ships in which he is now housed, winds and waves are mere innocuous incidents. He is no longer the subject of thrilling yarns of storm and adventure. Of seamanship he acquires only enough to box the compass, heave the lead, make a simple splice, tie a half-dozen knots, or pull an oar in squadron races. All other functions are performed for him by automatic machinery, which he supervises and directs. Electricity, compressed air, and steam are the servants of his will. Incessant drill and attention to mechanical details are his lot; or, as he puts it, when asked by a landsman what he has to do, "we do what we please until we are told to do something else, and then we do that pretty quick."

The British navy is largely recruited from apprentices, of whom there are several sources of supply. Greenwich Hospital School is one, where boys from eleven to fourteen years of age, the sons of warrant officers, and men of the Royal Navy, and of non-commissioned officers, and men of the Royal Marines, receive preliminary nautical schooling. When they arrive at their fifteenth year they are drafted to the various training-ships. Then, again, many of the lads trained in the several men-of-war allotted to the merchant marine for that purpose enlist in the navy. According to Mr. Goodenough, there is no difficulty in getting recruits for the service. There are more boys ready to join than can be taken on at any time. These are youngsters from sixteen to eighteen years of age, who have received no preliminary nautical training. They are required to sign an agreement to serve for twelve years. Mr. Goodenough gives a very complete account of the life of these apprentices, of the fairness and justness with which they are treated, and of the encouragement they receive until they reach the rank of warrant officers, the highest grade to which they can attain.

Of the changes which have come to the new school of British men-of-war's men none is more striking than the altered character of the songs sung by them. Mr. Goodenough says that the days of the old "forebitter," the forecastle ditty of the navy of Marryat's time, are over. The modern British naval blue-jacket prefers to borrow his songs from the music-hall. Moreover, he appears to delight in dismally sentimental subjects, such as "A Flower from My Angel Mother's Grave," "See that My Grave Is Kept Green," etc., in vivid contrast to the old songs like "In Cawsand Bay Lying," "The Fighting Téméraire," etc. Moreover, the British blue-jacket of to-day appears to cultivate considerable religious sentiment. Not so very long ago the "holy Communion" was on board naval ships somewhat covertly administered. Now, according to Chaplain Goodenough, it is an established function, openly celebrated. When it was first proposed, an old Admiral in command of a fleet was approached on the subject. "What's all this?" he shouted; "I have been fifty years in the service, and I never heard of holy Communion on board ship before." It is the same with the amusements of men-of-war's men on shore. As an old naval man puts it: "Whatever would old Shiver-the-Mizzen say if he could come back from Fiddler's Green and see blue-jackets careering along the road on pneumatic-tired bicycles? Why, he'd throw a fit!" It must not be surmised from this that the modern British man-of-war's man is degenerate or has lost his old attributes of courage, self-reliance, or "handiness." The performances of the naval brigade in the South African war refute this assumption.

Chaplain Goodenough takes up every phase of the blue-jacket's life and duties on board a ship-of-war, on the battle-ship, the troop-ship, the training-ship, and the torpedo-boat; at shore stations, and when on leave. He tells of his failings and shortcomings, as well as of his better qualities; of the well-behaved and of the vicious, and of the pitfalls that beset the apprentice. He gives, in the chapter devoted to the "sick-list," many instances of the sympathy and spirit of comradeship existing among shipmates. What is the more to be admired in the chaplain is his frank admission that he could not talk religion to a sick man, because the victim was helpless and could not get up and walk away if he did not care for the subject. "So many people," he says, "are eager to exercise their powers of religious talk upon the seaman and the marine, that the chaplain's talk is liable to be classed by those long-suffering individuals as among the religious trials to which their state of life exposes them."

Chaplain Goodenough's book may be cordially praised as an interesting and complete exposition of sailor-life on a modern British ship-of-war. Our American methods are somewhat different, inasmuch as in our service the individuality of the "man behind the gun" is allowed greater expansion. Initiative in him is encouraged to the point where it does not conflict with the discipline necessary to the control of a large number of men confined within narrow limits. An American blue-jacket is far less of an automaton than is his British prototype. Of the advantage of the two systems one over the other, the actual test of conflict can alone determine. A naval battle between two equally matched battleships, American and English, would in the end depend, probably, more upon a chance shot than upon any marked superiority of the combatants on either side.

DOWDEN'S PURITAN AND ANGLICAN.

STUDIES IN LITERATURE. 341 pp. 8vo. $2 00, *net.*

The volume treats of Puritanism and English Literature, Sir Thomas Browne Hooker, Herbert, Vaughan, Milton, Jeremy Taylor, Baxter, Bunyan, Butler, the Transition to the Eighteenth Century, etc.

Henry Holt & Co., N. Y.

Maine Coast.

FOR SALE—On Penobscot Bay. A beautiful tract of 400 acres, with nearly four miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches; is much diversified in its surface with woodland and open fields, and commands everywhere most exquisite views of bay, islands, mountains, and ocean. There is a steamboat landing near the tract, giving daily connection with trains and boats to and from Boston. The property is on the main land, within five miles of Islesboro and Castine. It has several farm-houses, a pond, and trout-brook. It will be sold at a low price per acre to settle a joint account, and offers an exceptional opportunity for a gentleman wishing an independent estate, or for subdivision.

Address J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

TEN THOUSAND COPIES

THE COLUMN

By CHARLES MARRIOTT. $1.50

Of this remarkable story two opinions are just to hand

(1)

SENATOR JOHN M. THURSTON:

"I have read no story of modern times which so completely demanded my undivided attention from the beginning to the end as 'The Column,' by Charles Marriott. It is a striking and, as it seems to me, a faithful delineation of the strongest and yet most natural characters. The language is chaste and refined, the dramatic interest intense, the plot powerful, and the whole work cleanly and brilliantly intellectual. It is sure to take high rank in the literature of the day."

(2)

Mr. JULIAN HAWTHORNE

in THE NORTH AMERICAN:

"Marriott, taken as an alternative after other literary forms, is deeply welcome and full of wholesome exercise and succulence. He paces up and down, as it were, in a hall where all is harmonious and proudly beautiful, even fastidious. . . . It is a book full of repose, even in its passion; and it is everywhere rich in beauty. . . . Mr. Marriott comes among us a stranger and an alien; but he is welcome, for he brings with him a beauty which lifts and purifies the mind."

THIRTY THOUSAND COPIES

THE VISITS OF ELIZABETH

By ELINOR GLYN. $1.50

SEE THAT THE BOOK CONTAINS THE BEAUTIFUL PHOTOGRAVURE PLATE.

This "adorable maiden" has been received with acclamation by the entire press:

"Heartily welcome." "Singularly beautiful." "Utterly charming." "Irresistibly comic."
"A fascinating, tantalizing, lovable little being."

King's End

BY

ALICE BROWN, author of "Meadow Grass," "Tiverton Tales," etc. 12mo, $1.50.

"It is refreshing in this time, when a new novel is often an infliction, to find as charming a book as Miss Alice Brown's 'King's End.' . . . It is late to insist upon the insight and literary distinction which Miss Brown brings to her interpretation of New England character. In the present book a charming Yankee girl who hovers between a religious 'Call' and a sturdy lover, and a social outcast, who, like Silas Marner, is humanized through having the care of a child fall upon him, afford Miss Brown the kind of subjects that best display her delicate talent,' says the New York *Evening Post.*

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, New York.

THE EVOLUTION OF IMMORTALITY

By the Rev. SAMUEL D. McCONNELL

"As some but not all animals have qualities that approach the human, so some people are immortal, *but not all*," says Dr. McCONNELL. His theory that immortality is the final result of the survival of the fittest, the highest step in a long chain of evolution, is thoroughly in unison with biological truth. It is a stimulating book, since it offers immortality as something to be achieved instead of as common to all men without effort.

Cloth, 12mo, **$1.25**

RECONSTRUCTION IN THEOLOGY

By Prof. HENRY C. KING, Oberlin Sem.

Tending to bring about a restatement of theology in terms of the personal relation—accepting the scientific spirit of the age, yet in touch with the spiritual life of the Church.

Cloth, 12mo, **$1.50**

THE MACMILLAN COMPANY, 66 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, MARCH 28, 1901.

The Week.

The President's appointment of ex-Representative Rodenberg of Illinois as Civil-Service Commissioner is ideal—that is, it represents perfectly the McKinley notion of civil-service reform. Mr. Rodenberg has openly and ostentatiously opposed the whole reform system. On February 17, 1900, he was one of the seventy-seven members of the House who voted, on a formal roll-call, to strike out the appropriation for the Civil-Service Commission. This is, of course, the annual spoilsmen's motion. They wish to kill the reform system by refusing to provide its necessary expenses. To stand up on a yea-and-nay vote and be registered in favor of this attack on the merit plan of filling public offices, has long been recognized as the mark of the thorough-going spoilsman, the man who sneers at "snivel-service reform" and denounces the "hypocrites" who pretend that Congressmen will not appoint the noblest specimens of the race. Mr. Rodenberg is fresh from this demonstration of his hostility to reform, and it is fitting that President McKinley should now select him to administer the law which he abhors. It is like appointing an ex-burglar to be police magistrate.

Mr. Rodenberg's "special fitness for the place" is trumpeted in a dispatch from Washington to the *Court Circular*—beg pardon, we meant the *Tribune*. Yes, but he was also eminently fitted for any other place within the gift of the President, and uncommonly anxious to fill one; the kind and its duties being a matter of indifference, provided the salary were satisfactory. There was "a great time at the White House today," telegraphed the Washington correspondent of the Chicago *Record* on March 20. He referred to a gathering of the Illinois delegation for the purpose of demanding from the President the appointment of ex-Representative Rodenberg as a Commissioner of the St. Louis Exposition. Mr. McKinley was reminded that he had been appointing "dead ducks" to that desirable sinecure, but that four of them had come from the Senate and only two from the House. Moreover, the Republican dead ducks had been getting the worst of it. The Illinois delegation united, therefore, on Mr. Rodenberg. He was a Republican, no duck could be deader than he, and he ought to have the place. The President demurred, and is even said to have displayed a little temper at being asked to provide for so many "busted" politicians. Happily, he bethought himself of the vacant Civil-Service Commissionership, and, regarding it frankly as "a place," flung it as a sop to the spoils-hunter. But we know that this is no "backward step" in civil-service reform, because President McKinley promised that none should be taken during his Administration.

We extend our respectful sympathy to Senator Hanna, who has again met the proverbial fate of the peacemaker. But yesterday it was the impractical seven among the Republican legislators of Delaware who foolishly resented his well-meant efforts to elect both Addicks and Dupont. Now it is another seven, also Republican members of a Legislature, but in Nebraska, who have wantonly and wickedly declined to take the advice of the boss of the Republican party. After receiving telegrams from the great Cleveland statesman urging them to stand by the caucus nominee, D. E. Thompson, these men have had the extremely bad taste to reply that the election of Mr. Thompson would be "disgraceful to the State and suicidal to the party." This is exactly the same kind of Mugwump language in which the anti-Addicks men indulge, and we can understand just how wearying and discouraging it all is to Mr. Hanna. These stubborn rascals, with their cant about "disgrace" and "State duty," should take Mr. Hanna's word for it that the only thing at issue is the number of Republican Senators in the next Congress. Beside this everything pales. In the wise Hanna mind, two Republican Senators from a State are worth any price. Why should Nebraskans and Delawareans be so slow to realize that the sacrifice of State honor, of decency, of morality, and the shirking of public duty are none too large a price to pay to strengthen the Republican party in the Senate by four men?

Gov. Odell has won the fight for freedom from the despotism of Boss Platt. The conference of Republican leaders, which the Senator called for Sunday to consider the attitude of the organization toward further police legislation for New York city, resulted in an agreement not to press the matter further. This conclusion was inevitable after the Governor had announced his unalterable opposition to the policy, and public opinion throughout the State had endorsed his Declaration of Independence. It would have been nothing short of stark madness to press the scheme further, and even the most loyal henchmen of the boss would not follow him in a course which meant political ruin to them personally as well as to their party. There was nothing left for Platt to do, so far as this question was concerned, but to accept the situation and express his regret. This he did—with pretty poor grace, and the matter of police legislation is therefore settled. Platt could not surrender, however, without showing his teeth. Here is the threat with which he ended his acceptance of defeat in the matter immediately at stake:

> "If it turns out in the next municipal election that the judgment which I have formed upon this subject has been wrong, then I shall be glad that Tammany has been left in control of the police."

The meaning of this is plain. If Tammany shall carry the municipal election next fall, Platt will hold Odell responsible. He will then say: "You see that I was right. I insisted that Tammany would win unless we should pass a law at Albany depriving it of its control of the police force. Odell blocked such legislation, and he is to blame for the result." A man who is capable of such a threat is capable also of trying to make it come true. But it will be risky business for the Platt of 1901, deprived of his old power as State boss, to attempt what was done in 1897 by the man who was undisputed leader of the party, and could control the whole organization, throughout the State as well as in the city.

The reasons why the British Government declined to accept the Senate amendments to the Hay-Pauncefote treaty are both respectful and respectable. The details upon which Lord Lansdowne rests his objections are: first, that the treaty, as amended, assumes to abrogate a previous treaty, without any negotiation for that purpose; second, that it leaves both the United States and Great Britain free to acquire territory in Central America, except within a short distance of the canal; third, that the terms of the Davis amendment, which relates to the measures that the United States may take to secure its own defence, are too vague; and, finally, that the striking out of the clause which provides for securing the adherence of other Powers to the treaty leaves those Powers free to take any measures they please, while binding Great Britain to a specific line of action. Probably all of these objections could have been surmounted except the first. If a proposal to abrogate the Clayton-Bulwer treaty had been made in the proper way, instead of an attempt to set it aside without previous consultation, we cannot doubt that means would have been found to meet it satisfactorily to both parties, and to secure the concurrence of the Senate. But forms count for much in diplomatic negotiation, and

rightly so, since the dignity of a nation must always be one of its weightiest concerns. It was not a dignified way of setting aside the Clayton-Bulwer treaty to whip out one's pencil and write a few words in another treaty without asking the opinion of the other party to the treaty; yet if Lord Salisbury had been at the Foreign Office, he might have acted as he did when a more ill-mannered proposition was laid before him touching the Venezuelan boundary. What mood the Senate will be in when the Isthmian canal question comes before it cannot be predicted, but it is something in favor of peace and good order that some time must elapse ere that body comes together again. It is fortunate also that the negotiations are still in the hands of statesmen who are sincerely desirous of a good understanding.

The most flattering unction which the Administration is able to lay to its soul in the Cuban controversy is that the Cubans are certain, in the end, to "yield." This, of course, is a tacit admission that the islanders are acting under duress. They will yield, as any people must, to *force majeure*. There is nothing very strange about this, certainly nothing very glorious. It needed no ghost to come from the dead to make us believe that 76,000,000 people could coerce 1,500,000, if they chose to violate their solemn pledge never to attempt it. And that it is coercion pure and simple, the stark force of the stronger, which is being applied to the Cubans, there is no doubt whatever. One of the returning Congressmen admits that two-thirds of the inhabitants of Cuba are vehemently desirous of absolute independence. Of course, this representative of American popular will thinks that the confessed popular will of the Cubans is all folly, and should be put down with a "strong hand." That is what we have come to—brute force exerted where we vowed we would never exercise the slightest control, and the policy of sweet reasonableness dropped for that of sheer compulsion.

After having shipped several newly recruited and untrained battalions and companies to Manila, Gen. Corbin finds it necessary to explain the sudden ordering of all available regular troops to the Philippines by declaring that he must have several months in which to train the rest of the new regiments before shipping them to the scene of hostilities. The necessity for this we have pointed out for months past. It is patent to all military men, but the War Department has hitherto treated the matter as if the mere assembling, uniforming, and equipping of a thousand men and forty officers meant that it had another regiment fit for active service. As a matter of fact, the bringing together of the personnel of a regiment means nothing of the kind. Even though the name "regular" be given to it, it must be drilled, taught to shoot, disciplined, and instructed day and night for months, just like any militia or volunteer regiment, if it is to be an effective body of men, and not a uniformed mob. Even our able regular officers cannot perform miracles, and do not hesitate to admit privately that placing raw regiments in the field is positively criminal, since the men do not know how to shoot, and have not the faintest conception of the care of their bodies in camp, on the march, or in trenches. To expose raw recruits to Philippine firing-line conditions is to deliberately increase the pension list and the death rate, and we rejoice as a matter of humanity at the War Department's decision, however much it may worry Gen. MacArthur. That good order in the Philippines will profit by the delay is shown by the fact that the battalions already sent were riotous and disorderly in San Francisco, and that the Manila jails are full of volunteer soldiers of the now returning regiments, which were similarly rushed to Manila two years ago before being trained and disciplined.

The value of wholesome neglect in colonial administration is strikingly brought out in the letter of our Samoan wards to the President. The native Governors explain their satisfaction with American rule as a rule which lets them alone. "Our great fear at first," they say, "was that we should be cast aside in our government, that our customs which we honor would be changed or interfered with." Nothing of the kind has happened, and the Samoans are correspondingly pleased. They say that they feared "the rule of the soldier," but they have found Commander Tilley a kind friend who has "kept his promises." There we have, in a living example, the secret of governing colonies. It is the secret which the English have learned, and which should have been an open book to us when we went to the Philippines. To interfere as little as possible with native customs, to strengthen and utilize every form of native government, above all to be kind and just and to keep promises—those are the elementary rules. Every one of them has been violated by our policy of meddle and muddle in the Philippines. So, we doubt not, would they have been in Tutuila if the island had seemed worth exploiting. Its insignificance and poverty have led to our neglect; so that our appearance of wisdom in administering it is a kind of happy accident.

The rise in the price of the Virginia century bonds to a point near par has, like other similar changes in values, made the fortunes of a number of people, and has vastly improved the credit of the State. Instead of being, as a few years ago, on the verge of bankruptcy, Virginia has now worked into a much more comfortable financial condition, both from the standpoint of the State Treasury and from that of the taxpayer. A similar problem now awaits solution by the State of West Virginia. It will be remembered that the close of the civil war found Virginia burdened with an enormous debt, amounting on January 1, 1870, with accrued interest, to more than $45,000,000. A division of this debt into two parts, one of $15,000,000 apportioned to West Virginia as her share, the other of $30,000,000 being assumed by Virginia herself, was effected by the Funding Act of 1871. But as West Virginia has always rejected the apportionment by which she was given a share proportionate to her territory and population, and has claimed a division based upon money actually spent within her own borders by the State Government prior to the war, no settlement has ever been reached. Thus the provisions of the Funding Act amounted to a repudiation of these bonds, and the blame must rest primarily upon West Virginia, since she has never provided for any of them, even to the amount admitted to be her just share of the debt.

It now appears that public sentiment in favor of some provision for funding the bonds is making headway, though it is retarded by the alleged fact that speculators have for some time been quietly cornering as many of the old certificates as they could. It is even said that much of the renewed interest in debt payment has been factitious, and has been due to the work of the speculators themselves, although the best evidence seems to indicate that speculative operations are the result, and not the cause, of the new feeling in the matter. The situation is precisely the same as that which confronted the Federal Government just after the adoption of the Constitution. The same arguments concerning the work of speculators were then urged, and the same reply should be given now. Into whatever hands the bonds may have fallen, these should be honestly paid, and there can be no manner of doubt that the State would gain immeasurably in financial standing and public respect should she adopt such a course. The unfortunate condition of Virginia, both fiscally and economically, during the "Readjuster" period, when the payment of her own bonds was in doubt, as well as the renewed confidence of investors and the better financial outlook after payment was assured by the "Riddleberger Act" of 1892, give ample evidence that State honesty will prove the best policy.

The Budget speech of the Canadian Minister for Finance neither did him extraordinary credit nor exposed his party to the censure of the Opposition. On the whole, the showing was a satisfactory one. For the past fiscal year the revenues of the Dominion have reached $51,029,994, an increase for the year of $4,288,745. More than half of the increase has gone to the cost of the contingent sent to South Africa and to the garrisoning of Halifax. For the current year the excess of revenue over current expenditures is estimated at $6,350,000, but this showing is less favorable when it is admitted that enough must be paid to capital account to increase the public debt by about $1,800,000. It is hard to see that much political capital for Liberal or Conservative can be made out of the budget. Mr. Fielding can easily show that in the recent fat years the revenues have greatly increased, and remind the Canadian people that under the Conservative party they had lean years. The Conservatives will say that but for Liberal mismanagement the country would have been more prosperous, and there the matter stands till something arises to shake Sir Wilfrid Laurier's big majority.

This overthrow might come from the financial pressure caused by the steel bounties. With the great expansion of the iron industry in Canada, the Treasury already begins to feel the drain. The Minister for Finance estimates most conservatively that the steel bounties will exceed $1,000,000 for the present year. It is easy to see in this increasing but wholly indefinite charge upon the Treasury a possible disturbing influence in Canadian finance, and it is probably the uncertainty as to the amount of revenue applicable to this purpose that has led the Canadian Government to refuse a bounty to the producers of beet sugar, paying them off by exempting for a year sugar-making machinery from the customs duties. It should be added that, by what looks very like mystification, the steel bounties, like the railway subsidies, are to be charged to the account not of current expenditure, but of capital. That Mr. Fielding is reasonably assured of the situation for the present year is shown in the fact that he proposes no new revenue bill, and, except the exemption clause for sugar-making machinery, no change in the tariff.

Mr. Joseph Chamberlain's brother in the cordite business had a bad quarter hour under cross-examination on Thursday. Though the plaintiff in the libel suit against two London newspapers, he was soon put on the defensive. Freely admitting that the Kynochs Company, with which he was connected, had combined with other companies to keep up the price of powder in Government contracts, he confessed also to having influenced Irish members of Parliament in favor of the Kynochs by threatening to shut down the works unless Government contracts were secured. This admission drew from the Tory Lord Chief Justice a testy "You pulled the strings"; but so far the evidence hardly touched Mr. Joseph Chamberlain, in whose interest the suit was brought. When, however, it was shown that Mr. Arthur Chamberlain had used in a business way his "personal" influence with the Government, and it was proved that in open competitions the Kynochs had been allowed to withdraw bids and substitute lower ones, it was clear at least that Mr. Joseph Chamberlain had been a careless guardian of the black sheep of his family. We can foresee the tender sympathy he will have from all the Tory press, this incorruptible statesman who wakes up suddenly to find his kith and kin plundering the Government of which he is a great part. The damages awarded Mr. Arthur Chamberlain by the jury, £200, were almost nominal.

If the question of independence be left out of consideration, it cannot be said that the terms offered to Gen. Botha by the British were illiberal. As reported in the Parliamentary papers, the English plan was to govern the Transvaal and Orange River colonies by a crown-colony administration, composed of a nominated executive advised by an elective assembly, this form of government to be succeeded shortly by a representative government. The English and Dutch languages were to have equal rights, Boer war debts to the extent of £1,000,000 were to be paid, aid was to be given to the impoverished farmers to start afresh, and the expatriated prisoners were to be returned. Certainly this is far from being the unconditional surrender demanded by Lord Roberts, and the very fact that Mr. Chamberlain himself directed the modification of the terms as late as March 6, shows how eager for peace even the great Jingo leader has become. Indeed, the Boers might well have counted this a substantial victory and have been justified in accepting the terms, trusting to future negotiation for further amnesty towards rebellious English colonists and for the settlement of other disputed questions.

The Russian position as to Mantchuria seems impregnable. Months ago, shortly after Pekin was captured, Russia proposed a general evacuation of China. She would withdraw all her troops, she would abandon Newchwang, she would leave Mantchuria—provided that the allies would, at the same time, leave Pechili and turn over the Government of China to the Chinese. The United States agreed—or was thought to agree. Afterwards it was explained that we had agreed with a convenient *if*. But the other Powers refused. They did not believe Russia sincere. Perhaps they doubted the sincerity of their own protestations that they wanted no Chinese territory. At any rate, sincere or not, Russia, has, since that day, had the diplomatic and the moral advantage. She said then that, if withdrawal were not immediate, she might be compelled to stay indefinitely. Now she is preparing to stay in Mantchuria. It is easy to say that she always intended to; the point is that she volunteered to withdraw, and on terms and for reasons which the allies should at once have accepted. They did not, and Russia has since had the whip-hand.

The part played by the Russian university students in the disturbances at St Petersburg recalls the recent violent proceedings at the University of Vienna, and suggests a state of things quite unfamiliar to those acquainted only with American or English institutions. The immediate cause of the difficulty seems to be the enforcement of the laws prohibiting student secret societies and drafting recalcitrant students into the army. Most of the student societies are political and radical in their nature, and it is largely due to their work that the Russian universities have become centres of Socialist agitation and Nihilist plotting. For this work a favorable environment was found in the fact that a large proportion of the students are proletarians, living under the conditions sketched by Dostoievsky with matchless, though morbid, power in 'Crime and Punishment.' In such a soil of want and misery the revolutionary seed has grown rapidly. Existing conditions in Russia are very similar to those that prevailed in Germany shortly after the inauguration of the policy of reaction by the Congress of Vienna, and which continued during the long struggle for German unity. The organization of the *Burschenschaft* in fact furnished the prototype of the Russian societies, and laid the foundation of the much-lauded "ungeheuere Gewalt" of the German students, of which, fortunately, few traces are now left—at least politically. A state of things like that in Germany before 1850 and in Russia at present could never exist in a country possessing a definite political organization, with recognized organs for the expression of public opinion. Only under the influence of German particularism or Russian autocracy would such an outlet for popular feeling be necessary, or the crude and rather aimless agitation of the students have any political significance whatever. The university disturbances are merely representative of the general spirit of unrest which more and more pervades the intelligent classes in Russia, and must be expected to increase as industry develops and the conservative policy breaks down.

THE TARIFF BRIBE FOR CUBA.

Monday's Havana dispatches gave us a sight, *dessous des cartes*, of the game which the Administration is playing in Cuba. In its consuming anxiety to induce the Cubans, by hook or by crook, to accept our ultimatum, without forcing us to drive it home by the argument of pike and gun, promises of tariff favors are being more and more openly made. These are necessarily vague. The President can only hint and insinuate; can but point out the obvious advantage it would be to Cuban planters if their sugar and tobacco were admitted free of duty, or at greatly reduced rates, in the ports of the United States. He, or his agents, cannot refrain from asking the Cuban delegates if they do not seem to see in this direction a generous *quid pro quo* for agreeing to our demands.

The Cubans are quick to see the point, and all their talk now is of persuading the Convention to bend before President McKinley's will, in return for a reciprocity treaty. But just when the scheme was working beautifully, Senator Proctor, in either malice or innocence, had an interview with a Havana newspaper, in which he reminded the Cubans that it took more than the President to make a treaty, and that the reduction of tariff duties was a legislative function in the United States. This produced a natural reluctance in the Cuban mind to yield to the misty blandishments of the Administration, unless there were something binding on the United States, something down in black and white, to show for it. Accordingly, the latest phase of the situation in the island is a decided movement of public opinion over to the view of accepting an American protectorate, provided there be a breach made, for the behoof of Cubans, in American protection.

We have always believed that an effective promise of free trade, or even of generous reciprocity, made to Cuba would be more than the planters could resist or refuse. Their natural market is here, and if its doors were flung wide to them, they could not be expected to look too sharply at the conditions precedent. The thing would turn on the same principles of human nature that led the Alsatian to say to Bismarck that whether Russians or Prussians took the province was all one to the inhabitants, if only their taxes were lowered. Our tariff taxes on sugar and tobacco are as if especially directed against the Cuban growers. Were they to be removed, or reduced two-thirds, the island would leap forward in prosperity. This is and has long been so unquestioned a truth in the eyes of Cubans that, as we say, no higher bribe could be offered them than the removal of American tariff barriers against their products. It would jump with their commercial interests completely.

Secretary Root long ago gave evidence that he was fully aware of having this trump card in his hand. In his last annual report he spoke in an oracular tone about the "uncertainty as to the continuance of a market for her [Cuba's] products." This was the plainest sort of hint that the Cubans ought to know on which side their bread was buttered. Yet it was then more in the nature of a threat than of a promise. The implication was rather of a tariff war if Cuba proved obstinate, than of a reciprocity treaty if she showed herself pliable. But now it is clear the Administration is using the tariff, in the Cuban negotiation, as it has been so long used at home—that is, as a means of paying for political favors. The President is extremely desirous that the Cubans should agree, with good grace or with bad, to his ultimatum. It seems, then, the most natural thing in the world for him to reward them, if they are good boys, with a little tariff taffy. Already he has graciously abolished their internal export tax on tobacco; and this, he has intimated, is only an earnest of what he will do to modify the United States tariff, for their benefit, if they will quietly act as he wishes.

This is the little game, but there is no likelihood that it will work. On the side of the Cubans, their eyes are now opened, and they will insist on something better than a Presidential promise. No "plain duty" utterance of McKinley's will do; give them an act of Congress creating free trade with Cuba; give them a reciprocity treaty not only negotiated, but ratified by the Senate, and then they will agree to American demands. Otherwise not. As for Mr. McKinley, it is evident that he cannot undertake to translate his indefinite promises of tariff favors into treaty or into law. His rebuff by the Senate in the case of his reciprocity treaties is too recent and smarting for him to think such a thing possible. Yet we cannot but be glad that the exposure of his plan has come about publicly. It will be apt to lead to a great moral awakening among Connecticut tobacco-growers. Conscience may also be expected to become more tender in the case of the beet-sugar men and the Louisiana cane-producers. What! is the breaking of our pledge to Cuba going to cost us our protection against Cuban tobacco and sugar? One sees how this thought will put quite a new aspect upon the sacredness of a promise and the solemnity of a national obligation. If we are to lose money by violating our pledge, why, we might as well keep it. This is the kind of latent morality which the President will have stirred up by his tariff flirtation with the Cubans; and that it will be sufficient to block this particular scheme of his we cannot doubt.

THE PRESIDENT'S HAND IN DELAWARE.

For a number of years J. Edward Addicks, a rich, vulgar, and unscrupulous speculator, has been trying to buy a seat in the United States Senate from Delaware. Three times in succession he has failed, because an honorable element in the Republican party considered him a disgrace to the State which he sought to represent, and preferred that the seat should remain vacant or even be filled by the Opposition, rather than that it should be occupied by so disreputable a person. During these three contests Addicks has secured no help from the national Administration. When he spent $75,000 in electing Republican members to the Legislature in 1894, and then early in 1895 demanded from them his pay in the shape of the Senatorship, a Democrat sat in the White House. At his next trial, in 1898-99, and again when he attempted the same trade in 1900-01 (two Senatorships now being at stake), there was a Republican President, but Mr. McKinley gave him no help in the disposition of the Federal patronage.

Three weeks ago the Delaware Legislature adjourned, seven Republican members having stood out to the end against all the influences which were brought to bear in behalf of the man who is debauching their State. It is hardly possible to exaggerate the power of these influences. A man who has millions of dollars, and who is willing to spend money recklessly in a small commonwealth, can bring pressure to bear upon poor legislators in a variety of ways hard to resist. Addicks also had the open support of the Chairman of the Republican National Committee, with all the resources at Hanna's command. The head of the party organization had Addicks "recognized" at the Philadelphia convention last summer, and he insisted that Republican members of the Delaware Legislature should follow that example.

So much was open to the world. We have said that in the third as in the second of Addicks's struggles the Administration at Washington refrained from giving him any help in the allotment of Federal patronage. But the President did not "keep his hands off" throughout the recent struggle. It is part of the hitherto unwritten history of this contest that recalcitrant Republican members of the Legislature, after Hanna had failed to move them, were summoned to the White House and were importuned by Mr. McKinley to send two Republican Senators to Washington, even if one of them must be the man whom their consciences had prevented them from supporting. It is refreshing to know that these plain men of honor did not hesitate to tell the President of the United States that the price was too high.

Mr. McKinley now abandons concealment. He has just made an appointment of an Addicks man to a postmastership, and, when the opponents of Addicks protested, he informed them that he had made this appointment in full knowledge of its bearings. It is now universally understood that the President has decided openly to help Addicks, and it is feared by those who have kept up the good fight against corruption all these weary years that this reinforcement will at last defeat them. The general expectation is, that Addicks will now succeed in persuading enough of his Republican opponents to abandon the struggle, so that a majority of the Legislature will agree to elect him and somebody else at an extra session, to be held as soon as the necessary "arrangements" are made.

It is nothing short of a national humiliation that the Government of the United States should be thus employed to promote the rape of a State and the general depravation of political standards in the republic. Addicks is as open and flagrant a corruptionist as we have ever seen in national politics. The system which he has developed in Delaware is the most elaborate and pervasive ever applied anywhere. He secures the influence of men of local consequence throughout the State—the country lawyer, the village doctor, the rural storekeeper—and rewards them for working in his behalf. He is always ready to pay off the mortgage of a poor farmer who will recognize the obligation at the polls. He gives positions as directors in his gas company to men of importance. He buys votes at the polls through his agents by the hundreds at every election, $20 being a common price for a ballot, and even $75 being sometimes obtained when the competition is keen. This work of demoralization has been going on so long and so successfully that a leading jurist of Delaware, in discussing the situation last year, was constrained to say that "the very foundations of morality are being steadily undermined in our State."

All decent people throughout the country rejoiced, therefore, when it appeared that Delaware still retained sufficient principle and conscience to thwart for the third time the impudent attempt to make traffic of a Senatorship which has been so often filled by a high-minded statesman. There must be equal indignation now against the proposal of Mr. McKinley to help on this outrageous scheme. Public sentiment should be pronounced and organized, and brought to bear at the White House. The President must be made to feel that the people of this nation will not follow him as he follows Hanna in bolstering up the corrupt practices of Addicks. Even the clergy and the religious press may be counted on to draw the line here in their apologies for Mr. Hoar's William the Well-Beloved.

THE BOSS IN THE OPEN.

Gov. Odell has issued a Declaration of Independence. Senator Platt, as boss of the Republican organization, sent word through his son to the Governor that he wanted a Metropolitan Police Bill passed. The Governor replied that he could not see the reason for such legislation, that he would not urge the proposed bill, but would veto it, if it should be passed; in short, that "he would not stultify himself" by approving a measure which he had condemned in his message to the Legislature last January. This message was a surprise, from both its repudiation of the policy of a State Constabulary Law which Platt had demanded, and its opposition to the scheme of a Metropolitan Police Commission, which had been suggested as an alternative. Clearly the Governor was not disposed to be the mere tool of the Senatorial boss. There was, however, an obvious attempt to avoid a break with the machine, through the recommendation of a law accepting the principle of State interference with home rule so far as to give the Governor the power of removing the single Police Commissioner of New York city, who was to be substituted for the old "bipartisan" Board. It rested with the machine to make an issue or avoid it.

Platt takes his whipping meekly. There is no "rupture" between himself and Gov. Odell, he explains with the patience of a saint; it is only an "honest difference of opinion." John Phœnix never devised a more elegant way of confessing, while apparently disguising, the fact that he had been thrown to the floor and pummelled. State and nation are ablaze with the news. Every politician in the land is discussing the fine manhood of a Governor who scornfully threw the insolent orders of the boss back into his teeth. Even to the remote confines of Oyster Bay the truth is percolating that a man has arisen at Albany whose motto is *res non verba*. But Platt and his astonished messenger-boy sons have not heard of it. There is no rupture. Similarly there was no rupture when the Emperor William deprived Bismarck of the Chancellorship. Only, everybody knew, after that, who was master.

To our mind, the great public and political advantage of the open break between the Governor and the boss lies in the fact that it is open. We see Platt as he is. He is out in the daylight at last. All his political life he has been burrowing, sapping and mining like Hamlet's ghost, a "fellow in the cellarage." His methods have been subterranean, and to that fact they have owed a good part of their effectiveness. A mysterious power behind the scenes, a malign influence that stalketh in darkness, a secret influence that sways public events—how the imagination of the ordinary man is impressed by such things! The boss who can so clothe himself in mystery and silence comes to be regarded as a kind of invincible fate. His hidden purposes are thought to be self-executing. Men fear his power, which is all the greater in their minds because it is so vague and undefined. They see something; they imagine everything. Hence the wisdom of the famous old boss maxim: "Addition, division, and *silence*."

But the boss whom the gods would destroy turns voluble; and Platt, in an evil hour, became not only voluble, but vociferous. He issued his orders, not behind closed doors, but from the house-top. Then the fatal hour struck, and Gov. Odell flung his glove in Platt's face, also in public. There were no conflicting versions of what happened, told to friends confidentially and with personal coloring by the parties in interest. It was all open and above board. "You will do this." "I will not." The Governor acted on Bismarck's dictum that in politics there is no middle term between velvet and cold steel, and since Platt would have it so, cold steel Mr. Odell made it.

This, we say, is an enormous gain all round. The extent of it we can best measure by comparing Odell's way with Roosevelt's way. The latter was almost as fond of secrecy as the boss himself. A little breakfast with the boss behind closed doors, mutual pledges of silence, mum's the word to the reporters—why, we had two years of that, and where did we stand when we got through? Nobody knew. Roosevelt's friends had wonderful, but wholly confidential, stories to tell of the Colonel's heroic front in these hole-and-corner conferences with Platt. Table-pounding, theatric glaring, vigorous soldier's oaths—all these things we were asked to believe in, under the strictest seal of confidence. But Platt and his friends told another story. Roosevelt was about the "easiest" subject the boss ever had to tackle. "Why, I can wind him about my little finger." And the boss invariably had, or said he had, his way. Who could tell where the truth lay? But now all doubt is brushed aside. Platt came out into the open; Odell stood in full view; the orders were publicly given and publicly scorned. And the result is that the people now see that the once dreaded boss—dreaded because skulking in shadows and secrecy—is nothing but a toothless old giant, sitting helpless in the entrance of his cave and cursing passers-by.

The revelation is instant, also, of the political wisdom of sending the boss about his business. Gov. Odell has won the swiftest response and commendation from all parts of the State, and in the nation at large nothing could more spread his fame. It is a complete confirmation of what we have all along maintained, that the people are ready,

nay, anxious, to rise in acclaim of the man who will show the way to break boss tyranny. As a stroke of political shrewdness alone, Gov. Odell could not have served himself better. If self-respect and the sense of the dignity of his office had not impelled him to resent the insolence of Platt's message, he might well have been moved to it by ambition, by the thought of the rewards that might come to him for spurning the rewards, along with the commands, of the boss. It will ever be, however, a cause of melancholy to reformers that this great demonstration had to be made, not by one of their own class in the Governor's chair, but by a man trained in the straitest sect of the machine politician. Perhaps it was necessary, though, that a man who thoroughly knew from the inside the hollowness of the boss's power, should be the one to strike it contemptuously and crumble it into dust.

We recognize fully the political aspects of Gov. Odell's action, and the expertness with which he strengthened himself in advance for the fated encounter. He did not speak until he knew that the big battalions were on his side. But to-day is not the time to question his motives or discuss his future. He has performed a great public service.

THE STREET-RAILWAY PROBLEM.

The question of the proper attitude for the municipality to occupy toward street railways is again raised by the report to the City Council of Chicago of the Street Railway Commission appointed by that body early in 1900. The occasion for the investigation was the approaching expiration of several of the more important street-railway franchises, and the Commission was to examine primarily "into the feasibility and practicability of the municipal ownership of street railways in this city, and the terms and conditions under which this ownership may be established."

The Commission consisted of seven members of the City Council, and was assisted in its labors by an expert secretary, to whom much of the work involved in the report may be attributed. Its recommendations were summed up in the form of a bill, to be presented to the State Legislature, its essential features being provisions for submitting grants of municipal franchises to popular vote, for possible municipal ownership and operation of street railways, for the regulation of municipal debt incurred in acquiring such property, and for the control of private companies operating leased municipal lines.

Ordinances granting franchises are to be passed in the usual way by the local City Council, and, if approved by the Mayor, are to go into effect within sixty days, unless within that time a petition shall be presented signed by a number of voters equal to 10 per cent. of all the votes cast at the last Mayoralty election. In that case the franchise bill is to be submitted to popular vote, and if it fails of a majority, it will be rejected. Franchises may contain the provision that street-railway property shall revert to the city without compensation upon the expiration of the period for which they were granted, and in any case the property of companies may be taken by the municipalities upon such occasions, under condition of payment for it at a fair valuation. Every city is to have power to own, construct, and lease street railways within its corporate limits; and, should funds be required in carrying out the policy of municipalization, they may be obtained by the issue of "street-railway certificates." These obligations are not to constitute a liability of the corporation itself, but shall be secured upon a so-called street-railway fund, to be made up from the rents or incomes derived from the roads, according as they may be leased or directly operated. In case a policy of leasing be pursued, the corporations controlling the lines are to make complete and frequent reports concerning their financial operations, in which they shall specify the amount of their capital stock, cash payments on such stock, extent of assets and liabilities, receipts and disbursements, and numerous other details.

The report follows the suggestions of the most careful among recent students of municipal conditions, in providing for a law of general scope, applying to all municipalities alike, yet leaving to each full power of local control. Further, the law is moderate in its provisions, since most of its sections are merely permissive, and do not compel the acceptance of any specific policy by a particular municipality. "The Legislature, in considering the bill herewith presented," says the Commission, "is not called upon to decide whether the policy of municipalization for any given city is expedient. The Legislature ought to give the power to municipalize, leaving every city to decide for itself, according to the conditions there existing, whether or not it be wise to exercise the power, and to what extent." The bill does not even suggest the immediate operation of the lines by the city of Chicago, if the policy should be accepted there. Indeed, the Commission expressly states that, in its opinion, such a policy would be unadvisable, though it believes that "it would be wise for the city, at the earliest practicable time, to acquire ownership of the trackage, and whatever may form a part of the public street."

The question of really vital interest is, after all, the old one whether or not municipal ownership, either with or even without municipal operation, is feasible in the United States at the present time. Yet it is precisely upon this point that the Commission fails to throw any light either as to general or local conditions. After emphasizing the need for public control, the Commission points out that, in attempting to devise a system of public oversight, the two important considerations are that adequate powers be reserved to the governing authorities, and that special machinery be created for the purpose of insuring the intelligent exercise of such powers in the interest of the public. What assurance there would be that such adequate powers of control would be properly exercised even with the aid of any amount of "machinery," the Commission fails to indicate. The gist of the whole issue is tersely stated by Prof. J. Laurence Laughlin in a letter to the Commission. He raises the question whether the average citizen will be more honorable or conscientious when the street railway which passes his door is a municipal one, than if it were owned by a private company, and suggests that it may be an even thing whether it is worse for private corporations to bribe Aldermen to obtain franchises, or for unprincipled politicians to exploit for their own advancement and enrichment the properties owned by a municipality.

The truth is, that there is no recognized principle, economic or political, which can be appealed to as dictating action either favorable or adverse to municipal ownership. The whole problem is essentially one whose solution must depend upon special considerations of expediency and local conditions. The real question, therefore, is whether the advocates of municipal ownership can substantiate the claim that, under the present conditions of American municipal life, as they exist in Chicago, for example, decisions in favor of public ownership will be wisely taken or honestly carried out. Will municipal ownership, in short, assure a higher degree of honesty and efficiency than has obtained under private control? The burden of proof rests upon the advocates of the new policy. The Chicago Commission asserts that control of public means of transportation "is a governing function," which "ought not to be surrendered." But this is only a doctrinaire statement. The decision as to what is the wisest course must be based upon general observation of actual conditions, not upon mere opinions.

THE GREAT JORDAN "FAULT."

JERUSALEM, January 9, 1901.

The depression in the crust of the earth extending from Antioch, in Syria, through the Jordan valley and Dead Sea to the Gulf of Akaba and the Red Sea, was pronounced by Humboldt to be the most remarkable geological phenomenon anywhere to be found in the world. Its total length from north to south is more than 500 miles, extending through seven degrees of latitude. Its width

is never more than twenty-five or thirty miles. Its sides are formed by precipitous mountain slopes rising several thousand feet above it; while its central portion, extending from Lake Huleh to the Dead Sea, is below the level of the ocean, reaching at the surface of the Dead Sea a depth of 1,290 feet and at the bottom 2,600 feet below the Mediterranean. Twenty days in the saddle have enabled me to obtain a vivid conception of this most interesting region and to add something, I hope, to the facts concerning it which have been previously made known.

From Beirut to Damascus a narrow-gauge railroad carries one over the Lebanon Mountains and across the valley intervening between them and the Anti-Lebanon range. This valley, known as Cœle-Syria, is about ten miles wide, and, though 3,000 feet above the sea, is bordered by mountains rising from 3,000 to 7,000 feet higher. Baalbek occupies its central portion, being on the divide between the Orontes River, which flows to the north, and the Litany, which runs to the south as far as the base of Mt. Hermon. On first looking down upon it one might suppose it to be a long, narrow lake-basin which had been filled with sediment; but closer attention shows that it is a synclinal depression, open at both ends, which has been levelled up by subaerial erosion and covered with the fertile wash from the limestone slopes on either side. Its productiveness is phenomenal, and it is still capable, as in all past time, of supporting a dense population. Under the protectorate of European Powers, it is fast regaining its former importance.

The Litany River, after running about eighty miles to the south and reaching a level of 2,000 feet above the sea, suddenly turns to the west and crosses the Lebanon range, making the descent to the Mediterranean in about twenty-five miles. In this part of its course it has probably taken advantage of a "cross fault," of which there are several examples farther south, which has opened a channel to the sea. But, in addition to this cause of the sudden deflection across the Lebanon range, another exists in the enormous amount of volcanic material which fills the valley west of Mt. Hermon. We had an excellent opportunity to see this after coming into the head of the Jordan Valley at Banias. The basaltic masses of rock here extend entirely across the valley, and rise in successive steps as far as the eye can reach towards the north. In every respect they are in striking contrast to the fruitful limestone strata of the mountain slopes on either side.

From Damascus we took horses on December 17 for Jerusalem. As we had no tents, we depended on finding shelter in the villages wherever we should happen to be. Our first stopping-place was Hineh, a Syrian village on the southeastern flank of Hermon, twenty-eight miles from Damascus, and nearly 5,000 feet above the sea. Our shelter was the house of the Russian priest, who was both pastor of the church and teacher of his native language in the parish school. The house was on the side of a hill, and furnished shelter for animals in the lower story. We ascended to the family residence by ten or twelve stone steps, and found there a platform in front of the door, on which all could sun themselves in pleasant weather. This, like the roofs of the houses upon which we could look on the lower portion of the hill, was covered with dirt, well compacted through use of a stone roller. There were no glass windows in the house. The only way of admitting light was by opening the doors and the close wooden shutters on one side. A young Syrian woman who had been educated at the Scotch Mission in Damascus, and was here as a teacher in the school, was occupying the only spare room in the house. This she vacated for us. But there was no means of warming it, and as a storm came on which shut us in for all the next day, we had ample opportunity to experience some of the discomforts in the life of the region. The priest and his family of six or seven were all living in the adjoining room, where they slept and ate and cooked and warmed themselves by an open fire with no chimney to afford escape for the smoke and poisonous gases. Their only fuel was a scanty supply of corn cobs. During the evening and the following day nearly the whole village came in to see us and to shelter themselves from the driving sleet and snow. Their cheerfulness under these conditions was a constant surprise to us.

Among the visitors was a blind girl, about ten years old, whose father was dead, and who had no shoes or stockings. My compassion moved me quietly to give ten francs to the young Syrian woman who was her teacher, with which she promised to send to Damascus on the following day and buy shoes and stockings for the unfortunate girl. But I found later that it would have taken a fortune to clothe all the bare feet of the village. When the wind had abated, on the third day, but while snow was still falling, we ventured to cross the remaining spur of Hermon. Though the snow was a foot deep, it was no uncommon thing to see a buxom lass stalking barefooted through the streets of a village, with a heavy load on her back. One of our muleteers had nothing on his feet but slippers, one of which was so loose that it kept coming off. After many vain attempts to keep it on, he at length deliberately took it off and tucked it under a strap which held on his mule's load, and cheerfully waded through the snow barefooted the rest of the day. I noticed, however, that on the next day he was very quick to appropriate a pair of well-worn socks which I cast aside before starting in the morning. It is difficult to estimate the extent to which human beings can inure themselves to the inevitable hardships of life.

On descending to the Jordan valley above Lake Huleh we reached sea-level, leaving the snow line 3,000 or 4,000 feet above us, and rode along the edge of the low plain which extends about fifteen miles to the north of the lake. Near the lake this becomes so marshy that it cannot be crossed, but the most of it is cultivated by the Bedouins, who were already out in great numbers putting in seed, with their oxen and ploughs. On passing one of their numerous villages of black tents, we were accosted in good English by a Bedouin, who said he had been in America, and asked us to stop and take coffee with him. Twice before we had been thus accosted by Syrians who had been in the United States. At the annual meeting of the Presbyterian Mission in Beirut, which we chanced to attend, much was said about the tendency of their converts to emigrate to America. In one group of churches containing a membership of 400 or 500, 130 had gone to America. It is contrary to law for them to leave the country; but the day we were at Beirut the Governor was persuaded to go out of the city for a few hours, while a whole shipload went a few miles out in the other direction and embarked for our country. The woman in the Jewish colony at whose house we stayed one night, later on, told us that her husband was in America, and she should follow him as soon as possible. The difficulty of keeping the leaven in the country which is so necessary for its regeneration, is one of the most discouraging factors in the problem of Turkish civilization.

The Jewish colony to which reference has been made, is one of those sent out by the Rothschilds, who have purchased a large tract of fertile land to the southwest of Lake Huleh. This is being rapidly brought under high cultivation, and villages of modern appearance are springing up over it. El Janneh, where we stayed, is well up on the flanks of the western mountain slope, and is surrounded with vineyards and mulberry groves for the culture of silk-worms. The village is paved and well supplied with water, and roads are built so that wagons can be used. A small silk factory, run by steam, gives employment to about 100 men and boys. Altogether the settlement has a very thrifty appearance. But it is impossible to tell how much of the thrift is due to the outside capital which is being used for temporary needs. The Jews are not natural agriculturists, and all their colonies in Palestine are still, to a considerable extent, recipients of charitable aid, especially in the support of schools and in providing medical assistance.

Lake Galilee is more than 600 feet below the level of the sea. One of the most marked of the "cross faults" of the region extends westward from the Jordan valley a little north of the lake. This is known as the Plain of Esdraelon, and falls down in its highest part to about 400 feet above sea level. The north side of this "fault" appears as a series of precipitous cliffs running east and west and a little south of Nazareth. Mt. Tabor is an outlying block projecting part way into the plain. An English company has a railway from Acre on the coast partly graded through this pass; but, for some reason, work upon it is suspended for the present.

The feature in the Jordan valley to which we gave special attention is the terrace of fine sediment, about 650 feet above the level of the Dead Sea, which completely surrounds it, and stretches far out beyond each end. This, however, attains its full height only near the margin of the valley. Towards the middle of the valley it descends, either by a gradual slope, or by a succession of more or less well-marked terraces, of which we counted twelve near the south end. Where the shores are precipitous and no streams are entering from the sides, the material consists of coarse débris, somewhat water-worn, which has fallen from the cliffs. But, whenever a water-course comes in from the bounding highlands, there is a delta-like extension corresponding in extent to the size of the stream which has contributed the material. These are, however, not characteristic of the north end of the shores, for the reason that the sea is here so deep as to have swallowed up all that the shores have heretofore brought within its reach. The delta-

like extensions of the terrace are very pronounced about the southeast, the Lisan being most prominent of them all. It is clear enough that in a recent geological age, the water-level in the valley stood for some time about 700 feet higher than now, and has gradually receded to its present level.

The cause of this fluctuation in the level of the Dead Sea opens an interesting field of speculation. By most recent writers it has been connected with the glacial period, like that of the filling up of the Salt Lake basin in Utah. As long ago as 1862 Sir Joseph Hooker announced that the cedars of Lebanon were growing on a terminal moraine. As they are 6,000 feet above the sea, this is quite likely the case; but I could detect no evidence of glacial action anywhere in the Lebanon region which we visited. There was certainly no general glaciation of the region. Still, as it is probable that the glacial period was characterized by increased precipitation and diminished evaporation over a bordering area of considerable extent, it affords an easy explanation of the rise of water in the Jordan valley. I observed, also, near the south end of the Dead Sea, evidence that the silting up took place to a large extent during a gradual rise in the water. The coarse material near the bottom was frequently so far out from the old shore, and so covered with thick strata of fine sediment, as to render no other supposition than this possible. The glacial period affords the best explanation of this.

The slopes of the whole range are so steep, and the trails so nearly impassable, that one wonders, in travelling over them, how even the present scanty population manages to live. But the limestone, like that of the Blue Grass region in Kentucky, rapidly disintegrates, and furnishes the elements needed for vegetation. By extensive terracing, the scanty soil was formerly all retained in place on the gentler slopes, while forests protect the higher and steeper slopes. It will require all the power of a centralized government and of concentrated capital to restore its former fertility. Such trails as we were compelled to pass over, south of Nabulus and all about the south end of the Dead Sea, are scarcely to be paralleled in the most inaccessible portions of the Rocky Mountains. Still, it is surprising how much can be transported on the backs of camels, mules, and donkeys, and how satisfied people can be amid the disabilities of such conditions as here exist. They need no shoes, little clothing, and scarcely any fuel. On the whole, they seem as well satisfied with their conditions as do those in the more favored portions of the earth.

G. Frederick Wright.

Correspondence.

DUTCH WASHINGTONS.

To the Editor of The Nation:

Sir: The following letter from a Washington has been found among the papers of Benjamin Franklin, and is interesting because of the glimpse it gives of the Dutch Washingtons. In the genealogical table of the pedigree of Washington of Adwick-le-Street, given by Sparks, James Washington, a son of Robert of Leeds, who died in 1674, is described as a "merchant at Rotterdam," but his descendants are not traced. This Robert was a contemporary of the two Washingtons who emigrated to Virginia. As Adwicke is in Yorkshire, I turned to Dugdale's 'Visitation of Yorkshire,' made in 1666, and find that Robert is there described as a "merchant in Holland," thus moving the migration to Holland one generation back of that mentioned by Sparks. Very probably it was political troubles that drove Robert out of the country, as one of his brothers, Darcy, died in the garrison of Newark, being then in the King's service, and another brother, James, died in the last siege of Pomfret Castle. I believe no link connecting this Yorkshire family with the Sulgrave Washingtons has yet been discovered, but this letter may serve a purpose in drawing attention to the Dutch branch.

Worthington C. Ford.

Boston, March 16, 1901.

Monsieur

Je me sçait faire des Excuses suficantes, pour la Liberté que je prend, ma seule Esperance Consiste en votre bonté, qui j'espère me pardonnera, pour la situation dans la quelle je me trouve. J'ai L'Honneur de porter le même Nom de ce Grand General Washington, & Comme notre Famille est Angloise, et preuve quelle á été distingueé puisque mon grand Père, le dernier de notre Famille qui est né la a reçus la Coppie de nos Armes hors la Maison du Roi, ou que L'original Existe actuêllement.

Un Joseph Washington s'a fait fameux, par le changement accepteé, qu-il á fait dans les Loix en Angleterre. Et Comme Mons. le Collonel Bentinck, qui á eut L'honneur d'avoir servit sous les Ordres de son Excellence, m'assure, que ce General seroit Anglois, et assez bon de me pardonner ma Liberté j'ai prit la resolution de lui Ecrire une Lettre en Anglois, dans la quelle je L'envoye une Coppie de nos Armes, j'espêre son Excellence me pardonnera ma maniére d'agir et quel obligation ne L'auroige pas, cy me daingeroit L'honneur de me tirer hors de mon incertitude je ne savois prendre un chemin plus Court, et plus sur, que de m'adresser á vos bontés vous pryant bien sumissivement, de me pardonner, et de prendre la pêne de vouloir Envoyer L'envelloppeé a ce Fameux General j'amais une personne au Monde, vous aura une obligation vive Comme la miënne.

Mon Grand Pere Comme je vient de marquer, venant ici en Hollande, c'est marié á une demoiselle Wijnantz, par quel mariáge nous sommes parenté, á des tres bonnes Familles de ce païs ci, Comme mon Oncle Roese qui a été General en Cette service, son Fils actuéllement est une Membre de leurs Hautes Puissanses, et Bourgemêtre de Swoll.

Mon pere qui est mort depuis douze Ans, j'avois en ce tems dix, et suis pour le présent, un des Anciens Lt: au Regimt; du General Major Van Aerssen van Sommessdyck.

J'ai encore deux Oncles, Frêres de mon Pere, qui ont des charges Pollitique, et demeurent à la Haye.

Si j'avois pas toute ce Famille, autre ça une Mêre bien chérie et grace á Dieu par dans le ças de me plaindre de la Fortune, j'aurois de puis long tems me rendu en Amerique mais pour quiter tout ces Liens, & de n'être pas sur de son fait, serions des démarches bien Légêres.

Mais cy je pourois me Conter de la Famille de ce Fameux General, pas un moment de Hésitation, ou je Volerois vers Lui, pour faire en sorte, de meriter le nom d'un cy Grand Homme, en y atribuants tous mes efforts!

Ayer donc la bonté Monsieur, de Lui Envoyer L'Envelloppée ma sensibilité sera parfaite, et j'amais une personne vous sera plus redevable que moi, qui á L'Honneur d'être, avec un respect le plus profond du monde.

Monsieur,

Votre tres Humble et tres Obeissant Serviteur,

J. Washington.

á le Haye 30 de Decemb.:

1777.

ÆSCHYLUS OR SOPHOCLES?

To the Editor of The Nation:

Sir: In acknowledging the receipt of my book, 'The Ballad of Manila Bay, and Other Verses,' Mr. Thomas Bailey Aldrich kindly called my attention to what he regarded as a mistake in the title of the sonnet, "To Shelley's Sophocles," the sub-title of which reads: "The book, now in the Bodleian Library at Oxford, was found in Shelley's hand after the body was washed ashore." I take the liberty of quoting from Mr. Aldrich's letter:

"Are you not mistaken about the volume of Sophocles being 'found in Shelley's hand'? When the body was washed ashore in the Bay of Spezia, it is said that a volume of Aeschylus was found in one pocket of Shelley's jacket, and in the other Keats's poems, 'doubled back, as if the reader, in the act of reading, had hastily thrust the book away.' Such, at least, is the statement of Mr. Symonds in his life of Shelley (English Men of Letters)."

I find also that Professor Woodberry, in the first volume of his Centenary Edition of Shelley's Poetical Works (Memoir, p. lxxxii.), has given in full the quotation from Trelawny: "The tall, slight figure, the jacket, the volume of Aeschylus in one pocket, and Keats's poems in the other, doubled back, as if the reader, in the act of reading, had hastily thrust it away, were all too familiar to me to leave a doubt on my mind that this mutilated corpse was any other than Shelley's."

On the other hand, Professor Dowden, in the second volume of his life of Shelley (p. 529), thus comments in a note: "The 'Sophocles' of Trelawny's 'Recollections' (1858) is changed to 'Aeschylus' in his 'Records' (1878). Mr. Garnett, in his article on 'Shelley's Last Days,' also says 'Aeschylus.' In August, 1886, I had in my hands the volume preserved at Boscombe Manor as that found in Shelley's pocket, and I made certain that that volume is Sophocles."

To confirm the accuracy of my own note-taking in the Bodleian, I wrote to my friend Mr. W. R. Morfill, professor of Russian literature in the University of Oxford, and examiner in English literature for the University of Cambridge, and his reply has just come:

"As regards the Shelley volume, I have gone fully into the matter for your benefit and inspected carefully the documents. The evidence comes from Lady Shelley, the poet's daughter-in-law, and may be relied upon. The book is a copy of *Sophocles*, Oxford edition, 1809, two volumes bound in one. It is true that Shelley *held it in his hand*, and was clasping it when his body was found. This is attested in documents under the hand of Lady Shelley, and they are bound up in a volume as *pièces justificatives*."

It would seem, therefore, that certain of our literary authorities should be revised, in the light of Professor Dowden's note and of these Bodleian documents.

Horace Spencer Fiske.

University of Chicago, March 19, 1901.

SIR HUDSON LOWE.

To the Editor of The Nation:

Sir: Now that the microbe of militarism is ravaging far and wide so that war is justified by one notable writer, glorified by another, and, by Lord Rosebery,

apologized for in the person of its truest modern exponent, Napoleon, may a looker-on breathe a word on behalf of that much pilloried individual, Sir Hudson Lowe? Or, rather, may I call into court one who has a good word to say for him—one who was a canny Scotch woman, of wide social experience, and a shrewd judge of men and things? This gentlewoman, first Miss Grant, later Mrs. Smith, wrote an account of her life, called 'Memoirs of a Highland Lady,' and the mention of Sir Hudson Lowe may be found on pages 459-460 of this work.

Captain and Mrs. Smith, on their way home to England, stayed for awhile at Colombo, Ceylon, and were pleasantly entertained by a Scotch friend, Campbell Riddell. Festivities were frequent, and concerning one of these Mrs. Smith says:

"At the first of these entertainments I was taken to dinner by a grave, particularly gentlemanly man in a general's uniform, whose conversation was as agreeable as his manner. He had been over half the world, knew all celebrities, and contrived, without display, to say a great deal one was willing to hear. About the middle of dinner the Governor called out, 'Sir Hudson Lowe, a glass of wine with you'—people did such barbarities then—to which my companion bowed assent. Years before, with our Whig principles and prejudices, we had cultivated in our Highland retirement a horror of the great Napoleon's gaoler. The cry of party, the feeling for the prisoner, the book of Surgeon O'Meara, the voice from St. Helena, had all worked my woman's heart to such a pitch of indignation that this maligned name was an offence. We were to hold the owner in abhorrence. Speak to him, never! look at him, sit in the same room with him, never! None were louder than I, more vehement; yet here was I beside my bugbear and perfectly satisfied with my position. It was a good lesson. He had been sent to Ceylon because he was so miserable at home. People, judging him as we had done, tabooed him remorselessly. He was so truly sent to Coventry that he once thanked Col. Pennington in a coffee-house for the common civility of handing him a newspaper, saying that any civility was now so new to him that he must be excused for gratefully acknowledging it. The opinion of less partial times has judged more fairly of Sir Hudson, his captive, and the surgeon. Timidity and anxiety made Sir Hudson unnecessarily vexatious, Buonaparte was not in a mood to be placable, and Mr. O'Meara wanted money and notoriety, which he gained at no expense."

Too much of latter-day history and criticism consists in taking sides; yet it seems a pity that there should be again held up for contumely an officer and gentleman whose great misfortune it was to be set to guard a military genius—Heaven save the mark!—who had cost England and Europe millions of lives, millions of money, and a sum total of misery which cannot be reckoned.

To all who have any saving grace of humor, however, a complaint of ungentle processes by those who uphold and defend war seems rather droll. War is the peculiar thing in which the end is believed to justify the means. Judged by a military standard, therefore, Sir Hudson Lowe is amply justified. He was a military man. He was set to do a certain thing, and he did it. Obedience and success are, according to the present Emperor of Germany (and who knows if he does not?), the soldier's chiefest virtues. Few deny, however, that war teaches bloody instructions which are most direfully successful in returning to plague their inventors. V.

Baltimore, March 20, 1901.

Notes.

In connection with the Clarendon Press collotype facsimile of the Shakspere First Folio of 1623 (the Chatsworth copy), Mr. Sidney Lee, who is to contribute the preface, desires to make a census of extant copies. To any owner he will send a collation, mainly from Lowndes's 'Bibliographer's Manual,' and a schedule of particulars. Mr. Lee's address is No. 108 Lexham Gardens, Kensington, London, W.

D. Appleton & Co. offer their whole extensive list of publications to purchasers "on a subscription basis"—*i. e.*, on payment in easy weekly instalments. This is a new departure of a very radical character, and the operation of it will be watched with interest.

Among Henry Holt & Co.'s preliminary spring announcements we remark 'A Popular Political History,' till Lincoln's death, by Mrs. Viola A. Conklin; 'A History of German Literature as Determined by Social Forces,' by Prof. Kuno Francke; 'Selections from the Divina Commedia of Dante,' with English translations facing the original text, by Richard James Cross; 'The Young Folks' Cyclopædia of Literature and Art,' by John D. Champlin; 'Hypnotism and Suggestion in Therapeutics, Education, and Reform,' by Dr. R. Osgood Mason; 'A Manual of the Flora of the Northern States and Canada,' by Prof. N. L. Britton; 'A French and English Dictionary,' by Prof. A. Hjalmar Edgren and Percy B. Burnet; and 'An Italian Dictionary,' by Professor Edgren.

We select from Houghton, Mifflin & Co.'s spring list 'The Life and Times of William Lowndes,' by H. H. Ravenel; 'English Politics in Early Virginia History,' by Alexander Brown; 'The *Mayflower* and her Log,' by Azel Ames, M.D.; 'Falstaff and Equity,' by Charles E. Phelps, Judge of the Supreme Court of Baltimore; 'The Life Everlasting,' by John Fiske; 'Poems,' by William Vaughn Moody; 'The Complete Poetic and Dramatic Works of Percy Bysshe Shelley,' "Cambridge Edition," in one volume, edited by Prof. George E. Woodberry; 'Every-day Birds,' by Bradford Torrey; 'Content in a Garden,' by Candace Wheeler; 'Substitutes for the Saloon,' edited by Raymond Calkins; 'Penelope's Irish Experiences,' by Mrs. Kate Douglas Wiggin; 'The Successors of Mary the First,' by Elizabeth Stuart Phelps; and the complete works of Macaulay in ten octavo volumes.

Set down for April by Harper & Bros. are the *Sun's* review of 'The Progress of the Century'; 'The Bolivian Andes: A Record of Climbing and Exploration,' by Sir Martin Conway; 'Orations and Essays of Edward John Phelps,' edited by J. G. McCullough, with a memoir by John W. Stewart; and 'Practical Golf,' by Walter J. Travis.

'The Insect Book,' by Dr. L. O. Howard, with large photographic color-plates, will be added by Doubleday, Page & Co. to their nature series.

Announcements by Funk & Wagnalls Co. are 'The Hexaglot Bible,' in six volumes, a European production; volume i. of 'The Jewish Encyclopædia,' complete in twelve quarto volumes; 'Scientific Side-Lights,' classified illustrations, compiled for the benefit of public speakers, writers, editors, etc., by James C. Fernald; 'Holy Days and Holidays,' an anniversary-day encyclopædia compiled by the Rev. E. M. Deems, D.D.; and the index volume to Parker's 'People's Bible,' compiled by the Rev. Henry T. Page.

Thomas Y. Crowell & Co. have nearly ready 'Monopolies Past and Present,' by Prof. James E. Le Rossignol, and the Complete Works of Edgar Allan Poe, edited by Prof. James A. Harrison of the University of Virginia, and others.

John Churton Collins's 'Ephemera Critica' is on the point of being published by E. P. Dutton & Co.

The Century Company has thrown open to the trade its 'Battles and Leaders of the Civil War,' heretofore a subscription work, at a reduced price, in four volumes. This will be good news for small purses.

Macmillan Co. have in press 'American Diplomatic Questions,' by John B. Henderson, jr.

The annual report of the Selden Society gives an account of the progress of its work. Volume xiv. for 1900, 'Beverly Town Records,' was published in November; volume xiii., 'Select Pleas of the Forests,' edited by Mr. S. J. Turner, is still in arrear. Volume xv., the first volume of 'Select Proceedings in the Star Chamber,' is expected to be out on time in the summer of 1901. Provisional arrangements (subject to contingencies) have been made for the following publications in subsequent years: 1902, 'Select Jewish Plea Rolls,' edited by Mr. J. M. Rigg; 1903, 'Year Books of Edward II.,' volume i., edited by Professor Maitland and Mr. Baildon; 1904, 'Star Chamber,' volume ii., edited by Mr. I. S. Leadam; 1905, 'Year Books of Edward II.,' volume ii., edited by Professor Maitland and Mr. Baildon; 1906, 'Glanvill,' edited by Mr. I. S. Leadam. Mr. Richard W. Hale, No. 10 Tremont Street, Boston, is the Secretary for the United States.

The publishers of Johnston's 'High School History of the United States' (Henry Holt & Co.) have always taken pains to keep this well-known text-book up to date, both by furnishing supplementary chapters on each new Presidential period, and by adding bibliographical notes, topical readings, new maps, and new illustrations. The preface of the first edition is dated 1885. Since that time the text has been revised by two editors, Prof. W. M. Daniels of Princeton and Prof. William MacDonald of Bowdoin. The volume which we now have in sight comes fresh from the hands of Professor MacDonald and shows signs of careful editing. Apart from a chapter on the McKinley Administration, the substance of the book remains unchanged. At several points the narrative has been expanded, but asterisks are inserted to point out any departure which has been made from the original words. Professor MacDonald states his aim as having been to add to the book's practical usefulness "without sacrificing its essential characteristics, or doing violence to the principles on which it was constructed." He has kept within the limits of this conservative revision.

The 'Morte Arthure,' an important and attractive alliterative poem of the fourteenth century, well known to English scholars in the editions of Halliwell, Perry, and Brock, is now reëdited for students by Mary Macleod Banks (Longmans, Green & Co.). It is remarkable as being in spirit the least Celtic piece of the Round Table cycle. The story here has little of the mysticity and elfin light which became its chief characteristic in Malory and Spenser. There is a sturdy

Anglo-Saxon quality shot through it, and it is full of a precision in observation and realism in description which continually remind one of Chaucer. In view of this, and of the brisk energy of the whole story, it is peculiarly suited to college reading, and Miss Banks is to be thanked for presenting it in a form so convenient and pleasant. The editing, as a whole, is sound and intelligent. It might have been worth while to discriminate the place of the poem in the Arthurian cycle a little more closely, or, at least, to abstract from Sommer's exhaustive discussion of that point. Particularly good are the scattered notes suggesting the cogent influence of alliteration over the association of names in myth and legend; but it is hard to believe with Miss Banks that the pervasive notion of the fondness of giants for the flesh of young children arose wholly from the similarity in sound of *barn* (child) and *bar* (boar). The vocabulary is the least satisfactory section of the book.

'Elements of Statistics,' by Arthur L. Bowley (P. S. King & Son), is clearly intended for the advanced student, or for one intending to prepare for an examination for entrance into the British public service. The work of Bertillon, however many its merits, was written with the French administrative system in view, and could be of little service outside of France as an introduction to statistics. Mr. Bowley's work suffers from the same limitations, and the Labor Department of the Board of Trade is the main objective of the leading chapters. The schedules of that Department are analyzed, the resulting tables criticised, and most of the examples are taken from reports on wages. This is unfortunate, for wage statistics are notoriously elusive, and even the best are open to grave objections. More than the inherent difficulties in the way of obtaining good results stands the serious neglect shown to this branch of inquiry in the United States, where no two States pursue the same methods. It is to be feared, therefore, that Mr. Bowley's studies will not receive the attention they merit. Upon the subject of averages, index-numbers, and the theory of probability applied to statistics the book is full, and shows that the author is familiar with the most recent work of Pearson, Edgeworth, and others in these lines of investigation. The numerous diagrams included are suggestive and valuable. Yet it is not a book for the beginner, however necessary to the student.

One of the more pretentious of the recent books for the gardener is a bulky volume by Mr. John Weathers, F.R.H.S., from the press of Longmans, Green & Co. The author has endeavored to produce a book sufficiently complete to be of substantial use to the professional gardener as well as to the amateur. The volume opens with a non-technical discussion of the life history of the plant, its methods of reproduction, and the nature and care of the soil. A consideration of the flower garden follows, with lists of varieties best fitted for various situations. The main body of the work is devoted to an exhaustive enumeration of the plants known to horticulture in so far as they are hardy out of doors in Great Britain. Accompanying the account of each species are brief directions for its culture and propagation. This feature of the book is one of decided value, since we here find brought together in a convenient compass the most important information about plants from all parts of the globe. While a few particulars regarding American plants are hardly correct as they stand, the information is, generally speaking, well chosen and fairly accurate.

'A Handy Book of Horticulture' is the title of a small book recently issued by E. P. Dutton & Co. and John Murray, London. The author, the Rev. F. C. Hayes, Lecturer in Horticulture in Alexandra College, Dublin, discusses in an attractive way the problems that present themselves to those who are beginning to study garden-making, and in untechnical language answers many of the questions that are sure to puzzle the beginner. Advice is given concerning the choice of varieties for different situations and the kind of care needed to insure the desired results. The author suggests methods of handling not only the ornamental but also the useful part of the garden. Although written by and for a resident in a British climate, the greater part of the book would prove almost equally useful to amateurs in America.

Another recent book on gardening, which deals with the raising of vegetables only, is by Prof. Bailey of Cornell University. The materials and appliances used by the gardener are discussed, and directions are given for their care and use; advice, too, concerning the kind of soil best adapted for each crop, how the seed should be sown, the plants be cared for, and how best to harvest and market or store the crop. This latest number of the Rural Science Series (Macmillan Co.) is an attractive addition to the list of Bailey's garden books.

M. Émile Boutmy, of the Institute of France, presents in a small volume three obituary essays on men of unequal merit and reputation, Taine, Scherer, Laboulaye (Paris: Armand Colin). The circumstances under which these papers were originally written involved some sacrifice of critical spirit in favor of eulogy, thus giving to Laboulaye a measure of importance somewhat difficult to ratify. How many readers of the present generation know 'Paris en Amérique' or 'Le Prince Caniche'? The study of Scherer dwells chiefly on the moral struggle between reason and faith which resulted in skepticism and (fortunately for literature) determined a critical career. As regards Taine, little is here added to what the world already knows concerning his intellectual life and its influence, but a few discreet remarks confirm the conviction that, with his death, his few intimates lost the privilege of intercourse with a charming personality.

The tendency towards broad generalizations is somewhat too obvious in M. Pierre de Coubertin's last volume on educational theory, 'Notes sur l'Éducation Publique' (Paris: Hachette). In view of the rising tide of democracy, the author holds that certain concessions must be made to suit the immediate practical demands of the next generation or two—chiefly in the reduction of formal study for the sake of knowledge bearing on active life, and of better equipment in the direction of physical culture. The chapters dealing with the last question, being written from minute and special observation, are not only the most interesting, but the most serviceable in the book. Such topics as the education of women and the place of art in educational training, here rapidly dealt with each in a single chapter, are too complex to be disposed of so summarily.

A further excellent addition to the specimens from great writers ('Pages Choisies,' Armand Colin) comes to hand in volumes on Joseph de Maistre, Stendhal, and Turgeneff. Of the introductions the most complete and thorough is that on De Maistre by H. Potez; it explains clearly the grounds of the philosopher's reactionary absolutism, and pays the usual tribute to the austere integrity of his character. It might not, however, be difficult to show that De Maistre's theocratical system is frequently less coherent and consistent than most of his critics seek to make out. In all three cases the extracts are judiciously chosen.

The second volume of Nova Scotia Archives contains a reprint of official letters and documents covering the years 1713-1741. They are interesting for the light they throw upon the manner in which an isolated province inhabited by French and Indians was governed by a handful of Englishmen. The most noteworthy of these governors, however, was not an Englishman, but Paul Mascarene, an exiled Huguenot, and his numerous letters show not only the difficulties of his delicate position, but also the wisdom and firmness with which he ruled his turbulent fellow-countrymen, the "habitans." The editor, Prof. A. M. Macmechan, has contributed a large number of explanatory notes and an excellent index. There is also a plan of the fort of Annapolis Royal in 1710.

An organization which started up in Philadelphia, but which is rapidly extending its work over the larger cities of the Union, and which has the not very happily chosen name of "The Book-Lovers' Library," undertakes to do for readers of books what the circulating libraries fail to do—to furnish service; that is, to deliver books (in neat and fresh condition) every week at everybody's door. One will thus get his ample allowance of reading matter, at least so far as the newer books are concerned, with as little trouble as he (or rather she) now gets the family dinner sent home, or the family shopping. The venture is already very successful, and there is no doubt that it meets a want that will grow by what it feeds on. It is a curious question whether it will have the tendency to increase the size of editions of the popular books by increasing largely, as it is sure to do, the number of those who read them, or to diminish it, by enabling the people who would have read a given book anyway to get on without the trouble of buying it.

—The catalogue of the Rawlinson manuscripts in the Bodleian Library, of which two volumes appeared some time since, has been completed by the addition of two more volumes of entries and one of index. The papers listed in volumes 3 and 4 are of a miscellaneous character, with theology and politics occupying chief place. Of special collections, those of Thomas Hearne, Sir Thomas Browne, and the Rawlinson family are most extensive. There are a large number of Italian historical tracts, and instructions to papal ambassadors in the sixteenth and seventeenth centuries. Among items of special interest we note lists of the members of twenty-nine livery companies of London, in or about 1650; a life of Sir Thomas More, by Nicholas Harpsfield; a collection of 128 state papers, mainly warrants and letters to Percy, King Charles's general of artillery in the Civil War; the journal of the Earl of Sunderland during his diplomatic mission to Vienna, in 1705;

three volumes of proceedings of the synods of the French Protestant Church in the sixteenth and seventeenth centuries, and a collection of tracts relating to the French Protestants; the earliest and shortest text of the travels of Sir John Maundeville; a copy of the 'Quest of the Holy Grail,' in French prose, showing numerous verbal variations from Furnivall's edition, and with considerable additional matter; and a copy of the 'Morte d'Arthur,' with similar divergences from the Paris edition of 1533.

—Papers relating to America are numerous, though none are of the first importance. The manuscript of John Dunton's American narrative, 1685-6, first printed in 1867 by the Prince Society, is here, as are also some letters from George Fox and other Quakers, 1669-75, including an account of Fox's travels in Jamaica and New England, as given in his journal. A copybook of papers relating to the Bermudas, 1615-88, includes a collection of laws, 1623-63, and orders, 1622-61, additional to the printed laws of 1622, and letters and papers regarding the *quo warranto* brought against the Somers' Islands company. There are a number of entries referring to the affairs of New Hampshire and Massachusetts, particularly to the boundary controversy between those colonies. Among these is a letter from New Hampshire, dated July 22, 1720, to Henry Newman, Secretary to the Society for Promoting Christian Knowledge and the Society for the Propagation of the Gospel, appointing him agent in England for that colony, with a salary of £100, and with instructions respecting several matters, especially the delimitation of the boundary. A note to a later entry (vol. iii., p. 558, No. 74) conjectures that this may have been Newman's "first direct commission as sole authorized agent with a fixed salary," since Newman and Jeremiah Dummer had already been employed as agents for the colony. Interesting, also, is an account of the contingent expenses of New York under Bellamont, 1698-9, and Cornbury, 1702-3, and "a copy of the paper which Alderman [Robert] Parker, late of Lynn, laid before the trustees for establishing the colony of Georgia in America, since his retiring from that colony to complain of the maladministrations there," dated London, November 29, 1736.

—Building the tombs of the prophets maltreated in their day is a practice which once met with sharp reproof; but that it has not yet been discontinued witness 'Jonathan Edwards: A Retrospect; Being the Addresses Delivered in Connection with the Unveiling of a Memorial in the First Church of Christ in Northampton, Mass., on the 150th Anniversary of his Dismissal from the Pastorate of that Church' (Houghton, Mifflin & Co.). The volume is edited by Prof. Norman Gardiner of Smith College, who contributes a valuable essay, "The Early Idealism of Edwards," which argues convincingly that this idealism was not derived from Berkeley. Not being, it signifies a wonderful precocity. Dr. H. T. Rose, now pastor of the church from which Edwards was dismissed in 1750, tells the story of his dismissal in a manner that is the more pathetic for its quiet tone. It was certainly a remarkable business, this dismissal of New England's ablest preacher, theologian, and philosopher from the church which he had hung so heavily with the laurels of a great career. Nothing contributes so much to the unity of the various addresses, letters, etc., as the comparison that is made between Edwards and Dante. In the address of Dr. A. V. G. Allen, whose 'Life of Edwards,' so admirable in every way, singled him out for prominence in the memorial proceedings, this comparison is run out into many particulars. The most obvious, Edwards's description of Sarah Pierrepont, whom he married, and Dante's of Beatrice in the 'Vita Nuova,' could hardly escape the dullest person acquainted with the two passages. But we are assured that Edwards's engagement with hell was much less than Dante's; that Edwards's Enfield sermon has tipped the scales of popular judgment of his preaching too much to the infernal side. Dr. Gordon of the Old South Church, Boston, makes the frankest possible disclosure of the departure of the New Orthodoxy from Edwards's sterner doctrines. The bronze memorial, designed by Mr. Herbert Adams, the unveiling of which called for these addresses, is a beautiful portrait in relief, three-quarters length, somewhat idealizing and strengthening a portrait of 1740, and suggesting less the prophet of the Great Awakening than the preacher of the Farewell Sermon, though we are assured that Edwards's manner was never so hot as his matter.

—'Under England's Flag' (Macmillan) is not, as might be inferred from the title, another fervent essay in patriotism, like Dr. Fitchett's 'How England Saved Europe.' It is a rather ill-named piece of autobiography which centres around certain episodes in the life of Capt. Charles Boothby, R. E., during the years 1804-09. The book itself is a sincere and straightforward description of campaigning in the two Sicilies and the Peninsula, with passages concerning Sir John Moore's expedition to Sweden. Capt. Boothby never rose to high military rank, nor did he reach such general distinction as is represented by a place in the 'Dictionary of National Biography.' But his journal shows a quick appreciation of military and political tendencies, besides a degree of cheerfulness which at once commends his writings and his character. This impression is confirmed by numerous family letters which are also printed. The Boothbys are known to picture-lovers by Sir Joshua's delightful portrait of the little Penelope Boothby; and Hoppner's portrait of Capt. Boothby's mother, Lady Rafela, is a vigorous piece of work. The private life of the family seems to have been delightful, and we seldom see a young man's loyalty to his father better illustrated than it is here. We must warn "preface readers" against taking their impression of this volume from the author's very evangelical remarks; not that they are out of place, but because they create the wrong idea that the contents will probably have the character of a tract. The book was written in 1824, though it is now published for the first time. We should also connect it with 'A Prisoner of France,' which has already been printed, and wherein are described the later acts of Capt. Boothby in the Peninsular war. We are unable to comment in detail upon his various adventures prior to 1809, but there is one admirable feature of the whole narrative which we must mention—its honesty of tone. While Capt. Boothby did his soldier's duty, he could not shut his eyes to the vileness of war, nor could he withhold his pen from describing it. Lovers of glory may find it useful to read a short passage about the Battle of Maida. "It was a field of battle smoking with recent carnage, peopled with prostrate warriors distorted with the death agony, harnessed for battle in gay colors, feathers, and gold, but stained and bathed in their own life-blood, having on that gory bed closed all the sanguine, joyous hopes of life. A sight so disfigured, what heart of rock could long dry-eyed behold!"

—The most magnificent sanatorium of ancient or modern times was, probably, that group of edifices which sprang up, by degrees, around the temple of Æsculapius at Epidaurus. Pure air, charming mountain scenery, elaborate hostels and baths, gymnasiums, a stadion, a library and music-hall, the most beautiful theatre in the Grecian world, were among the attractions which drew hosts of invalids and their friends to this resort, while the god himself, assisted by his satellites and his sacred serpents, appeared to the sick in dreams, and worked cures and miracles which are attested by official records accidentally preserved to us. Year by year, since 1880 or thereabouts, new structures have been excavated, and the precinct exceeds in extent even those of Delphi and Olympia combined. A good general description of the latest results of these excavations and of the probable purpose of the various buildings is furnished in two lectures by Richard Caton, M.D., on 'The Temple and Ritual of Asklepios,' delivered at the Royal Institution of Great Britain, and printed by the Cambridge (Eng.) University Press (New York: Macmillan Co.). They are illustrated by several restorations and about thirty photographs. Dr. Caton's point of view is that of an intelligent amateur who has repeatedly visited and examined the ruins and has availed himself of the latest authorities, including the treatise of Cavvadias published last year. As a physician, his opinion is, of course, striking and valuable with regard to certain technical matters. The dormitories, he thinks, could not have accommodated more than four or five hundred patients. The *abaton*, a lofty and airy sleeping-chamber, its southern side being an open colonnade, "is singularly like the shelter-balcony or *Liegehalle* now used in treating phthisis. . . . There can be little doubt that many of the sick benefited greatly by the rest, the pure air, the simple diet, the sources of mental interest, the baths, exercise, massage, and friction, and in later days by the actual medical treatment adopted. Surgery was also employed." In fine, the sacred precinct necessarily gave opportunities for scientific study, and in the lapse of time had its resources reinforced by scientific methods from outside.

—Dr. Caton tantalizingly refrains from any speculation as to possible resemblance of the alleged cures to those of modern hypnotism or suggestion, nor does he compare the miracles with those of modern shrines. The preposterousness of some of these and of their method, as noted on page 38, is slightly modified if we remember that the patient *dreamed* his head was cut off, etc., though the text is imperfect. It cannot be true that the theatre was built 450 B. C. (p. 18), and the Tholos in the fourth century B. C. (p. 10). They both, probably, must be

ascribed to the middle or latter part of the fourth century. Nor was it possible for "priest and patient to attend theatrical representations *constantly*"; the theatre in classic times was an intermittent luxury. The matter-of-fact style and statements of Dr. Caton will bear supplementing; and the casual English reader may profitably turn to Diehl or Dyer, and especially to the beautiful chapter in 'Marius, the Epicurean.'

—The troubles in China almost make one forget that Japan, too, had once her "Boxer period," and that for years it was the hope of earnest, but misguided, patriots, as well as swashbucklers, that the foreigners would all be driven into the sea, and the Divine Country be again shut up from the world. A volume recently published in Tokio, entitled 'Eshin Funinroku' (literally, revolution, wind-sky record), and treating of the period of storm and stress before 1870, by Baron Suyematsu, now Minister of the Interior in the Imperial Cabinet, brings out this anti-foreign feeling very clearly. The author, who has already distinguished himself by a translation in English of one of the best-known works of the Middle Ages, the 'Genji Monogatari,' is now engaged in writing 'Kai Ten Roku,' a history of the movement that culminated in the revolution of 1868, which will be of high interest. To secure facts not to be found in written documents, he interviewed the Premier Marquis Ito and Count Inouye. Both of these patriots have survived the period of swords, clubs, and topknots, the dangers of foreign ships and lands, the bloody escapades of clan feuds, and the murderous attacks of foreign-haters, and, still worse, the sentimental necessity often laid on gentlemen of the old school to commit harakiri. They are yet in high place, but always, whether in or out of office, are and have been for a generation the first subjects of the Emperor. Ito, we believe, is unscarred; but Count Inouye, for once daring to speak in favor of Western civilization, was cut and left for dead, his wound extending from shoulder to thigh. With the rough surgery of a comrade, who used ordinary tatami (rice-straw mat), needles, and common twine, to sew up the gash, his life was saved. The book gives a vivid picture of the days when narrow-minded rulers and patriots wished to keep Japan closed, or to borrow foreign forces only to keep the alien out. Yet no instances of mob violence are known as in China, but only the actions of individuals or groups of clansmen. Unlike China, Japan had a dualism in government. The energies of loyal patriots were therefore utilized in destroying what was historically a usurpation. What is most remarkable about this book is the absolute frankness with which everything in the past is laid open. Nothing is concealed. Both the author and the high officers who furnished the information seem to take the greatest pride in giving the truth, the whole truth, and nothing but the truth. Yet it is exactly this very spirit and procedure which are as different from the old Japan, which was moulded under Chinese influences, as the Japan of our day, in all her ways and works, is different from the China of 1901. It is a fresh and striking contribution to that study of Altaic psychology which challenges the attention of students of the East and of humanity in general.

WILLIAM JAMES STILLMAN.

The Autobiography of a Journalist: William James Stillman. 2 vols. Boston: Houghton, Mifflin & Co. 1901.

"You don't give dates enough, I think—there's one fault for you!" So Edward FitzGerald reproached Fanny Kemble a quarter of a century ago. Mr. Stillman has anticipated this objection in his own case. "Of a life so desultory, fragmentary rather," he says (p. 467), "it is useless to keep the chronology," and in his preface: "In what is peculiar to myself, and so of relatively trivial moment, dates and the order of events are of little importance." He has not, however, neglected the order of events, though between page 2, which records his mother's birthday, and page 118, there are but two dates, and from one of these alone his own birth-year (1828) is left to be inferred.

His native place, equally uncertified, was Schenectady, N. Y. His stock, however, was pure Yankee—on his father's side, from Connecticut by way of Rhode Island, where it mingled with the Rhode Island Maxsons, of whom his mother was one. Readers of the *Atlantic Monthly*, in which some instalments of this autobiography have already seen the light, will recall the elaborate study of the parent to whom the youngest of nine children was most and fondly attached. The story opens with this painfully impressive delineation of "A New England Mother and her Family," whose self-tormenting Seventh-Day Baptist Puritanism has been completely outgrown by the author—"by a purely evolutionary process, without revolt or revulsion"; just as the keen and unerring sportsman has been converted into a loather of the needless taking of animal life. There was a successful revolt from senseless paternal severity, ending in the boy's running away to New York; and he was fortunate in obtaining a college education against his father's opposition. This—at Union, under Dr. Nott, of whom there is an excellent presentation—and an innate love of nature and of art were the leaven which was to work the spiritual transformation. But, also, we must read between the lines a personality of rare attractiveness, such as made his oldest brother Thomas his generous benefactor while he lived, and such as caused him to be received with open arms in the famous and fastidious Cambridge circle of the early fifties. "You came into my loneliness," said Lowell, alluding to the loss of his first wife, "like an incarnate inspiration." Any one can understand this who looks at the charming frontispiece portrait from Rowse's drawing of 1856.

It is the head of the budding artist, the first pupil of the late F. E. Church, idealist enough to resolve on going to Europe with the thirty dollars fetched by his first painting; of the already established protégé of Ruskin, for whom he was to name his eldest boy; of the companion of Rossetti, Millais, and the Pre-Raphaelite group; of the budding journalist, the founder of the *Crayon*. Also, in what is by far the most romantic personal episode in the whole narrative, of the ardent emissary of Kossuth. Perhaps we may pause here to quote Mr. Stillman's judgment of a celebrity disastrously tried by the touchstone of American abolitionism during his fruitless visit to America. "Incompetent conspirator" he is called on page 153, and on page 162 he is dismissed in this passage:

"More than thirty years after [1853], I went to see Kossuth at Turin, and introduced myself as the young man who went to Hungary for him to carry off the crown jewels. He burst out with an impetuous denial of the existence of the expedition. 'But,' said I, 'I have your letters written to me in Pesth.' 'I should like to see those letters,' he replied. I promised to send them, conditionally on his promise to return them; but, thinking it over, I sent him only one, enclosed in a stamped envelope directed to myself, with a letter recalling the promise to send it back. I never heard from him again, however, and saw that he only wanted to get the letters to suppress their evidence."

The memorable Adirondack Club, formed under Mr. Stillman's enthusiastic leadership, has been described by his pen before, and no one can have forgotten the tender Emerson eager to kill a deer, and paralyzed in the act by the Genius of the place, which wanted him for higher ends. The present rehearsal and the chronicle of Mr. Stillman's stay in Cambridge, which confirmed some of his most lasting and beneficial friendships, afford opportunity for painstaking interpretations of Emerson, Longfellow, Agassiz, and, above all, Lowell—who has a whole chapter to himself, wrought with acute sympathy for the poet's crushing bereavement, as is manifest when Mr. Stillman opens his own permanently wounded heart in grief for his ill-fated boy Russie. We shall not quote from these portions, but, shifting with the scene to England, will give this picture of the poet Clough (one of the Cambridge circle by temporary adoption), better, perhaps, for its brevity than some of the more labored (page 302):

"Of all the people of the poet's temper I ever knew, Clough was the least inclined to talk of poetry; and, but for the sensitive mouth and the dreamy eye, with a reflective way he had when talking, as if an undercurrent of thought were going on while he spoke, one might have taken him for a well-educated man of business, a poet-banker, or publisher. Perhaps it is in the memory more than it was in the life, but, as I recall him, there seemed to be in him an arcanum of thought, something beyond what came into every-day existence—a life beyond the actual life, into which he withdrew, and out of which he came to speak. I should have liked to live beside him and know him always, for in that phase of him was infinite study. What I did see, however, left on me the impression of a man who was able only to sketch out the life he would have lived—a life of far greater capabilities than anything accomplished could indicate."

In many periodicals and on many occasions, Mr. Stillman has told of the cooling of Ruskin's attachment for him, of the disastrous effect of his doctrine on his own art, and of his ultimate emancipation from the doctrine. It is cursorily treated here, but sufficiently, and we need not dwell on it. We must pass over, too, the glimpses of French artists of renown with whom a sojourn in Paris made our American acquainted. Failure to be accepted for enlistment in our civil war was the turning-point in his career, for he committed, in his view, the error of his life in accepting a consular appointment in 1865 to Rome, then Papal territory, in lieu of Venice, which he sought for, but which Mr. Howells obtained without desiring it. "All the disasters of my subsequent life," he observes, "came from that error," namely, of "having accepted the miserable and delusive advantage of an official position under my Government."

"But my position was a difficult one. The arts were, for the war times, suspended"; and he could not well live with his relatives. The Roman chapter is one of the sprightliest in the book, and will always be valuable to students of our perverse consular system. "Of a minister of the United States of America found drunk in the streets of Berlin by the police, and a chargé d'affaires who, in an outbreak at Constantinople, hoisted the flag over a brothel he frequented, the memory," says our author, "is, perhaps, too old to have reached men born much later than I; but, for the twenty years of my first knowledge of European matters, our representation abroad was a disgrace to America" (p. 371). We remark for this period some details regarding the Brownings, and some uncompromising censure of Charlotte Cushman.

The second volume is for the most part a condensation or restatement of what is to be found in Mr. Stillman's 'Cretan Insurrection of 1866-68' (1874) and 'Herzegovina and the Late Uprising' (1877), works of lasting historic value. The epitome will be found full of interest and variety of adventure. The second work just named we owe to the first, for, reviewed by Prof. Max Müller in the *Times*, it recommended Mr. Stillman to that journal as a correspondent, which he ceased to be only on attaining the age of seventy. Speaking of his first impressions in Crete, whither he was transferred as consul from Rome, and where he played a highly important part in the course of affairs, Mr. Stillman writes (p. 378):

"I have since seen a good deal of Turkish maladministration, and I am of the opinion that more of the oppression of the subject populations is due to the bad and thieving instincts of the local officials than directly to the Sublime Porte, and that the simplest way of bringing about reforms (after the drastic one of abolishing the Turkish Government) is in the Powers asserting a right of approbation of all nominations to the Governorships throughout the whole empire. When, as at certain moments in the long struggle of which I am now beginning the history, I came in contact with the superior officers of the Sultan, I found a better sense of the policy of justice than obtained with the provincial functionaries."

Once firmly in the employ of the *Times* as its Levantine reporter, Mr. Stillman had a clear right to the title of journalist, which he has elected over that of artist, art critic, archæological explorer, or civil servant as his proper designation. Two-sevenths of the Autobiography is put behind before he appears as art critic of the *Evening Post* under Bryant, or proprietor with John Durand of the *Crayon*. He had been the New York *Herald's* Vienna correspondent during the Exposition of 1873, and served the same newspaper jointly with the *Times* during the Herzegovinian outbreak. In Athens his frankness about the Greeks cost him the love of those who had ordered a public funeral for his first wife (a true victim of their cause in Crete). In Florence he wrote too plainly of sanitary defects to become popular. To Rome, on the other hand, he gave a clean bill of health, and here he ended his connection with the "Thunderer," which insured him an honorable retirement. With "Greek Broils," "The Blockade of Greece," "Crispi," "Italian Politics," "Adowah and its Consequences"—in which Tricoupis and Crispi are the leading figures and studies—these beautifully printed volumes are brought to a close, pessimistically.

"One cannot pronounce the same judgment on Greece and Italy," he says (p. 713). "The decay in Greece is economic and civic—poverty of resource and resources on one side, and on the other invincible insubordination, refusal in the individual to submit to discipline or sacrifice, the conceit of a dead and forgotten superiority which makes progress or docility impossible. The measure of apparent renovation in Athens and some other points is owing to the influence and benefactions of the Greeks who have lived and prospered in other lands, where their natural mental activity has borne fruit; but the normal progress of the nation is so slight that it has no chance in the race of races now being run in the Balkans. But the Greeks are preserved from a moral decay like that which threatens Italy by the domestic morality, due in part to temperament, but in part also to the influence of the clergy, who, if not scholars and wise theologians, are generally men of pure domestic morality and leaders of the common people. The Orthodox Church is national, lives with and for the people, has no political ambitions, and cannot endanger the state. In Italy the danger is other." "Nothing less than the courage and abilities of a Cromwell could reform government in Italy; and, in the opinion of some of the wisest and most patriotic Italians I know, the task is hopeless and the decay inevitable" (p. 725).

These sentiments seem to fit the grave, introspective face drawn recently by Miss Lisa Stillman for a frontispiece to volume ii.—lineaments pathetic and humane such as suggest the sage. Nobody who knows him well will contest the good account Mr. Stillman gives of himself on p. 389, with which we may fairly dispatch our readers to the entertaining and profitable work itself:

"My temperament and the habit of my life had always prevented me from anticipating trouble, and I never hesitated to go ahead in what lay before me, trusting to the chapter of accidents to get through; incessant activity keeping anxiety away. I have never flinched from a duty if I saw it, have never done an injustice to man or woman intentionally, and at more than one moment of my career have accepted the worse horn of a dilemma rather than permit a wrong to happen to another; and if I have been erratic and unstable, it has not been from selfish or perverse motives. I have always been what most people would call visionary, and material objects of endeavor have not had the value they ought to have had in my eyes. As I look back upon a career which has brought me into contact with many people and many interests not my own, I can honestly say that I have not been actuated in any important transaction by my own interest to the disadvantage of that of other people, though I have probably often insisted too much on my own way of seeing things, in undue disregard of the views of others. Confronted with opportunities of enriching myself illicitly, I can honestly say that they never offered the least temptation, for I have never cared enough about money, or what it brings, to do anything solely for it; and if I have been honest, it has not been from the excellence of my principles, but because I was born so."

STEPHEN'S ENGLISH UTILITARIANS.—II.

The English Utilitarians. By Leslie Stephen. In three volumes. London: Duckworth & Co.; New York: Putnams. 1900.

In concluding a notice, that must be all too short, of a work which in each chapter contains suggestions for many essays, we propose to follow out one of Mr. Stephen's fruitful ideas, and, under our author's guidance, exhibit the closeness of the connection between the peculiarity of John Mill's education and character on the one hand, and the peculiarity of his position and influence as a thinker. For John Mill's career assuredly presents a paradox. He was the trained apologist of orthodox Benthamism. To the end of his life he remained its stern defender, and upheld by the most vigorous polemics all the fundamentals (as he understood them) of the Utilitarian creed. Yet he gained the confidence of a generation which was moving rapidly away from the influence of Bentham. Between 1848 and 1870 Mill was in England an intellectual power. Though a "solitary thinker," to use an expression of his own, he conciliated the trust—one might almost say the personal affection—of the youth of England.

In 1859 his treatise 'On Liberty' excited general enthusiasm. Men who were no longer exactly young felt its charm. Kingsley, who fancied himself the sworn foe of Utilitarianism, read the book through while standing in Parker's shop, and became, to use his own words, "a clearer-headed, braver-minded man on the spot." And the impulsiveness of Charles Kingsley only betrays in an exaggerated form the effect produced on persons of a more stable and judicial intellect than the author of 'Alton Locke.' When Mill, in 1870, was pressed forward, at no desire of his own, as a candidate for a seat in Parliament, he gained the support of the best and wisest among his contemporaries. The rigorous economist won the hearts and the votes of the workingmen of Westminster, who distrusted political economy; and this though (or perhaps because) he stuck manfully to his expressed opinion that truthfulness was not the special virtue of English artisans. His later works complete the paradox of his position. The recognized defender of Utilitarianism encountered his severest critic in Sir J. F. Stephen, who accepted Benthamism as expounded by Bentham; and a teacher who, educated outside the influence of Christianity, had rejected throughout his life every form of religious dogma, has since his death found his last eulogists among clergymen who use his dicta as arguments in favor of ecclesiastical orthodoxy.

In 1901 the glamour which once surrounded the name of John Mill has passed away, and calm critics ask themselves for an explanation of all that is paradoxical in his position The key to the problem is to be found, as Mr. Stephen throughout his third volume constantly intimates, in the circumstances of Mill's education and in the idiosyncrasies of his character. "He was the subject of one of the most singular educational experiments on record." James Mill determined to leave behind him a trained defender of the Utilitarian faith. This was the one object of the stern and almost cruel discipline to which he submitted the intellect of his son. His object was to "make" the boy's mind, and thus render him a successor worthy both of James Mill and of Bentham. Hence John Mill was systematically indoctrinated with the views of a sect; he was brought up to be the apologist of Utilitarianism much as the younger Pitt was, under the direction of his father, trained to become a Parliamentary statesman. James Mill's experiment in education was a strange one, and—a far greater marvel—was crowned with success. The education which James Mill

gave his son had one saving merit: "The son had been taught really to use his mind; he had been trained to argue closely, to test conclusions instead of receiving them passively, and to systematize his knowledge as he acquired it." Hence in early youth he was a vigorous controversialist, and those who accuse James Mill of injuring John by overtraining should remember that there is really no evidence that John Mill would, but for his father's discipline, have achieved high intellectual eminence, and reflect that, "after all, he certainly became one of the leading men of his generation, and if this strenuous education was not the sole cause, it must be reckoned as one of the chief causes of his success." Here, at any rate, we have the source of John Mill's extraordinary capacity for dialectical combat and for lucid exposition. As against ordinary opponents, he was a trained pugilist fighting men who could trust to nothing but their natural physical strength.

So much for John Mill's education. Turn now to his character. His nature was far more receptive than self-assertive; he was, moreover, a man of great emotional susceptibility and of most unusual tenderness; he was possessed, as is plain in every page of his autobiography, by the desire, which his father's education in no degree satisfied, to give and to receive sympathy. He was in character as much feminine as masculine.

"He had some of the amiable weaknesses which we at present—perhaps on account of the debased state of society—regard as especially feminine. The most eminent women, hitherto at least, are remarkable rather for docility than originality. Mill was especially remarkable, as I have said, for his powers of assimilation. No more receptive pupil could ever be desired by a teacher."

If to the word "receptive" we add "or retentive," we have the secret of James Mill's educational triumph. He made upon his son's mind the impression which he desired, and made it with such completeness that one naturally wonders whether, had the elder Mill so willed, the younger might not have been made into the representative of doctrines opposed to Benthamism. Is it true "that, had James Mill adhered to his early [Calvinistic] creed, his son would probably have become a fit subject for one of those edifying tracts which deal with infantile conversion"? Is it the case that a different education might have made him a Coleridgean instead of a Benthamite? Whatever be the answer to these otiose inquiries, certain it is that Mill possessed the two qualities most to be desired in a disciple—the capacity to receive and the energy to retain and defend the doctrine of his master.

The qualities, however, of mind and of heart which favored the success of James Mill's experiment ultimately produced something which, could James Mill have seen the whole result of his teaching, he might have deemed failure. John Mill's receptivity and his passion for sympathy laid him open to influences of which his father had never felt the attraction. The worship of Mrs. Taylor must have been trying to a tyrannical philosopher, accustomed to claim obedience, both moral and intellectual, from his children, and convinced that he had "made" the mind of his son. An even more serious matter was that John Mill, while believing in the fundamentals of Benthamism, felt his heart drawn, as James Mill must have partially perceived before his own death, towards sentiments and ideas with which neither Bentham nor James Mill had any sympathy. John Mill was, indeed, inclined to overestimate the importance of emotion, and though, throughout life, something of a recluse, always condemned the want of sociability exhibited by Englishmen. His heart, if not his intellect, went out towards the Socialists. Comte at one time almost gained his allegiance. Tocqueville, whose speculations displeased James Mill, revealed to John Mill the dangers of democracy. John Mill's later theological theories would, we may be sure, have offended as much the inherited sentiment of James Mill's early Calvinism as the settled convictions of his later Atheism.

But here we pass from John Mill's education and character to their effect upon his position as a thinker. From his education springs his tenacious faith in the fundamental doctrines of Benthamism. Mr. Stephen proves, almost to superfluity, that in John Mill's ideas or assumptions there was, strictly speaking, no originality. In his logic and in his psychology he was the disciple of James Mill. In his ethics he was a Utilitarian of the school of Bentham. In his political economy he built upon the foundations laid by Adam Smith, by Ricardo, and by Malthus. His legal ideas were derived from Bentham and Austin. Above all, his conception of the relation of the individual to society and to the state was, in its essence, the conception entertained by the leaders of the school in which he had been educated. John Mill's fundamental assumptions remained, in short, till the end of his life the same as the assumptions common to the whole body of English Utilitarians. Mill's admirers of 1860 would have claimed for him an originality the existence of which is denied by Mr. Stephen. But John Mill would have agreed with his critic. He never claimed to be the expounder of new doctrines; in his own eyes he was the defender, though to a certain extent the reformer, of the Utilitarian creed.

Though Mill remained till his death a convinced Utilitarian, he was "a Utilitarian with a difference." The distinction from his predecessors is typified by his attempt to combine highly appreciative criticism of Coleridge with profound but very cold respect for Bentham. He was the guardian of the temple of truth built up by the "Fathers" of Utilitarianism, but the warmth of his sympathies made him attempt to expand the edifice in every direction, in order that he might make room therein for aspirations unknown to or contemned by his teachers. His logical and economical convictions, implanted in his mind by parental training, were derived from the eighteenth century, but by sentiment he belonged to the nineteenth. His mind may have been made by James Mill, but his heart turned towards Maurice, Sterling, and Coleridge. He was among the first to recognize the genius of Carlyle, and Carlyle, naturally enough, mistook for a moment the Utilitarian logician for a mystic. The watchword of the day (1830-1840) was "Sympathize that you may understand." This dubious dogma exactly fell in with Mill's natural disposition. He remained, for instance, the disciple of orthodox economists, and notably of Malthus and Ricardo, but he shared the aspirations of Socialists. His treatise 'On Liberty' reads like an impassioned defence of Individualism, but critics such as Grote, and enthusiasts such as Kingsley, read between the lines, and saw that if Mill's argument defended *laissez-faire*, he was far from accepting the do-nothing principle.

"Political economy, he says, would have a melancholy and a thankless task if it could only prove that nothing could be done. He holds that a huge dead lift is required to raise the laborers out of the slough of despond, and he demands, therefore, nothing less than great national schemes of education, of home and foreign colonization."

He even appears to admit the truth of an idea utterly foreign to Benthamism, and, as many would add, opposed to common sense—that existing rights to property, especially in land, are invalidated by its originally wrongful acquisition. What is true of Mill's economical is true of his moral and religious teaching. Its aim is to show that the aspirations of the highest morality and the most genuine religion may be based upon Bethamite Utilitarianism.

To the generation for whom Mill was a prophet, this reconciliation of logic with enthusiasm was the source of his power. His influence has waned because, to the cooler critics of a later time, it is doubtful whether Mill really accomplished a feat which possibly in itself is incapable of achievement. In his mind the dicta of strict logic and the inspirations of ardent feeling were connected rather than combined or fused together. He expanded the philosophical edifice erected by Bentham, but did he not, in the course of renovation, shake the foundations of the fabric? Yet, whatever be the final answer to this question, the generation who counted Mill a great teacher were essentially in the right. He possessed not only that characteristic goodness perceived in him by T. H. Green, but also two great qualities not always found in men of more commanding intellectual power. He felt and imparted to others enthusiasm for liberty and for justice; he handed down from his own teachers a profound and unconquerable belief in the absolute supremacy of truth.

By Land and Sea. By the Rev. John M. Bacon, A.M., F.R.A.S. London: Isbister & Co.; Philadelphia: J. B. Lippincott Company. 1901. 8vo, pp. 275. Four photographic illustrations.

Reviewers who are addicted to the practice of reading books through are not often sorry when they come to *l'envoi*. Yet it does sometimes happen; it did to one reviewer in the case of Mr. Bacon's volume. Somebody was wondering the other day why ballooning had not become a more generally favorite sport with Englishmen; for surely, said he, nothing could be more dangerous or more expensive. It has, however, several disadvantages; there is no din; there is not the least sense of motion, nor even a zephyr; and there is very little to see, especially in England. For when the balloonist looks down upon anything but clouds, the landscape is on most days thickly veiled with haze.

Mr. Bacon has usually had a scientific object in making his ascensions. Sometimes it was to count meteors, or make some of the other astronomical observations for which a solid support is not necessary; sometimes it was for wireless telegraphy, but predominantly it was for acoustical research. This is the natural way in

which science advances; a man first acquires some peculiar facilities for making a certain class of observations, and then he applies those facilities as best he can. Mr. Bacon gives us many curious and novel observations about sounds, and connects them in a way which even the professional physicist will find instructive. Still, one can hardly say that he has manifested a very distinguished genius for this class of investigations, the great difficultness of which is well recognized. His chief result is that, so far as he can find, no echoes are given back from air, contrary to the conclusions of Tyndall. But he mistakes the nature of the problem. Theory leaves no doubt that acoustical disturbances must be reflected from air; the question is, What are the limits of the circumstances under which they become audible, and how far can reflection from air, with the consequent interferences, account for the areas of inaudibility of fog-horns, etc.? Sounding horns from a balloon is, no doubt, a great lark, but one could not expect the perpendicular reflection of a sound from a stratum of air to be audible, especially of denser air. Nature reveals her secrets only to her most earnest worshippers, and although Mr. Bacon has been sufficiently interested in his acoustical operations to spend several days, "marooned," as he calls it, out in the German Ocean, in the Maplin Lighthouse, which stands on an iron scaffold, and has passed one night in making experiments at the top of St. Paul's dome, and another on the church-tower of Thatcham, yet it is easy to see that the animating motive of his aeronautics, as it will be that of his reader, has been the pure fun of the thing.

God defend us for blaming him, or depreciating his book. If he has not the scientific genius of a Faraday, he has another gift that is rare and serviceable to his fellowmen, for every ascent is described so simply and unsensationally, and yet so gayly and so vividly in all its details, that one might wager a pretty penny that any given reader of it, supposing the book remains at his elbow and that leisure is granted, will not leave it long without reading it again. Sober discussions of curious phenomena alternate with descriptions of ascents in each of which there cannot fail to be something more or less exciting. For example, chapter iii. describes a balloon race.

"Our opponent began by forcing the running, and from the first with obvious success. . . . To set, however, against the gain in speed acquired by flying high, there was a material loss entailed by expenditure of ballast. . . . The next move was played simply by lapse of time, without manœuvring, and resulted in a slow and steady rise and consequent gain on our part, while the opponent, reaching the culminating point due to her leap into space, suffered now from the loss of gas incurred, and was presently sinking below us. . . . From an early stage of the race I am now describing it was evident that our balloon was the more heavily, in fact too heavily, loaded, by the dead weight of passengers. We had the smaller quantity of sand at disposal, and, in consequence, our defeat was only averted by artifice. . . . Two hours had passed and we were flying at 3,000 feet. . . . At this point we saw our rival still distancing us. . . . We began settling down. . . . To say truth, there was little more manœuvring left us, for we had but one bag of ballast remaining, and this we were already paying out by driblets to save collapse. Down we swooped, fast and faster, in spite of the constant slender flow of sand, till at last we stood ready to meet a seemingly inevitable plunge into a long level pasture. Quickly we discharged the whole remaining ballast, and so abode the issue. It was touch and go. Diving to within three feet of the ground, our balloon hesitated, halted, and then kept level, while we coasted the whole length of the paddock with cows in stolid wonderment lying right and left of us. Then we righted, the impetus of rapid descent was spent, and we lifted, shooting up once more in right good earnest. Down plunged fields and woodland into such a fast-deepening gulf that the aneroids were promptly consulted, and showed the index-hand running backwards without stop or stay till near 6,000 feet was noted and we were still rising. The pace had been great. We were now more than a mile high, and we looked down and around. There, already behind us, lay our opponent sprawling on a grass field, a crowd of people round her, giving us an easy win after all. They had evidently thought us beat and so came down."

This was badly managed on both sides. The opponent had cast out ballast during the first rise, a most senseless proceeding. He might better never have taken it. The result was that, soon after that, Mr. Bacon's balloon was gaining. His party had, therefore, only to stay up in order to win; and they ought to have stayed as high as possible, because the wind is swifter higher up. Yet, when they were descending and, of course, "fast and faster," they payed out ballast only in a slender flow of sand. They ought, as soon as they began to descend, to have thrown out enough to make them lighter than the air. They waited until it was only by the merest luck that they did not strike anything. Still, they went up 6,000 feet. They would have gone 3,000 feet higher, at least, and have got the advantage of a stronger wind, had they done so earlier. As it was, the opponent might have stayed up long enough to beat them; but he never could have done so after his first folly, had Mr. Bacon's party discharged their ballast at the right moment.

Although Mr. Bacon records in this volume seventeen balloon-voyages made by him, and we may suppose he has made others, he still labors under the idea that the entrance of a balloon into colder air at once causes it to descend; and to account for the rising of a thistledown through cold air he thinks it necessary to suppose upward "rivulets" of warm air. At one time, he thinks, "we must have entered a cold current unknown to ourselves," because the balloon began to sink. Another time, on emerging to the upper side of an evaporating cloud before sunrise, it is the "chill" which he feels, and not the facts that the aqueous vapor is much lighter than air and that the free radiation would probably cause dew to be deposited on the balloon, that retards its ascent. When the sun sets, it is, according to him, the cooling of the air, not the cooling of the balloon, that makes it come down, although Glaisher had demonstrated that sunset does not particularly cool the higher air. And many other passages are to like effect. Physicists will know what to think of them; and they do not make the book less entertaining.

The Masque of Judgment. By William Vaughn Moody. Boston: Small & Maynard. 1900.

It would be easy for an evil-minded critic to coin epigrams at the expense of Mr. Moody's poem. He might note an occasional echo of Shelley and the phantasmagoric scenery, and name the poem "Prometheus Rebound." Or he might carp at the attempt to condense into a single thin volume the entire History of the Decline and Fall of the Holy Cosmic Process. Or he might have a witty shot at the poet's Big Game, at his marvellous collection of Lions, Eagles, "Dragons old," and "Serpents with pendulous necks." Yet the truth of the matter is that the critic would simply have his wit for his pains. No patter of epigrams can do Mr. Moody's poem serious mischief; it is too substantial and vital to be in danger from paper pellets.

One of the most noteworthy points of Mr. Moody's book is its use of an elaborately finished and highly sophisticated literary form for the utterance of a genuinely democratic impulse. This democratic bias of thought and feeling might easily be missed by the casual reader. A "Garden in Paradise" hardly suggests Walt Whitman; and the legendary actors in the *Masque*—Raphael and the rest—the persistent abstract symbolism, the allegorical action, and the richly ornate diction carry the reader far indeed from the streets of "Mannahatta." Yet in truth the poem is a brilliantly imaginative interpretation of the same modern impulses, of the same restless craving for richness and luxuriance of life, of the same audaciously optimistic belief in the worth of life, of the same strenuous and reckless pursuit of individual good, that are just now peculiarly characteristic of our youthfully sensuous and materialistic American nation, and that find their extreme and most picturesque expression in the raw splendor and the exultant and almost ferocious carnality of the pageant of life as the wayfarer encounters it in New York city. Be it said at once that Mr. Moody himself would probably reject this reading of his book; and be it added that his book is very far from being either carnal or sensual. Nevertheless, it is unmistakably a plea for the joy of life here and now, for the largesse of the senses, for the worth of passion ("passion is power And kindly tempered saves"), for the rigor of the cosmic game, for the divine contradictions of actual life (its "laughter and sorrow and brawl"), and, in short, for what the moralists call wealth of individual experience as opposed to any meagre ideal of asceticism. It pleads for rich diversification of the human type rather than for subordination to conventional patterns, for exuberant wilfulness rather than for tame, tea-drinking conformity.

Perhaps, to the captious reader, all this will seem to savor of moral anarchy, and indeed even the most sympathetic reader must wish that now and then Mr. Moody were a trifle less luxuriant in his description of variant moral types, and a little more explicit about the scope of his moral code. Very memorable and very beautiful are the laments of the foiled truth-seekers and the desolate lovers and the over-eager warriors who lie whelmed with woe in the Valley of Judgment—"souls defeated, broken, and undone," because they refused to "render up their wills" at the divine behest. Yet one cannot but query what neighbors these few select sinners had in the Sea of Death; whether there were any house-breakers or foot-pads there; and, if so, whether they, too, are included in Raphael's pathetic lament over the "wills" that have "ceased to search Though quite unsatisfied."

Such carping, however, Mr. Moody would doubtless deem needless and flippant, and he would urge that the general tenor and drift of the *Masque* sufficiently safeguards

its plea for freedom. And, indeed, it must be admitted that the rights of the spirit are by no means neglected. One of the most beautiful passages in the poem describes the power of the spirit to sway the senses:

"Darkly, but oh, for good, for good,
The spirit infinite
Was throned upon the perishable blood;
To moan and to be abject at the neap,
To ride portentous on the shrieking scud
Of the arousèd flood,
And halcyon hours to preen and prate in the boon
Tropical afternoon."

The obverse of this truth also finds expression in equally beautiful lines:

"Not in vain, not in vain,
The spirit hath its sanguine stain,
And from its senses five doth peer
As a fawn from the green windows of a wood."

Doubtless, the *Masque* is, on the whole, a plea for the rights of the "sanguine stain" and the "senses five." And yet, quite as surely, passion and richness of experience as Mr. Moody conceives of them have a spiritual cast and color; and the impression that the entire *Masque* leaves is that of a noble and lofty idealism. Not easy would it be to find in all contemporary poetry a finer Hymn of Man than Mr. Moody has given to Raphael in the third act of his *Masque*. It might be safely read after Mr. Swinburne's "There came to the making of man," and would serve as an admirable corrective for the early pessimism of that poem:

"O Dreamer! O Desirer! Goer down
Unto untravelled seas in untried ships!
O crusher of the unimagined grape
On unconceivèd lips!
O player upon a lordly instrument
No man or god hath had in mind to invent;
O cunning how to shape
Effulgent Heaven and scoop out bitter Hell
From the little shine and saltness of a tear;
Sieger and harrier,
Beyond the moon, of thine own builded town,
Each morning won, each eve impregnable,
Each noon evanished sheer!"

. . . . . .

"Deem not that mighty gamut-frame was set
For wanton finger-fret!
No empty-hearted gymnast of the strings
Gave the wild treble wings,
Or flung the shuddering bass from hell's last parapet.
Though now the Master sad
With vehemence shall break thee,
Not lightly did he make thee,
That morning when his heart was music-mad;
Lovely importings then his looks and gestures had."

The characteristics of Mr. Moody's style may be in some degree captured from the passages already quoted, though the unusual vividness and splendor of his imaginary landscapes and the charm and tenderness of the lyrical interludes are not fairly represented.

A typically lovely lyric is the Song of the Redeemed Spirits flying past towards Paradise:

"In the wilds of life astray,
Held far from our delight,
Following the cloud by day
And the fire by night,
Came we a desert way.
O Lord, with apples feed us,
With flagons stay!
By Thy still waters lead us!

"As bird torn from the breast
Of mother-cherishings
Far from the swaying nest
Dies for the mother wings,
So did the birth-hour wrest
From Thy sweet will and word
Our souls distressed.
Open Thy breast, thou Bird!"

Doubtless, this *Masque* has the faults of a first volume. It may be charged with over-ambitiousness in the choice of a subject of cosmic scope—a subject unattempted yet in prose or rhyme, and discreetly unattempted. Its style, too, is at times—not often—over-luxuriant, and languid, ready to die of its own dear loveliness. Moreover, Mr. Moody's idiom is not yet wholly individual; a wary ear catches now and then a cadence or a phrase suggestive of Shelley or Browning or Milton. But all these flaws or faults are, by general consent, the authentic faults for the first volumes of poets doomed to go far; they are the appropriate vices of the poetic temper.

Introduction to the Old Testament in Greek. By H. B. Swete, D.D., Hon. Litt.D. Dublin. With an appendix containing the letter of Aristeas, edited by H. St J. Thackeray, M.A. Cambridge (Eng.): University Press; New York: Macmillan. 1900. Pp. xiv, 592.

It is a pleasant duty to welcome this work. It has been long awaited, and, now that it at last appears, it does honor to its author and to the edition of the LXX which it accompanies. The place which the book is intended to fill, and which it will certainly fill most worthily, can be easily stated. There is no attempt at new discoveries or suggestive hypotheses, but rather at such a gathering up of the already known, and stating of it in easily intelligible form, as will afford a general introduction for beginners to the study of the Greek versions. That is, what we have here is a student's manual, and not an exhaustive treatise. But Dr. Swete's idea of a student's manual is a full and generous one, and the accumulation of fact which he has heaped up is prevented from being overwhelming only by its careful tabulations and general orderliness.

The book divides into three parts: a history of the Greek Old Testament and of its transmission; an account of its contents; and of the use of it in literature, of its critical and historical value; and its textual condition. In the first part we have an account not only of the version commonly called that of the LXX, but also of the later Greek versions, of the recensions of the LXX, of secondary versions based on it, of its MSS. and printed texts—all this with a fulness that recalls Scrivener-Miller in the text of the New Testament. The second part deals with the variations between the Palestinian and Alexandrian Canons, and between the Hebrew and Greek recensions of the same texts; with the language of the LXX as to grammar and dictionary, with its general purpose and character, and the limitations and guiding principles of the translators; with stichometry, capitulation, and divisions of the text generally. The third part divides into two—the use that has been made of the LXX in the past—*i. e.*, quotations from it by non-Christian Hellenists, in the New Testament, and in early Christian literature, and, second, the use that can be made of it now for the text and explanation of the Old Testament and for the study of the language of the New. Through all this, the needs of the student are the first consideration. There are suggestions to guide him in his studies, and, from time to time, copious accumulations of examples—*e. g.*, pp. 330-339—to suggest problems and their solutions.

If any criticisms may be ventured of so excellent and authoritative a book, one would be against the assumption—the πρῶτον ψεῦδος, may we venture to say?—that there was *a* Alexandrian version, a single entity to which the term "Septuagint" may be applied. Are we not, rather, learning slowly that not only were different sections of the Old Testament translated at different times and by different hands, but that different translations of the same sections, both absolutely independent and largely recast recensions, existed at the same time, and still exist in our extant MSS.? Another small point of criticism may be raised, which applies not to Dr. Swete only, but to almost all who have written of Origen's 'Hexapla.' If it was never copied, that was not because it "must have been the despair of copyists." Classical students who are accustomed to comparatively short texts, seem to have no idea what gigantic works can be and have been handed down by the labor of Oriental scribes. As one example alone, the 'Lisan al-'arab' of Ibn Manzur may be cited. It fills 8,812 closely printed quarto pages, and has been handed down in many copies since the death of its author, in A. D. 1311. The 'Taj al-'arus,' of equal length, though a comparatively modern work, has been copied many times. The gigantic mass of the Babylonian Talmud is another case in point. It may safely be said that it was not the labor of copying the 'Hexapla' which lost it for us.

Ten Months a Captive among Filipinos: Being a Narrative of Adventure and Observation during Imprisonment on the Island of Luzon, P. I. By Albert Sonnichsen. Charles Scribner's Sons. 1901.

Since the beginning of our troubles in the Philippines, we have had no interior view of the conditions there equal to Mr. Sonnichsen's narrative of his captivity, excepting possibly the highly significant reports of Cadet Leonard R. Sargent and Paymaster W. B. Wilcox of the United States navy on their travels in central and northern parts of Luzon during the months of October and November, 1898. Mr. Sonnichsen's captivity began a little later, just on the eve of the fatal outbreak in February, 1899. With a companion he set out for Malolos, the two purposing to take photographs in the character of English press correspondents. On the train they were suspected of being spies by a grave and reverend "señor" whom they next encountered in the full-dress uniform of Aguinaldo's staff. His suspicion was confirmed by an Englishman, who possibly resented their disguise and certainly had an eye to his own main chance. The first imprisonment at Malolos proved to be one of the most painful and disagreeable experiences of the entire captivity. A fellow-prisoner, to whom the name Arnold is given for obvious reasons, proves to be a very entertaining rascal as the book goes on. He was not wholly bad, and, though twice a traitor when Sonnichsen and others would fain escape, he was ready at all times with such kindly offices as involved no personal inconvenience and were flattering to his sense of benevolent interposition. New batches of prisoners came in from time to time, and their characters and fortunes are described so vividly that what was monotony for the writer and his friends becomes for us a succession of moving accidents.

Their condition was made more critical by the popular excitement which attended the first misfortunes of the Filipino arms. Harsh treatment was, however, in the main reserved for the Filipino "secreto," or informer, and some of the accounts of this would be very shocking were not our American lynchings so toughening to our sensibility. The cruelties of the Filipinos were tender mercies as compared with these.

Eventually at Malolos there was some relaxation of discipline, including wrestling in the prison yard, and Mr. Sonnichsen's good opinion of the Filipinos, which steadily increased as he came to know them better, was enhanced by his finding himself thrown by one of them who stood no higher than his chin. The first outing into the town was an exciting one. In the barber's shop Sonnichsen met, as he thought, an ill-looking brigand who stared at him impudently and—turned out to be a reflection of himself in the mirror. There he was much chaffed by the young Filipinos, who asked if Americans shot from the hip, and if they soaked themselves with whiskey to get their courage up before going into battle. Such things were as credible in Malolos as similar stories about the Filipinos in New York. Only once, at any time, did he have a glimpse of Aguinaldo, drinking beer in an indifferent manner; an exasperating sight, so dry was his own throat. Evidence of the Filipino devotion to Aguinaldo is never far away. His unselfish goodness endeared him to his people more than his successful worrying of the Americans. No Filipino believes the story of Aguinaldo's mercenary acceptance of a Spanish bribe, of which Mr. McKinley was so readily convinced, with documents in his possession which might have taught him better, had he cared to be informed. Moreover, though the Ilocanos do not love the Tagalogs, and were profoundly devoted to Gen. Luna, Mr. Sonnichsen found nowhere among them any credence of the charge of Gen. Luna's assassination by command of Aguinaldo.

Leaving Malolos with the retreating Filipinos, the first stop was at San Isidro, and here the prisoners were joined by Lieutenant Gilmore and his party. From what follows it would appear that much needless anxiety was suffered on their account. Something of qualified admiration infects the general account of that accidental hero, and in conclusion we are told: "Some of the hardships endured might many a time have been ameliorated, had the men been made to feel in the only officer among them more of the moral influence of a leading mind and a spirit better befitting the situation in general." Gilmore's efforts to obtain personal "rights" and "privileges" embittered his fellow-prisoners against him. His message, which Sonnichsen finally delivered to Gen. Otis, after preserving it through many wonderful vicissitudes, was received by that officer with sublime indifference.

All of Mr. Sonnichsen's later experience was among the Ilocanos, and he was so well treated in general and met with so much particular kindness that he might well fear to compromise his friends by his escape. His conclusion of the whole matter is that the Filipinos have treated their prisoners as well as other nations theirs in recent wars —much better than the South its prisoners in the civil war, or the North its own in some cases. He finds the Filipinos "as entitled to be called civilized as other nations, and much more so than some whose representatives we receive at our capital and accord the same honors as those of the most polished nations." The most recurrent notes are that the Filipinos will never submit to the forcible destruction of their independence, and that a degree of self-government equal to that of Canada would be cordially accepted if tendered to their present government. Everywhere Mr. Sonnichsen encountered the complaint that the Americans kept on hammering the Filipinos without offering to them any plan of settlement. His evidence confirms that of many others, that the Philippines might have been peaceably annexed if we had gone to work in the right way; and even those who would prefer their independence cannot but wish that their annexation, if it had to be, might have been effected without the waste of six hundred millions of dollars, and the end not yet, and a more tragic waste of life.

The Sources and Literature of English History, from the Earliest Times to about 1485. By Charles Gross, Ph.D., Harvard University. Longmans. 1900. Pp. xx, 618.

It might be an interesting subject of speculation why certain books come to be written, or compiled, in one country rather than another. How is it, for instance, that, with all the attention given to American history in this country, the best books, both on the aborigines of the continent and on the colonial period, have proceeded from Englishmen—Mr. Payne and Mr. Doyle? And how is it, on the other hand, that it has been left for a Harvard professor to produce the first thorough and systematic bibliography of mediæval English history? It is not that there are no great historical scholars in England—Stubbs, in the generation now passing away, and Maitland, among younger scholars, are luminaries before whom pale the fires even of Gneist and Pauli; nor that competent journeymen are wanting, as the volumes of the Rolls Series as well as of the Surtees and Selden Societies' publications sufficiently demonstrate; nor that general historical interest is lacking, for this is disproved by the continued existence of the *English Historical Review*. Moreover, both at Oxford and at Cambridge, a score or more of tutors and some hundreds of undergraduates have for years been giving and receiving instruction in mediæval English history. It may be that the men of ability who might have undertaken the task are either kept too busy with undergraduate instruction, or, if they are fortunate enough to enjoy leisure, prefer to give their time to original investigation. Doubtless it is also a matter of personal predilection; Professor Gross is a born bibliographer. But we may hazard the conjecture that the explanation is to be found in some measure in the absence from English universities of what we know as "graduate" study. When the men who are likely to do some original investigation are isolated units, scattered up and down the country, it is natural enough that they should be left to find their way for themselves; when they are brought together in "graduate courses," each man of them eager to discover some unworked field for a doctorial dissertation, it cannot but occur to their teachers that a guide-book will save them from a good deal of quite unnecessary waste of time.

To whatever its appearance may be due, the bibliography now before us is an honor to American scholarship, and will be the greatest possible boon to historical students. The only previous bibliography of the subject is that by Mr. Mullinger, the erudite librarian of St. John's College, Cambridge, which forms the second part of the 'Introduction to the Study of English History' bearing his name and Mr. Gardiner's. This was not without its usefulness for beginners, and they must still refer to it for the post-mediæval period; but it is all too brief, and, as Professor Gross mildly remarks, it "devotes little attention to record publications and to Continental writers." Professor Gross's volume contains 3,234 titles, arranged in 72 sections, with careful cross-references, and a complete index. He is sparing of comment; but under each head he indicates which are the more "valuable" of the authorities, or of the modern writers, as the case may be; and where the book in question is exceptionally bad, he damns it with a quiet epithet. How painstaking is the classification may be illustrated by the ten pages devoted to the ecclesiastical "Vitæ et Epistolæ" of the Anglo-Saxon period, arranged under the names from Alcuin to Wilfrid, or by the sixty-five pages on "Local Records and Local Annals," ranging from (a) Bedfordshire to (z) Yorkshire. And, as any one who knows anything about the subject will at once see on turning over his pages, Professor Gross's work is much more than a mere catalogue: the modest biographical and critical notes—appended, for instance, to each of the chronicles—could only have been produced by a sane judgment and a wide and sure-footed scholarship.

The book, as it stands, is almost absolutely exhaustive, and every self-respecting library will at once obtain it. Where Mr. Gross is —not weak, but—least strong is only along the fringes of his own field as a constitutional historian. And here and there we would have made some additions. Considering, for instance, how slow agrarian conditions were in changing, we should recommend the investigator of mediæval agriculture to look at the writings of Arthur Young and William Marshall, although they describe the methods of the eighteenth century; as well as the series of Reports on the several counties presented to the Board of Agriculture at the end of that century. We should explain the nature of the statistics to be found in Rogers's 'History of Agriculture and Prices,' and mention Fleetwood's 'Chronicon Preciosum.' We should try to separate the wheat from the chaff in the volumes of Traill's 'Social England'; we should add Birkbeck's little book to those on land tenure, and Hecker's (if only because for so long it stood alone) to those on the Black Death; and Miss Zimmern's and Theodor Lindner's to those on the Hanse. If it is worth while placing Mr. Froude's observations on the 'Science of History' among treatises on Historical Method, as Professor Gross apparently thinks, room might also be found for Mr. Goldwin Smith's two lectures on the 'Study of History' (1861); and Mr. Warde Fowler's privately printed paper on 'The Progress of Historical Study in Oxford' (1885) might be referred to, if only to set buyers on the lookout for it. We have no great belief in Buckle's philosophy of history—which, indeed, he did not attempt to exemplify himself—but if a student is capable of thinking about the meaning of history, he might well be told to read the first chapter of the 'History of Civilization'; and to such a student Seeley's writings on the relations of history to politics would be stimulating if not convincing. We are glad to find Lord Acton's Inaugural Lecture set down in the list; but students who are

able to follow that somewhat enigmatic discourse will get still more out of the remarkable paper by the same hand on "German Schools of History" with which the *English Historical Review* began its career. Still, all these, as before remarked, are but the fringes of Professor Gross's field, as he beholds it; and after he has borne the burden and heat of the day in reaping the rich harvest of records and chronicles, we cannot blame him for leaving a few ears standing near the fence.

The Natural History and Antiquities of Selborne, and a Garden Kalendar. By the Rev. Gilbert White, M.A. Edited by R. Bowdler Sharpe, LL.D., with an introduction to the Garden Kalendar by the Very Rev. S. Reynolds Hole, Dean of Rochester, and numerous illustrations by J. G. Keulemans, Herbert Railton, and Edmund J. Sullivan. In two volumes. London: S. T. Freemantle; Philadelphia: J. B. Lippincott Company. 1900. Small 4to, pp. xxiv, 428, and xv, 444.

Nearly one hundred editions of White's 'Selborne' have been published; among them probably none that has more general excellences than the present. Dr. Sharpe has gone back to the first edition, 1789, and to originals of the letters for his text. By his notes on the natural history the science has been thoroughly modernized, and the amount of text has been almost doubled, approximating that of Bell's edition, 1877. The matter included, and its arrangement, are as follows: Volume i., with fifty full-page illustrations, and thirty-seven smaller ones, contains the introduction, a table of contents, lists of illustrations, the letters to Pennant (I.-XLIV.), an introduction to the Garden Kalendar, one appendix of a few notes on zoölogy, and another of a note on geology; and volume ii., with forty-nine full-page and thirty-two smaller illustrations, contains a table of contents, lists of illustrations, the letters to Barrington (I.-LXV.), the Antiquities of Selborne, more particulars respecting the old family Tortoise, the appendixes to the Antiquities (I.-V.), the bibliography, and the index. In this really desirable edition of the classic, however, there are several respects in which the editor's work falls much below what was to have been expected from him. The bibliography is incomplete, and, such as it is, needs a thorough overhauling. One of the entries to be added may be supplied by an apparent reprint of Jesse's edition, 1850. It bears date of 1870, and has the illustrations colored by hand. Instead of Henry G. Bohn, etc., it bears the imprint, "London: Bell & Daldy, York Street, Covent Garden"; otherwise the title-page appears to be the same as that published by Bohn. Gilbert White himself has not been well treated. There is no doubt whatever that a moderate amount of investigation would have resulted in an acceptable account of his life and characteristics.

The illustrations in the main are very good, but here again the author has not received anything like justice. His portraits (imaginary, of course, no real likeness being available) will not be tolerated by those who see him through his writings. To represent him as a dandy only emphasizes the limitations of the artist. In fact, these so-called portraits, scattered through the text, are mere caricatures, and the same may be said of most of the other figures of human beings in these volumes. Contrasting with the above are portraits of Barrington and Pennant (sufficiently honored by the fact that the letters happened to be addressed to them) occupying the posts of honor as frontispieces, as if more prominently concerned in the work than the author. However opinions may differ as to the taste that further belittles the author by descriptions following his own on the title-page in entire disproportion to the contributions, the evidence here and elsewhere in these pages is conclusive as to the possession by the editor of an affectionate and subservient regard for titled personages.

Japanischer Humor. Von C. Netto und G. Wagener. Mit 257 Abbildungen, darunten 5 Chromotafeln. Leipzig: F. A. Brockhaus. 1901. Pp. x, 283.

Goethe's remark, that "nothing reveals the character of men more clearly than their conception of the laughable," not only is true of individuals and classes of society, but is especially applicable to nations and different types of the human race. Even kindred peoples, like the Germans, English, and Americans, or the French, Italians, and Spaniards, have developed each a peculiar quality of humor, which the others often fail to appreciate. Indeed, this disparity exists within the limits of the same country, the humor of Berlin differing essentially from that of Munich, while that of Saxony is generally recognized as something quite apart, and usually more ludicrous than ridiculous. This distinction is still more marked when we compare Orientals with Occidentals, or Caucasians with Mongolians. A joke which causes the broad face of the Chinaman to dilate and his slit eyes to sparkle with delight, may not afford a European the slightest amusement; and we know how difficult it is for an American, with all his boasted cosmopolitanism, to find any entertainment in a Japanese comedy, unless it be a clever counterfeit in the style of Sullivan's "Mikado." Lafcadio Hearn says that before going to Japan, he had no perception of the deeper meaning of Japanese art, either in drawing or in color, both of which seemed to be crude, conventional, and outlandish. Now it is the Western art of illustration, as seen in the common run of English weeklies and American magazines, that strikes him as "conventional, undeveloped, and semi-barbarous." For a Japanese to understand the engravings in our pictorial periodicals, he must have lived abroad; and for an Occidental to perceive the truth, or the beauty, or the humor of Japanese drawings, he must know the life which those drawings reflect. This principle applies not only to every province of art, but also to the whole vast manifold realm of humor, whether expressed in words or in designs.

The proper recognition of these facts lends especial interest and value to the recent volume on 'Japanese Humor,' by Professors Netto and Wagener, the former for thirteen years connected with the University of Tokio, and the latter, now deceased, for twenty-four years a resident of Japan. Professor Netto is the author of a book, entitled 'Papierschmetterlinge aus Japan,' in which he intended to devote a chapter to Japanese humor, but found, on further examination, that the subject was too extensive to be satisfactorily treated in so limited a space. Meanwhile both scholars had been collecting materials for a long time before they discovered that their investigations were on the same line, when they resolved to offer to the public the combined results of their researches. The contents of the work are not confined to the present day, but embrace a long period in the evolution of Japanese culture, some of the illustrations being the work of artists who lived eight centuries ago. Every drawing is accompanied by the name of the artist, as well as the year of his birth and death, so far as they are known.

In the first half-a-dozen chapters the representations are derived from Hindu mythology, as modified by the later legendary developments of Buddhism in China and Japan. A prominent part is played by the seven gods of fortune, of whom Jurojin and Fukurokujin, the bestowers of wealth and longevity, are the chief. The tall cylindrical head and squat figure of the latter often occasion comical scenes. It must be remembered, however, that bodily deformities of Oriental deities are not necessarily humorous or satirical in their origin, but have a symbolical significance expressive of certain attributes, although such distortions are admirably adapted to caricature and are frequently made to serve this purpose. To what common uses a sacred image may be put is seen in that of the deified Daruma (Bhodidharma), who, in order to free himself from worldly passions, sat nine years gazing at a wall until his legs fell off, and now figures as a child's toy, a tumbletoady, which is so weighted that, when thrown down, it always assumes an upright position on its haunches with the austere look of an ascetic.

A still more prolific source of humorous delineation is the adventures of Em-ma (Yé-ma), the ruler of the infernal regions, and his satellites. The devil appears to be quite as easily fooled in Japan as elsewhere, and thus becomes a never-failing source of diversion to mankind. Matahei, a painter of the sixteenth century, burlesqued the monks by representing the devil as a mendicant friar collecting contributions for the temple, and with one horn broken as a sign of contrition. Of a like character are the tricks of mischievous elfs and kobolds, the wiles of witches and wizards, and the play of the personified elements—the pranks of the demoniac forces of the thunder and the wind, and the fantastic forms of floating mists and flaming meteors. A clever persiflage of artistic realism from the conventional Japanese point of view is the scene in which the painter, Okio, depicts a spectre with such closeness and fulness of detail that it stands out from the canvas and holds him with its skinny hand. A prominent place is also assigned to the realm of fable, in which the exploits of Saru the ape, Tanuki the badger, and Kitsuné the fox resemble in many respects the adventures of our Reynard. Of domestic animals the horse occurs most frequently; quite conspicuous, too, are not only birds, but also the lower orders of fishes, insects, mollusks, and reptiles. More than eight centuries ago the painter Teiko Sojo depicted the battle of the crabs and the frogs with a lively humor, recalling the "Homeric" batra-chomyo-machy, and the Froschmeuseler of Robenhagen. That the pencil of the satirist does not let the opportunity slip is evident from drawings of the ape as a Shinto priest, and an art-

critic, and Fukuroku incarnate as a polyp. A significant design represents foreigners of different nationalities suspended by their mouths from a pole, as the Japanese dry fish, with the designation "Tojin-boshi" (dried barbarians), the full force of which term would be better expressed by the Shaksperian phrase, "smarting in lingering pickle." Extremely entertaining are the humorous scenes taken from real life, beginning with the frolics of children, and the practical jokes which they are fond of playing upon older persons, and including comical incidents of a domestic or social character, and gayeties in which the attractive centre is the Geisha, to whose fascinations even saintly ascetics sometimes succumb.

It is hardly necessary to add that the contact of Japanese with Western civilization, which has produced such remarkable changes in the "land of the rising sun," has also modified the expression of its humor. Undue eagerness to appropriate the fruits of European culture has been inevitably attended with blunders which furnished material for burlesque. Comic papers, like *Marumaru Chimbun*, modelled after *Punch*, *Kladderadatsch*, *Fliegende Blätter*, or *Life*, appear from time to time, but have mostly an ephemeral existence. If they indulge in political satire, the rigorous censorship of the press soon ends their career. In conclusion, we heartily commend Netto and Wagener's beautifully printed and finely illustrated volume for its appreciative treatment of an important subject, of which the majority of foreigners have only very vague conceptions.

Frangipani's Ring: An Event in the Life of Henry Thode. Translated by J. F. C. L. London: John Macqueen.

This narrative centres about an interesting piece of treasure-trove. The title may suggest to some a memory of the appeal made by Francis I. from his captivity at Madrid to Soliman the Magnificent. But the book has nothing to do with that subject. The Frangipani in question was Count Christopher, a brother of the Count John who was employed by the King of France, and the focal point is Venice rather than Constantinople. At the beginning of 1892, a workman, in digging a ditch at Prata, near Pordenone in Friuli, found a true-love ring which bore the inscription, *Mit wyllen dyn eygen*—"willingly thine own." It was taken to Venice for sale, and was there bought by Dr. Thode. Its new owner at once began a quest for information about it, and was led to believe by the *Diaries* of Marino Sanuto that it had belonged to Count Christopher Frangipani. There is evidence to show that Frangipani, fighting for the Emperor Maximilian against Venice in 1514, lost "a relic" near Pordenone, where the ring was found. The Venetians captured him in battle and lodged him as a state prisoner in the Torricella. About a year later his wife writes him that she is having a new ring made in place of the old one which he has lost, somewhat smaller than the other, and asks that he will have the same legend engraved thereon. "And I am inwardly constrained to send the ring to your Lordship, in order that you may wear it for love's sake, and in remembrance of me. And since there is no good goldsmith to be found here, I pray your Lordship, should this please you, to have it graven there."

The heroine of the story, which is told in most romantic style, with documents of proof inserted at intervals, is this same lady, Apollonia Lang of Augsburg. She was a sister of Maximilian's confidential adviser, Cardinal Matthew Lang, the celebrated Archbishop of Salzburg. After a brilliant career at the imperial court, she married Count Julian von Lodron, and lived with him until his death, shortly after, at Ober-Vellach in the Möllthal, where her memory is still preserved by an interesting altar-piece of Jan Scorel. Then she married Frangipani, and proved a most faithful wife to him. After sending the second ring, she soon made her way to Venice, and shared her husband's long captivity. Early in 1519, Frangipani was given over by the Venetians to the French, and kept by them a prisoner in the Castello at Milan. Apollonia accompanied him there, too, and justified the legend of the ring by remaining at his side till her death, September, 1519.

Dr. Thode is anxious to prove that his story is not a hoax, and supplements his conclusions at every point by evidence drawn from trustworthy sources. Assuming that he has got Frangipani's ring, which is not unlikely, the whole episode is an unusual one. It reminds us of Prof. C. E. Norton's article (published some years ago in the *Atlantic Monthly*) on 'Rawdon Brown and the 'Scutcheon of Banished Norfolk.' The translator might, at places, have written better English, but the volume as a whole, with its real research, its beautiful type, and its excellent illustrations, is very attractive.

THE MACMILLAN COMPANY'S NEW BOOKS

THE EVOLUTION OF IMMORTALITY.

By the Rev. SAMUEL D. McCONNELL. Cloth, 12mo, **$1.25.** *Ready next week.*

"As some, but not all animals have qualities that approach the human, so some people are immortal, *but not all*," says Dr. McCONNELL. His theory that immortality is the final result of the survival of the fittest, the highest step in a long chain of evolution, is thoroughly in unison with biological truth. It is a stimulating book, since it offers immortality as something to be achieved by personal effort instead of as common to all men without power to choose or to reject.

THE STAGE IN AMERICA, 1897-1900

By NORMAN HAPGOOD.
Author of "Abraham Lincoln, the Man of the People," etc., etc.
Cloth, 12mo, **$2.00.**

A picture of one period of the American drama, including chapters on the theatrical syndicate, on "American humor," the tragic ending, American revivals of Shakespeare, on imported plays, and what a theatre ought to be.

RECONSTRUCTION IN THEOLOGY.

By HENRY CHURCHILL KING.
Prof. of Theology and Philosophy in Oberlin College and Theological Seminary.
Cloth, 12mo, **$1.50**

A restatement of theology, such that the readers may rest in accord both with the scientific spirit of the day, and with the deepest spiritual life of the churches.

THE WORKING CONSTITUTION OF THE UNITED KINGDOM

By LEONARD COURTNEY.

This comment was made in a recent London letter to *The Evening Post:* Cloth, 12mo, **2.00**

"A scholarly and authoritative political survey by the most successful Chairman of Committee the House of Commons has ever had."

Just Ready. *THE NEW NOVELS.* **Each $1.50**

ROBERT ANNYS: POOR PRIEST.

By ANNIE NATHAN MEYER.

A story of the first great "strike" on record in English history, when the common people appealed to the boy king for protection.

THE HERITAGE OF UNREST

By GWENDOLEN OVERTON.

"Quite unusual in directness, vigor, and singleness of plot and purpose. . . . Merely as a picture of the conditions of army life and Indian warfare . . . the book is immensely interesting and really valuable."—THE OUTLOOK.

ARROWS OF THE ALMIGHTY

By OWEN JOHNSON.

A story of the civil war, yet not a "war story"; but an exceedingly interesting "inside" view of the commissary dept, in which the hero is an officer.

THE MAKING OF CHRISTOPHER FERRINGHAM

"It may fairly be questioned if there can be found anywhere else in literature so well rounded, so persuasive and so forcible a portrayal of a typical Puritan community as that which we have in the first half of this book."—THE BOSTON HERALD.

A HISTORY OF SOUTH CAROLINA IN THE REVOLUTION, 1775—1780.

By Gen. EDWARD McCRADY.
Cloth, Demy 8vo, **$3.50** net.

Its author, a member of the Charleston, S. C., Bar, and President of the South Carolina Historical Society, has already given two volumes to this series, described by THE NATION as both "valuable and needed," with which the new issue is uniform.

THE HISTORY OF SOUTH CAROLINA

UNDER THE PROPRIETARY GOVERNMENT, 1670—1719

UNDER THE ROYAL GOVERNMENT, 1719—1776

Each demy 8vo, **$3.50** net.

HISTORY, PROPHECY AND THE MONUMENTS,

OR, ISRAEL AND THE NATIONS.

By JAMES FREDERICK McCURDY, University of Toronto. Three vols., demy 8vo, **$3.00** each.

I. To the Downfall of Samaria.
II. To the Fall of Nineveh.
III. To the End of Exile and the Close of the Semitic Régime in Western Asia.

Just Ready.

On the issue of Vol. I. Prof. MORRIS JASTROW, JR., of the Univ. of Penna. wrote:

"It is to be heartily recommended to the general public as a very useful compendium. For Bible readers and students alike it is indispensable."—THE NEW WORLD.

HER MOUNTAIN LOVER

By Hamlin Garland

Author of "The Eagle's Heart," etc. 12mo, 400 pages, frontispiece by Relyea. Price, $1.50.

A story of picturesque contrasts, the scene laid in America and in England, the hero a Colorado miner—a masculine counterpart of "Daisy Miller."

EAST LONDON

By Sir Walter Besant

Illustrated by Phil. May, Jos. Pennell, and Raven-Hill. 8vo, 364 pages, with full index, rich binding, $3.50.

A book of extraordinary interest, describing life among the toilers of the East End of London. By the author of "All Sorts and Conditions of Men."

THE WIZARD'S KNOT

By William Barry

Author of "Arden Massiter," "The Two Standards," etc. 12mo, 400 pages, $1.50.

A novel of life in Ireland, teeming with incident and adventure. The plot is unfolded against a background singularly vivid and picturesque.

Send for richly illustrated catalogue, with advance announcements of all Spring publications.

The Nation.

NEW YORK, THURSDAY, APRIL 4, 1901.

The Week.

Less than three years ago Frederick Funston entered the volunteer army as colonel of the Twentieth Kansas Infantry, without previous military experience except that gained by bushwhacking with the Cuban insurgents. To-day he is one of the leading generals of the regular army, and, with Gens. Wood, Bell, and Grant, will form our chief reliance among the commanders of our army after 1910. That he is without the rudiments of military training, he himself has admitted on occasion. As a scout, there is no disposition in any quarter to question his brilliant ability, remarkable energy, and courage. As Mr. McKinley had no choice except to make him either a line lieutenant, a staff captain, or a brigadier-general, the country as a whole will not be disposed to cavil at the extraordinary reward bestowed upon the Kansan. At the same time Gen. Funston would probably be the first to admit that some years' experience as a major or lieutenant-colonel of regulars would have been more to his professional advantage. As it is, like other generals whom we could name, he will have to rely for a time largely upon his staff officers for the technical side of his work. It is gratifying to note that there is a great deal of criticism of the methods employed by Gen. Funston in making his capture. Deceit, forgery, trickery, and begging of food from the man you are about to entrap—these are not often American characteristics in warfare, and we need hardly point out what an outcry at Filipino perfidy and Boxer-like savagery would have arisen if an American general had been caught by such a trick. It would have been proof positive of Filipino unfitness for self-government for years to come.

President Schurman, in answer to the question what should be done with Aguinaldo, says that he would appoint him Governor of Cavité, Bulacan, or some other Tagalog province; of course on condition that he use his influence for the pacification of the country under the Government of the United States. Not only is Mr. Schurman's advice wise and helpful *per se*, but it comes with the moral authority of the present Administration, whose accredited agent he was when we first took charge of the civil administration of the islands. Whatever support Mr. McKinley's policy has had in the forum of public opinion, has been derived from the Schurman report. Nobody can say that his present advice is tainted with hostility to the Administration. The reasons with which he supports his recommendation are sound and true. Our object, he says, is peace and good government. We seek no vengeance, no punishment. Aguinaldo has shown that he possesses administrative talents of the highest order. They should be employed in the work of restoring good government.

With practically every available soldier on the way to the Philippines, the War Department, according to Washington newspapers, is having much trouble in raising the new regiments which were promised to Gen. MacArthur by July 1. That there has been a marked increase in the number of recruits enlisted is true, but the difficulty of obtaining the necessary officers to command them is worrying the officials not a little. As the numerous promotions consequent upon the reorganization act have emptied the regular line of all second lieutenants and have sent up a large number of first lieutenants, the War Department must await the return and mustering out of the volunteer regiments in order to examine their officers for transfer to the regular army. It is now hoped that the majority of these appointments may be announced by the end of May. Meanwhile the War Department is gathering together officers of higher rank from Cuba, Alaska, China, and the Philippines, which means that the regiments away from home are temporarily being stripped of officers. From Portland, Oregon, comes the tale of recruits pouring in upon one poor colonel without an officer of his regiment to help him, two or three "loaned" from other organizations being his sole aids. Evidently word that the new regiments will not be needed at once would come most opportunely for the War Department.

Congressman Hull, of Iowa and the Philippine Lumber Company, is on his way to the Philippines to see for himself how American Expansion is progressing and what other opportunities besides Government lumber contracts are open to the beneficent and self-sacrificing American civilizer. The Lumber Company, according to its head, Major Frank S. Bourns, is in a position to get all the Government contracts within its reach, but we do not believe that Mr. Hull will be content with this evidence that he is not merely a political "drone," forced to live upon his Government salary. In any event, the Government and the Philippines are certain to profit by Mr. Hull's visit to the archipelago. We look forward with pleasure to the judicial and unbiassed views of American progress in the islands with which he will supply the press and Congress on his return from the islands. One thing we are sure of, he will not be so foolish as to believe the Filipinos capable of governing themselves as long as this self-government will in any way endanger those precious Government contracts of the Lumber Company. Before leaving, Mr. Hull gave another exhibition of the way the wise statesman of to-day feathers his nest. He was the sponsor of the bill enlarging the army, and of the provision in it that volunteer officers might be appointed assistant judge-advocates-general of regulars with the rank of major. Into one of these fine berths he has now slipped his young son, Major John A. Hull of the volunteers, who has been in military life since the outbreak of the war with Spain, and who thus takes precedence over more than 2,000 officers of longer service—some by thirty years and many by twenty years.

We are rapidly losing patience with these Cubans. Their reasoning powers are curiously undeveloped. In the most crude and childish way they keep on saying that the United States cannot both "maintain" Cuban independence and demand conditions which would destroy it. This is the gist of the varying reports of the Committee of the Convention appointed to consider the Platt amendments. Really, this makes us take a lower view of the Cuban intellect than we ever had before. How can people be allowed independence or self-government who have so little conception of the great American political principle of riding two horses at once going opposite ways? Why, President McKinley tells them in the plainest way that he is only taking away their independence for the sake of making it absolutely perfect. Can't they see this? If not, why can't they take his word for it? They go on asserting in their ridiculous fashion that it must be either independence or annexation. That is their dilemma; but we could name at least fifty American statesmen and hundreds of American newspapers who would assure them that they are "all wrong" about this, that it is no dilemma at all, that there is a *tertium quid*, or a *decimum quid* if necessary. Evidently the Cubans have no head for logic, and we cannot patiently endure their silliness much longer.

The Administration's latest hope of getting the Cubans to do what it wants is pinned to the "literature" which it has had sent to the island, dealing "frankly" with our ultimatum, and explaining how Cuban independence will not really be affected by it. After this

literature has been thoroughly circulated, and has had a "quieting effect," the President is confident that all will be as he wishes. All this, of course, proceeds on the supposition that the Cubans do not know the meaning of words and have no knowledge of international law. Their delegates have already expressed the official opinion that the American demands are tantamount to a denial of Cuban independence; but a little "literature," compounded in Washington, is expected to make them take this all back. The whole thing recalls the fabled executioner who could so neatly slice off a head that his very victim did not know it. President McKinley will assure the Cubans that he has not severed Cuban independence at the neck; but the mere reading of his ultimatum will be the pinch of snuff to set the head rolling clear from the shoulders. The Cubans may be very stupid, but they are surely "up to snuff" to the extent of knowing when their aspirations, and our promises, are decapitated.

Ex-President Cleveland has delivered two lectures before the students of Princeton University in defence of his Venezuelan message to Congress and of the policy which preceded it. He has thus compelled those who could not agree with him to take some notice of the affair. Mr. Cleveland seems to think that people who look at it in the calm light of retrospect "must acknowledge the good that has come to our nation through this episode in our history." If it is ever good for a nation that its Chief Magistrate should stir up the war spirit among its people, it must be acknowledged that Mr. Cleveland did a good thing, for he did more to that purpose than any other man of the present generation. All other Presidents of our time have sought to curb it. Even McKinley was dragged into it reluctantly, "with a stop-watch held over his head." It is not sufficient to say, as Mr. Cleveland does, that his Venezuelan policy "has established the Monroe Doctrine on lasting foundations in the eyes of the world." The late E. J. Phelps, who was a great lawyer and a warm personal friend of Mr. Cleveland, whose Minister to England he had been, took occasion to show in a public lecture, some time after the excitement had passed away, that the Monroe Doctrine had nothing to do with the matter, that Mr. Cleveland had wholly misconceived it, and that his course in the Venezuelan matter was as unjustifiable in the eye of the public law as it was indefensible in morals. It is from no desire to reopen that controversy that we call attention to what has been said on the other side by a man whose patriotism was equal to Mr. Cleveland's, and whose equipment as a lawyer was superior. Mr. Phelps's address was published by G. P. Putnam's Sons in 1896, under the title 'America and Europe—a Study of International Relations.'

On grounds of public policy the appointment of Mr. Rodenberg as Civil Service Commissioner ought to be revoked, for the simple and sufficient reason that no man ought to administer a system to which he is so hostile that he has tried to abolish it. On grounds of party consistency the argument is no less strong. Ever since the Civil-Service Law of 1883 was enacted, the Republicans have professed to be the patrons of the reform. When the motion to "starve out the Commission" by cutting off all its supplies came before the House on the 17th of February, 1900, every Republican leader of any prominence voted against it, with the single exception of that notorious spoilsman, Gen. Grosvenor of Ohio. Save for a little group of Republicans from Ohio who stood with Grosvenor, there were in all the region from the Atlantic Coast to the Missouri River, which is so overwhelmingly Republican, only fifteen Republican votes besides Mr. Rodenberg's to destroy the system. The Illinois spoilsman thus has left not even the plea of representing his party, and no excuse for him can be found.

President McKinley's instinctive use of all offices at his disposal as mere "places" is again exhibited, much to his disadvantage, in his choice of the nine Commissioners to the St. Louis Exposition. Congress provided a salary of $5,000 for each of them, and Representative Tawney of Minnesota, who had much to do with framing the legislation for this commemoration of the Louisiana Purchase, declares that it was the avowed intention to have the Commissioners represent "the leading industries of the country." Instead of that, we have a portentous list of ex-Senators and ex-Representatives, with two or three nobodies sandwiched in among them. Congressman Tawney was so indignant at the way the thing was going that, on March 22, he telegraphed the President begging him to recognize the importance of the educational exhibit at the St. Louis Fair by naming at least one Commissioner who knew something about education. President Northrup of the University of Minnesota had been prominently urged for the position, for which his fitness is uncontested. But President McKinley passed him by, and, to reward Senator Jones of Arkansas for not having defeated the Philippine amendments to the Army Bill, allowed that statesman to "name" a country storekeeper. But this does not imply that Mr. McKinley would put a slight upon education. Oh, no; he promptly appointed President Northrup a delegate to the Pan-American Congress, soon to meet in Mexico, an office which, it is officially explained at Washington, is one of "much dignity," though it is regretfully added that there is "no salary attached." If there had been, the politicians would have got it. But after this striking tribute of the President's to the higher education, one sees with what a fine show of pride and gratitude Harvard will hand him his degree of LL.D. next June.

In the cities of Cleveland, Toledo, and Columbus, Ohio, municipal elections were held on Monday, the results of which possess more than a local or even State interest. In each case the successful candidate for Mayor is a man who made his campaign on a platform which involved the attitude of the municipal authorities toward corporations engaged in public service, particularly the street-car companies, and which promised the people greater advantages from municipal oversight of such corporations in the future than in the past. The election of Tom L. Johnson in Cleveland is the most striking. He made a great fortune through the protective system as a manufacturer of steel rails, and yet he advocates free trade. He largely increased this fortune through the consolidation and development of street-car lines in more than one city by such methods as are ordinarily pursued by the promoter, and yet he advocates cheaper fares and larger concessions to the public in other ways. He is an extensive owner of real estate, and yet he was a bosom friend of Henry George, and has long been an advocate of the single tax. His line of action has been thus described by a friend: "He finds a certain state of things in society, and believes another state would be better for humanity. He advocates this other state, but because of that he need not stand by and lose any opportunity that presents itself." Mr. Johnson profited greatly by the prolongation of the factional controversy which has long waged among the Cleveland Republicans, the personally upright candidate of that party being hampered by his affiliations with the old and objectionable McKisson machine.

Platt has decided that the term of the Mayor of New York city shall be reduced from four years to two, and it is generally expected that this decision will stand at Albany. There was a good deal of doubt among students of city government as to the wisdom of the longer term when the change was made in the new charter, and since early in 1898 many people have lamented that there was no chance of getting rid of Van Wyck before the end of 1901. But the conclusion of most thoughtful men who have gone into the matter thoroughly is, that in the long run we are likely to get better mayors under a four years' term

than under a two. What is the reason of Platt's insisting upon the two-year term? An explanation which is entitled to weight appears in that plain-spoken Republican newspaper, the *Press*, under the headline, "Blackmail, the Reason." The *Press* says that, if Tammany is to be beaten this year, it must be by a "candidate who will look with no more favor upon Platt instruments of blackmail and misgovernment than upon the Croker instruments of misgovernment and blackmail"; and, of course, if such a mayor is elected, Platt does not want him in office any longer than can be helped. This is one explanation furnished by our Republican contemporary, and the other is that "elections at long intervals do not favor the blackmailing business." The *Press* declares that this is the only reason why the Platt machine sticks to annual sessions of the Legislature, and wants Governors elected once in two years. "Blackmail!" it concludes—"that is the reason for the two-year Mayoralty term which the Platt people will try to force upon New York city at the very moment when she is on the edge of escape from Tammany Hall." Such is the brutal way in which a widely circulated Republican newspaper talks about the Republican machine.

Coincidently with Mark Twain's playfully paternal remonstrances, addressed through the *North American Review* to the Chinese missionaries, comes another rebuke to them which they will find it difficult to ignore. President Tucker of Dartmouth said in a sermon in Boston on Sunday night, under the very eaves of the American Board, that "the Christian Church has been set back, nobody knows how far, by the behavior of the missionaries in China." These words come from a man to whom all sensationalism is abhorrent, and who, as pastor of the Madison Square Church in this city, and as professor in Andover Theological Seminary, earned the right to inflict the faithful wounds of a friend, if missions can, indeed, be wounded by his serious and weighty words. President Tucker would be the last man to bring a railing accusation against missionaries as a class, and it must be only convincing evidence that has led him to speak out. The churches and missionary boards have been, in general, so tonguetied in presence of the un-Christian deeds done in China by the apostles of Christianity, that it is refreshing to have a man of President Tucker's character and influence break the silence which was getting to be little short of shameful.

Everybody's sentiments seem to be consulted in this Chinese business except those of the Chinese themselves. Great Britain is highly considerate of the susceptibilities of Russia, Russia of Japan's, Japan of Germany's, and so on round the circle; but where does China come in? She is simply the subject for vivisection. Mr. Hay has made public the note in which he advised the Chinese Government not to sign the Mantchurian treaty with Russia, or any other, pending a general settlement at Pekin. But Russia was at the same time telling China that she must sign, on pain of being considered unfriendly. What were the beset Chinese to do? The Western Powers were urging China to resist the Russian demands. But would they help her to do so with material as well as moral assistance? Nothing of the kind. Russia, however, was on the spot. Russian troops were in effective occupation of Mantchuria. A treaty would legalize their temporary stay there; without it they would stay anyhow. And guns and bayonets on the Amur must count for more than notes on the Potomac or speeches on the Thames. Yet the poor Chinaman is caught between two, and told that he will be ruined if he signs and ruined if he does not sign. Lancelot Gobbo was not more unhappily torn in his contest between conscience and the fiend.

A familiar illustration of the vitiating influence of the protectionist policy is found in the fact that its application to one industry always results in renewed demands by others for the same sort of support. No better example of this kind of "derived demand" for tariff-coddling can be found than that furnished by the recent four-days' debate in the French Senate apropos of the proposal to impose an export bounty upon cereals. Here we have unmistakable demonstration of the applicability of the general theorem to a special case. To say nothing of the absurd protectionist policy of France in general, a particularly debauching influence has been exerted by the bounty on beet sugar, and its correlative, the ship subsidy. How miserably inadequate these measures were to promote the objects at which they aimed, was thoroughly explained by Mr. David A. Wells ten years ago. But it has taken until now for their worst effects to be felt. The demand of the grain-producers that they be accorded similar aid from the public purse was no more than the natural outcome. If the growers of beet sugar are to be assisted, why not the cultivators of wheat; and if they, then why not all other agriculturists? The circle is a vicious one, and this seems to be understood by the Minister of Agriculture, who pointed out with much justice that "the result would simply be the guarantee of a minimum price for grain, which would imply genuine state socialism." He concluded by characterizing the measure as "bad in principle and dangerous in its consequences."

That the tariff poison in France is working in every part of the body politic is further demonstrated by the demand of the small traders that they, as well as others, shall be accorded a measure of protection. A good deal has already been done in the way of providing for small manufacturers by practically excluding works of an artistic and ornamental character, especially those of Italian origin, by means of a special system of import duties. Similarly, foreign workmen were excluded from certain trades about ten years ago. In many parts of France much custom has been secured by travelling traders, chiefly Italians, Swiss, and Belgians, and it would be no more than reasonable for the small business men to protest against such invasion of their territory. Just how the protective principle could be applied they are not clear. It is pointed out by the *Ami des Petits Commerçants* that "experience shows that the legislation in behalf of agriculture has been very beneficial to it." Hence the natural inference is drawn that the same would be true of other lines of effort, and this inference takes form in the statement, "We, likewise, demand that we be protected." The fallacy in the whole policy of protection is clearly suggested, apropos of the demand of the merchants, by the *Temps*, which shows that protection, if effective, must necessarily be special in its nature, and is then class legislation; while, if general, it defeats its own ends, since it only takes from one pocket what it puts into another.

Emperor William appears to have had his mental balance completely upset by his recent mischance. Another oratorical indiscretion of his Thursday has set all Germany buzzing. He seemed to be brooding on the possibility of a revolution; at any rate, his references to '48, and the duty of the troops to shoot down "insolent insurgents," should they again appear in the streets of Berlin, were most maladroit. It will be remembered that when that historic revolt against absolutism occurred, when the Revolution in Paris set Vienna and Berlin aflame, the King of Prussia really offered concessions. Instead of speaking of the rioters (the citizens behind barricades) as "insolent insurgents," he addressed them as his "dear Berliners." But a half century of blood and iron has changed all that. However, it is not likely that the Emperor's rhetorical flourish meant anything in particular, except that his mind is uneasy. Germany's immediate troubles are more likely to come from the stoutest defenders of William's divine right than from an insurrection of Radicals and Socialists. We mean the Agrarians, who are now driving the country on to a tariff war with Russia and the United States.

THE CAPTURE OF AGUINALDO.

The efforts of the Filipinos to recover their independence have been growing rapidly weaker during the past two months, giving promise of a cessation of hostilities within some reasonable time. This movement toward peace has now been accentuated by the capture of their leader, Emilio Aguinaldo. It is the opinion of those best qualified to judge—that is, of English officers who have had experience in dealing with the Malay races—that we might have avoided all trouble in the beginning if we had treated with Aguinaldo and his followers, at the outset, as men entitled to be consulted in the government of their country. If we had extended to him the same consideration that we accorded to the Sultan of Sulu, for example, it is most probable that we should have had his coöperation, instead of his hostility. In the case of the Mohammedan ruler we recognized his authority and preserved the *status quo* even to the extent of tolerating slavery in his dominions, although it is contrary to the Constitution of the United States. It is not to be supposed that Aguinaldo would have refused everything short of absolute independence if the original attitude of friendship toward him had been maintained. If the spirit which actuated our consuls at Singapore and Hong Kong (the first American officials who came in contact with the Filipino leader), had governed our subsequent policy, there is every reason to believe that we should have saved thirty-five hundred lives of our own men and spared the maiming of as many more, not to mention the Filipino blood that we have shed during the past twenty-six months.

It is customary to speak of Aguinaldo as the Rebel Chieftain. Names are not very important now, but it is well to remember that neither he nor his followers ever owed any allegiance to us. They were in revolt against Spain when the accident of war brought us to Manila. They were fighting for independence. We destroyed the Spanish power. We sought the coöperation and aid of Aguinaldo in that enterprise. Whatever may have been the promises or implications of that alliance, nothing ever occurred that could put him in the attitude of a rebel, since there can be no rebellion where no allegiance is due. Whatever fate may be in reserve for him, he will be known to history only as a defender of liberty under desperate circumstances and against terrible odds. With little money and with scant resources in arms, ammunition, and supplies, he has maintained the fight for more than two years against an organized army of more than 65,000 men, possessing every appliance of modern warfare, and having entire command of the sea. That in this heroic endeavor he was moved solely by patriotism, and that his character was above reproach, is the testimony of officers of our own, both military and civil. Nor has his career been stained by any act of cruelty. At the time when these great responsibilities were thrown upon him he was only twenty-seven years of age. History can show few brighter examples of patient endurance, intellectual resource, and high principle. We feel sure that such virtues will stir the admiration of every lover of liberty in the world, and that the name of Aguinaldo will find a place eventually in all American hearts.

If any words of ours could reach those charged with authority in the Philippine Islands, we should urge them to treat their captive now as they ought to have treated him in the beginning. Our excuse for being in the Philippines at all has been that we were committed, by our victory at Manila, to the task of restoring order in the islands, and giving the natives as much liberty and self-government as they are capable of exercising. Now we have in our hands the one man who possesses influence throughout the country, wherever it is needed to restore peace. Every consideration of common prudence, statesmanship, and Christian charity points to his employment for the settlement of society and the restoration of good order, industry, and prosperity. The question what measure of self-government the Filipinos shall enjoy is to be determined by public opinion in the United States. In order that public opinion may have a chance to develop and find expression, there must be peace in the islands themselves. For this reason, as for the more obvious one of saving our money and our children's blood, every means to secure that boon should be employed; and surely nothing promises more hopeful results than the coöperation of Aguinaldo. The assurance of this lies in the announcement that he has taken the oath of allegiance, and so at least put an end to any deliberations on our part as to whether he shall be deported to Guam or indefinitely imprisoned. But we have yet to learn what his intentions are beyond individual submission and abstinence from further hostilities.

The fate of Aguinaldo, however, is not the matter of chief interest which his capture brings before us. The destiny of the United States is now, as it has been from the beginning, the subject of the greatest concern. The political future of the Filipinos is of little consequence to the United States, except as it is connected with the question whether the spirit of the American republic is to be preserved as it was handed down to us. Can a free people govern an empire and maintain the institutions which distinguish them from monarchical governments and privileged orders? All history says no. It has never been done for any long period. It is contrary to reason and experience to suppose that a conquering and self-aggrandizing republic can preserve liberty to itself when denying it to others. The opposition to our proceedings in the Philippines by those who are called Anti-Imperialists rests upon this consideration. They have sympathized with Aguinaldo and his fellows as they sympathize with suffering humanity in other parts of the world, but their political action has been based on the belief that a republic cannot be the oppressor of other peoples without losing its own character and hastening to its doom.

FRAUDS AT MANILA.

Next in importance to the capture of Aguinaldo, although exciting very different emotions, is the news which came from Manila on Monday that extensive frauds have been discovered in the Quartermaster's Department, that Capt. Barrows of the Thirtieth Volunteer Infantry, and a dozen or more of his subordinates, together with a number of civilians, have been arrested. Dispatches from Washington say that the Government has heard nothing about these frauds, and that Gen. Corbin thinks that the reports are exaggerated, although he has no reason for thinking so. Inasmuch as the censorship on news still exists at Manila, it is most probable that the information allowed to come through is the minimum rather than the maximum of the scandal. The story is, that large quantities of army supplies have been missing for a long time past, the losses extending back to June, 1900; that thousands of sacks of flour, together with quantities of bacon and other stores bearing the Government marks, have been found in the possession of unauthorized persons; that a Government contractor has been spending large sums of money in entertainments to army officers, that a prominent officer of the Commissary Department is accused of leading a scandalously immoral life, and so forth.

To those who recall the words spoken by Gen. Otis, more than a year ago, these revelations will not be in the least surprising. The wonder is rather that the present revelations did not come sooner. In an official order printed in the *Evening Post* of January 3, 1900, he said that cases of bribe-taking and other like misconduct by persons holding positions in the military or civil service had been reported to him; that passes had been obtained and transferred for a money consideration; that transportation in public conveyances had been extended to unauthorized persons, and that contributions had been solicited, if not exacted, from subordinates, as presents to their superior officers. "The evil," he said, "corrupting and far-reaching in its effects, appears to have reached a stage which renders its suppression with a strong hand im-

perative." Concerning the exaction of presents to superior officers from those under them, he called attention to a law of the United States which prohibits the acceptance of such gifts, even when offered voluntarily. But this was evidently the smallest part of the corruption which he believed was going on at that time, although he was not able to put his hand on the guilty parties. Another source of corruption was discovered two months ago, when G. W. Carman, a private citizen, and a Spanish merchant named Carranza were arrested for sending supplies to the insurgents by means of passes obtained from Government officers and employees, who must have known what the passes were used for, and must have been paid for giving them.

It is with no satisfaction that we recall the evidence of former scandals in Manila, or that we comment on these fresh disclosures. One of the strongest arguments against what is called Expansion, has been the belief that our civil service is not fitted for the administration of government in distant countries. This defect was known to and appreciated by the Schurman Commission, who pointed out the necessity of radical reforms in that service. In fact, President Schurman, in a public lecture shortly after his return, declared that it was a *sine qua non* of successful government in the Philippines that the men sent thither should be selected by a rigid civil-service system, and not by favoritism or haphazard. It was an obvious incongruity, however, that we were already in the Philippines, and had no intention either of coming away or amending the civil service. On the contrary, we were deteriorating at home at the very moment when the Chairman of the Philippine Commission was insisting on improvement abroad. The President's order withdrawing from the classified list several thousands of offices which had already been placed under civil-service rules, was nearly simultaneous with President Schurman's appeal for the enforcement of a better system. The discovery of the Neely frauds in Cuba came, about the same time, to illustrate both the President's course and that which his chief adviser in Philippine matters recommended. And now we have the painful disclosure not only that there has been no improvement in civil-service methods at Manila, but that corruption has found its way into army administration also. This happens to be coincident with the President's appointment of Rodenberg as Civil-Service Commissioner, a few months after he had voted to abolish the merit system entirely.

These facts are a sufficient comment on the assumption made by many well-meaning persons that the additional responsibilities cast upon us as a "world Power" would compel us to bring our civil service up to the measure of the new requirements. We believe that some college professors held this opinion. It was the belief of others (detractors of the good McKinley) that if the American civil service was defective at home, where it was under the correction of public opinion and the watchful eye of the press, it would be worse in distant islands where these restraining influences did not exist. They maintained that a civil service cannot rise higher than its source, but must necessarily fall somewhat below the fountain-head by reason of friction and distance. But they incurred the reputation of pessimists and are still more or less under a cloud.

THE CURRENCY SITUATION IN THE PHILIPPINES.

Sound Currency furnishes an interesting documentary history of the monetary situation in the Philippines, compiled by L. Carroll Root from official reports on the subject. Conditions in the islands are not immediately alarming and are likely to present technical difficulties rather than large questions of theory, yet it is easy to see how Congress might make a bad mess of the matter if it should pursue its former policy of "going it blind" on currency questions. When the United States first took over the islands, it found there a silver standard which had succeeded a nominal gold standard about 1875, shortly after the first downward rush in the price of silver. Gold was driven out by the Mexican dollar, which was preferred to gold on account of its greater bulk and suitability for the business of the people. The use of such dollars was legalized in 1876, those in circulation being made a legal tender, although further importations of them were forbidden the following year.

At the time of the American occupation, therefore, there was no gold in circulation in the islands, and the standard was an arbitrary one, the dollar fluctuating in value partly with the price of silver bullion and partly with local demand and supply. The prohibition on importing Mexican dollars was abolished almost immediately after the advent of the American troops in Manila, in consequence of representations made by local banks concerning the increased need of coin produced by the greater volume of business. In consideration of the permission to import, the banks guaranteed a rate of exchange not worse than $2 Mexican for $1 United States. Prior to July, 1900, the banks were not called upon to maintain their guarantee, for the Mexicans remained from 1 to 7 cents less valuable than the ratio of 2 to 1. Late in July the American dollar was quoted at only $1.98 in Mexican money, and this decline in price led to a discrimination against American currency on the part of the natives, which was only partly remedied by an arrangement, effected by the Philippine Commission, for the exchange of Mexican dollars against those of the United States at the rate of 2 for 1, and a duty of 10 per cent. on the export of the latter.

There are four proposed methods of dealing with the question. The first is the familiar bimetallic policy. Waiving for the present the danger and wrong of pressing down a crown of thorns upon the Filipino brow, it is clear that any effort to maintain Mexican dollars at a $2 parity with our own might be a very dangerous undertaking, and that bimetallism cannot be thought of for an instant. Inasmuch as Mexico is a free-coinage country, the United States would be practically offering to maintain the world's product of silver at a certain price, provided only that it had passed through the Mexican mints. The Commission's efforts to "keep the ratio steady" in the Philippines have already been expensive and very troublesome. Nor would a second proposed plan —the rough-and-ready method of merely extending our system to the Philippines, without change of unit—be exactly fair. In an unprogressive country like the Philippines, it would take a long time to readjust the scale of prices and wages in terms of a unit twice as large as that hitherto prevailing.

The third and fourth modes of dealing with the problem are the establishment of a gold standard, with a unit corresponding to the peso (Mexican dollar), or worth, in other words, something like half as much as the present American dollar, and the policy of "open mints" in the Philippines, which implies the acceptance of a single silver standard, with free coinage, but without obligation to redeem. The latter suggestion has perhaps been most widely approved. But it should be observed that the old confusion, of which we are all heartily tired, but which seems to be inevitable whenever monetary discussion is aroused, between a gold standard and a gold medium of exchange tacitly underlies nearly all the statements on the subject. In considering the relative advantages of silver and gold as standards, the theoretical arguments are too familiar to need much discussion. It is enough to say that the retention of the silver standard would carry with it all the usual disadvantages—fluctuating par of exchange, instability of value, etc. The Commission itself admits that "as long as the principal currency of the islands is Mexican money, the ratio of exchange between it and United States money will be subject to constant fluctuations. . . . Every such fluctuation operates to the injury of all business interests except that of the local banks and speculators in currency."

The situation is much like that which existed a few years ago in Japan. The

gold yen and the silver yen were of equal value in 1875. The subsequent decline of silver caused gold to pass out of circulation. In 1897 silver had fallen to one-half its former value. The gold yen had been out of circulation more than twenty years. It was unknown to the common people; when used at all, it passed as the equivalent of two silver yen. The Government adopted the gold standard and took the yen for the unit of value, but did not coin any gold pieces of one yen. The smallest gold coin is the piece of five yen, approximately equal to our quarter eagle. Then the Government made silver subsidiary to gold and legal tender for only ten yen. In this way all the evils of the currency system were cured in a very short time, and without producing any commercial confusion.

The experience of Japan points the way to currency reform in the Philippines, but it implies that the Mexican dollar "must go," and a Philippine silver coinage must take its place. But gold should be made the standard, in order to avoid the difficulties that India has suffered and is just now emerging from. The argument for preserving the silver standard proceeds either from those classes which, as the Commission suggests, are interested in its retention—that is, who profit by its fluctuations—or from uninstructed public officials like Paymaster Bates, who, speaking of a proposed free coinage of Philippine silver, magniloquently says that it would "gratify the pride of the natives, and tend to cultivate among them a national spirit and ultimately a feeling of gratitude toward this country." The sooner we get away from our present precarious position as the possible redeemer of innumerable Mexican dollars, the better.

ISTHMIAN CANAL QUESTIONS.

In the April number of the *Forum* Mr. Aldace F. Walker carefully examines the report of the latest Isthmian Canal Commission, and especially that portion which relates to the probable traffic that may be relied upon to justify the expenditure of $200,000,000, which is the latest official estimate of the cost by the Nicaragua route. Mr. Walker's paper is entirely impartial as between Nicaragua and Panama. He seems to concur with the Commission in holding that, while there are some important advantages in the Panama line, both in cost and in canal-distance, the restrictions attached to the concession by the Colombian Government and by the shareholders of the old bankrupt Panama Company are such as to make the Nicaragua route preferable to the United States, as builder and owner of an interoceanic waterway.

The question discussed in Mr. Walker's paper is whether it is worth while, in a financial point of view, to build the canal at all; in other words, whether the canal will earn enough over operating expenses to pay interest on the cost computed by the Commission. There may be reasons for building it apart from its commercial aspects. If the national defence requires it, we must build it for the same reasons that England builds great war-ships; but if we are concerned with it only as a means of transportation, then we had best look carefully to the dollars and cents, and form some idea beforehand of the income and outgo. A canal has a certain value as a means of regulating the rates of transportation by rail, and it has often been affirmed that the Erie Canal pays in this way for the cost of keeping it in repair; but it would hardly be deemed worth while to build an interoceanic canal in order to lessen the earnings of our transcontinental railways. Our legislatures can compass that end more cheaply.

Mr. Walker does not affirm that the proposed Nicaragua canal would not pay interest on its cost, plus the charges of operation and repair, but merely that no figures have been presented tending to show that it would. The only estimates given in the report of the Commission are those of the Sub-committee on Value of the Canal, given in an "Additional Report" submitted to the Senate by Senator John T. Morgan of Alabama. This report presents replies by Prof. Emory R. Johnson of the University of Pennsylvania (who was a member of the Commission) to questions "concerning the traffic of an Isthmian canal and of the Suez Canal, and the industrial effects which will result from the opening of an American interoceanic canal."

The Suez Canal has been in operation twenty-nine years. It is "in the direct route of the principal commerce of the world," that of Europe and North America with India, China, Japan, the Straits Settlement, the Philippines, and Australia. It has no competition by rail, and none by water except by an enormous détour, via the Cape of Good Hope. The canal itself is only ninety-two miles long and is without locks, as compared with one hundred and eighty-six miles and nine locks on the Nicaragua route. (Canal distance and lockage count heavily in operating expenses and in the estimate of net earnings.) The position of the Suez Canal enables it to charge $1.80 per registered ton for vessels passing through it, which is considerably more than the Nicaragua Canal could charge, except at the risk of turning freight to competing routes.

The Suez Canal in the year 1899 gave passage to 9,895,630 tons of freight, earning a gross revenue of $17,624,553. Professor Johnson estimates the tonnage of the Nicaragua Canal in 1914, the possible date of its completion, at 7,500,000 tons, and ten years later at 11,250,000 tons. These figures Mr. Walker considers fanciful. "A statement," he says, "that the Isthmian Canal will carry one-fourth as much tonnage as the Suez Canal (*i. e.*, 2,473,900 tons) would have been accepted as fully ample by many conversant with the respective commercial opportunities of the two canals." In answer to the question what rate of toll per ton he adopted in estimating the gross income of the canal, Professor Johnson replied that any toll greater than $1 per registered ton would cause vessels to the west coast of South America to pass through the Straits of Magellan, instead of the Isthmian Canal, and that this would constitute about one-third of the traffic available for the canal.

To pay interest at 4 per cent. on the cost of the canal would require a net revenue of $8,000,000 over and above running expenses. The latter, Mr. Walker thinks, cannot be less than $2,000,000 in a country subject to torrential rains like Nicaragua. It may be four times as great. Thus a gross revenue of $10,000,000 would be required to pay 4 per cent. interest on cost. It is not necessary, however, that 4 per cent. should be paid. The Government can borrow at 2½ per cent. Therefore, it could accept a gross return of $7,000,000, and have $5,000,000 net after paying an assumed charge of $2,000,000 for operation. Can this smaller sum be expected?

Professor Johnson says that 3,426,752 tons of the maritime commerce of the United States during the year 1899 "could have used the canal to advantage," but as the ports of shipment and of entry are not given, there is no way to determine whether this commerce would actually have taken that route, if it had then been open. If imports of tea and silk from China and Japan are included—imports that now come by steamer to Pacific ports and thence eastward by rail—Mr. Walker says very little of such traffic will ever leave the railroads. "The roads may have to reduce the rates, but they may be relied upon to keep the business." The same may be said of traffic going the other way. The railroads will never allow it to escape from them. They can send cotton goods half way across the Pacific before a ship loading at Boston or New York could emerge from the western terminus of the Nicaragua Canal. Another element of the problem adverse to the canal is the fact that the greater part of our traffic with the Orient originates or ends in the interior of the country—where the railway can pick it up or deliver it at the door of the producer or the consumer. No such traffic originating west of the Alleghanies or north of the Gulf States will go or come via the Isthmian Canal. The same is true of the trade of California.

Very little of that which is now hauled by rail will go by any other route. Mr. Walker considers Professor Johnson's estimate of 3,426,752 tons of United States freight as "simply incredible," and his further estimate of 3,346,377 tons of European trade with the west coast of America as equally visionary. Of the latter amount, 2,425,932 tons were to and from Chili, which, being mostly handled by sailing vessels, would continue to pass through the Straits of Magellan.

Mr. Walker's estimate is that possibly 2,000,000 tons, at an outside figure, would actually use the canal at one-half the Suez rates of toll. This might suffice for operating expenses, but would allow nothing for interest on the investment. Of course, Mr. Walker's bias as an officer of a transcontinental railway must be allowed for, in estimating the value of his communication, but it is something which calls for a reply from the Congressmen who sought to commit the Government to an expenditure of $200,000,000 after half a day's debate.

JUDICIAL OATHS.

The fuss which the Catholics are making in England over the coronation oath, and the small amount of interest apparently taken in the matter by the general public, show how much of its strength as a defender of popular institutions the official oath has lost. No obligatory oath is of much more value to-day as a guarantee of anything, or a protection against anything, than the coronation oath in England.

The truth is, that the importance attached by either one party or the other to modifying the oath or not modifying it is a good illustration of the width of the gulf which separates us from the Middle Ages. Nothing used to seem easier to the men of that period than to safeguard an institution or a custom by surrounding it with oaths. Our reverence for what is called "the sanctity of an oath" has enormously diminished, but in its day it was a very powerful defence. The idea that the Almighty would help men to keep their promises, or would punish them for breaking them, was a deeply rooted belief of the earlier Christians, and it seems as if we ought to do something to keep it alive; yet the whole trend of modern jurisprudence has been in the direction of weakening it, probably because it was so frequently used for purposes of oppression, or in order to "get even" with one's enemies.

The oath which graduates of the universities had to take was clearly looked upon by those inside the sacred ring as one of the great defences of the English faith and morals, and its abolition as a tremendous concession; but since that period everybody recognizes the gain to both morals and education. This oath, which has until recently barred the entrance to universities to Nonconformists, really divided the English people into two nations, between whom not only was there no sympathy, but even the growth of sympathy was repressed, both by law and by social usage.

I think it may be safely said that the dissenting clergy in England preserved pretty faithfully the scholarly traditions of their Puritan ancestors, but they were less successful in meeting the cultivated social odium which attended the name of Dissenter. The ordinary language of the Cambridge and Oxford student regarding nonconforming ministers was one of contempt or defiance. Indeed, contempt for Dissenters was one of the earliest parts of the education of an English boy of the upper classes. No one who has ever frequented an Oxford common-room in the last forty years, and listened to the conversation there after dinner, but must have heard lots of contempt and ridicule heaped upon dissenting ministers—even the way in which they tied their white cravats was not above criticism, and, presumably, they were ignorant of Greek and Latin. Every one remembers Sydney Smith's joke in one of his later illnesses, when he answered an inquiry after his health by saying that "he was so weak that, if one gave him a knife, he would not be able to stick it into a Dissenter."

Those who think that this assertion that the oath divided the English people into two nations is an exaggeration, must remember that the age when invincible prejudice is most easily formed is youth, and that opinions about Church or State take root more readily during the period of a man's education than later. Probably in this respect matters were not made any worse by the reservation of the universities for Episcopalians, but they were certainly not made any better. The social prejudice was bad enough, but it was embittered by the fact that the Dissenters were shut out from any participation in the advantages of the great seats of learning.

I was once stopping at a country house in Devonshire, where among my fellow-guests were the Mayor of a Scotch town and his wife. Our host was a distinguished Episcopalian, and a very liberal man. Talk turning upon Bunyan's 'Pilgrim's Progress,' the Scotch lady joined in the talk, showing her familiarity with this popular work. Remembering, however, that her host was not of Bunyan's stripe of religion, she hastily added that "Bunyan's book was the only work of a Dissenter she had ever read." The fact is that the term "Dissenter" has been, since 1688, a term of reproach, which is somewhat ludicrous, as it indicates only dissent from the English Church.

Another oath of somewhat the same character is the American Custom-house oath, which divides the people into two parties—the traveller and the Custom-house inspector; the traveller swears to the list of his effects, and the inspector promptly shows he thinks he may have perjured himself by searching his trunks. This submission to the charge of perjury from his own paid servants doubtless tends to break down character, and is as much a blot on the social conditions of our own times as the test-oath has been in England ever since 1688.

E. L. G.

THE PLIGHT OF MAINE.

BRUNSWICK, Me., March 30, 1901.

On the 13th of September, 1900, two days after the State election in Maine, Hon. Joseph H. Manley, then Chairman of the Republican State Committee, gave out, through the columns of the Lewiston *Journal*, an open letter calling attention to three things which, in his opinion, "the Republican party must do in order to retain control" in the State. The first was to revise the tax laws. The third was to abolish the fee system. Of the second he said:

"(2.) We must insist that the present prohibitory law shall be strictly and rigidly enforced in every section of the State. The people have a right to any law they desire. They are the sovereigns. They have, whenever they had the opportunity, voted overwhelmingly in favor of prohibition. I agree that many of our best men think the cause of temperance would be better promoted by a local-option high-license law. If the majority of people so think, that should be the law of the State; and I can see no possible objection to again submitting to the people the question, which would have to be presented in a proposition to repeal the present Constitutional provision. But until that is done and the people vote to repeal it, we have a plain duty to perform, and that is the enforcement of the law. The condition to-day is, that we are having a practical license law, because in many, if not all, the counties in the State it is the practice to indict once or twice a year every man who pays to the United States a special retail liquor-dealer's tax. He is indicted on that fact, and in 99 cases out of 100 settles and pays what is demanded of him. This, I admit, swells the receipts of the county treasury, but I submit that it is not the wise and proper course to pursue."

Mr. Manley's position as titular chief of the Republican party in Maine and Speaker-to-be of the State House of Representatives, naturally gave to his utterances great weight in the public estimation—greater, probably, than just at that time would have been attached to the words of any other public man in the State; and speculation immediately became rife as to what this unexpected deliverance might mean. Advocates of resubmission promptly hailed it as a harbinger of success for their cause; the advocates of prohibition quite generally interpreted it as a warning that the support of the Republican machine would no longer be certainly counted upon, while to many people Mr. Manley's declaration appeared only in the light of a shrewd political move, intended to forestall public opinion and gain for the Republicans the credit for any genuine reform in liquor legislation which might be inaugurated by the Legislature the following winter.

It soon began to appear, however, that if resubmission was a bonafide part of the Republican programme, it was not going to be altogether easy to carry it out. To begin with, Mr. Manley himself, in a second letter published September 19, emphatically denied that he had written in his previous letter "a sentence, line, or word" in favor of resubmission. Then the Woman's Christian Temperance Union promptly put itself on record as unalterably opposed to a change in the Constitutional status. Other circumstances also operated to obstruct the path of the resubmissionists, the chief of these, perhaps, being the election in Cumberland County—the most populous county in the State, with Portland as the county seat—of a radical Prohibition candidate for Sheriff, and the consequent likelihoood that, in that county at least, the prohibitory law would be more vigorously enforced than it had been for a number of years. Mr. Manley's letters, however, together with the Cumberland County episode, had made the question of prohibition the most prominent matter, so far as general public attention was concerned, to come before the Legislature; and while it was generally felt that tax reform

and the abolition of official fees were matters of great moment, it was suspected that even the questions of taxation and the fee system might be found to be, like many other public questions in Maine, strangely entangled, and in devious and unexpected ways, with the question of the enforcement or modification of the prohibitory laws.

What happened can be briefly told. The message of the Governor, non-committal on most important topics, was non-committal on the subject of prohibition also, merely repeating the well-worn platitudes about the benefits of temperance and the services of the law "in stimulating and promoting that intelligent and vigorous public opinion which is the support of all effective law." A bill providing for the resubmission of the prohibitory amendment to the Constitution was defeated in the House on March 14 by a vote of 34 to 84; and on the following day the Senate, by a vote of 3 to 22, declared itself to be of the same mind. For at least two years more, then, Maine will continue to appear in the diminishing list of prohibitory States, and the outcome of the vote at Augusta will doubtless be widely proclaimed as a victory for temperance and moral reform. It would be hard to say which class is the more gratified at the result—the radical Prohibitionists, officially represented by the Woman's Christian Temperance Union and an organization known as the Civic League, or the liquor-dealers, who can now continue their illegal business under substantially the same conditions as heretofore, and with all the advantages of low license and assured public support.

One can hardly avoid speculating with much seriousness as to just why resubmission should again have failed. It certainly is not for lack of knowledge. So far as the practical working of prohibition in Maine is concerned, the law has long since been seen to be not only a farce, but the greatest source of social and political corruption in the State as well. Any one who knows anything about Maine, and cares only to tell the whole truth, knows that the prohibitory law is everywhere treated with contempt, that the violation of it is expected by the public and winked at by the officials sworn to enforce it, and that it carries in its train a mass of perjury, bribery, lying, and evasion from which no community and no class of society escapes. The spasms of virtuous reform which attack the larger towns and cities from time to time have no considerable public support, and serve only to reveal the firm hold which the liquor business has upon the real sources of influence. Even the agencies established under authority of law for the sale of liquor for medicinal, scientific, and manufacturing purposes are, in too many cases, little better than legalized saloons, save that the liquor sold is commonly not drunk upon the premises. And yet a law whose every accompaniment is rottenness and stench is still further riveted upon the State by overwhelming votes in the State Legislature, and Maine is left to deal with one of the most difficult of social problems, the control of the liquor traffic, by the sole means of legislation which can be neither enforced nor repealed.

I know of no more striking example of inability on the part of well-meaning people to see things in their normal relations than is presented by the persistent and ceaseless agitation of prohibition in Maine by such temperance organizations as the Woman's Christian Temperance Union and the Civic League; and the share of credit which they claim for the recent victory ought not to be denied them. Truly their eyes are holden that they cannot see. Nor do I know of any State in which an alleged "public sentiment," whose tangible embodiment one would have great difficulty in discovering, is whirled over the heads of public men with such disastrous effect. One hardly knows which should be feared the least, a fanatical devotion to an exploded and mischievous theory, or a cringing fear of an inarticulate bogy; yet few Republican legislators or politicians in Maine have for years dared to face either of them.

In the meantime, there are not lacking those who view the effects of the continuance of present conditions with grave concern. With corruption deeply characterizing the dealings of the State with the liquor interests, it seems to many inevitable that there should be some weakening of moral tone in other directions as well. With the violation of a well-known law either open and notorious or generally recognized and winked at, it is not surprising that all laws affecting personal habits and tastes, or demanding a somewhat particular conformity, are less easily enforced, or that wealthy and influential persons and corporations should be encouraged to demand special consideration and immunity. I have heard many teachers express their conviction that the laxity in the treatment of the prohibitory law was largely responsible for a weakened respect for law, whether State statutes or municipal by-laws, among the young people of the State. Superficially, too, there seems to be an increase, in rural Maine, of the grosser and more brutal forms of crime and of crimes whose primary inspiration is drink. Worst of all, however, is the growth of a good-natured indifference to the whole situation, a passive acquiescence in general disregard of the law so long as the disregard be not too flagrant, and a waning interest in serious public discussion of the question. The most ominous thing about prohibition in Maine is that the people simply do not care.

One thing, however, the legislative experience of the past winter has clearly demonstrated. So far as political responsibility is concerned, the continuance of present conditions in Maine is directly and chiefly attributable to the Republican party. Everybody knows that, for all practical purposes, there is but one party in Maine. The Republicans have overwhelming majorities in the Legislature and control most of the important offices, both State and local. There being no political opposition, there is also no political discussion, and public interest in either State or national questions is languid. Whatever is done, accordingly, is done by the Republican machine, and it is to that agency that responsibility must be ascribed. As Mr. Manley himself said in his famous open letter, "We have an overwhelming majority in the next Legislature, and will [shall] be held responsible for whatever legislation is enacted, and responsible for what we fail to enact that the people demand shall be enacted." So far as the proceedings at Augusta were concerned, however, expressions of opinion from Republican leaders on the question of resubmission were conspicuously lacking, nor was there anything more than the merest pretence that the action of the Legislature registered the will of "the people." To assume that the Republican leaders are not perfectly aware of the utter rottenness of the whole business would be to credit them with less than average intelligence; yet nothing can be surer than that, unless the present prohibitory situation in Maine is speedily mended or ended, it were better for the Republican machine that a millstone were hanged about its neck, and that it were drowned in the depths of the sea. WILLIAM MACDONALD.

GENERAL THIARD.

PARIS, March 13, 1901.

The 'Diplomatic and Military Recollections' of Gen. Thiard, just edited by M. Léonce Lex, an ex-pupil of the École des Chartes, may be added to the ever-increasing mass of documents concerning the history of the nineteenth century. A biography of Gen. Thiard had already been published in 1869, by Dr. Chaudet at Chalon-sur-Saône. The General belonged to the province of Burgundy. His name was Auxonne-Marie-Théodose de Thiard, Count de Bissy; but he wished to be called simply "Gen. Thiard." He was born on the 3d of May, 1772, in the palace of the Tuileries (his father was a general, lieutenant-general of the province of Languedoc, Governor of Auxonne and of the palace of the Tuileries). He was educated among the Philosophers and the Encyclopædists, all intimate friends of his father—Condorcet, Marmontel, Crébillon, Chamfort, Suard, D'Alembert, Diderot. As a child he saw much of the old court. At the age of sixteen he was made a supernumerary sub-lieutenant in the infantry regiment of the King. When the Revolution broke out, his regiment was disbanded, and he betook himself to Worms, which was at the time the headquarters of the army of Condé. He left no notes on his agitated life as an émigré, and we only know that he quitted the little army of Condé when it entered the service of Russia; that he came back to France; that, after the *coup d'état* of the 18th Fructidor, he emigrated again and rejoined the army of Condé, and remained in the regiment of Enghien dragoons till the end of 1799. In October, 1800, he returned definitively to France, and obtained his erasure from the list of the émigrés. He stayed quietly in his department of Saône-et-Loire, where he was elected Councillor-General and became a candidate for the Legislative Body. He was not elected, however; his adversaries reproached him with having "his boots still covered with the mud of Coblentz."

Napoleon was not hostile to the émigrés. The administrative capacity of Thiard had been brought to his attention. Thiard's acquaintance with the famous Madame Récamier also gave him a certain prestige. When the First Consul became Emperor, he chose Thiard as one of his chamberlains. It was in this capacity that Thiard figured at the coronation of Napoleon in Notre Dame, at the coronation of the Emperor at Milan, as King of Italy, and that he fulfilled an important mission at the courts of the Elector of Baden, the Elector of Bavaria, and of the Duke of Bavaria. The 'Diplomatic and Military Recollections' relate to this period of 1804 to 1806. They were for a long time in the hands of M. Thiers, who used them in his 'History of the Consulate and the Empire,' and the manuscript is now in the archives of the Department of Saône-et-Loire.

The 'Souvenirs' begin with an account of

a great review held by Napoleon on the 20th of January, 1805, in the Court of the Tuileries, when Thiard was entering on his functions of Chamberlain. After the review he was presented by Talleyrand to the Emperor. "You are from Macon?" "No, Sire, but I belong to the Department of Saône-et-Loire." "You were in the army of Condé?" "Yes, Sire, but it was disbanded." "I know that you served your princes with much devotion; I expect the same devotion on your part. Now take the oath." When the interview was over, Talleyrand said to Thiard, "Now, do as well as you can"; and Thiard entered upon his duties, for which he was entirely unprepared. He found favor with the Emperor, who had long conversations with him, often on the subject of Queen Marie Antoinette, "but superficially, and without going deep into the subject; but I had no difficulty in seeing that he had great prejudices against her."

"People," says he, "generally attribute to the Emperor a despotic and absolute character, suffering no objection or contradiction, ready to answer with a disagreeable word the smallest observation. He had, like everybody, moments of irritation, but I never noticed that he uttered an offensive word. He got angry when mistakes were committed that compromised the safety of the army or the interest of the country; never when they were personal to himself. . . . In his drawing-room his amenity was perfect, and he showed sometimes a gayety of which, from the accounts given of him, he was not thought susceptible."

Napoleon embraced all possible subjects in his conversations. He was fond of the theatre, and willingly gave his opinion on the plays he saw. "As for music," says Thiard, "it was another thing; he did not understand it any more than chemistry. The two airs which he often and habitually hummed were, 'Will you love your father-in-law?' and the 'Chant du Départ' [Méhul's famous song]. The first showed that his mind was quiescent, the second that great thoughts agitated his imagination." Talleyrand seldom appeared before eleven o'clock; his arrival was generally the signal for the retreat of the guests. The Emperor and his Minister of Foreign Affairs talked together quietly and then left for the inner apartments.

Many are the details which Thiard gives concerning the Emperor's conversations. He tried to form for himself a just view of the character of the man who had become the arbiter of Europe. Some of his opinions will seem rather paradoxical, but deserve to be related:

"As I never," he says, "allowed myself to be intimidated or disconcerted by him, I had greater facility than others for judging him. I am convinced, for instance, that he always saw with deep regret such frequent ruptures of the Continental peace; that he would have liked to maintain it; that all his hostile thoughts were directed against England; that the war against that nation was the only one which he continued without repugnance—he called it the holy war."

Thiard also reached the conviction that all that Napoleon did for the reëstablishment of the Catholic ceremonies and to give influence to the Church was suggested to him by faith rather than by political reasons. The grounds of this opinion, however, do not seem very good. To be sure, Napoleon was very anxious to have the Pope at his coronation, but he took the crown from the Pope's hand and put it himself on his head. Again, he did not close the convents in Italy, but he did not reopen them in France. Thiard thinks that Napoleon made a fatal mistake in creating a new aristocracy. He goes so far as to say that "if the Emperor did not fulfil the great mission which Providence seemed to impose on him, if he did not entirely change the political and social state of Europe, it was, if I am not mistaken, because he was born a nobleman, a Catholic, and a Corsican."

Thiard accompanied the Emperor during the greater part of the famous campaign of 1805, which will be remembered by the capitulation of Ulm, the entry of the French army into Vienna, and the victory of Austerlitz. Napoleon conferred upon him the brevet of captain of the mounted chasseurs of the guard. He employed him at times as an aide-de-camp, at times as a diplomat. Napoleon was much attached to Prince Eugène Beauharnais, whom he made Viceroy of Italy. He wished to find a wife for him, and cast eyes first on the daughter of the Elector of Bavaria, a very distinguished princess; but she was engaged to the heir of the Duchy of Baden, and moreover, her mother, the Electress of Bavaria, was a bitter enemy of France and of Napoleon. Napoleon took advantage of the knowledge which Thiard had been able to acquire of the little German courts while he was in Condé's army, and gave him a mission to Germany, with the double object of breaking off the marriage between the Prince of Baden and the Princess Augusta of Bavaria and of marrying the Prince of Baden to Stéphanie de Beauharnais. Thiard was a clever negotiator; he used the influence of the Countess of Hochberg, who was morganatically married to the reigning Elector of Baden. He was the bearer of Napoleon's treaties of alliance with Baden and Bavaria, and he fulfilled his mission to the satisfaction of the Emperor. At one point he was less fortunate. Napoleon wished also to marry his brother Jerome to Princess Catharine of Würtemberg; but the American marriage was, for a time at least, an obstacle that could not be surmounted.

In February, 1807, Thiard resigned all his functions near the Emperor, for reasons which remain unknown to us; he was of a choleric disposition, and perhaps allowed himself too much familiarity with his sovereign. What is certain is, that there was a violent scene between them, in consequence of which Thiard left for his country-seat at Vaulry, where he remained quietly till France was invaded; he then enlisted in the National Guard. When Louis XVIII. became King, in 1814, he made Thiard *maréchal de camp* (the equivalent of general), Knight of Saint Louis, and Commander of the Legion of Honor. On Napoleon's return from the island of Elba, the King gave Thiard the command of the Department of Aisne, and ordered him to march against the two brothers and Generals Lallemand, who with their troops had assumed the tricolor cockade. Thiard refused, and told the Duke de Berry that he had been so unfortunate in his youth as to turn his arms against his compatriots, but that he would never use them except against the enemies of his country. By a phenomenon which is explained by the incidents of his life, the soldier of Condé's army had become a liberal; he became in his Department, during the Restoration, the representative of the liberal cause. His Parliamentary career extended from 1820 to 1848; in 1830 he espoused the cause of the Revolution, as he was a friend of Lafayette, of Manuel, of Benjamin Constant, of Laffitte, of Casimir Périer. After the Revolution of 1848 he was not reëlected Deputy; he fell ill, and died on the 28th of June, 1852, at the age of eighty-one.

Besides his 'Souvenirs,' he left a Journal of the army of Condé from 1791 to 1793, which belonged to his grandson the Marquis d'Étampes, and which was given by him to the archives of the Department of Saône-et-Loire. It is probable that it will some day be published.

Correspondence.

THE OLD ORDER CHANGETH.

To the Editor of The Nation:

Sir: Am I wrong in looking for a causal relation between three expressions of opinion which have recently come under my notice?

(1.) The very illuminating address by President Schurman in the hall of the University of Michigan last evening closed with the impressive statement that the Philippine entanglement had produced a fundamental change in American ideals; that the America of the nineteenth century is a thing of the past, and this whether the Filipino is to come to us as a colonist or as a brother.

Without pushing the question whether this acceleration is to set the pace for the future, so that with every new administration the America of Washington and Lincoln will be put one step further behind us, the more important question remains, whether the Philippine business is to be regarded as cause or effect. The Filipino has given us a new America, which all accept, many rejoice in. How did it come about?

(2.) I was recently stating to a friend the position of President Hadley in his paper in the last number of the *Educational Review*, that science and history should come late in a student's course, and be preceded by the largest possible studies in language and mathematics. Entirely right and wise, surely. But this brings it about that, in the public schools, courses in science and history must be repeated in every department, or great numbers will fail to get any science or history; and as this works a hardship for those who look forward to a complete education, there must be separate schools for those who are preparing for college. "Yes," said my friend, "that's it; that's it. Yard them off. Let's have classification according to affinities. I want my children to be educated with those among whom they are to live. There is a class of people in this country who will, for the distinction it confers, send their children to college, whether they want to go or not. Give them preparatory schools. Then there are those who, with unimportant exceptions, cannot afford to send their children to college. Let them have their schools. Hadley is right." Of course he misapprehends President Hadley's position, and is wrong as to the kind of people who go to college. But here is a democrat of democrats, an old-line abolitionist, who in fifteen years has come to want class schools, negro disfranchisement, and all that. How did it come about? And the case is typical.

(3.) And now a letter from a lady of much reading and observation: "You scientific people have done your work only too well,

You have made us all care more about the reign of law than the reign of justice and humanity. You have made it appear that fine manners, self-restraint, tenderness, truth, even justice itself, are so many weights in the struggle of life, a struggle in which only the fit—that is, the strong, and those who have laid aside every weight—can survive." And she goes on to enumerate the many things in modern life which may well afflict tender and pious souls, emphasizing patriotism with a mailed fist, and growing class distinctions. Is there something in this? Patten, in his 'Development of English Thought,' says that science has shown little power to change the ideals of the race; little to alter national thought by direct means, though it has great power in creating economic conditions and thus modifying the national thought. Is he right?

E. A. Strong.

Ypsilanti, Mich., March 27, 1901.

FUNSTON'S CHRISTIAN PROCEEDING.

To the Editor of The Nation:

Sir: It would appear that the capture of Aguinaldo was effected by treachery involving the use of false uniforms and a forged document. Supposing (and I apologize to every British officer for making the supposition) that the British in South Africa had succeeded in capturing Botha or De Wet by means of a proceeding of this kind, what a noble chorus of righteous indignation and reprobation would have arisen at once from the whole press of Europe, with that of the United States in loud and full unison! If the United States authorities are not a little more fastidious about some of their proceedings, the mud-throwers of the European press, when they get tired of their English target, may perhaps set up an American one for a change.—Yours sincerely,

R. C. Allison.

10 Peel St., St. John, N. B, March 30, 1901.

"MODERN CHRISTIANITY" AND MODERN PROPHETS.

To the Editor of The Nation.

Sir: Mr. Herbert Spencer is continually reminding us of the undying significance of that ultimate religious verity, "Force persists." We are reminded by "E. L. G.," in his just and timely arraignment of "Modern Christianity" in a recent number of the *Nation*, that Righteousness persists.

No one who has read his Bible closely, especially the Old Testament, can fail to recognize that no small spark of the old prophetic fire burns in "E. L. G." He has done just what Elijah or Jeremiah would do if they were living among us to-day—protested with might and main against the devil and his doings. When Satan has a pious streak, as he often does, and, arrayed in solemn black, appears in the pulpit full of zeal for the spread of the gospel at home and in heathen lands, he cannot deceive wise old watch-dogs of righteousness like "E. L. G." They know the devil when they see him, and bark acordingly.

"E. L. G." has all the pathetic indignation of a true prophet of the Lord. It always was lonely business living up on Horeb's heights, and is still. So we can readily understand why "E. L. G." strikes the rather despairing tone, *Derelictus sum ego solus*. He says: "I have lately searched history as well as I am able, to get hold of some piece of wickedness which Christianity has impeded or prevented"—an exasperating enterprise certainly! The connection tells us plainly that by Christianity "E. L. G." means "Modern Christianity," *i. e.*, that which is to be held responsible for "Steve" Elkins and recent doings in Cuba, in the Philippines, and in China. "E. L. G." reminds us of Schiller ("Meine Glaube"):

"Welche Religion ich bekenne? Keine von allen
Die du mir nennst.—Und warum keine? Aus Religion."

We do not need to take a despairing view of the Christianity of Moses and the prophets and of Christ and the apostles while such men are among us. That they stand outside of the conventional sheep-fold of the Church and say very severe things, simply puts them in the same company with the prophets, with Socrates, and with Christ, who all did the same. That that very un-Christlike thing "Modern Christianity" calls forth modern prophets like "E. L. G." is only one more proof of the undying persistence of Righteousness among us.

But alas! in spite of "E. L. G." and all the prophets, it is to be feared that things will go on pretty much as at present, for two reasons, perhaps—partly *stultitia hominum*, probably also *patientia Dei*.

Charles Edward Stowe.

Heidelberg, March 18, 1901.

LYNCHING FOR ANY CAUSE.

To the Editor of The Nation:

Sir: In the *North American Review* for February, Marion L. Dawson furnishes an article under the caption, "The South and the Negro." Its object apparently is to present a sort of apology for lynching—an evil which he makes attributable to but one cause. But, notoriously, lynching as a mode of execution has extended its application to other crimes than the particular one for which it was originally intended. As instances, I have in mind, among others, the negro who, a short while ago, was burned at the stake in Texas, his crime being murder; the negro who was lynched at Broxton Bridge in this State, his offence being theft (stealing a Bible); the well-known case of the Baker family, also in this State, in which a negro Postmaster proved obnoxious to the community, and, in consequence, suffered the usual penalty of death at the hands of a mob. Another case, of recent occurrence, is the lynching of a woman in Tennessee for being insolent in her reply to one of the members of the mob which was in search of her brother for stealing. Not one of these offences was what is known as "the usual one." Apologists for this summary mode of punishment may well consider the far-reaching consequences involved. J. R. H.

Beaufort, S. C., March 23, 1901.

A SECOND DISCLAIMER.

To the Editor of The Nation:

Sir: It is necessary that the undersigned inform the general public that the use made of their names by the "American College of Sciences," doing business at Philadelphia, in advertising an "advanced course in personal magnetism, hypnotism, and suggestion by seven distinguished specialists," is wholly unauthorized and unwarranted. The public is warned against the trick of being thus led to believe that we concur in the statements made in this advertising scheme concerning the scientific facts and the practical uses of hypnotic influences. The undersigned believe that the practice of hypnotism should be restricted to a most guarded application.

Our names and the "courses" advertised in this "advanced course" are derived from articles which each of the undersigned was requested, individually, by the "New York State Publishing Company" of Rochester, N. Y., to prepare for a scientific exposition of the facts and principles of hypnotism and allied phenomena. The compilation appeared from the press late in 1900. Had the undersigned had any intimation whatsoever that this second and unauthorized use of the articles was to be made, viz., as a part of a course of instruction in the general subject, they would have absolutely refused to contribute to the compilation in the first instance. The responsibility of each of the undersigned goes no farther than the contents of the original article he contributed to the compilation.

This disclaimer is to be taken in accord with the one appearing in *Science*, November 30, 1900, p. 850, and in the *Psychological Review*, January, 1901, p. 63. The names here undersigned appear in an advertising sheet circulated by the "College," which omits the names appearing under the first disclaimer.

A SLIP OF THE PEN.

To the Editor of The Nation:

Sir: In your review of W. J. Stillman's Autobiography (No. 1865) there is one slight error. You speak of him as correspondent of the New York *Herald* during the Vienna Exposition of 1873. I was correspondent of the *World* at that time, and knew nearly all the American newspaper men in Vienna. The principal *Herald* representatives were Young and Jackson. Stillman, Bayard Taylor, and E. V. Smalley were correspondents of the *Tribune*. I had known Taylor before, and through him became acquainted with Stillman. We lunched together nearly every day for many weeks. It was one of my great pleasures to get Stillman to discuss the paintings in the art gallery. He would not relish, I suspect, your connecting him with the *Herald* in 1873, for that newspaper's treatment of Vienna was below its usual standard. J. M. H.

[Our correspondent is quite right. Mr. Stillman's connection with the *Herald* came later.—Ed. Nation.]

Notes.

Prof. Wm. H. Carpenter, head of the Germanic department of Columbia University, is-

sues an appeal for the "hearty coöperation of the descendants of the early Dutchmen"—"settlers on Long Island, in New Jersey, and up through the valleys of the Hudson and the Mohawk and the radiating country"—in gathering up the words, phrases, and nursery rhymes left behind in the language of to-day. Professor Carpenter asks that such relics be communicated to him, written in an orthography representing their sound as learned by the collector, and with precise indications of date and locality of acquisition.

During the coming year McClure, Phillips & Co. will publish here the Dent "Temple Molière," in the French text of MM. Despois and Mesnard, beginning directly with "Le Bourgeois Gentilhomme" and "Le Médecin malgré Lui." They will also bring out in the companionable Temple form (long ago found fitting for it) Heine's 'Buch der Lieder.'

E. P. Dutton & Co. will publish during the spring 'Through Siberia,' by J. Stadling; 'In Tuscany,' by Montgomery Carmichael; 'China,' a history of diplomacy and commerce from the earliest times, by E. H. Parker; 'Frescoes in the Sixtine Chapel in Rome,' by Evelyn Marsh Phillips, illustrated; 'Our [English] Naval Heroes,' edited by G. E. Marindin; 'The British Thoroughbred Horse,' by W. Allison, M.A.; 'The Evolution of the Bible,' by H. W. Hoare, B.A.; and 'Trusts and the State,' by Henry Macrosty, Fabian Series No. 1.

R. H. Russell will issue immediately Dürer's sixteen designs of 'The Apocalypse,' with accompanying Scriptural text; 'The American Stage,' a pictorial souvenir of the leading actors and actresses of the day; 'The Rose of Dawn: A Romance of the South Sea,' a narrative poem by Helen Hay; 'Racing Rhymes, and Other Verses,' by Adam Lindsay Gordon, with illustrations; and single-story classics for children in "Wayside" edition, Kingsley's 'Perseus,' Hawthorne's 'Paradise of Children,' etc.

'School Hygiene,' by Edward R. Shaw, Dean of the faculty of pedagogy in the New York University, is in the press of Macmillan Co.

Among the spring announcements of Dodd, Mead & Co. are 'Turner and Ruskin,' a quarto volume of examples, edited by Frederick Wedmore; 'The Journal of Hugh Gaine,' edited by Paul Leicester Ford; 'Empresses of France,' by Miss H. A. Guerber; 'Masters of Music,' by Miss Anna Alice Chapin; and 'Life and Sport on the Pacific Slope,' by Horace Annesley Vachell.

The reissue of Mr. W. S. Gilbert's 'The "Bab" Ballads' (New York: R. H. Russell), with the author's Thackerayesque illustrations reduced without injury, is a very pleasing advertisement of the good taste and workmanship of the "Wayside Department" of the Cambridge (Mass.) University Press. The gray and white binding is to be commended along with the rest of this taking pocket companion, whose good wine of humor needs no bush.

No excuse for reprinting Puckle's 'The Club; or, A Grey Cap for a Green Head' (London: Freemantle & Co.; New York: Truslove, Hanson & Comba) is so valid as the incidental reproduction of "embellishments cut in wood from designs by John Thurston." It is from this side that Mr. Austin Dobson appears to have been drawn in for an introduction; but he quotes without challenge the claim of the preface to the edition of 1823, first containing these engravings by Bewick's pupils Nesbit, White, and Harvey, among others—"Every line of the drawing is marked out upon the block by the designer exactly as it appears upon the paper." If this were so, however, it would not be possible to detect the mannerisms of the artists named, as it is; to say nothing of the occurrence of pure white line (see *Envioso* for example, p. 28, which we take to be Harvey's work, or *Zany*, p. 99, signed by Nesbit). Altogether the illustrations are interesting for their period, and the vignettes are charming; the volume is prettily made.

A handy pocket reprint of 'Selections from the Prose Tales of Edgar Allan Poe' (Macmillan) follows, by permission, the Stedman-Woodberry text. There is a portrait, an anonymous biographico-critical introduction of good quality, and notes. The edition is one to be recommended.

Mr. Thomas E. Watson's 'Thomas Jefferson' in the "Beacon Biographies" of Small, Maynard & Co., Boston, is written from the point of view of Georgia, with frank intention to omit controverted topics. Hence Jefferson's views on slavery are not developed beyond his early effort to allow manumission within the State. The 'Notes on Virginia' is pronounced profitable reading yet, but not for that which reflected the chief lustre on its author—the denunciation of slaveholding. The classical passage on this subject will have to be sought elsewhere, and will be found in Mr. Henry Childs Merwin's praiseworthy volume in the corresponding "Riverside Biographical Series," in which have also recently appeared lives of Peter Cooper, by R. W. Raymond, and of William Penn, by George Hodges, both readable. Small as these volumes are (in both series), an index should, we think, be provided.

Who could not wish that such vulgar caricature as F. Opper's of the trinity, The Trusts, Hanna, and McKinley ('Willie and his Papa, and the Rest of the Family,' New York: Grosset & Dunlap), were purely libellous? And who, recognizing the humor of it all, the essential justice of the main contention, can help regretting that these clever cartoons were wasted on the readers of a yellow daily journal, whose editor has graciously assented to their republication in a volume? We cannot blame the artist for the medium when we consider how impervious the average Republican organ is to seemly and rational presentation of the same truths. Some of Mr. Opper's satire is in the interest of a spurious Americanism, and is levelled at the most honorable member of the President's "family."

A classified Mother Goose with index of first lines, and fresh illustrations, is 'A Book of Nursery Rhymes,' arranged by Mr. Charles Welsh (Boston: D. G. Heath & Co.). This first part ("personal to the child") presents Mother Play, and Mother Stories pertaining (a) to animals and their doings, and (b) to other children, and other people in relation to children, the whole "proceeding from the simple to the complex." The type is bold.

A magnificent folio in the Country Life Library imported by Charles Scribner's Sons, 'Gardens Old and New,' abounds in illustrations, many of them full-page halftones, of unusual beauty and softness. The introduction is chiefly given up to a discussion of the "historic continuity" of gardening and of the relation of the garden to the house. Throughout the entire book the question of the proportion, in the ideal garden, of the formal and the natural aspect is purposely kept in the foreground. The body of the volume deals with upwards of seventy English houses, of which the first is Clevedon Court, the home of the Eltons, and hospitable, in Sir Arthur Hallam Elton's time, to Tennyson, Hallam, and Thackeray. In its gardens long straight lines of terrace, vine-clad wall, and hedge offer restful occupation to the eye. In interesting contrast to its comparative simplicity is Levens Hall, of which a description follows, whose shrubs are clipped these last two hundred years in the image of Queen Elizabeth and her maids of honor; whose holly spreads eagle's wings, and whose noble yews are wrought into strange forms of peacocks and other fantastic shapes. We are told that no other garden in England possesses so much old and curious topiary work. The book, both by its text and by its illustrations, offers a really illuminating study of gardening in England. Here is portrayed the "pleasaunce" after the school of Le Nôtre, the simple and pleasing arrangement at Bulwick Hall, the modern topiary work as it is shown at Elvaston Castle, the garden architecture of beautiful Stoneleigh Abbey. Among the many remarkable pictures, "The Lower Pleasaunce" at Rous Lench Court, "Garden Art and Natural Character at St. Catherine's Court," "The Formal Garden" at Longford Castle, "A View over the Park" at Lilleshall, "A Vista of Sombre Yews and Bright Flowers" at Condover Hall, "The Classic Ascent beneath the Old Walnut Tree" at Ven House, may severally be noted for their interesting details. The chapters on Chatsworth, and on Guy's Cliff, Warwick, are superbly illustrated. The book is a valuable contribution to historical and descriptive garden lore.

The Bostonian Society's Proceedings for January last contains a paper on Boston ships, in which are some interesting facts. Ship-building began in 1631, the year following the settlement, and the industry increased so rapidly that in 1698 Lord Bellomont said, "I believe there are more good vessels belonging to Boston than to all Scotland and Ireland." The merchants of Boston at that time computed their trade at four times that of New York. In 1716 the first lighthouse in America was built, "the ninth then in existence in the world," and the Boston ship *Columbia* was the first to open up the northwest coast trade and the first to circumnavigate the globe under the American flag. In President Guild's annual address are some comparisons of the Boston of 1800 with the present city. A photogravure of the Carwitham view of Boston (which is the earliest picture showing the whole of the town), published in London about 1724, is here produced.

The *National Geographic Magazine* for March contains an account of a journey across Abyssinia to the Nile by Mr. O. T. Crosby, interesting chiefly for its intimations of the progress of western civilization in that country. The French railway from Jibuti had reached, a year ago, a distance of forty miles from the coast. There is a telephone from Harar, the principal town, to the capital, which the Emperor Menelek continually uses to transact his business. This capable and intelligent ruler is apparently sincere in his desire to put

down the slave-trade. When Mr. Crosby passed through a part of the kingdom where there were still slave-markets, he saw no signs of it, but learned afterwards that the chiefs had given orders that no traffic should take place when a white man was present. Though the foreign commerce is in the hands of the French and English, he noted that in Harar "American cotton goods were the only cotton goods in evidence." Mr. W. J. McGee's notes on the Old Yuma trail characterize the ancestors of the Papago Indians, "who, driven into the deserts too far for foes to follow, were able to adjust themselves to one of the hardest environments in America, to engage in a ceaseless chase for water singularly like the chase for quarry in lower culture, and to produce a unique combination of crop-growing industries with migratory habits." Other articles are upon the sea fogs of San Francisco, with some remarkable photographs, and a description of the Philippine exhibit at the Buffalo Exposition, as well as some of the physical features of the islands.

A noteworthy contribution to the ethnography of a little-known people is to be found in Dr. Carl Sapper's paper, in *Petermann's Mitteilungen*, number two, on the Indians of southern Central America. In contrast to the relatively homogeneous Indians of Guatemala and Mexico, they are divided into numerous tribes with distinct languages and customs. Dr. Sapper attributes this separation to their lower civilization at the time of the Spanish conquest and their more determined resistance to its civilizing influences. On the accompanying map are shown twenty-four different languages. After some notes upon these languages, he shows their present condition—chiefly from his own observations, as the literature of the subject is very meagre—in their social organization, their marriage and funeral customs, religion, dwellings, food, clothing, weapons, and industries. His general conclusion is that there is a real fundamental distinction between them and the Maya-Aztec races to the north of them.

Although now a matter of history, the "coal crisis" in Germany of 1899-1900 may still be studied with advantage. M. Perquel has published a report on the subject prepared at the instance of the French Minister of Commerce, and has compiled an interesting sketch of the causes leading to the "crisis." The interests of France have naturally been kept in view, for the coal production of that country is very inelastic, and French industries become more dependent each year upon foreign supplies. If, therefore, Germany finds that all its own production of coal is required for domestic use, and a quantity must be imported from abroad, Germany not only cuts off the nearest source of French supply, but enters into English coal markets as a competitor of France, and one possessed of greater needs and higher ability to purchase. That the situation has changed since M. Perquel made his report does not lessen its value, and his account of the influence of the coal syndicates is of permanent economic worth. He concedes too high a value to the efforts of the syndicates to control production and prices, regarding them as purely beneficent in their effects—a conclusion discredited by the existing crisis in the iron and steel industries of Germany. In an excited and rising market the full pressure of monopoly was not felt; but it is now crushing in its weight and a cause of anxiety on the part of Government.

The essay by Charles Simon, the Rumanian Consul-General at Mannheim, on the "Fall in the Price of Wheat in France" possesses interest because it was called out by the pressure of American competition in agricultural products. France has given wheat greater protection than it enjoys in any other country of Europe, yet the price has remained much below the rate anticipated by the tariff-framers, and below what commercial considerations would favor. To correct this low price, M. Simon proposes to permit the importation of wheat in bond and the exportation of a like quantity from any port of France on the bonding certificate. This privilege will render unnecessary the transport of wheat over long distances in France from a department having an excess to one suffering from a deficit, and, in the opinion of the author, will permit an export not now profitable. Germany is taken as the example, but the remedy will not reach the real cause of complaint—the ability of the United States to grow wheat and land it in Europe at a cost permitting effective competition. The essay is published by Roustan, Paris.

A preliminary statement of the results of the Danish census of February 1, 1901, has recently been published by the state Statistical Bureau. From this it appears that the present population of Denmark, not including the dependencies and colonies, is 2,447,441. The census of 1890 showed a population of 2,172,380, so that the increase during the last eleven years has been over a quarter of a million, or about 12½ per cent. Notwithstanding the loss of Norway and Sleswick-Holstein, Denmark now contains as many inhabitants as it did at the beginning of the nineteenth century. The increase during the past eleven years has been very much greater than in any earlier corresponding period. This is due to the marked decrease in emigration, especially during the last half of the period, and to the equally marked decrease in the death-rate. The steady increase in the birth-rate should also be taken into account. In view of the efforts already begun by the Danish authorities to prevent the spread of consumption, the principal disease of the North, a still greater decrease in the death-rate may be looked for during the first ten years of the present century. In Denmark, as in the rest of northern Europe, the chief increase in population has been in the capital, which now contains 378,280, an increase of 17.7 per cent. The total increase of the towns has been 28 per cent.; that of the country districts only 4 per cent. One-fifth of the whole population is contained in Copenhagen, and another fifth in the remaining towns. The town showing the most remarkable increase is Esbjerg, the Chicago of Denmark, as it is called, with a growth from a little over 4,000 in 1890 to more than 12,000 in 1901. The largest provincial town is Aarhus, in Jutland, which has almost doubled its population in the last eleven years, and has shown a remarkable advance in other respects as well. Copenhagen celebrated the opening of the new century by more than doubling its territory through the addition of several suburbs to the north and west. This means an immense increase in population in the near future, which will be helped by another annexation next year.

Mr. W. I. Fletcher's Summer School of Library Economy will open for its eleventh year at Amherst, Mass., for a five-weeks' session on July 15. Those who attend will no longer have the advantage of Dr. Sauveur's Summer School of Languages, but elementary French will be taught by Professor Symington of Amherst College. An extra course also is special instruction in "library handwriting."

The familiar portrait of John Marshall has been finely copied from the canvas, in photogravure, by F. Gutekunst, Philadelphia, to gratify the centennial interest in the great jurist. The plate measures about 12x15 inches, and is accompanied by an autograph and a motto—"Mark the perfect man."

—Professor Lydekker, one of the custodians of the British Museum, contributes to a recent number of *Nature* an interesting notice on the species of animals that have been exterminated by man during the century that has just closed. These are, perhaps, not so numerous as is generally supposed, and the forms are mainly such as are known more particularly to the systematist and collector. Among the fewer common types which collections and books of travel have made familiar, one of the most deplorable cases of extermination is furnished by the quagga, the beautiful zebra-like animal of South Africa, which in the first half of the century could still be met with in thousands covering the grassy veldts. At that time it formed the staple food of the Hottentot farmers of the Graaff Reinet district. The extermination of this animal, antedated seventy years by the destruction of the blaauwbok or blue antelope, appears to have been accomplished in 1873, and yet, singularly enough, most writers on natural history are seemingly under the impression that the quagga is still an abundant member of the African fauna. It is a remarkable fact that of this animal, which was frequently driven in harness at the Cape in the eighteenth century, and was afterwards the object of much unsuccessful effort at domestication, only a single stuffed specimen exists in all the British museums. Burchell's zebra, although still plentifully represented by sub-specific forms in various parts of the continent, has disappeared in its type-form, probably the most strikingly handsome of the African fauna. The other animals referred to by Professor Lydekker are mainly birds, such as the black emu (*Dromæus ater*) of South Australia, the water-hen (*Notornis albus*) of Lord Howe and Norfolk Islands, the diablotin or burrowing petrel of the Antilles, two species of the Nestor or kaka parrot of the Pacific Islands, a species of cormorant from Bering Sea, and the great auk, of which the last pair known to be living was destroyed in 1844. Professor Lydekker refers with satisfaction to the status of the Indian fauna, for, as he says, "it has not lost a single species of mammal, bird, or reptile, either during the nineteenth century or within the period of definite history." The animal whose early destruction is considered most likely, or which at least requires "most careful watching," is the Indian rhinoceros. The Asiatic lion has had its range very materially narrowed during recent years, but it is still extant.

—Another side to this interesting phase of zoölogical inquiry is presented in the

depredations made upon man and his domesticated animals by the wild beasts of India. The annual catastrophes from this source have always been appalling, but those of the year 1899, for which the statistics have recently been published, seem unsurpassed, and they fully bear out Professor Lydekker's contention that the Indian fauna is in a good, perhaps even more than satisfactory, condition. The total deaths of human beings, as now registered, number for that year 27,500, for 24,600 of which the venomous snakes are held responsible. The increase over preceding years is largely attributed, singular though it may appear, to a lack of effort on the part of man to exterminate, as is proved by the concurrent decrease in the amount of bounty paid. A flooded condition of the jungles, which drove many of the animals, notably the tiger, to the neighborhood of village sites, is also held partially responsible. The deaths from tigers was 899, of which nearly one-half occurred in Bengal. The wolf is held accountable for 338 deaths, most of them occurring in the hill country or in the adjoining region. The casualties inflicted upon domesticated animals can hardly be counted, for the loss of cattle alone is placed at 99,000 head. Curious to relate, in some districts of the Central Provinces the tiger-bounty had been for a number of years withdrawn, the complaint of the husbandmen being that, with the destruction of the "king of the jungle," the deer and wild hogs developed in such numbers that they became an absolute menace to the crops. A European magistrate, on withdrawing the premium, felt that the balance which Nature had established in the struggle for existence should not be disturbed.

—In 1861-62 De Vogüé and Waddington explored a portion of Central Syria, finding "a large number of ruined cities and towns in a deserted mountain country to the east of the Orontes and in the Hauran." Since that time, the greater portion of that region, together with the important neighboring districts which De Vogüé was unable to reach, has remained unexplored, partly because of a general lack of interest in post-classical remains, partly because of the difficulty of visiting those regions, owing to the lack of water and the unwillingness of the Ottoman Government to grant permission to travel in parts so unsettled and unruly. In 1899, under the patronage of Messrs. V. Everit Macy, I. N. Stokes, and Clarence and B. T. Hyde of New York, a remarkably well-equipped expedition was sent out to re-explore the territory in question, and to visit as much of the unexplored neighborhood as possible. The leader of this expedition was Mr. Howard Crosby Butler, with whom were associated Mr. Robert Garrett for topography, Dr. W. K. Prentice for classical epigraphy, and Dr. Littmann for Semitic epigraphy; Mr. Butler himself taking architecture, sculpture, and matters purely archæological. During the second season the expedition had further an anthropologist, Mr. Henry M. Huxley, while for six weeks in the summer it was accompanied by Dr. George E. Post, the well-known medical missionary and botanist of Beirut. With the exception of two months in midwinter, the expedition was in the field from October of 1899 to June of 1900, and explored pretty thoroughly the district from Aleppo to the southern edge of the Hauran, and from the Orontes eastward to Palmyra. Mr. Butler furnishes a preliminary report of results in the last number of the *American Journal of Archæology*. Of inscriptions, he enumerates 386 Greek and 15 Latin, the major part hitherto unknown, together with a considerable number of Syriac, Palmyrene, Nabatæan (including one of the year 5-4 B. C.), and Safaitic, and a few Hebrew inscriptions. These were all, with one or two exceptions, post-Christian, dating from the beginning of the Christian era to the close of the sixth century. What may lie beneath, we do not know; but the surface is covered in a most remarkable manner with ancient ruins, probably the most interesting feature of which is "the remains of public and domestic architecture. There is nowhere so extensive illustration of the domestic architecture of the ancients, excepting, of course, in the Pompeian remains." But, while "the remains upon the Bay of Naples are not architectural in the truest sense, presenting as they do the most crude methods of construction, the houses of the deserted cities of northern Syria are wonderful monuments of architecture, interesting as studies of style and construction, as well as of plan and arrangement, and in their relation to the civilization of the time." The architecture was not homogeneous. In general, it may be said that it represents something different from the Græco-Roman architecture of the coast, and suggests the influence of another centre, which, we fancy, may ultimately be found in the practically unexplored regions of Mesapotamia, where Edessa exercised a predominant influence in the earliest Christian centuries. From the topographical standpoint, also, the results of this expedition are important. We are promised, as a result of this expedition, "maps of four separate districts and a large route map," besides "a detailed account of the architecture of the regions explored." This publication the explorers hope to give to the public "within two years."

—We do not feel quite sure as to whether or not Prof Edwin Erle Sparks's 'Expansion of the American People' (Chicago: Scott, Foresman & Co.) is designed for use as a school text-book. If it is, we can hardly think it preëminently adapted to that purpose; but the volume itself is both entertaining and informing, and may be read with profit by many to whom the general course of our political development is pretty familiar. Leaving at one side political history, in the narrower sense, and ignoring almost altogether the details of the struggles by parties and party leaders and the discussions over articles of political faith, Professor Sparks has sought to show how the United States has grown, first of all in territory, but, along with that, in the diversity, range, and content of its material and social interests. Passing rapidly over the colonial period, the narrator goes on to the time when population began to spread across the mountains, and American institutions began to reproduce themselves in the nearer parts of the great West, thence in the South and Southwest, beyond the Mississippi in the Western plains, and finally on the Pacific. It is the story of the frontier, with its accompaniments of internal improvements, wagon roads and canals, railroads and steamboats, Indian wars, and territorial reaching out after "natural boundaries." The story, highly condensed and kept within obviously narrow lines, is worked out with an unusual wealth of unfamiliar incident, and with a directness and movement which go somewhat to offset the lack of other literary distinction. What makes Professor Sparks's book of more than common importance, however, is not so much its subject-matter as its point of view. It is distinctly Western in its atmosphere and treatment, its regard for what has been done rather than for what has been thought and said, and its acceptance of "empire" as the sure result of inevitably following the line of least resistance. As an all-round survey of American history, such an account is, we can but think, sadly awry, but perhaps the reaction against the conventional historical methods, especially if kept as well in hand as it is in Professor Sparks's volume, will turn out to be a good thing. A word should be said for the numerous pictures. While some of the cuts seem cheaply done, and the highly glazed paper detracts somewhat from the effectiveness of all of them, the abundance of well-chosen contemporary illustration here presented adds much to the value of the book.

—Octave Navarre, in his 'Essai sur la Rhétorique grecque avant Aristote,' makes an enthusiastic attempt, first, to give a detailed history of the earlier Greek Rhetoric, and, second, to reconstruct it on its technical side; aiming incidentally, all through his work, to encourage interest in a branch of study which he conceives to have fallen into undeserved neglect. On the historical side he has certainly drawn together a great deal of material not readily accessible to the average student, poorly equipped in the matter of time and sources, and for this he will doubtless receive the thanks that are his due. On the constructive side he makes up for the failure of previous technical works on rhetoric to survive, partly by an analysis of the earlier speeches which have come down to us, in whole or in fragments, and partly by pushing portions of the later rhetoric back into his period. The validity of his method here is not beyond question. When some isolated precept of the earlier period is found in the later rhetoric, bound up as an essential element in a complex whole, he assumes for the whole the demonstrable antiquity of the part. The result of such a process cannot be more than probable, though few will be found to deny the claim that a large portion of the formulated classical rhetoric which has survived must be carried back, with at least some degree of technical formulation, to an earlier date. On the other hand, he seems occasionally to lose sight of the fact that speeches were made before rules for speaking, and assumes too hastily the existence of a rule at an early period simply because he finds an extant speech in harmony with the rule as recorded by the later rhetoricians. We regret these lapses in the logic of M. Navarre's work, for if rhetoric is to be rehabilitated for any other purpose than to smooth the road for our modern sophists and demagogues, it must tread close by the path of a rigid logic.

—Dr. Karl Vossler of Heidelberg, whose various researches in Italian literature have received favorable notice in these columns, has contributed a volume on 'Italienische Litteraturgeschichte' to the excellent and

inexpensive "Sammlung Göschen." The latest results of Romance scholarship are here brought within the narrow compass demanded by the exigencies of the series, and are thus made accessible to cultivated readers in general. After a brief introductory chapter on the structure of Italian verse and the evolution of the literary language, the author proceeds to trace the development of Italian literature from the earliest texts to the works of contemporary writers. The half-dozen pages devoted to Dante are a model of compression and critical treatment, and, although avowedly based on De Sanctis, admirably correct the errors of fact and perspective into which that brilliant critic's unhistorical method occasionally led him. The final chapter on the writers of our own day is the least satisfactory, and gives no adequate idea of the literary forces generated by the struggle for Italian unity which were weakened and deflected from their course when the object of the struggle was accomplished. On the whole, however, the volume may be implicitly trusted, and the reader can turn to it with the certainty of finding in the account of each author, whether a few lines or several pages are devoted to him, the latest and most authoritative results of criticism and research. With two such excellent manuals as those of Vossler and Flamini now accessible, the study of Italian literature should receive additional impetus in our universities. An oversight of the proof-reader is to be noted on page 72: "Pius II." should, of course, be "Paul II."

THE LATIN MONETARY UNION.

A History of the Latin Monetary Union: A Study of International Monetary Action. By Henry Parker Willis, Professor of Economics and Political Science in Washington and Lee University. The University of Chicago Press. Pp. 332.

Professor Willis has laid all students of monetary science under lasting obligations by this remarkable work. We hold it to be remarkable for its insight and grasp on economic principles, but still more for its laborious sifting of all the documentary and contemporaneous evidence available in the several countries forming the Latin Union. Much of this material will be new to French and Italian as well as to English and American readers. No such history of the Latin Monetary Union has hitherto been produced in any language, nor, it seems to us, will any future one be needed. The question may be asked whether the subject itself is worth so much labor as has here been expended on it. We can answer this question best by showing what the book contains. Any reader taking cognizance of the declared object expressed in the title-page will answer it in the affirmative.

The Latin Monetary Union was formed by a treaty dated December 23, 1865, between France, Belgium, Switzerland, and Italy. The drainage of silver from those countries following the new discoveries of gold in California and Australia had left them nearly destitute of small change. All of them, except Switzerland, had the double standard at the ratio of 15½. Switzerland had the single silver standard—with the franc as the unit—and no gold coinage at all; but the gold coins of France had established themselves in her commerce to such an extent that her Government in 1860 made them legal tender. In order to retain her silver small change, she had lowered the fineness of all coins smaller than five francs to 800-thousandths. This was in principle what the United States had done in 1853.

The first overtures for a monetary union to deal with the troubles consequent upon the exportation of silver came from Belgium. They were gladly accepted by the other countries, and the negotiators assembled November 20, 1865. Although the object of their meeting was merely to deal with the deficiency of small change, some of the members saw plainly that the question underlying all others was whether they should remain bimetallic or should adopt the single gold standard. The three smaller countries strongly advocated the gold standard with a silver subsidiary coinage, and the French delegates were of the same mind; but the French Minister of Finance, M. Fould, insisted on adherence to the double standard, and his authority was controlling.

The agreement provided that the countries should form a union "as regards the weight, fineness, diameter, and circulation (between the public treasuries) of their gold and silver coins"; that the gold coins and silver five-franc pieces of all the countries should be identical in everything, except their inscriptions, and should be received in the public treasuries of all; that the fineness of the smaller silver coins should be .835, and that they should be legal tender to the amount of 100 francs in one payment, and should be redeemed in gold, or in silver five-franc pieces, by the treasuries of the countries where they were struck, when presented by individuals or by the treasuries of the other countries. The gold coins and the silver five-franc pieces of each country were to be received without limit in the public treasuries of all, but there was no provision for redeeming them in anything else. Nor was there any clause requiring any of the parties to coin either metal. Nor was there a word on the subject of legal tender. A provision was added, enabling other states to join this monetary union at their own volition, by adopting the system and accepting its obligations. The treaty was to continue in force fifteen years, and for periods of fifteen years each thereafter, unless denounced one year before the expiration of any such period. The market ratio of gold and silver at the time was slightly under the legal ratio of 1 to 15½.

Professor Willis shows us why the French Government overruled the plenipotentiaries in reference to the adoption of the gold standard. The Emperor Napoleon III. had a conceit of extending the prestige of France by securing the adoption of her monetary system among the nations. He was largely under the influence of the Bank of France and of the *haute finance*, upon whom he must rely in the event of a war with Prussia, which was already in contemplation, and he was, therefore, disposed to be governed by them in matters of detail. They had reaped large profits from exchange operations in gold and silver on each oscillation of the market ratio above or below the legal ratio. If the single gold standard were adopted, this source of profit would be cut off. So the plenipotentiaries were not allowed to have their way.

At the outset, nothing seemed simpler than a monetary union composed of adjacent states whose coinage systems were already similar, yet it went wrong almost immediately. Italy suspended specie payments within six months. Her silver money, including her subsidiary coins, flowed into the territory of the other countries, and the question whether she would be able to redeem the latter rose in men's minds. The question of redeeming her five-franc pieces had not yet become important. Greece was the only other country that elected to join the scheme. This she did in 1868, but her finances were in such a rickety state that she brought weakness rather than strength to the union. The next event of importance was the international monetary conference of 1867, held during the Paris Exposition of that year. Nineteen countries, including the United States, were represented in it. The declared object of this conference was to secure uniformity of coinage among civilized nations. The real object was to secure the adhesion of other countries to the Latin union. This end might have been gained but for its bimetallic basis. The delegates voted unanimously for the monetary system of the Latin Union, provided they were not committed to bimetallism. They then voted unanimously, with the exception of Holland, for the single gold standard. French officialism and the *haute finance* were surprised and mortified that the representatives of the entire Latin Union, including France herself, had broken their leading-strings and voted against bimetallism. Naturally they had no further use for the conference. Professor Willis points out incidentally the "complete misstatement" of the action of the conference of 1867 made by the United States Monetary Commission of 1876, which had the effrontery to say: "The demonetization of silver formed no part of the policy proposed"—that being the very thing which was proposed.

The action of the conference was not lost upon public opinion in France. An agitation sprang up for the adoption of the gold standard, and became so persistent that the Government was compelled to take notice of it. Not a year passed thereafter without a commission to examine the subject. The fact is very clearly brought out by Professor Willis that, despite the opposition of the great bankers, France was moving irresistibly toward the gold standard, and would have adopted it before Germany did but for the war of 1870. Important testimony on this point is found in the *Enquête* of 1868, in which the opinions of the Receivers-General and the Chambers of Commerce of the entire nation were called for. Of the responses given, 113 were in favor of the gold standard and only 22 for bimetallism. The Minister of Finance and the money-changers managed to stave off a settlement by referring the question to the Conseil Supérieur de l'Agriculture, du Commerce et de l'Industrie, in December, 1869. This body made a more thorough investigation than any of its predecessors, and, by a vote of 14 against 5, decided in favor of the gold standard; but the report was not finished till late in 1870, when the disturbed state of public affairs prevented any action upon it. The report was not published until 1872. Meanwhile it was generally believed that the war indemnity imposed by Germany had disabled France from adopting

the gold standard. This was an erroneous supposition, as events subsequently proved. All that needed to be done was to stop coining silver, and this remedy could have been applied as easily at one time as at another; but this fact was not self-evident. It could be learned only by experiment.

The year 1873 was an eventful one. The price of silver fell below 60d. per ounce. The ratio to gold had been above 15½ for five years, and was slowly rising. Silver was flowing into the countries of the Latin Union and gold flowing out. The white metal was piling up at the mints of Paris and of Brussels, much beyond their capacity to coin it. The old five-franc pieces were reappearing in payments with disagreeable frequency. The French authorities sought to check the movement in September, 1873, by a secret mint regulation, limiting the coinage of silver to 250,000 francs per day. Two months later the limit was lowered to 150,000 francs, and then the secret came out. Of course it did not have a quieting effect on the public mind. The Belgian Minister of Finance was much distressed by the commercial classes, who insisted that, unless something were done to check the inrush of silver, there would not be a gold coin left in the kingdom. After unnecessary and almost fatal delay, he proposed a bill to the legislative body authorizing the Government to limit or suspend the coinage of silver five-franc pieces till January 1, 1875. The bill was promptly passed, and the suspension ordered.

In November, 1873, Switzerland requested that a new convention of the Latin Monetary Union be called, and this was agreed to by France, notwithstanding the opposition of the money-changers, who were again making large profits. The convention assembled at Paris, January 8, 1874. All the countries found themselves more or less in a trap. None of them could take the steps which self-interest required. Belgium and Switzerland wanted complete stoppage of silver coinage. Italy was still under suspension of specie payments, but she had promised to allow the National Bank to coin sixty million francs of silver as a reserve fund, for which the bullion had already been provided. France did not know exactly what she wanted, but she knew that she held an immense stock of Italian and Belgian silver, whose future required careful nursing. Everything pointed toward compromise. The result was an agreement to restrict the coinage of silver five-franc pieces for the year 1874 to 120 million francs for all the countries, the proportions for each being defined. It was provided that the sum allotted to the National Bank of Italy should be kept under lock and key until after the next meeting of the Union in January, 1875. The right of admission to the Union previously extended to other countries was withdrawn unless by the consent of the existing members. Silver was thus practically demonetized by the Latin Union, although the restriction placed upon its coinage was called temporary. The restriction was renewed with some variations for each year until 1876, when the French Chambers, at the instance of M. Léon Say, the Minister of Finance, passed a bill authorizing the Government to limit or suspend the coinage of silver five-franc pieces by decree. The bill was passed on the 5th of August, and the decree of suspension was promulgated on the following day.

The international monetary conference of 1878, called at the instance of the United States, had no effect upon the course of events, but the conference of the Latin Union itself in that year was important. The Union would have been dissolved but for the fact that France was carrying a heavy load of Belgian and Italian silver which there was no present means of getting rid of. Italy was now taking steps to resume specie payments, and the conference addressed itself to the task of returning her subsidiary silver and getting pay for it according to the terms of the original agreement. If anybody thinks that a monetary union of four or five different countries on a bimetallic basis is a simple thing, and easily managed, let him read the debates and proceedings of this conference, and the various treaties, protocols, declarations, and additional acts evolved by it, all relating to this one subject of the Italian subsidiary coins. Incidentally the fact is here disclosed that one and a half million francs of the silver coins of the Papal States had rushed into France pell-mell with those of Italy proper, but without any redeemer, express or implied. This, however, was only a minor mischance.

The question of redeeming the silver five-franc pieces was mooted in the conference of 1878, where it came near to producing an explosion. It was the chief bone of contention in the next conference, that of 1884. France, which held the bulk of them, had reached the determination that each country should redeem in gold at par all of its silver five-franc pieces, and had even arranged the time and manner of redemption before the conference assembled. Italy, although she had showed fight when this plan was advanced in 1878, was now ready to support it. She had resumed specie payments and was enthusiastic for the gold standard. Belgium refused flatly to sanction the proposal, and withdrew from the conference when she was outvoted. The other countries went on calmly without her, and adopted a new treaty, that of 1885. It was provided that the coinage of silver five-franc pieces should be suspended and not resumed without unanimous consent; that the legal-tender quality should be refused to the five-franc pieces of any state not a member of the Union, and that any state renouncing the Union should be held to receive back its silver five-franc pieces circulating in the other countries and pay their nominal value on demand. As Belgium had not formally renounced the Union, although her delegates had withdrawn from the conference, these clauses applied to her.

Belgium contended that she had derived no advantage from the coinage of five-franc pieces at her mint for private persons, and therefore could not be justly called upon to redeem them. The others reminded her that she was not under any obligation to coin for private persons, and that if she had elected to do so, and a loss resulted from such coinage, such loss ought not to fall upon the other parties to the Union. The others had means of coercing her, or at all events, of discrediting her in the eyes of the world, by depositing her five-franc pieces in the National Bank of Belgium and selling the bills of exchange drawn against them in the money markets of Europe. The Bank might pay the bills in silver exclusively, but she would ruin her credit. Nobody would know what a draft on the Bank of Belgium was worth at any time. Moreover, all the banks and treasuries of the other members of the Union would refuse to receive Belgian five-franc pieces, which would thereupon rush home precipitately. Shortly after this treaty was concluded, Belgium dispatched M. Pirmez as her plenipotentiary to Paris to treat with the French Ministry instead of the representatives of the Union. In the end, she assumed responsibility for her silver five-franc pieces, but was accorded very lenient terms. Actual redemption was indefinitely postponed, but the power now resides with France to call upon Belgium to redeem 250 millions, Italy 270 millions, and Greece 14 millions of silver francs. None of them can do so; therefore they cannot withdraw from the Union even if they should desire to.

The later conferences of 1893 and 1897 teach nothing except the impossibility of rehabilitating silver and the inconvenience of being obliged to consult four Governments besides your own whenever you want to issue a few million francs of subsidiary coin. Any unprejudiced reader of this history will have reached the same conclusion as Professor Willis, even before he reads it at the end of his book, viz.:

"The Latin Union, as an experiment in international monetary action, has proved a failure. Its history serves merely to throw some light upon the difficulties which are likely to be encountered in any international attempt to regulate monetary systems in common. From whatever point of view the Latin Union is studied, it will be seen that it has resulted only in loss to the countries involved."

The work is dedicated to William L. Wilson, the late President of Washington and Lee University.

The Archbishop and the Lady. By Mrs. Schuyler Crowninshield. McClure, Phillips & Co.

To readers of 'A Superfluous Woman,' 'The Engrafted Rose,' by the same writer, will come as an agreeable evidence of growth in grace. That was in the last degree disagreeable, with a disagreeableness from which its latest successor is happily quite free. There is, to be sure, an unpleasant family with an ancestral obligation to be odious, but it is drawn with reserves, and affords no more shadow than is inevitable in a story dealing largely with questions of heredity. There is, moreover, a real story; it has construction, if not greatly hampered with plot, and it proceeds on interesting and original lines. The ancestral tendencies haunt the story with ghostly subtlety. The reader is conscious at one or two points of a Hawthornish thrill and chill. Yet there is nothing beyond the

possible in the story, and there are some English-village characterizations and some peasant dialect work that were done by a shrewd and humorous pen. About the style there hangs too often a conscientious avoidance of the simple which to the plain man is vexing. We wish Miss Brooke would read and take to heart what Chief Justice Marshall wrote to his grandson: "The man who by seeking embellishment hazards confusion, is greatly mistaken in what constitutes good writing." The embellishment in her case is a bumptious tendency on the part of pompous words to rush to the front. After some of her sentences one is obliged to cough to regain breath. Sometimes she feels this and translates herself. "It lay within the idiosyncrasy of temperament that the medium he chose was not strings but keys. Hawmonde was a fine pianist." If she would throw away the worser half of her manner, we should live the happier with the purer half. What, for instance, could be prettier than the phrase concerning the young man when the dark-eyed heroine, with voice that "matched her eyes," looks at him and speaks to him, and it is said that he felt "as though a bunch of pansies had been lightly thrown against his breast"?

Miss Daskam's 'Stories for Girls' are in the main refreshingly free from the trait which renders many girls' stories painful reading—the making of each young heroine a reformer of all the adults about her. Such literature abounds, and should be classed as reading for all except young people. The trail of this educative serpent is to be seen in the opening story of the present collection, but on the whole the tone taken is wholesome and fitting, free from mawkishness, and with the unmistakable college-girl touch which knits them closely to the present-day reader. There is a generous sprinkling of millinery, but perhaps this is a necessary sugar-powdering to the tonic moral, and so "no more than reason" for a young girl's behoof. The gem of the book is the story of a girl's disillusionizing glimpse into Bohemia. This is cleverly done and is well written. The author's style, indeed, throughout is commendably simple, clear, and good.

Miss Cook's Wellesley stories carry one bodily and in a neat, trim style into college life, its atmosphere, occupations, athletics, elections, rivalries, tea-drinkings, class-ceremonials, now and then its studies. This effective transportation of the reader being supposedly the author's aim, she may be congratulated on her success. The studies are nothing if not realistic, and leave the reader instructed, if sometimes æsthetically a-cold. The picture does not altogether put one in love with college influences. If we are to understand that college life sharpens the sense of honor, we must ask, Is a girl justified in reading another girl's letter even when she knows it is a lying one? If Professor Lamont really visited the scene of the junior mysteries, was it honorable to let Miss Brook figure as the culprit? If Professor Lawrence did not know of the affair of literary plagiarism, was it not so much the worse for Professor Lawrence? The self-justifying plagiarist's portrait meantime is very clever, as is that other one of the irresponsible Clorinda, with her shifty logic, But somehow the indeterminate type of character and of retribution, however identified with modern fiction, jars in college literature. One would like to see the mean and dishonest girls all found out and overtaken by poetic justice in the good, old-fashioned way. The one love story is quite the poorest of the collection. The proof-reading, let us hope, was not done under college auspices, being atrocious.

The stories from New York's Syrian quarter, as might have been expected, have arrived, and very excellent ones they are. Lower Washington Street and Battery Park, with the sea glimmering and the elevated road roaring, form the background to what the subtitle of 'The Soul of the Street' proclaims as "correlated stories." What seem at first like affectations of speech are looked back upon as Orientalisms when one has fairly entered upon the scene and learned to value the dreamy, child-loving, country-serving, visionary Khalil Khayat, the grimy old editor and the chief link in the "correlation." The writer's evident intimacy with his subject conveys itself to the reader, who, growing acquainted with a new circle of fellow-citizens, at the last, seems to be parting with friends. We see Syrians dealing with one another, with Irish hoodlums, and with city officials; we see them wise, greedy, kindly, suspicious, dirty, poetic, patriotic, servile; we feel that the likenesses are speaking; we love the lovable traits of these Christian exiles, even some of the exiles themselves; and we are glad they live near the Battery. In good report and evil, the record is vivid, and the book a noteworthy document upon a little-known phase of our city history.

'The Inn of the Silver Moon' is as merry a litle extravaganza as a bored reader could wish. It relates the adventures of two young French persons, who have surreptitiously imbibed the "American idea" through American romances. The youth declares that, "beneath the exterior of a provincial *rentier* may lurk the spirit of Uncas, the Last of the Mohicans." The young girl's confession is that, after reading Howells, smuggled into her convent, "the insidious poison of confidence in mankind has entered my blood, and that I shall never know again the sweet suspicion and mistrust of my earlier years." Chance throwing these emancipated spirits together into a tangle of predicament, it requires the cleverness of both to bring them to a safe harbor, which is accomplished in a delightfully comic fashion. One agreeable innovation, among many, upon the usual scheme of such stories is the refreshing recklessness with which embarrassments are sloughed, never to reappear. We are spared that tiresome, "And now to return to the dragon," which has cast a gloom over many funny sketches.

'The Archbishop and the Lady,' through the first half of its 460 pages, seems on the point of being one of the best novels of the winter. The old French Abbey, the ruins and haunted rooms, the vine-clad terraces and leafy arbors, make a charming setting for a house party of eccentrics of all nations. Curiosity is whetted, interest is roused and long maintained. Mysteries are agreeably handled and characters drawn in high relief, if not always with persuasion. The *descensus Averni* of a novel is too often far from being as facile as the ascent. This one in particular flags sadly after once the piling on of troubles has been accomplished, and when we are looking for release. At least half of the later interviews in Paris of the hero with his various friends and opponents could have been omitted as adding to the story nothing but feebleness. At the Abbey all went well, but, reversing the proverb, this good story dies when it goes to Paris. The characters go flopping about in their tribulations, as minutely as aimlessly. The Irishman is one of the best-drawn persons in the drama. The American hero is all-conquering, as usual, but somewhat colorless. The heroine is rather loosely put together. The most elaborate and successful of the portraits is that of the much-married Madame. The *enfant terrible* is wholly preposterous, but a useful agent in disclosing secrets necessary to be known. A writer who criticises the English as given to lapses in grammar should take care not to say "hoped that it might be her whom he sought." The book is thickly sown with clever sayings, the outcome of clever observation of men and manners; and for all its faults is interesting reading. It would be an ideal book for the over-Sunday guest. He could not finish it within the limits of his visit; he would remember the beginning of it as uncommon, and he would go all his days wondering how it came out.

RECENT BOOKS ON INDIA.

While India, the wretched, is miserably prone before the devils of famine and plague, Indologists, though unable to aid her in her stupid helplessness, are doing the best they can for her in other ways. And it is indeed a pleasure to turn from the dreary annals of disease and death to books that revive the memory of accomplished greatness, and recall the age when India was herself. The year past has brought out several publications of more than usual interest for the outer circle of those interested in Oriental matters.

Of these, two in particular represent less the year than the half-century and generation just completed. It was nearly fifty years ago that the Pāli scholar Fausböll published his modest and learned edition of the best-known collection of Buddhist verses, the famous 'Dhammapada.' At that time its place in the ancient literature was unknown; it was generally considered to be a work by itself, and its true nature was suggested only as a doubtful theory among other questionable hypotheses in regard to its origin. Now we know that it is merely a collection of "elegant extracts," torn from their connection and grouped together, the flower of Buddhist teaching in the form of popular verse; some of it common to Brahman and Buddhist alike. The work has often been translated, and "All that we have is the result of what we have thought," "Not birth and learning but good behavior make the true Buddhist," are phrases familiar even to those unlearned in the native texts. With the imprint (Luzac & Co.) 1900 instead of MDCCCLV, this little volume has been reëdited by the veteran scholar who first gave us the text, and in a few words of preface he has shown at a glance how great is the advance of Buddhistic scholarship since the book first appeared. Nearly half the stanzas have now been assigned to their proper place in other Pāli books. One feature deserving of especial commendation is the restoration of the metrical form in verses which, in the old edition, jarred painfully upon the ear. It will be a great good when other Hindu metrical works shall at last be rescued from the

hands of the grammatical pedant and published in their original form of verse. It is pleasant to add that this little volume of Dr. Fausböll's is dedicated to an American scholar, "Professor Dr. Lanman of the Harvard University," a fitting recognition of Professor Lanman's long devotion to the cause of Pāli scholarship.

With what sounds like a long sigh of relief, the editor of a very different work breathes out in a learned Introduction his satisfaction at living to complete the labor of twenty years. The last volume of the "Sacred Books of the East" closes the extended translation of the huge 'Çatapatha Brāhmana,' by Dr. Eggeling—in many regards the most important of ancient Hindu books on the ritual of sacrifice. The subject is remote, the style is irksome; but the content of many chapters is of far more general interest than is indicated by the title or general subject-matter. For it is characteristic of Hindu works on the ritual to interpolate tales and sociological data of prime importance. The learned editor has treated some of these in his Introduction—sub-subjects, so to speak, of the main work, but to us more germane to knowledge than the rules of the ritual. Particularly attractive are the passages which deal with human sacrifice and those mysterious singers who "celebrated the King" in impromptu verse, the earliest reference to verses of a strictly epic character. What a hold such studies have upon the true scholar is well illustrated by the closing words of the Introduction, where the editor, after his "and now my task is done," yet concludes brightly: "If a second edition could ever have been required, . . . it would have found me ready once more to work my way through the bewildering maze."

As a sort of appendix to the question of epic origins involved in the text of the last-mentioned book comes Rektor Pischel's little monograph, entitled 'Die Heimat des Puppenspiels,' concerning which it may be said that no one "can afford to be without it" who is interested in the origin of dramatic representation. It is a pamphlet not for Sanskritists, but for the world, the kind of "popular" writing to which German scholars occasionally condescend, especially when, on being elected to the high office of Rektor, they have to say something intelligible in public ("Hallesche Rektorreden," Max Niemeyer). The same author's massive volume, 'Grammatik der Prakrit-Sprachen,' which has just appeared, deserves a review by itself. It is the most complete and important contribution to Indic phonology that has yet been written.

The Pāli Text Society has taken time by the forelock and published a little Buddhistic work in 1902 (*sic*)! It is called the 'Netti-Pakarana,' and may turn out to be a valuable addition to the already large Buddhistic library, but its date is so doubtful that at present it is scarcely worth while discussing its contents. Lateness, however, is not always a bar to worth, as may be seen in the very attractive little volume by Foucher, 'Étude sur l'Iconographie Bouddhique' (Paris: Ernest Leroux), which, though it deals with documents as recent as the eighth century, contains much of historical value, not only in occasional notes on modern conditions, but also in the testimony given by the documents to tradition undoubtedly older. Of the first there is an example in the note on page 4, which confirms the opinion first advanced four years ago, that Bengal was a seat of Buddhistic culture long after the twelfth century, at which time it has always been supposed that the Hindus were wholly Brahmanistic. Another passage, on page 52, shows that *caitya* is not necessarily a tope; the wide bearing of which remark in Buddhistic history will perhaps not be apparent to all without the supplementary statement that Buddhism has often been suspected to exist on the evidence of this very word *caitya*, which, in distinction from the reliquary mound called a tope, is only a general commemorative monument, and may be of any form. Of the second sort of information to be gleaned from this careful study, that pertaining to the classification of divinities (including Buddha!) is most valuable, since it tends to elucidate some vexed questions in regard to sects of the church. Most curious is it to find one small miniature combining in one figure the characteristics of the Buddha and the Bodhisattva—that is, the ideals of two opposed sects! Still more important for the history of Buddhism is it to find Shiva and Buddha merged into one.

Turning from these foreign studies of Danish, English, German, and French scholars, there remains a little book of American authorship, which, without the same evidence of being the creation of a specialist, is nevertheless a decided contribution to the literature of Buddhism. Its long title may be condensed into the form 'The Dhamma and the Gospel' (Boston: Marlier & Co.), and its author is Dr. C. F. Aiken of the Catholic University of America. Although stamped with *nihil obstat* and *imprimatur*, it is not of that class of books which give to the reader only what the writer thinks best for him to know; but it is a very fair and dispassionate review of the question whether Buddhism gave rise to Christianity. That the author is not a Sanskrit scholar may be inferred from the inclusion of Manu among Sūtra-writers (p. 10); but this is a little slip, and the chief problem calls in reality for an historical mind rather than for knowledge of Sanskrit. Readers of the *Nation* will have noticed a few weeks ago a paragraph on a shallow book of Arthur Lillie's, which, one of a number of equally worthless volumes by the same writer, derives Christianity, the cult of the Norsemen, and Mexican superstitions alike from Buddhism. It is against the empty sciolism of this class of books that Dr. Aiken's polemic is written, and, though many of the points raised in the discussion remain moot, the general thesis is maintained in a worthy manner. The author neither blinks the problem nor fails to treat his numerous antagonists with respect, in some cases with more respect than they deserve. His contention that Christianity has made more impression on Buddhism than the latter ever made on Christianity is supported by the best evidence obtainable. The "marvellous parallels," explicable to writers of Lillie's stamp only on the assumption that Christianity borrowed from Buddhism, resolve themselves into a poor collection of resemblances some of which amount to naught but accident, while in others the greater probability is that Buddhism in its later stage (for many of the "parallels" are found only in the post-Christian epoch) was affected by the teaching of Christian missionaries who entered India in the first century. 'What India Owes to Christianity' is a book still to be written. For the present, Dr. Aiken's little volume is a healthy antidote to the numerous unscholarly diatribes written of late to prove that Christianity owes everything to Buddhism.

Up from Slavery: An Autobiography. By Booker T. Washington. Doubleday, Page & Co. 1901.

This book is to be sharply distinguished from another of similar character, 'The Life and Work of Booker T. Washington,' a subscription book of the cheapest character which has recently been put upon the market as if it were a new book. It contains a good deal of the matter presented in 'Up from Slavery,' interspersed with illustrations so ill-made and with such offensive titles that they cannot have been approved by Mr. Washington and must give him serious annoyance. 'Up from Slavery' has been published serially in the *Outlook*, where it has been widely read and with much admiration, but it is fully entitled to republication in the attractive volume which now comes to hand, lacking the excellent illustrations which were a notable feature of the *Outlook* serial. Those who would possess themselves fully of Mr. Washington's mind and purpose should supplement 'Up from Slavery' with his 'Future of the American Negro,' published a year ago.

The new book has an accidental timeliness for which we cannot be too glad, coming as it does so close upon the heels of Mr. Thomas's 'American Negro,' recently reviewed in these columns. It is the best kind of answer to that railing accusation, and we hope that Mr. Washington will attempt no other. He has one reference to it, or some earlier deliverance of its author, where he says (p. 249):

> "I have seen the statement made lately, by one who claims to know what he is talking about, that, taking the whole negro race into account, ninety per cent. of the negro women are not virtuous. There never was a baser calumny uttered concerning a race, or a statement made that was less capable of being proved by actual facts."

The difference between Mr. Thomas's construction and that of Mr. Washington is not, however, so great as it appears to the more casual reader. For it must be remembered that the negro is for Mr. Thomas, not a body of colored people, but, as certain theologians say of heaven, "a state of mind." His only true negroes are foolish negroes and bad negroes. He adopts a standard which excludes himself and presumably Mr. Washington, seeing that he does not once mention him nor the work which he and his eighty assistants are doing at Tuskegee. Mr. Washington's method is diametrically the opposite of this. He imputes his own work and that of all the better negroes to the race for righteousness. That is to say, in striking the average he does not exclude the better elements. In no other respect is his book more impressive and affecting than in that of his complete identification of himself with his people. His achievements are their possibilities. He delights frankly in the honors paid to him at Atlanta, at Harvard, in Europe, and elsewhere, but always because he is a negro and a representative of the millions who have just escaped from slavery into "a bewildering freedom."

Mr. Washington must have had natural

gifts of expression which have been enhanced by careful attention to the principles of good writing. His style is simple and direct, without any of that rhetorical effusion which Mr. Thomas holds to be a negro trait, and grossly illustrates in his own person. His sense of humor is keen, and he has some amusing stories, but they are never lugged in by the ears; they are always pertinent and happy illustrations of particular phases of his thought.

In some degree the book derives its interest from Mr. Washington's low and miserable beginnings contrasting with the successes of his later life. Benjamin Franklin's first arrival in Philadelphia has a worthy pendant in Booker T. Washington's first arrival in Richmond, where he slept *under* a sidewalk by night, while working by day to earn money to carry him to his destination at the Hampton Institute. It was neither strange nor dishonorable that his mind reverted to those days when he was getting a degree from Harvard or taking tea with Queen Victoria. But his getting on was but the smaller part of his experience—he was bound to do that, he was so ambitious, so thrifty and industrious. Very early in life, however, he developed an ambition to be the helper of his people. Inducements were offered him to seek political preferment, the rewards of which were easily within his grasp, but these he put aside, and at length, in 1881, at the instance of Gen. Armstrong, he went to Tuskegee to begin the work which is so honorably associated with his name.

On his way to this beginning his upward course was marked by many incidents of the *olim meminisse juvabit* kind. In his worst straits at Hampton, while working in a restaurant at Fortress Monroe, he found a new, crisp $10 bill. It would have rescued him from the horrible pit and the miry clay, but his employer decided that the money belonged to himself because it was found on his premises. Trying to be a waiter in New Haven, he failed so egregiously that he was driven off the field by the maledictions of the gentlemen (?) who could not endure his blundering; but he soon made himself efficient. A more significant difficulty was that attending his charge of an Indian student from Hampton to Washington. The Indian had the freedom of the cars and the hotels from which young Washington was excluded. On the other hand, at this early time and later, he had experiences that would have been "wonderful providences" to one more prone to theological interpretations.

The vicissitudes and achievements of the Tuskegee School are exhibited in a series of pictures and contrasts that must sometimes make the reader's heart beat fast and sometimes dim his eyes. Wonderfully pathetic are the reminiscences of students frost-bitten in their beds; of the old colored teachers flocking in and taking a lower rank than their former pupils; of the disinclination to manual labor which was gradually overcome; of the generous coöperation of the white people of Tuskegee with Mr. Washington and his coworkers. The first animal owned by the school was an old blind horse; now it has over 200 horses, mules, etc., besides 700 pigs, for which creatures Mr. Washington confesses a peculiar admiration. At first there was a stable and a hen-house for housing the pupils; now there are forty buildings, built almost entirely by the students. At first Mr. Washington was the only teacher; now he has a teaching and directing force of eighty men and women. At first there was no money; now the school property is worth $300,000, and there is $250,000 in endowment funds. Mr. Washington's chapter about getting money for the school is one of the most interesting in his book. Many have wondered how he could be away from Tuskegee so much without prejudice to his hold upon the work. We are informed that every day of his absence he receives an account of the work down to the last details—what students are excused from work and why; the bill of fare, and whether certain meats are baked or boiled.

There is scant attention to race problems, but it is not as if Mr. Washington had not written elsewhere of negro lynching and disfranchisement. Here it is only necessary for him to call attention to those utterances which were sufficiently distinct, and absolutely final in their disproof of any willingness on his part to sell the political and social birthrights of his people for any mess of industrial pottage, however wholesome this may be. Of striking episodes there is none superior to that of the Atlanta Exposition speech. In advance of its delivery he was very nervous, but even more so was his friend Mr. William H. Baldwin, jr., now better known than then, who walked about outside the buildings in a spasm of anxiety until the ordeal was over and a splendid triumph scored. Those who propose skipping the chapter on Mr. Washington's trip to Europe—the chapter on this subject can be so safely skipped in most biographies—would do well to change their minds. What is most interesting about it is the main reason why he feared to go. It was that he might seem "stuck up," trying to "show off," and so give countenance to the idea that the negro cannot bear prosperity without being unduly exalted. What is certain is that Mr. Washington has had successes that would turn the head of many a white man, but his own is right side up. It is kept so by the balance of a heart devoted to the elevation of his race.

The Art of Translating. With special reference to Cauer's 'Die Kunst des Uebersetzens.' By Herbert Cushing Tolman, Ph.D. Boston: B. H. Sanborn & Co. 1901.

By compilation from Cauer and others, with constant suggestions and illustrations of his own, Professor Tolman has made up a little volume of undoubted value to the teacher and translator of foreign languages, ancient or modern. It cannot be said, however, that the great difficulties heretofore encountered by the translator have now been cleared away. Perhaps it may be considered a sufficient achievement for a single effort if any considerable number of translators are brought to realize more vividly that the difficulties exist.

The volume does not shrink from the constructive side of the problem, however, and it is on this side that some of the positions taken require particular notice. We are told, as a point of departure, that "translation is arousing in the English reader or hearer the identical emotions and sentiments that were aroused in him who read or heard the sentence as his native tongue." The formula sounds well, but it has many and insurmountable limitations. Of course, he gets most enjoyment out of Homer or Virgil, Herodotus, or Livy who can most thoroughly assume their habit of mind and put himself in imagination in their environment; but, allowing for all the elements that are permanent in human nature and experience—and they are more, and more important, than we often think—the lapse of centuries yet leaves a gap which the most sympathetic and thorough scholarship can never close.

In the application of this idea the author insists that the translator must be true to the imperfections as well as the virtues of his original, as any other course will sacrifice the peculiarities of style displayed in the original. As an illustration, Frazer is criticised for transforming the "broken and slovenly" Greek of Pausanias into "stately" English. Without justifying a *stately* rendering of Pausanias, one may ask why there is any call for an English rendering of his work at all. In nearly every instance would not the English reader be after the substance, and not the form, of the original? Why, then, should he be annoyed by finding that substance buried in a mass of broken and slovenly English simply because broken and slovenly Greek was a peculiarity of the original? It is a wonder that his very choice of an illustration did not lead the author to recognize an important limitation to his formula in the purpose for which a translation is or ought to be made. Who does not feel compelled, for reasons apart from style, to read many books in which peculiarities of style are a constant stumbling-block, producing emotions of anger and disgust? Shall the translator of such books (sometimes epoch-making volumes in history, philosophy, theology, or natural science) strive faithfully to reproduce these emotions? But even in works admired for their literary value, the attempt to reproduce stylistic blemishes and idiosyncrasies must often end in ignominious failure. Who will give us an endurable translation of the later works of Tacitus reproducing in any close parallelism his syntactical peculiarities? The man who attempts it will almost surely give the false impression that the main feature in the great historian is his way of putting things, not the fusion of a great subject under the heat of a great and earnest mind. If ever the adequate translation of Tacitus comes, it will surely come from some statesman on whose mind the thought of the original will take such a hold that he will read with but scant consciousness of asyndetons enumerative and adverse, *comparationes compendiariæ*, alliterative antitheses, syntactical parallelisms, and inconcinnities, *et id omne genus*, so dear to the student of Tacitean style, and so small a part of the real Tacitus. When a great genius puts pen to paper with a purpose not primarily artistic, the result may be a great work of literature; but in such a case "the style will be the man" in a sense which lies far beneath the surface currents of grammar and rhetoric.

"When Sallust, Livy, or Tacitus, under influence of vivid description, ignores tense and person, and uses the so-called historical infinitive, the translator should endeavor to convey into English the excitement and confusion of the original." But he should be very careful not to assume that the historical infinitive in itself involves excitement and confusion in the original. The 'Agricola' lies before us, and at the bottom of the

third page (Gudeman's edition) we find the following words: "Sed noscere provinciam, nosci exercitui, discere a peritis, sequi optimos, nihil adpetere in iactationem, nihil ob formidinem recusare, simulque et anxius et intentus agere." Seven historical infinitives within twenty-four words, and yet who will make out a case for excitement, confusion, or even markedly "vivid" description in this straightforward account of the orderly way in which a cool and self-controlled young man went about the business before him?

"If the original be ambiguous, a faithful translation should be just as ambiguous as the original." Here, too, there should be qualification. There are often verbal ambiguities unintended and unnoticed by the writer. When Thoreau spoke of certain regions as looking like "a natural pasture for the moose and deer, exceedingly wild and desolate, with occasional strips of timber crossing them," he meant to give the reader no ludicrous conception, though the misinterpretation suggested by the position of the word "wild" has never failed to excite the risibility of a single one of the many to whom the present writer has read the passage as a test. Thoreau had apparently no keen sense of such possibilities of verbal position, and one could readily collect a large number of instances from his volume on the 'Maine Woods,' the suggested absurdity in every case being unintentional. If one were translating him into another tongue primarily for the sake of his stylistic peculiarities, whether intentional or unintentional, he would try to reproduce these effects; if the purpose were primarily to reproduce his conception of the Maine forests, we fail to see the validity of any such requirement.

We might quote a dozen other positions, taken practically without qualification, where serious qualification is surely needed, but space forbids. We should like to quote and emphasize the author's protest against the "school-jargon" which many teachers allow—yes, even require—from beginners in Greek and Latin, and in most cases we can agree heartily with the "Don'ts" of the volume; on the positive side, the reader will get the most good by keeping a mental interrogation-point constantly in evidence, and remembering that, in dealing with the products of the human mind, formal rules of absolute validity are few and far between.

BOOKS OF THE WEEK.

Allen, Mrs. William. The Love Letters of a Liar. Ess Ess Pub. Co.
Beacon Biographies: (1) Gould, Alice B. Louis Agassiz; (2) Sedgwick, jr., H. D. Father Hecker. Boston: Small, Maynard & Co.

Works for the Study of English

RECENTLY PUBLISHED BY **Henry Holt & Co.** 29 W. 23d St., NEW YORK

DOWDEN'S PURITAN AND ANGLICAN. Studies in Literature.

341 pp., 8vo, $2.00 *net.*

These essays cover Puritanism and English Literature, Sir Thomas Browne, Hooker, Herbert, Vaughn, Milton, Jeremy Taylor, Baxter, Bunyan, Butler, the Transition to the Eighteenth Century, etc.

BREAL'S SEMANTICS.

lxvi + 336 pp., 12mo, $2.50, *net.* Studies of the meanings of words.

N. Y. Tribune: "Little is left unintelligible even to the unlearned reader. . . . His style is lucid and wholly charming. . . . Studied in this way, words take on a new significance, becoming human records."

OSGOOD'S CLASSICAL MYTHOLOGY IN MILTON.

(Yale Studies in English.) lxxxv+111 pp., 8vo. Paper, $1.00 *net.*

ALDEN'S ART OF DEBATE.

By Dr. R. M. ALDEN, University of Pennsylvania. xv+279 pp., 16mo, $1.00 *net.*

Prof. Wm. C. Thayer, of Lehigh: "An excellent book, well put together, fresh, and up to date. I shall use it if the opportunity occurs."

Recent "English Readings." 16mo, cloth.

Burke's Speech on Conciliation with America.
Edited by DANIEL V. THOMPSON of Dr. Sachs's School, New York. xliii+122 pp., 50c. *net.*

Byron: Selections.
Edited by Dr. F. I. CARPENTER of the University of Chicago. lviii+412 pp., $1 *net.*

Lewis's Specimens of the Forms of Discourse.
Selected and edited by Prof. EDWIN H. LEWIS of Lewis Institute, Chicago. 367 pp., 60c. *net.*

Pope: Selections from his Poetry.
Edited by Dr. EDWARD B. REED of Yale. xxx+246 pp., 70c. *net.*

Tennyson's The Princess.
Edited, with introduction, notes, and analytic questions, by Prof. L. A. SHERMAN, University of Nebraska. lxi+185 pp., 60c. *net.*

Thackeray's English Humorists.
Ed. by Prof. W. L. PHELPS of Yale. xii+360 pp., 80c. *net.*

Swift: Prose Selections.
Edited by Prof. F. C. PRESCOTT of Cornell. xlvii+229 pp., 60c. *net.*

The Most Charming Love Story of the Year
SEVENTIETH THOUSAND

The Cardinal's Snuff-Box

By HENRY HARLAND, author of "Comedies and Errors," "Grey Roses," etc.

Crown 8vo - Cloth, $1.50

The North American—"This charming love story."

New York Tribune—"So captivating, so good, that we want it to be perfect. . . . It is a book to enjoy and to praise."

Boston Herald—"One of the most refreshing love stories of modern fiction."

JOHN LANE, 251 5th Ave., New York

JUST PUBLISHED.

Studies in Peerage and Family History.

By J. HORACE ROUND, M. A., author of "The Commune of London," "Feudal England," etc. With Frontispiece and Index. 8vo, pp. xxxi.-493, $5.00.

LONGMANS, GREEN, & CO.
91-93 Fifth Avenue, New York.

WANTED.—A COPY OF THE MEMOIRS (Diary), of John Quincy Adams. 12 vols., J. B. Lippincott & Co. Address PORTLAND ACADEMY, Portland, Oregon.

Cape Rosier,
MAINE COAST.

FOR SALE—To settle a joint account—The beautiful headland known as Cape Rosier Head, together with four hundred acres of land attached following the shore for two miles on either side. This property is a part of the main land, and is within half an hour by steamer from Islesboro and Castine. There is a steamboat landing within a mile. The whole tract is greatly diversified in character. The shores have bold rocks, coves, and beaches, and the land comprises beautiful woods, open fields, and pastures There are several farmhouses on it. The drives are varied and extensive through and from the property. The views from the "Head," as well as from many other points on the shore, are most beautiful and varied, commanding the whole range of the Camden Mountains, the Archipelago of Islands in Penobscot Bay, and the open ocean in the distance. The property is offered for sale as a whole only, at a low price per acre. Address

J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

BOURNE

FOR SALE—One of the most beautiful estates on Cape Cod; located at Bourne, on a charming lake, and near the head waters of **BUZZARD'S BAY**; 10 minutes' drive from station; house of 18 rooms (11 chambers); fully furnished; icehouse (filled); large stable; windmill; 15 acres land; select neighborhood. Price $12,000. ALFRED BLANCHARD, 120 Tremont St., Boston.

"PARLOUS TIMES will afford continuous amusement for days. It is delicious, sparkling with wit, and absurdly plausible. Taken all round, it is one of the most charming novels of the season."

An Array of Satisfactory Text Books in English

Gardiner's

The Forms of Prose Literature

Introduction, 175 pages, and Specimens, 325 pages. $1.50 net.

The Reason for Its Being.

The old rhetorics in use have been gradually displaced and in the change satisfactory illustrations of the different kinds of writing have been omitted so that teachers are compelled to have large libraries accessible if any direct study of style is to be made by means of specimens.

This ought not to be. With this book it will not be.

The Results of Its Being

Fifty Universities and Colleges used it as soon as their Professors saw it. The Illinois Teachers' Reading Circle, an organization which provides its members with the best two books to be found each year, adopted it.

ITS COMPANION BOOK.

Wendell's

English Composition

"A Standard of Excellence." $1.50

Clark's

A Study of English and American Poets

AND

A Study of English Prose Writers

6 vols. $2.00 net.

How is one to study the English Classics so as to obtain positive and appreciable results? These volumes make satisfactory reply to that question. Please note.

"Mr. Clark has done something on a new plan. It is a masterpiece of discernment, discrimination, industry, and refined taste. It is a storehouse of competent critical opinion, of biographical information, and of the winnowed wheat of English literature."—Boston *Advertiser*.

"The book is to the highest degree definite and practical. Even the pupil most lacking in literary instinct must carry away from the course here outlined something more than glaring generalizations."—*The Journal of Pedagogy*.

"Every teacher will get many times its price in solid value out of the study of this work. For it is a lesson in pedagogy as well as literature."—*The Post-Graduate*, Wooster, O.

"The best history of American literature thus far written by anybody."—*The Dial*.

Wendell's

A Literary History of America

"Enough has been said to show how fruitful a formula has been applied by Professor Wendell to the analysis of our literary past. It remains to add that he has produced incomparably the best history of American literature thus far written by anybody, a history that is searching in its method and profound in its judgments, on the one hand, and, on the other, singularly attractive in the manner of its presentation."—*The Dial*. (*pp. xi.*, 574, 8*vo*, $3.00.)

The attention of teachers is cordially invited and inquiries will be promptly and cheerfully answered.

CHARLES SCRIBNER'S SONS,

NEW YORK AND CHICAGO.

Houghton, Mifflin & Co.'s New Books

Autobiography of a Journalist

By WILLIAM J. STILLMAN. With two portraits. 2 vols. 8vo, gilt top, $6.00.

A notable addition to the attractive volumes of biography and reminiscence which have lately appeared. It is one of the richest and fullest, for Mr. Stillman is one of the most picturesque characters of our time. A large and distinguished group of friends figure in these volumes—Bryant, Lowell, Emerson, Norton, Judge Hoar, Agassiz, Ruskin, Turner, the Rossettis; and Italians and Greeks of great distinction. Mr. Stillman writes of his experiences while U. S. Consul at Rome and Crete, and while correspondent of the London *Times*. He writes with perfect frankness and much literary charm.

The Life and Literature of the Ancient Hebrews

By LYMAN ABBOTT, D.D., author of "The Life and Letters of Paul the Apostle," "The Evolution of Christianity," etc. Crown 8vo, gilt top $2.00.

"A book on Biblical study from Dr. Abbott's pen is an event for which multitudes of earnest men and women throughout the country look eagerly. The present work will be read with the keenest interest and satisfaction by those who realize that true criticism, here as elsewhere, tends only to the firmer establishment of truth."—*Boston Advertiser.*

The New Epoch for Faith

By GEORGE A. GORDON, D.D., author of "The Christ of To-day," "The Witness to Immortality," etc. 12mo, $1.50.

"We have found this book inspiring reading, a vigorous tonic for faith. The breadth of its knowledge, the depth and clearness of its philosophic insight, its sure penetration to the deepest meanings of life and the world, its convincing arguments for the spiritual interpretation of the universe, its wholesome optimism, and flung over it all the splendor of its literary style, make this a notable book among many books of its kind."—*Presbyterian Banner.*

The Light of the World

By HERBERT D. WARD, author of "The White Crown, and Other Stories," etc. With a frontispiece illustration. Square 12mo, $1.00.

"Whether one reads the book for the spiritual truth it conveys or for the singularly clever story that is told, in either case the interest is equally absorbing. The little volume is specially appropriate as an Easter gift."—*Chicago Chronicle.*

The Turn of the Road

A Romance. By EUGENIA BROOKS FROTHINGHAM. 12mo, $1.50.

"One of the most delightful among the new romances."—*Boston Herald.*

"An intense and concentrated story, a piece of thoroughly good workmanship."—*Milwaukee Sentinel.*

"A powerful story, alive with interest and movement."—*San Francisco Chronicle.*

King's End

By ALICE BROWN, author of "Meadow Grass," "Tiverton Tales," etc. 12mo, $1.50.

"It is refreshing in this time, when a new novel is often an infliction, to find so charming a book as Miss Alice Brown's 'King's End.' . . . It is late to insist upon the insight and literary distinction which Miss Brown brings to her interpretation of the New England character. In the present book a charming Yankee girl who hovers between a religious 'call' and a sturdy lover, and a social outcast who, like Silas Marner, is humanized through having the care of a child fall upon him, afford Miss Brown the kind of subjects that best display her delicate talent."—*New York Evening Post.*

A GROUP of GOOD BOOKS

FICTION THAT HELPS TO UNDERSTAND FACT

The Ways of the Service

By FREDERICK PALMER

With Six Drawings by Howard Chandler Christy

MR. PALMER made his studies in the Philippines as a war correspondent, and in these vivid stories of Army and Navy and native life he surrounds his characters with an atmosphere of reality that volumes of description could not convey.

12mo, $1.50

NEW POEMS BY GEORGE MEREDITH

A Reading of Life

WITH OTHER POEMS

By GEORGE MEREDITH

A NEW volume, which takes its title from the longest poem of verse, which reveals the qualities of brilliancy of imagination and power of phrase characteristic of the author. One of the most interesting elements of the volume is the collection of translations into English hexameter verse of selections from the Iliad.

12mo, $1.50

A BOOK OF REAL HUMOR

The Abandoned Farmer

By SYDNEY HERMAN PRESTON

Author of "The Green Pigs."

A NEW book in the field which Mr. Stockton explored in "Rudder Grange," but which since then has been neglected. It describes, in a delicious vein of humor, the experiences of a young newspaper man and his wife and boy on a small farm which they leased near the city. No one who laughed over the adventures of the hero of Mr. Preston's "Green Pigs" need be assured of the rich humor or of the exceptional literary quality of this new book.

12mo, $1.25

PRESIDENT J. G. SCHURMAN of Cornell University writes of

Ten Months a Prisoner Among Filipinos

By ALBERT SONNICHSEN

"Mr. Sonnichsen's book is valuable for the side-lights it throws on recent history in the Philippine Islands. But it is especially to be commended for the interest of the story of Mr. Sonnichsen's captivity which he tells with a careless art that hides art and, as he produces always the impression of verisimilitude, he enchains the reader's attention and sympathetic interest from beginning to end. As I write these lines word comes that Aguinaldo has been captured. The Tagalog bubble has burst. Mr. Sonnichsen's book is one of the few photographic snapshots we have, or are likely to possess, of the nature and operations of the Aguinaldian 'Republic.'"

The Outlook says: "It is a book to be read from cover to cover."

With illustrations. 8vo, $2.00

Hand-book of Pronunciation* (35cts.), is a concise and comprehensive treatise for advanced grades, high schools and colleges.

Educational.

Five Weeks of Outdoor Study

under competent leadership—study of nesting birds, of insect life, of trees and flowering plants and ferns, and of the varied Cheshire County landscape—are offered to men and women by

The Alstead School of Natural History,
ALSTEAD CENTRE,
New Hampshire,

whose third session will open on Tuesday, July 2, 1901.

The work of the classes is serious and earnest; the way in which the subjects are approached is new. The aim throughout is to gain close acquaintance with the things studied—such acquaintance as comes only from careful, systematic observation in the open air.

The instructors are Ralph Hoffmann, Merritt Lyndon Fernald, Hollis Webster, and William L. W. Field.

The membership fee of one hundred and fifty dollars covers all expenses of board, lodging, tuition, and excursions for the entire session.

For detailed information, early application should be made to the Secretary, W. L. W. Field, at Milton, Massachusetts.

Financial.

Books on Botany and Nature Study

Bergen's Foundations of Botany

By Joseph Y. Bergen, Instructor in Biology in the English High School, Boston, and Author of "Elements of Botany."
For introduction, $1.50.

Another notable book by Mr. Bergen, whose "Elements of Botany" has come to be the most widely used recent text-book on the subject in higher schools and academies. It is intended not to take the place of the "Elements," but to offer a more extended and comprehensive course for schools that wish to devote an entire year to the subject. The flora includes seven hundred species. The descriptions are written in the very simplest language consistent with accuracy, and technical terms are omitted in every case where ordinary language is sufficiently concise and accurate to answer the purpose.

REFERRING TO WISHART'S

MONKS & MONASTERIES

Albert Henry Newman, D.D., LL.D., Professor Church History, McMaster University, Toronto, in a signed review in the American Journal of Theology says: "It may be said at once that he has produced by far the best book on the subject in the English language, and that it would be hard to find in any language a better general discussion of the various questions involved in the history of monasticism."

With four photogravure portraits, $3.50 net.

COMMENTS ON DR. C. C. ABBOTT'S

In NATURE'S REALM

"Of the artist's work nothing can be said in criticism; its delicacy, truth to nature, and decorative effect are as admirable as they are unusual."—Evening Post, N. Y.

"The charm of such books as these lies in their essential simplicity and naturalness, but the special value of Dr. Abbott's lies in the fact that he never becomes so absorbed in the study of component parts as to fail in an adequate comprehension of nature as a whole."—The Outlook, N. Y.

With photogravure frontispiece and ninety drawings by OLIVER KEMP, $2.50 net.

HENRY T. COATES & CO.,
1222 Chestnut Street, Philadelphia.

"A. C. LAUT must rank with Maurice Thompson, Gilbert Parker and Ralph Connor in depicting frontier life. ***LORDS OF THE NORTH*** is unquestionably one of the few historical novels which is so true to life that it is history." —*Detroit Journal.*

FOR SALE EVERYWHERE.

10—New Novels—10

JEROME K. JEROME

Observations of Henry. By the author of "Idle Thoughts of an Idle Fellow," "Three Men on Wheels," etc. 12mo, cloth, with illustrations in color, $1.25.

Mr. Jerome portrays in his inimitable way some of the most noticeable characters seen by a London waiter. The waiter has narrated his observations to the author in very crude form, and the author has told them in his own words for the delectation of his readers.

JOHN URI LLOYD

Etidorhpa. By the author of "Stringtown on the Pike," etc. 12mo, cloth, illustrated, $1.50.

This book, first published some years ago, is now published in a popular form, and the author has taken the opportunity to revise the book from beginning to end. The success of "Stringtown," Mr. Lloyd's recent novel, should attract renewed attention to "Etidorhpa."

AMELIA E. BARR

Souls of Passage. By the author of "The Bow of Orange Ribbon," etc. 12mo, cloth, illustrated, $1.50.

A story of Scotland of a century ago, told with the simplicity and naïveté, combined with clearness of insight, that distinguish Mrs. Barr's work and that have won for it a popularity showing no signs of diminution.

MAX PEMBERTON

Pro Patria. By the author of "The Garden of Swords," etc. 12mo, cloth, illustrated, $1.50.

The story of an English Captain of Hussars, his love affairs, and his adventures in France and England. The book has a strong plot and a well-conceived love story.

PAUL LAURENCE DUNBAR

The Fanatics. By the author of "Lyrics of Lowly Life," etc. 12mo, cloth, $1.50.

The action of this story takes place chiefly in a little Ohio town at the beginning of the Civil War. Mr. Dunbar has drawn a vivid and realistic picture of the time, and still one that is probably not too highly colored.

AMANDA M. DOUGLAS

A Question of Silence. By the author of the Sherburne books, etc. 12mo, cloth, $1.50.

Miss Douglas has already established a reputation as a writer of stories for the young, but, like Miss Alcott, Miss Ewing, and other "juvenile" writers, she has also proved her ability to construct a fine story of sentiment and action for older readers.

HORACE ANNESLEY VACHELL

John Charity. By the author of "The Procession of Life," etc. 12mo, cloth, $1.50.

An interesting romance of life in California, of which the *New York Tribune* says: "A rattling tale, full of surprise and adventure, with characters in it that are well conceived and well drawn. It has the true spirit, and it is as readable a story of love and tragedy as the devotee of contemporary fiction could desire."

WILLIAM LE QUEUX

Her Majesty's Minister. By the author of "Secrets of Monte Carlo," etc. 12mo, cloth, $1.50.

This is a curious chapter of the secret history of a nation, a narrative of strange facts and diplomatic wiles. It deals with the betrayal of a State secret, and the complications which thereupon ensue.

JOSEPHINE C. SAWYER

Every Inch a King. By Josephine Caroline Sawyer. 12mo, cloth, $1.50.

This differs from many of the historical novels of the day in that it is not chiefly a story of duels and hair-breadth escapes, but is more a study of character. The hero is Henry V. of England, then Prince of Wales, and the romance itself is founded entirely upon fact.

F. FRANKFORT MOORE

According to Plato. By F. Frankfort Moore, author of "The Jessamy Bride," etc. 12mo, cloth, $1.50.

A novel in the wittiest and most amusing manner of this author. It is a remarkable satire on London life, London letters, and London love. Epigrammatic, interesting, diverting, and just the sort of book to pack in a grip or read on a steamer chair.

DODD, MEAD & COMPANY

372 FIFTH AVENUE NEW YORK

THE MACMILLAN COMPANY

NEW YORK CHICAGO BOSTON SAN FRANCISCO ATLANTA

MACMILLAN'S GERMAN SERIES

PREPARED UNDER THE GENERAL EDITORSHIP OF

WATERMAN T. HEWETT, Ph.D.

Professor of German Language and Literature in Cornell University

ADAPTED TO COLLEGE AND SCHOOL REQUIREMENTS

Each volume **60 cents,** *unless otherwise noted*

SCHILLER'S WALLENSTEIN. Edited by MAX WINKLER, *University of Michigan.* $1.00

UHLAND'S POEMS. Edited by W. T. HEWETT.

SCHILLER'S WILHELM TELL. Edited by W. H. CARRUTH, *University of Kansas.*

GOETHE'S EGMONT. Edited by SYLVESTER PRIMER, *University of Texas.*

GOETHE'S IPHIGENIE. Edited by CHARLES A. EGGERT.

FREYTAG'S DIE VERLORENE HANDSCHRIFT. Edited by KATHERINE M. HEWETT.

SCHILLER'S JUNGFRAU VON ORLEANS. Edited by WILLARD HUMPHREYS, *Princeton University.*

GOETHE'S HERMANN UND DOROTHEA. Edited by J. T. HATFIELD, *Northwestern University.*

LESSING'S MINNA VON BARNHELM. Edited by STARR WILLARD CUTTING, *University of Chicago.*

HEINE'S PROSE. Edited by A. B. FAUST, *Wesleyan University.*

SCHILLER'S MARIA STUART. Edited by J. H. SCHŒNFELD, *Columbian University.*

GOETHE'S POEMS. Edited by M. D. LEARNED, *University of Pennsylvania.*

HEWETT'S GERMAN READER

FOR SCHOOLS AND COLLEGES

EDITED WITH NOTES AND VOCABULARY

By WATERMAN T. HEWETT

Cloth, 12mo. Price, **$1.00.**

The Reader can be used equally well with any grammar. *It states principles,* and only in unusual cases is any reference to a grammar necessary.

Kroeh's Three Year Preparatory Course in French

By CHARLES F. KROEH, A.M.

Professor of Languages in Stevens Institute of Technology

FIRST YEAR COURSE..... PRICE 60 CENTS
" " " Teachers' Edition " 65 "
SECOND YEAR COURSE..... PRICE 80 CENTS
THIRD " " ..... " $1.00

Covers all the requirements for admission to Universities, Colleges, and Schools of Science

A HISTORY OF ROME

By GEORGE WILLIS BOTSFORD, Ph.D.

Harvard University

This is a companion volume to the "History of Greece" by the same author. The book contains three hundred and ninety-six pages of text, ten full-page illustrations, eighty-eight text illustrations, and seven colored maps. It aims to present briefly the growth of Rome, the expansion and organization of her power, the development and decline of the imperial system, and the transformation of the ancient pagan empire of the Romans into the mediæval Christian empire of the Germans.

8vo. Half Leather. Price $1.10.

Macmillan's Latin Series

PREPARED UNDER THE GENERAL EDITORSHIP OF

J. C. KIRTLAND, Jr.

Professor of Latin in the Phillips Exeter Academy

CORNELIUS NEPOS—Twenty Lives. Edited by J. E. BARSS, The Hotchkiss School. Cloth, xiv + 316 pp. Maps and Illustrations. Price 90 cents

Macmillan's French Series

PREPARED UNDER THE GENERAL EDITORSHIP OF

FREDERIC C. DE SUMICHRAST

Harvard University.

CORNEILLE'S NICOMÈDE, Edited and annotated by JAMES A. HARRISON, University of Virginia. Half Buckram, xxiii+153 pp. Price 60 cents

The Nation.

NEW YORK, THURSDAY, APRIL 11, 1901.

The Week.

If Aguinaldo needed a dictionary to spell out that manifesto now reported to have been signed by him, the newspaper reader should be supplied with a glossary with which to decipher the extraordinary dispatches about him that are now permitted to pass the Manila censor—for censorship there still is, despite the perennial announcement of its abolition. But however puzzling the dispatches may be, the public has received some interesting information from Major-General S. B. M. Young, who has just arrived from Northern Luzon, in regard to the outlook for permanent peace. Gen. Young is in line to succeed Gen. Miles as commander of the army in 1903, and his opinion is necessarily of great interest, if only for that reason. He does not hesitate to say that 60,000 men will be needed "for some time to come," and he by no means accepts the cheerful Imperialist view that Aguinaldo's capture and manifesto are to end the whole business. Gen. Young is particularly anxious about the powerful secret societies. It will take considerable time, he believes, to teach the ignorant natives that the doctrines of their "unscrupulous" leaders as to liberty and independence were quite misguided and misleading, and to convince them of the good intentions of the Americans. As these "good intentions" have hitherto too often taken the form of shot and shell and arson and destruction, the conclusion is hardly unnatural. Gen. Young, too, has had his experience as to the Filipinos who pretended friendliness and loyalty to the United States while really aiding the insurgents. In fact, his whole talk can affect Washington's cheerful optimism only as a cold douche.

We are surprised at the obstinacy with which the delegates to the Cuban Constitutional Convention adhere to their own opinions when their fallacies are exposed to them orally and in detail by "C. R. M." of the New York *Times*. This able logician went to Havana to see what was the matter with the Platt amendment, and why there was so much hesitation in gulping it down. In a long letter to his newspaper he tells us that the section which the majority of the delegates object to most passionately is the third, which is in these words:

> "That the Government of Cuba consents that the United States may exercise the right to intervene for the preservation of Cuban independence, the maintenance of a Government adequate for the protection of life, property, and individual liberty, and for discharging the obligations with respect to Cuba imposed by the Treaty of Paris on the United States, now to be assumed and undertaken by the Government of Cuba."

A benighted native named Portuondo, General Portuondo (Generals are evidently cheap in Cuba), asked the question: "How can one sovereign nation give to another the right to intervene in its affairs?" And then he added, "That concession destroys independence." Now observe the mental incapacity and deafness of this so-called General, as described by "C. R. M.":

> "It was in vain that I pointed out that the express object of the intervention was to *preserve* their independence. Nor was I more successful with the argument that, with or without the Platt amendment, Cuban sovereignty could not be more complete than that of Spain, against which for our own protection and under the general sanction of international law we had intervened; and upon a future like occasion we should be compelled to take like action. 'Very well,' he said, 'do so, under your general sanction, but you ought not to ask us to give you in advance the general right to intervene at your discretion. It takes away from our sovereignty.' "

"Suppressed by Weyler" was the proud self-advertisement which the *Discusión* of Havana long printed at the top of its first page. Last week this Cuban newspaper's office was seized and sealed by order of Gen. Wood until such time as the editor would humbly sign a statement declaring that his Good Friday pictorial attacks on Wood and McKinley were purely political, not personal. The incident is highly suggestive. In such impulsive outbursts Imperialism reveals its real nature. Just as the true Imperialistic answer to an American editor in Manila who criticised the Government was swift deportation, so the proper Imperialistic plan to turn away the laughter aroused by a political caricature is to shut up the establishment and imprison the editor. There is in this, of course, a characteristically military intolerance of discussion and criticism—the same sort of thing that leads indignant young officers in Paris or Madrid to go out and smash a newspaper office. The truth conveyed by the caricature, however, was only what has been asserted by hundreds of newspapers in the United States—religious journals among them, like the *Independent*, the *Watchman*, the *Standard*—namely, that the terms now imposed upon the Cubans are in violation of our pledge, and equivalent to a destruction of Cuban independence. Why not begin the seizing and suppressing at home?

Gen. Wood appears quickly to have perceived his blunder in suppressing the *Discusión*, and on second thoughts allowed it to go on publishing as usual. But the next issue of the newspaper triumphantly bore at its head: "Suppressed by Weyler; Suspended by Wood." Thus does the crafty editor convert the wrath of the Governor-General into an advertisement. As for suppressing newspapers and imprisoning editors, that is an old story with the Spanish and Spanish-American press; and Gen. Wood can devise no effective terrors in that line. Most Spanish-American editors of any age have become perfectly accustomed to doing their writing in jail, and don't mind it in the least. In fact, the "responsible editor" of the Mexican and South American press laws simply means the man who goes to jail. He gets extra pay for it. So that it is not a little funny to find Gen. Wood thinking that the newspaper men who despised the swords of Weyler will cower timidly before his own. Censorship and suppression of newspapers are familiar tricks of despotism. They are being played in Finland just at present with great success. But it takes a real autocrat to do it. An American made up to look like a fierce Russian, and essaying the rôle of a ferocious censor, will inspire, not alarm, but only a grin.

"The country is bleeding to death. Commerce is languishing. Agriculture is prostrate. Emigration of workingmen is taking on alarming proportions, and distress prevails in all parts of the island." Is it of Ireland, does the reader think, that this is said? Or of Crete or Sicily? No, it is said of our own benevolently assimilated Porto Rico, and said by the leading financial and commercial organ of the island, the *Boletin Mercantil* of San Juan. In confirmation of the unhappy diagnosis might be cited the American newspaper of the same city, with the almost united testimony of business men in the island and of houses in this country engaged in the Porto Rican trade. In the face of all this, what are we to think of Gov. Allen's official optimism? Why, we are to think that it is official optimism. Its indomitable nature may be sampled in his cheerful explanation of the reasons why laborers are emigrating from Porto Rico by the thousand. They are simply energetic, adventurous fellows who want to better themselves! Would Gov. Allen say the same of Irish emigration? And how did it happen that it never occurred to the emigrants that they were in need of "bettering" until the Americans took over their island?

In the appointment of Philander C. Knox of Pittsburgh as Attorney-Gen-

eral, Mr. McKinley secures a lawyer of marked ability, according to the testimony of all who know him. It must always be accounted something of a drawback, however, when the President picks out as his law adviser a man who has no public reputation, in preference to one whom the people have come to know and respect. It seems also rather unfortunate that, when there are laws on the statute-books against Trusts, the Attorney-Generalship should be given to a lawyer who has been the adviser of great promoters of Trusts. This is not to say that Mr. Knox may not prove impartial as well as able; only that, human nature being what it is, he has to overcome a measure of distrust and suspicion. From this point of view his appointment does not maintain Mr. McKinley's well-earned reputation for political shrewdness.

Carter Harrison was elected Mayor of Chicago last week for the third time by a majority of nearly 30,000. This is a great tribute to the personality of the man, as were his father's five terms in the same office to the popularity of the elder Carter Harrison. But the result means much more than that the present Mayor is a man who is very well liked, and who has inherited and acquired rare skill as a politician. Mr. Harrison is given another term because he attracted the support of the independent element, which holds the balance of power in Chicago, and which could and would have turned him out if it had thought the best interests of the city would be served by the election of his opponent. The Republicans had an excellent opportunity offered them. They needed only to nominate a man of high character and proved independence, who could be trusted to resist the unjust demands of the corporations as stoutly as Harrison has done for the past four years, and who could also be depended upon to end the present leniency towards the gamblers and disreputable classes of all sorts. But the Republican party in Chicago is controlled by a machine which forced upon the convention, as the nominee for Mayor, Judge Hanecy, who should have been debarred from candidacy by reason of being on the bench, and whose most undignified canvass confirmed all the suspicions that he represented the Republican ring and "the traction interests," while he held out little hope of improvement in regard to the "wide-open" conditions. The result was that even so strongly Republican a newspaper as the *Tribune* could not say a word in his favor on the morning of election day.

The Legislature of 1900 authorized the appointment by the Governor of a Commission to revise the charter of Greater New York, and an admirable body of men for this task was named by Mr. Roosevelt last April. The Commission made an elaborate report on the 1st of December last, which was submitted to the Legislature on its meeting in January. Gov. Odell in his message called attention to the report of this Commission for New York city, as well as to the promised report from the Tenement-House Commission for the greater cities of the State, and added: "Matters of such grave importance affecting the great municipalities should be carefully considered, and such recommendations as may appear feasible in the direction of better city administration should receive favorable action." Instead of such "careful consideration," the charter question was neglected even by the Committees on Cities for many weeks. When it was finally brought before the Legislature, the fourth month of the session had begun, and the leaders of the dominant party were planning adjournment by the 20th of April. The Constitution allows the Mayor of a city fifteen days in which to consider any measure affecting his municipality, so that, if Mr. Van Wyck were to take all the time allowed him before returning the bill to Albany with his veto, it would have to be passed the first time by the 5th of April in order that it might be passed the second time on the 20th. So on the 3d instant Gov. Odell sent to the Senate a so-called "emergency message," under the provision of the Constitution which authorizes the Executive to "certify to the necessity of the immediate passage" of a bill, in which case the requirement is waived that "no bill shall be passed or become a law unless it shall have been printed and upon the desk of the members, in its final form, at least three calendar legislative days prior to its final passage." This was an abuse of the "emergency" power on the Governor's part, for there was no necessity whatever for the immediate passage of the bill, and no bill could come before the Legislature more imperatively demanding careful consideration as printed in its final form. Having been thus dumped upon the upper branch on Wednesday, it was passed by that body within an hour; it was then sent to the Assembly, amended in scores of particulars by that body, and rushed to a final vote there within four hours on Thursday; it was got into shape for the Governor to sign on Friday, and was put into the Mayor's hands during the evening of that day.

There was every reason to expect that all sorts of jobs would be found in an act of 1,165 pages which had been passed with such scandalous haste. For one thing, Deputy Comptroller Levey points out that section 1526 was amended so that $20,000 apiece must be paid annually for corporation advertising to each of eight daily newspapers in the boroughs of the Bronx, Queens, and Richmond—or the great sum of $160,000 a year—although there is now no daily newspaper in two of these boroughs, and in no year since consolidation has it been necessary to spend over $2,000 for advertising in Queens or half that sum in Richmond. Mr. Levey points out that "it is not unlikely that newspapers will be established at once in the outlying boroughs for the special purpose of obtaining this patronage, just as was done in the days of Tweed, and the possible outcome of this attempted debauchery of the press in the outlying districts threatens even worst evils than the mere waste of public funds." Another "little joker," which got in at the last moment, nobody knows how, is a clause which apparently allows the Board of Education to give money to private schools. A third outrage is a provision that, while City Magistrates shall continue to be appointed in Manhattan, they shall be elected in Brooklyn, which borough the Republicans hope that they may carry; that the number of such magistrates in Brooklyn shall be increased to ten, as against only twelve for both Manhattan and the Bronx—a barefaced attempt to grab patronage; and that the old requirement, still continued for Manhattan, that a magistrate shall be a lawyer of five years' practice, may be waived for Brooklyn.

A committee of the City Club has made a report on the subject of the improper use of money by corporations holding special franchises, for the purpose of controlling legislation or of securing the favor of politicians. A bill has been prepared on very conservative lines to repress this evil. It is, perhaps, open to still further amendment. It does not propose to deal with past offences of this kind, but merely to put a curb on future ones. It does not apply to corporations in general, but only to those holding special franchises, such as the right to use public streets, and also to a certain class of moneyed corporations. The theory of the bill is that, if these corporations are required to publish certain details of their annual expenditures, they will be very careful not to make payments for political purposes. Accordingly, the bill requires certain items of expense to be made and filed once each year (earnings are not required to be filed). It provides further that any of the corporations named shall furnish on demand itemized accounts of their expenditures to the Attorney-General of the State, or to any stock or bondholder of the corporation in question, or to any taxpayer in any county where the corporation transacts any part of its business.

The Priestman case is exciting a good deal of comment in the press and in private circles, as it ought to, and is

associated in the minds of some people with the recent wholesale removal of Custom-house officials and the renewed activity of baggage inspectors on the docks. The outrage put upon Mr. Priestman was of quite a different character. He was taken to be obnoxious to the Pauper Immigration Law, because the person charged with the execution of it was not sure that Mr. Priestman would not become a charge upon the poor rates. If, after examination and cross-examination, this official should be satisfied that the passenger was likely to become a public charge, it would be his duty to deport him at the expense of the steamer that brought him to our shores, in the steerage probably, although he came first class —a dodge, perhaps, to evade the vigilance of those who guard our ports and our almshouses. The case is a fresh and glaring illustration of our civil-service system. It needs a thorough overhauling. If it does not receive one at the hands of the Treasury Department, it ought to be brought before the courts by Mr. Priestman, in an action for false imprisonment. There is no apparent reason why any arriving passenger, Mr. Andrew Carnegie, for example, should not be arrested on suspicion of not being able to earn a living, if the inspector does not happen to know him and is a fool to boot.

The terms offered to the United States by the Colombian Government in respect of the Panama Canal, if correctly reported, embrace everything that it is desirable or proper for us to receive. They include a lease for ninety-nine years of the strip of land through which the canal passes. The sovereignty is reserved to Colombia, and the neutrality of the canal is to be guaranteed by both Governments. A rental of the ground, based upon the gross receipts of the canal, is to be paid, the minimum sum of $250,000 being guaranteed. The existing Panama Canal Company is to be permitted to negotiate for the sale of its concession to the United States, but not to any other Government. These terms remove the only weighty objection which the present Canal Commission advanced against the Panama route. The offer made by the Colombian Minister proves that the French company realizes at last the necessity of decisive action. It cannot be doubted that the action of the Colombian Government is inspired by the canal company, and that it intends to employ the intervening time before our Congress assembles in bringing before the people of the United States the advantages of distance, time, and cost which their route possesses over that of Nicaragua. It is a fact of importance, too, that the Clayton-Bulwer treaty does not oppose our construction of a canal across the Isthmus of Panama, provided its neutrality is guaranteed and the sovereignty of the country through which it passes is not encroached upon. The terms of that treaty, except in these two particulars, apply only to a canal via the San Juan River and Lake Nicaragua.

The Delpit case has just brought before the Canadian public the relations of Church and State in the province of Quebec. Students of marriage laws generally will welcome the decision of the Superior Court of Quebec that no ecclesiastical requirement may impair the validity of marriage as a civil contract. Aside from its legal bearings, the case was one of peculiar personal hardship. When Mr. Delpit sought the annulment of his marriage on the ground that he and his wife, being both Catholics, had never been legally united by the Unitarian clergyman who performed the ceremony, he used a discreditable subterfuge to rid himself of the mother of his three children. It was most unfortunate that the ecclesiastical tribunal to which he applied chose to regard the marriage decree of the Council of Trent rather than the clear equities of the case, and decided that, by the strict rule of the Church, the marriage, not having been solemnized by the parish priest of one of the contracting parties, was in the eyes of the Church null and invalid. The decision of the Quebec Curia was sustained by the Vatican.

So far, in deciding whether a marriage contracted in good faith had or had not sacramental character, the Church was clearly within its rights. The clash with the State came only when the ecclesiastical tribunal asked the civil court to confirm its judgment and declare Mr. Delpit free to marry again. The request was the more plausible that the Roman Catholic Church of Quebec, in the control of education and the right to collect tithes, retains certain functions of a State church, and the specious plea was made that the Church thereby only claimed jurisdiction over its own members. What confusion might have arisen if the courts had admitted the principle that each church in the province had coercive jurisdiction in the marriage of its own members, it is easy to imagine, and it was gratifying when the Superior Court denied Mr. Delpit's motion, and affirmed the validity of every marriage contracted in good faith and properly recorded. It was decided that all clergymen in the province were equally competent to solemnize marriages; that the Church's jurisdiction must be enforced by the powers, chiefly moral, at the Church's command, and without the aid of the State; finally, that no ecclesiastical court exists by royal authority in the province, nor, if existing, has any jurisdiction in the purely civil case of the annulment of a marriage. The decision will be generally welcome in Canada, among the more enlightened Catholics as well as among the Protestants. There is little doubt that the two courts to which an appeal might still lie will sustain the decision of Judge Archibald.

When the man in the street imagines conspiracies against himself on every hand and sees in every passer-by an enemy, his friends usually call in an alienist to pass on his sanity. If the German Emperor's latest utterances are correctly reported, his mental condition calls for a like solicitude. This seeing in an epileptic workman "a hand from out of the people," these repeated allusions to the fidelity of the army "during revolutionary times at home," this warning the soldiers against the "voice of the tempter," these extraordinary precautions for his personal safety—all, saving the divine right of kings to act foolishly, bespeak a disordered mind. How serious this morbid condition of the Kaiser is or is likely to be, it would be folly to assert or to predict; that it is such as to cause grave anxiety is shown in the suppression of his recent speeches, and in charges made openly in the Reichstag that the Emperor is in the hands of a military clique who poison his mind against the people. Certain nations have got along very well under mad kings; Bavaria even gained a certain glory from the extravagances of Ludwig, the poet madman. But a monomaniac swayed by the desire of military glory and the fear of personal danger could bring only disaster to his country.

The naming of a reform Minister of Education in Russia shows that the student riots were no ephemeral demonstration, but a movement of protest too strong and too general to be disregarded. The admission of defects in the present scholastic system was not lightly to be obtained from an absolute monarch, and the terms of the new Minister's appointment make it clear that he is to exercise genuine Ministerial powers. It is a welcome concession to liberal opinion, for the recent assassination of Minister Bogolépoff might well have confirmed the Czar in his reactionary attitude. In a Cabinet which has already compelled the Czar to rescind his illegal decrees for the punishment of students and to dismiss the brutal St. Petersburg Chief of Police, the new Minister of Instruction will find sincere support for his programme of reform. It is, says Prince Kropotkin, in the current *Outlook*, the first time in Russian history that a Russian Cabinet has assumed the powers of a responsible Ministry. And it may be that the future historian will date the beginning of constitutional government in Russia from the student demonstration of 1901.

PEACE PROBLEMS IN THE PHILIPPINES.

If the Philippine insurrection, as an organized and formidable movement, is ended, as it appears to be, the verdict of mankind will be that the Filipinos have fought a good fight for liberty. If there is anything in the boasted chivalry of fighting men, even our own soldiers must have gained respect for their opponents—the little brown Malays who shrank not from pitting their puny strength against a giant's, and who have with such constancy and devotion maintained a dauntless front for more than two years. For our part, we should tremble for our own love of liberty did we not see other men willing to strive and die for theirs. We could not condemn in others what we should applaud in ourselves. But we have not cried shame on all the needless bloodshed to have any other feeling now than thankfulness that the long misery of it is seemingly over.

But peace hath her problems not less but more arduous than those of war; and it is to the great and pressing problems of peace in the Philippines that we must now address ourselves in earnest. Difficult as the military task has been of breaking down Filipino resistance, a severer labor is before us. Brute force can do the work of brute force; but government, far-sighted statesmanship, the ability to build up where we have destroyed, require instruments and skill far harder to come by than guns and strategy. It was easy for Austria to garrison Bosnia and Herzegovina with 165,000 men; but to introduce settled government into those provinces snatched from Turkish misrule—that was not easy. Cromwell could leave Ireland a smoking heap, and English soldiers can keep her in subjection to-day; but to govern her in peace and content has been a problem too hard for English wit to compass. Germany could hold Alsace and Lorraine in a grip of steel, but to convert their inhabitants into loyal subjects of the Empire has been the toil of thirty years, and the end is not yet. Lightheartedly as a nation may go to war, it cannot face such sequels of war as confront us in the Philippines without a deep sense of having a mighty work in hand.

We note at the very start, however, one happy circumstance. It is that the Filipino cause is now in a fair way to get a more impartial hearing in the United States than has thus far been possible. The reason is plain. Human nature being what it is, people will not parley with men in arms against them. It ought not to be so. Right and justice and humanity, it should always be in order to discuss, even *inter arma*. But to such a creature as man, living in such a world as this, as Bishop Butler used to say, we know that it is not possible. "Let them quit fighting, then we will talk with them. If they have a case to present, let them first lay down their arms." That is what has been said all over the country these two years past, and it has had the practical effect of putting the Filipinos out of court. But now that the era of discussion as a purely civic question has apparently come—now that the shouting and the tumult must give way to calmer methods—there is hope, we say, that the whole Philippine question will be looked at in a larger and more rational way.

Any ruler can carry on a war. McKinley could do it; Aguinaldo could do it. But to decide what to do after the war is over will require all our wisdom. Thus far the President has not gone beyond the military stage of the problem—that is, the easiest. All that he has asked or promised, beyond military measures, has amounted to little more than "the polysyllabic art of saying nothing." But now he must translate his vague generalities into clear-cut particulars. "The best and most extensive system of self-government which the Filipinos are capable of," is one of his phrases. Well, how are we going to find out what that is? The American way has been to try and see. Cast the bantling on the rock. The way to self-government lies through self-government. To cure excesses of liberty, grant more liberty. Probably we are not up to that yet in the Philippines, but we must make a beginning, and obviously the only way to begin is to consult the Filipinos themselves. We are not speaking now in any abstract way about the consent of the governed. Call that an exploded doctrine, if you please; the practical fact remains that as a pure matter of business, as a way of taking the first step out of the bog, we cannot set up a government for the Filipinos without ascertaining their wishes in the premises.

Nobody really disputes this, yet how much it implies! It implies that the expression of Filipino public opinion must be as unfettered as the air. Restraints and censorships must be stricken off. It implies that, as speedily as possible, a body representative of the Filipino people shall be constituted, to become what Burke called the "vehicle and organ of public opinion." If Bismarck insisted upon having Deputies from Alsace and Lorraine given a free voice in the Reichstag, so as to let the Empire know what the majority of the people in the Reichsland thought and wanted, we cannot deny open and unchecked expression to the wishes of the Filipinos. Their national spirit must be cherished as the most precious thing in human government, according to Professor James. As Judge Taft is now promising the slaveholding and polygamous Mohammedans in the Sulu archipelago not to interfere in any way with their customs or religion, so we are bound, in the end, to assure the Filipinos that we mean to leave them to work out their own salvation. Who is there in this country to say them nay? Not President McKinley. He has been astute enough not to shut the door on that possibility. Not, we believe, the voice of the American people, when the mists of war are off their soul. The fact is, that the sound and convincing arguments for Philippine independence never had so good a chance of being listened to as precisely at this juncture; and those who have the Filipino cause at heart should press them, in season and out of season, with more energy and more hope than ever before.

THE CIVIL SERVICE IN THE PHILIPPINES.

"Four recent appointees to judicial positions in the Philippines sailed for Manila to-day on the transport *Buford*." So ran a San Francisco dispatch of last week, apparently unimportant, yet not without very considerable significance. By whom were these men chosen? Under what power? Who judged of the necessity for their appointment, and who fixed their respective salaries? Was the advice and consent of the Senate of the United States asked, as is required by the Constitution when members of the Federal judiciary are selected? These are some of the questions which naturally suggest themselves to any one of an inquiring turn of mind on reading such a dispatch. The judges in question were, we believe, chosen by virtue of the general war power of the President; but the power lodged in his hands by the Spooner amendment to the Army Bill is a momentous one, as will steadily appear in the process of organizing a civil government.

We have already pointed out the danger to the Philippines from the fact that our civil service is not sufficiently well protected at home, or adequately organized, to administer government in distant countries under wholly altered conditions. But there are plainly still greater dangers to both the colonies and the home Government if the power of creating an unlimited number of places and of selecting their incumbents is to rest in the hands of any one man or set of men. We therefore welcome the first annual report of the Philippine Civil-Service Commission, just published, which shows that a beginning has been made in the direction of establishing a classified merit service, and we most emphatically urge its extension to include teachers and other important officials without delay. Wholly aside from the character of the men thus far selected, and with full recognition of the high standing and aims of Judge Taft and his associates,

the power of appointment of the civil Governor should be limited to the utmost. If experience has taught the necessity of restricting the appointing power of the President, the case cannot be different with a civil Governor 7,000 miles away from home, and practically out of reach of criticism.

We have already had not a few illustrations of the abuse of the appointing power in connection with our island holdings, which demonstrate, beyond dispute, the necessity for defining and safeguarding the service at the earliest possible moment. In Cuba, for instance, we have had Neely, Rathbone, Thompson, and some minor defaulters to bring discredit upon the country. Moreover, with the Cuban Treasury to fall back upon, not a few sinecures have been created, and not a few indefensible allowances have been granted. As examples we may cite the appointment of an elderly native of New Hampshire to the unnecessary office of superintendent of public buildings in Havana, the subvention of certain Cubans in the interest of the military government, and the giving of apartments in public buildings to army officers free of cost while they were drawing their usual allowances for quarters from the United States Treasury. The danger to the home civil service from unfit colonial appointments has already been significantly demonstrated by the ease with which Senator Beveridge's father-in-law was transferred to the classified service in the United States from Porto Rico, where he was appointed without examination at an advanced age.

The guiding principle of the Philippine civil service should be that as few Americans as possible shall be appointed to office. If this fails to commend itself to the spoilsmen, it is dictated by sound policy and prescribed by the experience of other nations. Subject races, the world over, have wanted their own offices and officers, however contentedly they have regarded the protectorate over them. The German official in French-speaking Alsace-Lorraine was no more beloved after the province's annexation in 1871 than was the English-born and bred governmental officer in the American colonies in 1776. The English were quick to recognize the soundness of this principle in Egypt. As Sir Alfred Milner has pointed out, Lord Cromer's great reforms were carried out by a mere handful of English officials, who trained to their needs their native subordinates, at first often hostile, as they carried on their work. In the army the reorganized Egyptian battalions, originally composed of the jetsam of two disorganized services, had but three or four English officers and sergeants to drill them and lead them into battle. The English battalion commander could tell very little about the reliability of his native officers and men, but he made them trustworthy by trusting them, and, with insignificant lapses, the principle has long demonstrated its correctness in practice, both in tedious garrisons and in hand-to-hand conflicts with dervishes along the Nile.

The policy of trusting the Filipinos and of inviting their coöperation by giving them responsibility cannot be initiated too soon. In the town and provincial governments thus far created by the Philippine Commission, American officers have apparently formed a majority of the officials selected. Under the Army Law recently enacted, Filipinos are restricted to first and second lieutenancies in the Philippine regiments that were authorized. The restoration of peace gives the opportunity of following the wiser English example, both in the army and in civil life. That the advisability of this is beginning to be recognized in the Philippines appears from the recommendation of the Civil-Service Board that natives should be advanced to posts held by Americans as fast as possible. The Philippine Commission, too, has wisely provided that soldiers in active service shall not become municipal officers, and has decreed that after March 1, 1902, provincial officers shall be selected under the provisions of the Civil-Service Act. It should have the hearty support of the Administration in these forward steps.

THE MONEY MARKET AND THE TREASURY.

The *Financial Chronicle* has some appropriate remarks on the present condition of the money market and the operations of the Treasury. It points out the fact that while money is growing scarcer, and some small shipments of gold to Europe have recently been made, the Treasury has abstracted upwards of $9,000,000 during the month of March, *i. e.*, $9,000,000 more than its monthly expenses.

The Secretary has been compelled to go into the market as a buyer of bonds to prevent an artificial stringency, although he had previously declared that he would not buy at present prices. There have been rumors in the Street that the fear of an artificial stringency here, arising from the Treasury drain, has produced actual stringency abroad, and interfered with some international negotiations of importance. Very likely the knowledge of this reflex action led Secretary Gage to change his mind and to buy $4,672,000 of the 4 per cents of 1907, in order to relieve the situation and reduce his surplus. To avoid these ever-recurring disturbances of the market, the *Chronicle* suggests an amendment of the Sub-Treasury Law in this wise:

"Let the amount of balance to be held in the Sub-Treasury be fixed by law, and all over that be daily or weekly put into depository banks to be checked out for the interest payments; or if those payments do not absorb it, to be paid out on bond purchases. An amendment to the law making all this obligatory on the Treasury Department would remove Sub-Treasury action ever after from disturbing our money markets."

That the United States Treasury ought not to disturb the natural course of trade by withdrawing from business channels money which it does not need, is an accepted axiom in finance. No other national Government does so, nor do our own city and State governments. The ideal condition is that which obtains in England, France, Germany, Austria, Russia, and all the lesser Governments of Europe. Their collections of taxes are deposited in banks which do a commercial business. The Government's deposits are treated like any other part of the daily intake. The bank keeps a reserve against all its liabilities, and uses the remainder of its cash for loans and discounts. In a country where this system obtains, the Government can never disturb the money market by its collections, since the public balances are just as much at the service of the community as those of private depositors. Such was our own system also from the beginning of the Government until 1840, when the Sub-Treasury Act was passed. This act was one of the consequences of the political quarrel between President Jackson and the Bank of the United States, which culminated in the removal of the Government's deposits from that institution in 1834.

Whatever may be thought of the merits of that controversy, we can hardly expect that the discarded system, although the best one imaginable, can now be revived. Ideas have changed, old prejudices have become petrified, new conditions have arisen, to which we must conform in any attempt to cure the evil under consideration. The existing methods of getting rid of a Treasury surplus are: (1) by depositing it in national banks and requiring security from them in the shape of United States bonds; (2) by purchasing such bonds with the surplus money of the Treasury; (3) by anticipating payments of interest on the public debt. The first of these methods is the one oftenest resorted to. The Government's deposits in national banks are now increasing, and must continue to increase unless bond purchases are resumed. The latter remedy is open to the objection that speculators may corner the bond market and compel the Government to pay extortionate prices. Such practices have been witnessed in the past, and will certainly occur again if like conditions prevail. The third remedy is so limited in scope that it may be left out of the reckoning. Paying interest a month in advance only adjourns the crisis thirty days. It is not a remedy, but a postponement.

Another remedy consists in such an

adjustment of revenue to expenses that the one shall be no greater than the other. That would be an ideal condition if it could be attained, but our Government has never been able to reach it. It was, in fact, the intention of Congress to realize it when that body passed the Tax-Reduction Bill, but at the last moment the River and Harbor Bill failed to become a law, and thus a large field of disbursement, for which estimates had been made, was removed, and the expected balance was lost. And now there is every prospect that the war expenditures in the Philippines will be greatly reduced; than which nothing can be more desirable. Human wisdom is not equal to the task of balancing the future income and expenditure of a government as large as ours and subject to so many vicissitudes. All that we can expect is an approximation. For this we must depend upon estimates of the Treasury, and every Secretary will be under some mental bias. He will always estimate for a surplus rather than a deficit.

The change of law which the *Chronicle* proposes does not seem to us adequate, although perhaps public opinion would not sanction a more radical one. It depends for its efficacy on the bond market exclusively. Whether the Treasury itself buys bonds to reduce its surplus, or whether the banks buy them and turn them over to the Treasury as security for money deposited with them, the remedy has its limits in the price of the bonds, and every million taken out of the market raises the price of the remainder by some small fraction. What is to be done when the last bond shall have been redeemed?

Some people say that the clearing-houses ought to take the Treasury surplus and pay interest for the deposits, and divide the money among their members ratably, because the security of a clearing-house in any large city would be good without a deposit of bonds. If the banks were not obliged to buy and pledge low-interest bonds as security, they could afford to pay interest on the money deposited with them. This plan seems to be impracticable, since the clearing-house is not an incorporated company, but merely a voluntary association or committee, and hence could not be made responsible for deposits. Moreover, it would not be willing to assume such responsibility if it could, since the apportionment of deposits would lead to bickering and jealousy among the different members, which might disrupt the clearing-house itself. It might be possible, however, for a few large banks in each of the large cities of the Union to form an association among themselves of sufficient magnitude to furnish adequate security without bond deposits, so that the Government could put its surplus money in their hands and receive the same rate of interest on its balances as is paid by city banks to country banks for their balances. This would be an approach to the system that prevails in the countries of the Old World, and the nearest one, perhaps, that public opinion would sanction.

ITALY AND THE ALLIANCES.

If the rejoicings of the belligerent French press over the detachment of Italy from the Triple Alliance were not premature, we might begin to think of a curious swing backwards of the pendulum of history. A Franco-Italian alliance now, or even the accession of Italy to the alliance between France and Russia, would carry us back to the time, fifty years ago, when the relations between the French and Italians were those of almost rapturous friendship. Mrs. Browning has embalmed in her poetry that "ecstasy of a newly delivered impassioned land" with which Napoleon III., who "came to deliver Italy," was greeted by her sons. It was not long, however, before the charlatan "liberator" threw off his mask of unselfishness, and took Nice as the price of his humane interference. From the peace of Villafranca and the treaty of Zurich there dated a decided chilling of the Italian enthusiasm for France.

But it was Bismarck, with his long-headed, cold-hearted diplomacy, who really determined the modern international relations of Italy. Before the war with Austria, he had ostentatiously cultivated Italian friendship, and this he cemented after Sadowa by bringing about the Austrian cession of Venetia to Italy. That done, he instantly began to bend all his diplomacy to preparation for the war with France, which to his marvellous eye was clearly inevitable. While Von Roon was whetting the Prussian sword and Moltke making ready to wield it, Bismarck was plotting, with infinite craft and skill, the diplomatic isolation of France. He went all lengths to ingratiate himself at Vienna, and in Austrian neutrality reaped the fruits of the astonishing and far-sighted moderation with which he had insisted, in the teeth of the Prussian Generals and the King himself, upon dealing with the enemy left prostrate at Königgrätz. He was after bigger game. He won over the Czar. He courted Spain. He maintained his good understanding with Italy. When all was ready, he pointed out their quarry to the Prussian eagles, and France had to submit to their terrible swoop, friendless and alone.

It was not only, however, to break down France's power of resistance that Bismarck pulled every diplomatic string; he must also draw her fangs for the future, must make her announced policy of *revanche* impossible. To this task he addressed his great powers immediately after the war with France, and Italy became steadily a more and more strategic piece in his game. In case of another war with France, Italian friendship would mean for Germany 100,000 French troops immobile on the southern frontier. So the Chancellor proceeded to bind Rome to Berlin. He gave a Government subsidy to the St. Gothard tunnel, as if to emphasize the desire of the two nations to come into the closest touch. When the Three Emperors' League was formed, Italy was invited to revolve about it as an important satellite. Later on, when the Czar, in indignation at the way in which Bismarck, as "honest broker" at the Congress of Berlin, had allowed Russia to be robbed of the spoils of her war with Turkey, threw himself into the arms of France, the Triple Alliance was the fertile Chancellor's invention to meet the situation, and Italy proudly took her place alongside Austria and Germany as equal member of the Dreibund. It is needless to detail the later occurrences which deepened the hostility between France and Italy. Tariff wars and the French aggression in North Africa turned the old Italian love for France into something like hate; and though there have been improved commercial relations of late, nothing has happened to make a Franco-Italian alliance seem either natural or likely.

Why, then, has the French press, and a part of the Austrian, spoken of it as if it were already an accomplished fact? Why have the Chauvinists at Paris declared that the rendezvous of the Italian and Russian fleets at Toulon would be another Kronstadt, only more significant? The sole known reason is that Italy has felt herself unjustly treated by the other members of the Triple Alliance in the matter of commerce. Austria has been legislating against Italian products. If the Agrarians have their way in Germany, Italian trade will be injured in that country, too. Call you this an alliance? Italy has angrily asked this question, and has been ostentatiously coquetting with France, with whom she already has a reciprocity treaty, and might easily get something better yet. But it seems clear from the latest dispatches that Chancellor von Bülow has seen the point, and given the Italian Ministry such assurances that the little flurry will soon be over.

Italy is certainly still in the Triple Alliance. It does not expire till 1903, and she has no real motive, unless it be trade arrangements, to withdraw. We often hear it said, it is true, that she finds the military burdens consequent upon the Dreibund too grievous to be borne. But there are two sides to this question. Italian expenditures on fleet and army have undoubtedly been heavy; but it may be questioned if the country was not in for them, al-

liance or no alliance. It was a flush and foolish time, when colonies were all the rage, and Italy would have had to be wiser than other nations if she had refrained from going in for those costly toys. As it stands, the military burden of Italy foots up about $65,000,000 a year, while the interest on her public debt, which is really the crushing item, amounts to $130,000,000. But this debt was contracted irrespective of the Dreibund. Moreover, the existing Italian Government is such a compound of heterogeneous materials, and promises so little to be stable, that it would hardly seem possible for it seriously to attempt any change in Italy's international status, or, indeed, for any foreign Power to think it worth while to negotiate with it to that end.

LOST AIDS TO CONDUCT.

In July, 1853, I steamed into the harbor of Smyrna upon one of the French Messageries. The place was in a state of great excitement, for it was reported that an American frigate which was lying there had just given an Austrian frigate, which was also in the harbor, exactly ten minutes in which to decide whether the captain would yield up a Hungarian who had claimed American nationality, and who had served in the war of '48 and '49. The Austrian Consul-General had seized him on shore. An American captain in those days had no occasion to seek instructions from the State Department; he knew on which side his country stood in a dispute about human freedom or human rights. This captain's course was clear: he shotted his guns and called his crew to quarters. The following day we learned that the case had been settled by the surrender of the fugitive. The Austrian captain knew that the American would not "reason why"; that his business was "to do or die."

There was then nobody in America finding excuses for tryanny or outrage in any quarter of the world, or sniffing round to see on which side there was money to be made in any question of humanity or justice. We sought out fugitives then, not for the purpose of surrendering them to their pursuers, but for the purpose of helping them. We stand to-day in the position in which King Bomba of Naples stood then, and we are as shy about aiding fugitives as the Austrians would then have been.

I have just been reading the Countess Martinengo-Cesaresco's book on Italian character, consisting of a series of biographical sketches of the leading Italians of those days. There is no decent man but must acknowledge the enormous moral elevation which a people derives from the contemplation of great examples of courage, patriotism, and persistence. Ricasoli, Ugo Bassi, and Nino Bixio could no longer be heroes of ours, however. We prefer Stephen B. Elkins or Gov. Tanner. Our hearts warm to a trickster like Funston, who betrays a fugitive in disguise. I call this a great moral descent, and I want to know who would call it anything else.

I do not know where to find any nobler examples of civic virtue than the men whose biographies this book furnishes, but it must not be supposed that the authoress confines herself to distinguished instances of this virtue. She has a thousand illustrations of the extent to which a people, even in the lowest grades, is elevated by a great cause. There is no depth in Italian society so low that it was not reached by the hopes and fears and ambitions of the Risorgimento of 1849. The charcoal-burner's pulse throbbed with the same emotion as that of Nino Bixio, who led Garibaldi's "Thousand" in Sicily, and finally laid down his life that Italy might be great and free.

We must not be supercilious about these things because we are a bigger nation. Mr. William Travers may have been right in saying that "he stuttered more in New York than he did in Baltimore, because it was a bigger city," but this hardly applies to national greatness. There are certain peoples whose fall we measure by the height from which they have descended, no matter how full their dinner-pail may be. One of the new things that have come into the world of late years, along with Expansion, is absorption in dinner-pails and insensibility to moral shame. The loss of shame among our public men is one of the saddest features of the time. Hitherto the sense of shame has happily stepped in to restrain ambition. It has scared men from doing things to which ambition would have prompted them. But we have lost even that. As long as we have a full dinner-pail, we care not what happens.

King Bomba of Naples was very like "the revered McKinley." Both were pious in their way; both claimed the right divine, as Palmerston said, "to govern wrong"; neither cared anything about the look of things, as long as the dinner-pail remained undisturbed; and neither was able to see any value in anything but the dinner-pail.

The most remarkable thing in the Countess Cesaresco's book is the prominence assigned to the promptings of the women, the mothers or daughters of the patriots. Nearly every one of those she mentions had a wife or a mother behind him who urged him "in Rome's quarrel to spare neither limb nor life, nor son nor wife," in the glorious struggle in which he was engaged. It is horrible to turn, as I have done, from the book which recalls such splendid self-sacrifice, to our newspaper accounts of the admiration of Funston's aged mother for her son's falsehood and treachery, and of the way in which he won his promotion. Funston is another illustration of the absence of what is called honor from the aids enjoyed by the American soldier. His great object seems to be, in the accounts we have of his career, "to get there," no matter how.

Among the warmest supporters of the Administration in its game of grab and greed are found women whose backing seems to have been given to the mere love of fight and of winning—the honor of the cause being as little apparent to them as to the men. To some of the most thoughtful of them, war, as an antidote to Wall Street or to commercialism, seems a complete and high justification of the slaughter of a brave people, fighting for self-government, as we once fought ourselves. Supposing the soldier's career to be superior to the clubman's or to the capitalist's, is not the school we have set up for their improvement too expensive—in human life, in moral standards—for women, at least, to advocate? When the standards of wives and mothers are thus lowered, then the race is indeed in danger.

E. L. G.

UNPUBLISHED LETTERS OF MAZZINI AND KOSSUTH.

FLORENCE, March, 1901.

Just as the volume of 'Selected Writings of Joseph Mazzini,' chosen by Carducci to form part of his "Scholastic Library of Classical Authors," was ready for the press, we received from various friends whole series of letters from Mazzini, addressed to friends and fellow-workers after the failure of the Savoy expedition up to 1848, and others written after 1849 to fresh colleagues and new disciples who rallied to the republican flag during the defence of Venice and of Rome. Many of these last remained faithful after the failure of the Milanese insurrection (February 6, 1853), nor gave in their adhesion to monarchy until after the peace of Villafranca, when Victor Emanuel, signing the treaty "for what concerns me," openly encouraged Garibaldi and the armies of Tuscany and the central provinces to fight the good fight and to keep the faith till unity should become an accomplished fact. Despite their monotonous reiteration of "the duty of action, the necessity of a war fund, the formation of plans destined to certain success" which was never attained, all these letters (and there are hundreds) are interesting as they elucidate the various stages of Italian revolutionary history. We select from those written between 1853-7 a few that shed new light on "the parting of the ways."

The Italians—suffering more cruelly than ever before 1848 from Austrian vengeance in Venetian Lombardy, from the atrocities which she compelled her subordinates to perpetrate in the duchies and in the Papal States, only equalled by the infamies of King Bomba and by the French-protected Pope—though united in their resolve to throw off the yoke of their oppressors, were divided as to the methods best adapted to insure success. The Moderates pointed to Piedmont, where the tricolor still floated and the Constitution was maintained, where the press was comparatively free, and electoral suffrage, if restricted, respected; where exiles from every enslaved province found an asylum, and where a policy of civil versus ecclesiastical rule was frankly initiated. The Liberals, never insisting on the republican form of government, but solely on independence and unity, maintained that Piedmont could not initiate a war against Austria without bringing all the Powers of Europe to the rescue of that mainstay of despotism; that only insurrection of all the oppressed nationalities could dissolve her heterogeneous empire; that, once Lombardy in arms, Piedmont must take up the gauntlet or perish. They freely admitted that the young King had not allowed the sword ungirt by Charles Albert on the battlefield of Novara to rust there; that the care bestowed on his small but thoroughly organized and well-disciplined army betokened his intention to unsheathe it at the first propitious moment. "Hasten that moment, prepare the opportunity," was the burden of Mazzini's song from the hour when the crime of the 2d of December had at last destroyed the illusion that the initiative of republican France would relight the revolutionary fire in Europe.

Unfortunately, the discovery of the conspiracy which embraced the entire Mantuan province, resulting in the execution of the flower of the conspirators and the total failure of the popular insurrection in Milan,

dealt a fatal blow to the hopes of the Liberals, while the protests of the Sardinian Government against the sequestration by Austria of the property of the exiles who had become naturalized citizens, attracted their attention to the little province at the foot of the Alps, where, unobserved at first, a strong, fresh hand had seized the helm, determined to guide the Piedmontese bark to its desired haven, and to take the wind out of the sails of any and all craft trying to join company and steer for more distant and, as the new pilot deemed, unattainable ports. Cavour—who had abandoned the stanch old Right of Revel and La Margherita and entered into alliance with Rattazzi, the leader of the Liberals in Piedmont, not aiming or pretending to aim at Italian unity, but to oust Austria from Venetian Lombardy and launch Piedmont down the Po to the Adriatic—from the hour that Louis Napoleon crushed revolution in France, saw in the future Emperor at once a patron and an ally, and at the same time recognized in Mazzini a formidable antagonist to be confronted, attacked, and utterly vanquished.

From the moment when the Eastern Question appeared on the horizon, Mazzini's one idea was to arouse betimes the nationalities against Austria when France and England should be unable to assist her, never doubting that Piedmont, with her army, would cross the Ticino to follow up the victory. Cavour, on the contrary, was determined to prevent all and any popular insurrection, and to send Piedmontese troops to fight along with France and England, *even if Austria was their ally*, and no matter what course the war might assume, expecting thus to secure the alliance of France in the future in the furtherance of his provincial schemes and in the total suppression of the revolutionary element.

During the year 1853, Mazzini sojourned on or near the Lombard frontier, and at the close of the year wrote to his chief confidant in Genoa: "War grows each day more probable; it is inevitable. The republican party of every gradation ought to unite in one single purpose, assume the initiative, and save the country from foreign, dynastic, and domestic intrigues." And, on the 18th of January, 1854: "The English Government, deeming the war inevitable, aware that Austria is on Russia's side, would gladly see her harassed by Italian and Hungarian insurrections. The English Government is trying to induce Piedmont to side with it against Russia, and would deprecate any revolutionary attempt. Therefore, let us take time by the forelock. Hungary will not fail to second an initiative on our part." In this assertion he was supported by Kossuth, who, on his return from the United States, where he did not obtain the million dollars which he had been led to expect, and which, perhaps, he might have secured from the true lovers of liberty if he had not kept persistent silence on the question of slavery, was, nevertheless, convinced that the Americans would espouse the cause of oppressed nationalities in Europe. At a banquet given by Sanders, the United States Consul in London, to Kossuth, Mazzini, and Ledru-Rollin, the alliance between the United States and the federation of the free states of Europe was proclaimed On the 16th of February, 1854, Kossuth writes to Mazzini:

"Now is our opportunity. The war in the East offers us an occasion to liberate our countries, as Austria must take sides. We can initiate a national movement only from the Turkish frontier, and how can we open out a path from Turkey until Austria is engaged elsewhere? A successful revolution in Italy would be followed by Hungary; thus Austria would be unable to send reinforcements. But we must wait till France and England are engaged with Russia. Austria will be placed between the horns of a dilemma. If she joins the allies, I shall hoist the flag in Hungary, you in Italy; if she maintains an armed neutrality, then we must both act in Italy, but we must wait till the situation is clearly delineated."

On the 19th of April, France and England bound themselves to maintain the integrity of the Ottoman Empire, and invited other Powers to join them. Austria, interrogated, made answer that she could take no part unless she received solid guarantees for the security of her Italian provinces; one of these guarantees being the occupation of Alexandria. Lord Clarendon, who had great hopes of securing a contingent of Piedmontese troops to serve under English generals, refused to entertain the proposition. But Cavour was already in communication with Napoleon's diplomatic agents. The King scouted the idea of his troops acting as mercenaries, but, enthusiastic for his army to win its spurs, declared that he would send his own brother to command the troops. All waited to see what Austria would really do. None of these pourparlers escaped Mazzini, whose one object was to attack the Austrians in front and in flank, and thus force Piedmont to follow suit:

"Piero," he writes, on the 23d of April to Cironi, from the Swiss frontier, "a line to-day, a handshake to-morrow, but silence as to my whereabouts. If we do not act to-day, we deserve to remain enslaved for another hundred years. My gorge rises to see our republicans diplomatize—'Wait till Austria unmasks,' etc. The hour *has* struck; for Hungary it is passed—the Austrians are concentrated on her frontier, and she can now only follow. It will pass for us if we halt. Austria, isolated, suspected, hated for her neutrality, is less to be feared to-day than when she may ally herself with the Western Powers, even if she does so in bad faith, remaining inactive."

On the 17th of February he writes:

"Scipione Pistrucci is dead, dying without seeing the dawn. With him I lose the last of the first friends who bound themselves to our work and kept faithful to the end. Others live, but have abandoned their faith. None loved their country with his pure, intense, and constant devotion, none are left to love me as he did. He was doomed to die, but it was my dream that he would die in Italy. His mother, sister, wife, and child, driven out of Lombardy, are in Locarno, crushed with sorrow and destitute. Patience! We must carry on the work of the martyrs, bear their cross with our own. In Rome all goes well as yet."

But in Rome all went ill instead. The plans of the Roman conspirators were discovered, the prisons filled, "Marco" (*alias* Giuseppe Petroni) immured in the dungeon of Pagliano, there to live his death in life till the Italian troops, entering by the breach in Porta Pia, liberated him and his fellow-prisoners in 1870, when Mazzini was imprisoned in Gaeta.

Daniel Manin, ex-dictator of republican Venice, threw the vast weight of his influence into the balance, saying to the House of Savoy: "Make Italy and we are with you; if not, not," and to the Constitutionalists: "Think of creating an Italy, not of enlarging Piedmont. Be Italians, not municipalists, and I am with you. I, a Republican, plant the unifying flag; who wills a United Italy, let him rally to and defend it, and Italy will be." Giorgio Pallavicino, the martyr of the Spielberg, acclaimed Manin, and the aristocratic element of the Lombard emigration rallied to the new flag.

Mazzini made no question of the republican flag, but said with truth: "Cavour has no belief in or wish for unity; he supports the party of Murat in Naples." This fact ascertained, loud were the protests of Manin and of all the patriotic exiles of Naples and Sicily. In Genoa a military committee, composed of Bertani, Medici, Cosenz, Pisacane, agreed with Mazzini that Piedmont would never take the initiative, but disagreed with him as to the wisdom of forcing on an isolated movement in any single city. The arrest and execution of Fortunato Calvi led to the failure of an attempt in Udine; the arrest and imprisonment of Felice Orsini frustrated another attempt. But Mazzini's hopes were centred in Garibaldi, who had visited him in London in 1853 on his return from the United States, stanch as ever and ready for any opportunity to unsheath his sword. Garibaldi affirmed his intention to head any attempt to free the peninsula without regard to the flag, republican or monarchical, if only the aim was unity. And he was on the point of going to attempt the freedom of the Bourbon prisoners prepared by Sir James Hudson, Panizzi, and Bertani, when the steamer chartered for the purpose foundered. Again, he was starting to head a Sicilian insurrection when the leaders, Baron Bentivegna and Spinuzzi, were arrested and shot. At the same time he openly approved the participation of the Piedmontese army in the Crimean war though all the party of action, save Carlo Cattaneo, disapproved, because Austria *had* joined the Western alliance. Speaking to a number of youths who gathered under his windows at Valeggio, he reminded them "that Piedmont was the guardian of the Alps; that Italians of all the provinces were ready to rally round the glorious flag that floated above them; and that he was ready to lead them under its colors." This speech was severely criticised by the Mazzinian newspapers. Garibaldi, indignant, challenged the editor of the *Italia del Popolo*, and chose Cosenz and Medici for his seconds. Savi secured Bixio and Regnati. But the seconds were averse to such a fratricidal duel; a jury was chosen, with Admiral Mameli, father of the soldier-poet Goffredo, and the duel was averted, but the affair sowed fresh divisions between the Garibaldians and Mazzinians, to the benefit of the "lucky third" Piedmont.

Notwithstanding Kossuth's open disavowal of his participation in the abortive revolution of February, 1853, in Milan, his denial of his own proclamation to the Hungarian troops serving then in the Austrian army, Mazzini, in his total self-abnegation, set down his defalcation "to a moment of weakness," to his belief in the necessity of maintaining his prestige (naïvely expressed in his explanation that "a general must never fail"), and cordially accepted his renewed offer of alliance when the Crimean war seemed to offer a common field for action against Austria, whose persistent neutrality so disgusted France and England that an attack on her by revolutionary forces would not assuredly have brought them to the rescue. The subjoined letter, entirely in Kossuth's handwriting, we give

in the original French (16th of March, 1855):

"À Mazzini:

"Cher ami! Je ne sais pas si vous vous rappelez le fait, comment au commencement des complications en l'Orient, le gouvernement turc a beaucoup hésité de se mettre à la remorque de cette politique occidentale la quelle lui a mis l'Autriche sur le dos. Il balança longtemps entre les nationalités et l'Autriche. Mais ce qui l'a décidé dans le choix, c'est ce que nous ne pouvions pas lui donner des garanties satisfaisantes que l'Italie et la Hongrie soient assez décidées d'agir de manière à laisser espérer qu'elles paralyseront l'Autriche.

"À toutes mes protestations les turcs n'avaient que la réponse, 'Mais d'un côté nous ne voyons aucune action sérieuse dans ces pays là'; de l'autre côté, 'Nous savons que ni vous ni Mazzini vous ne recevez point même autant d'aide financière qu'il vous faudrait pour vos préparatifs. Et ce n'est point rassurant à coup sûr. Nous ne pouvons pas courir le risque de nous attirer l'Autriche sur les bras sans la certitude qui l'Italie et la Hongrie la paralyseront.'

"Voilà donc une précieuse occasion manquée en suite de l'inaction. Qui ne donne signe de vie est censé mort; nous sommes donc parfaitement d'accord sur le besoin d'action. Le parti se suicide en n'agissant pas; il détruit toute confiance dans les peuples sur ses forces, sur son activité, sur sa vitalité s'il laisse passer une occasion telle que celle-ci. Mais où agir? Là est la question. Il n'y a que deux points pour le moment: ce sont Paris, l'Italie. Vous savez l'état de Paris. Vous savez le mécontentement qui y grandit. Une défaite en Crimée, un incident de toute autre genre, peut y déterminer l'explosion; mais un évènement extérieur le pourrait aussi, et si les nationalités le peuvent, elles ne devraient pas attendre. Parmi les nationalités, c'est la vôtre dont la situation est la plus avantageuse à l'action ce moment-ci. Et la trahison de la Maison de Savoie (parceque c'est une trahison au point de vue italien que cette alliance avec l'Autriche) aurait dû disillusionner tous ceux qui attendaient l'indépendance de l'Italie d'une bannière royale. Je crois que jusqu'à ce moment l'Italie ne pouvait beaucoup compter sur le Piémont pour les premiers moments de l'action, quoique en cas de succès il aurait suivi; mais à présent c'est différent. Il me semble que Gênes ne mériterait pas la gloire du passé si elle laissait échapper cette occasion d'agir. J'attends presque de la voir briguer l'honneur de l'initiative de l'indépendance de l'Italie républicaine.

"En tout cas, c'est mon avis que l'Italie devrait agir et nous donner le signal si elle le peut. Une insurrection sérieuse nationale en Italie qui promette des chances, et la Hongrie suivra, n'en doutez pas. Mais l'initiative lui est impossible, vu sa position géographique, stratégiquement inabordable pour y amener des armes, etc. (la Turquie m'étant fermée et la Valachie occupée par l'Autriche). Vous-même vous hésiteriez à lui donner le conseil d'initiative. La concentration de presque toute l'armée autrichienne pèse sur elle, et sans une grande impulsion morale lui venant du dehors, l'appeler à se soulever, elle seule et première, aurait l'air de l'appeler au martyre. Cette grande impulsion doit lui venir de Paris ou bien d'une insurrection italienne, de l'insurrection des troupes hongroises qui sont en Italie, et de ma présence a leur tête.

"Donnez nous une insurrection grande, nationale, italienne, et vous aurez la Hongrie. Donnez-moi un point d'appui qui me donne la possibilité de faire appel aux troupes hongroises en Italie de se ranger autour de moi, en leur présentant des chances de succès par le fait d'une insurrection nationale italienne capable de se maintenir, et vous m'aurez: vous savez mes engagements, je les maintiendrai. La position de l'Autriche vous est favorable. Vous n'avez à faire qu'à une comparativement faible portion de ses forces. Et Bonaparte lui-même ne lui pourrait donner des renforts, ce moment-ci. Il n'y a que de recrues. Sa seule armée se perd dans la Crimée. Et les troupes de l'Autriche, engagés aujourd'hui loin, le seront bien plus encore lorsque les mouvements intérieurs auront répondu aux vôtres. La crainte de ces mouvements à elle seule retient l'Autriche à la place où ses forces sont concentrées loin de l'Italie.

"Puissent vos compatriotes écouter votre voix. Le moment est précieux, qu'ils le saisissent. En le laissant passer, et si par hasard une paix est bâclée, nous aurons à le regretter, et à supporter peut-être dix ans de plus de martyre et de honte.

"Adieu. Votre frère de cœur et d'âme,

"L. Kossuth."

Once again a regular expedition was prepared. To give an idea of one of the hundreds of letters written by Mazzini, each in a different cipher, we subjoin one to Nicola Ferrari, a devoted henchman to his death in August, 1855:

"Sanmarino is important strategically, presents facilities, has some precious material, some hundreds of muskets in the magazines of the city; then, in the small castle of Serravalle, there are the arms of a company of sharp-shooters. In 1849 the Roman legion sold their arms and the country is full of them; a thousand might be requisitioned. The city has no police, a brigadier without a brigade; at night the gates are closed and the key left with the porter; the other entrances are not guarded, the mountain roads are easy. Rimini has a carriage-road; paths lead thither from Cesina, Savignano, Santarcangelo, passing by Verucchio, which is always fordable. One night is sufficient to gain Pesaro from Cesena. Bands of youths arriving in the suburbs under the rocks should leave a detachment to collect arms. Look out that none leave the city, which they must enter at dawn.

"A detachment must start from Rimini, surprise, during the night, the company that is in Serravalle, keep them prisoners, requisition arms, send tidings to the chief of the expedition. In 48 hours all the arms in city and country ought to be collected. The volunteers armed, they must carry rations for three days. From San Marino by Saint' Angelo in Vado it is easy to seize the pass of the Apennines, go on to Sepolcro, Loreto, menace Arezzo, occupy the postal road of Tuscany which joins that of Rome in Foligno, and execute several other operations equally important. The commander of the company in Serravalle is a foe, but a proprietor of the same name is ours. In the same city Giuliano Belluzzi and other Tuscans, who were officers in Rome, are also ours. Mind the name Giuliano, as there is another Belluzzi who must be arrested instantly," etc., etc.

For the *Duce* of a special expedition Mazzini counted on the infallible Bixio, when he was warned that "Nino," madly enamoured, was on the point of marriage, and that his departure from Genoa was not to be hoped for. Mazzini writes July 15, 1854, to Nino Bixio:

"I know that you have been informed of my plans and of my intention to summon you, and that you have answered, 'I cannot.' Friends of 20 years, military men on whom Italy has a right to count, fail in their duty and sink into sloth. Shall we also betray our country and the people who call upon their chiefs? Oh friend of mine, friend of Goffredo, will you also abandon them? You have pledged your word, you are about to enter into sacred ties, I know. But wherein does this hinder you? How? Are not husbands Italians? Liberty, country, the well-being, the honour of Italy, are these confided to celibates only? Does love become slavery? Duty, religion, are they to be left to those who do not love? You will become a father, and do not seek to give a country to your children?

"These thoughts would drive me into skepticism, into atheism, in these last days of life. So, what was sacred to you yesterday was so only at a given time in given circumstances? Love of country ends because you love a woman, because she loves you? I have always held that love consecrates us anew to duty, to virtue; that, loving, we grow better. I too have loved—nay, despite my gray hairs, I still love and am beloved. But if I thought that love would make me less active in duty towards my country, I would tear that love from my breast. Listen. I do not ask of you to leave Genoa now, nor until events shall make your absence a serious duty. If Genoa should rise up in the name of Italy, could you, because you are married, refrain from quitting your house and fighting with your friends? Nino, this is impossible, you cannot affirm its possibility. Well, I only ask you to act with me when the summons comes from the centre or from elsewhere. Then indeed you must come to lead an expedition because, of all I know and trust, you are the one to guide it to victory. Let me know only that I can count on you at a given day, a given hour, and I will not ask you to leave Genoa to prepare for action—but only to act. If you refuse this, I have but to bow my head and say; 'Another son lost to Italy.' Your friend Joseph."

What Nino's answer would have been had any insurrection broken out in Italy, can only be judged from the fact that never once was he absent from the roll-call. 1859, 1860, 1866, 1870 all saw him in the van. In 1857, when the Pisacane expedition to Naples ended in the massacre of Sapri, Bixio was on the high seas, and that "failure" was Mazzini's last revolutionary attempt. The long, keenly fought duel was over; Cavour had conquered. Italy, which had halted so long at the parting of the ways, followed the victor and his imperial ally, and went in for monarchical unity. Unity at least was saved, and Mazzini had a bitter Pisgah view of what was *not* his promised land! J. W. M.

Correspondence.

EDUCATIONAL WORK AMONG THE COLORED PEOPLE OF ST. LOUIS.

To the Editor of The Nation:

Sir: As you have from time to time referred in the *Nation* to the subject of the possibilities of educational work among the colored people, it may be of interest to your readers to be told of an experiment in this direction made this last season for the first time in the city of St. Louis. In connection with efforts here in past years to have educational lecture courses more especially for the wage-earning classes of the community, it struck me as worth while to make the test with the more enlightened elements of the large colored population. Scarcely any one to whom I broached the matter gave me encouragement with regard to it, thinking somehow the plan would not work. I called together a small committee of these people and talked the matter over with them. They were somewhat dubious in regard to it, explaining that they were divided up by lodges, secret societies, and churches of many kinds, and they felt quite uncertain as to the audiences they could promise, or as to whether the expenses could be covered. But they were ready to go ahead and give it a trial.

A course of eight lectures was arranged for, dealing with the subject of "America and American History," and the lecturers came from some of the ablest and most representative white citizens of St. Louis, including two or three of the foremost lawyers and several teachers or professors from the Washington University. The evening was divided into two parts, and for the opening there was a "Practical Talk" of twenty minutes or half-an-hour by some one of the well-known and prominent white cler-

gy of the city, including one Roman Catholic, a Congregationalist, a Jewish rabbi, the Bishop of the Episcopal Church, a Presbyterian, and a Unitarian. Nearly all these persons consented with alacrity to do the work assigned to them—of course without remuneration. The chief difficulty, perhaps, was in getting all the clergy who were asked. One or two of the "swells" from this profession looked askance and were inclined to hold aloof.

We had a "Committee of Forty," made up from the colored people, to take charge of the practical arrangements and to dispose of a twenty-five-cent course ticket in order to cover the necessary expenses. The lectures were all illustrated, but were emphatically educational and most instructive to any class of persons. They were given on Saturday evenings in the winter, and the hall selected for the purpose would accommodate about 200 people. To the surprise of many persons the effort proved a phenomenal success. After considerable experience in this city in arranging educational work for almost every class of persons and of every grade, it struck me that no effort ever put forth in this direction had gone on as smoothly and held out so well as in this particular instance. Again and again the hall was crowded to the doors. More than once there were twenty-five or thirty grown men standing, for lack of seats, an hour and a half listening to the "Practical Talk" of the clergyman and the lecture which followed. Two or three evenings when it was stormy the hall seemed almost as full as ever. The people were pleased and delighted in the extreme. They felt somehow as if a peculiar honor had been shown to *them*, and as if at last for the first time the same kind of privileges were given to *them* which were offered to other people. Usually, with such lecture courses, there is enthusiasm at the start, and the attendance plays out toward the end, after the novelty has worn off. But this does not seem to have been the case in the instance I am speaking of, and the people now, I think, are looking forward with eagerness to another similar course the following winter. They have assured me that they could have placed 800 or 1,000 tickets as easily as 400. The only trouble lay in the smallness of the size of the hall. Yet these lectures would have been instructive and educational to any average citizen of the United States.

I mention this because it has been, as far as I know, the only experiment ever tried in this direction in St. Louis, and went contrary, I fancy, to the expectations of a great many people. It proved to my mind as an educator conclusively that the time has come when we dare not class the whole colored race as all of one type, but must recognize that the same grades exist among them as among white citizens; that they too have elements wishing to improve themselves and continue to educate themselves throughout life; and that the gradations of character as well as possibilities for intellectual culture are the same with them as with white people.

Another striking instance of the same kind has come under my experience and observation this last winter, also in St. Louis. A representative from a group of twenty-five colored adult women came to me, asking whether I could arrange some kind of study work for them and secure a competent leader. This demand was spontaneous, coming wholly from themselves. I proposed a course of lectures on the "History of Painting" for them, and was able to secure a very competent leader, well-equipped for the work, from the best art talent of St. Louis. Oddly enough, the greatest difficulty came in being able to get a hall or meeting-place for them. At last, however, a suitable one was found, and this class has been doing, the teacher assures me, most satisfactory work. They have been faithful in their attendance, keen in their observations, and eager to do the reading assigned them. The teacher has had reason to be proud of the class and the serious work which has been done by them. It was probably as good work and as thoroughly carried out as anything undertaken by the most educated women of the white citizens of our community. It is not to be supposed, of course, that this represents the average. I cite the instance only to show that the time has come when we must use discrimination and cease to talk of the colored people as if they were all of one kind. This educational experiment has worked to the contrary—at least in St. Louis. WALTER L. SHELDON.

April 2, 1901.

MAN ALWAYS FIT FOR FREEDOM.

TO THE EDITOR OF THE NATION:

SIR: An answer to the imperialistic contention that the United States Government must not take its hand off of Cuba because that island is not yet ready for independence, is tersely given in the following paragraph from Macaulay's essay on Milton:

"Many politicians of our time are in the habit of laying it down as a self-evident proposition, that no people ought to be free until they are fit to use their freedom. The maxim is worthy of the fool in the old story, who resolved not to go into the water until he had learned to swim. If men are to wait for liberty till they become wise and good in slavery, they may indeed wait for ever."

The politicians of *our* time seem not to have advanced much beyond those of 1825.

GARNETT'S ANTHOLOGY.

TO THE EDITOR OF THE NATION:

SIR: In the *International Monthly* for April there is an advertisement of Dr. Richard Garnett's 'Anthology,' which reads thus:

"One of the principal features of the Anthology is the unique arrangement, which is Dr. Garnett's idea, known as the Chronological and Historical Arrangement."

The principal feature of the "International Library," of which the 'Anthology' is an enlargement, was the chronological and topical arrangement of the various excerpts. For instance, the episode of Odysseus's visit to the Phaiakians was preceded by Matthew Arnold's essay on the translation of Homer, and followed by poems and other selections that seemed to be apropos. When I saw that the publisher attributed to Dr. Garnett this arrangement of material, which I had supposed was original with myself, I wrote and asked him if it were so, and I immediately received a most courteous letter from him, absolutely disclaiming any wish to pose as the originator of this arrangement. It seems only fair to call attention to this matter in the interest of truth.

Faithfully yours,

NATHAN HASKELL DOLE.

NEW YORK, April 1, 1901.

Notes.

The Oxford University Press (New York: H. Frowde) will soon publish an historical essay long in preparation by Prof. J. Earle, 'The Alfred Jewel,' with a map and many illustrations, some colored; 'Legislative Methods and Forms,' by Sir Courtenay Ilbert, Parliamentary Counsel to the Treasury; 'The Relations of Geography and History,' by the Rev. H. B. George; and a new 'School History of England,' the joint work of several teachers.

Forthcoming from Longmans, Green & Co. are 'My Experiences of the Boer War,' from the German of Adalbert Count Sternberg; 'Notes on Reconnoitring in South Africa; Boer War, 1899-1900'; 'Abyssinia: Through the Lion-Land to the Court of the Lion of Judah,' by Herbert Vivian; 'Occasional Essays on Native South Indian Life,' by Stanley P. Rice; 'In Tibet and Chinese Turkestan,' a record of three years' exploration, by Capt. H. H. P. Deasy; 'The Wildfowler in Scotland,' by John Guille Millais; 'Old Cottages and Farmhouses in Kent and Sussex,' by W. Galsworthy Davie; 'Studies in Peerage and Family History,' by J. Horace Round; and 'Some Records of the Later Life of Harriet, Countess Granville,' by her granddaughter, the Hon. Mrs. Oldfield.

Further announcements from Macmillan Co. are an English translation of a timely address by Chancellor Rümelin of the University of Tübingen, on 'The Relation between Politics and the Moral Law'; 'The New Basis of Geography,' by Jacques W. Redway; and 'A Short History of Germany,' by Ernest F. Henderson.

Among D. Appleton & Co.'s announcements for April we note 'The Woman's Book of Sports,' by J. Parmly Paret, thoroughly illustrated with full-page half-tones from instantaneous photographs; 'The Play of Man,' by Prof. Karl Groos, translated by Elizabeth L. Baldwin; and 'The Spanish People,' by Martin A. S. Hume.

"Pioneer Towns of America" is the title of a new historic series undertaken by T. Y. Crowell & Co., beginning with the 'Story of Old Falmouth [Portland]' and the 'Story of Pemaquid.' The same firm will issue Forman's edition of Keats in a handy volume.

Small, Maynard & Co., Boston, announce the immediate publication of 'Theology at the Dawn of the Twentieth Century,' a symposium of original essays by many eminent theologians and laymen of both England and America (forty-six in number), grouped under twenty-nine main titles, and edited by the Rev. J. Vyrnwy Morgan, D.D., of Baltimore.

If sufficient support can be assured, Mr. James Warrington, No. 203 Walnut Place, Philadelphia, will publish a facsimile of Beissel's Treatise on Music which forms a preface to the 'Turtel Taube' bearing the Ephrata imprint of 1747. A competent English translation will face each page of the facsimile, and the treatise will be annotated by Mr. Warrington. The book, a foolscap quarto, will be sold, to subscribers only, in two editions. It will be the pre-

cursor of similar antiquarian musical reproductions.

The announcement has just been made by a committee of American anthropologists, of which Mr. F. W. Hodge, Managing Editor of the *American Anthropologist*, is Secretary, of the proposed publication by a leading New York house of a handsome illustrated volume containing more than thirty folk-tales which were recorded and translated by the late Frank Hamilton Cushing during his long and intimate association with the Zuñi Indian tribe of New Mexico. The price of the work will be $3.50. Information and subscription blanks can be supplied by the Secretary, whose address is Washington, D. C.

Mr. Henry D. Sedgwick, jr., has written of Father Hecker in Small, Maynard & Co.'s series of "Beacon Biographies"—beautiful little books with one defect, the extreme narrowness of the inner margins. It is difficult to imagine how Mr. Sedgwick's sketch could have been better within the limits to which he was confined. The main interest of it inheres in the conflict in Father Hecker's mind between the traditional Roman Catholic ideals and those of the modern world, and there is no more important chapter than the last, which relates the fortunes of Father Hecker's 'Americanism" since his death: its condemnation by the papal court, and the meek submission of Archbishop Ireland and other great ecclesiastics who were enamored of Father Hecker's method—the *argumentum ad hominem Americanum*. As a help towards understanding the sainthood of former times, Father Hecker is of great value. Mr. Sedgwick writes unsmilingly even where, during Hecker's novitiate, his brains were out with much fasting and yet he thought he had enough left to make a priest. Such were his rigors that "his superiors marvelled at his stupidity, and his brethren deemed him a fool," and it took weeks of hard labor to learn the *Pater Noster*. Perhaps the most amusing circumstance is his invitation to Thoreau to go with him on a pilgrimage to Rome, begging their way across Europe.

Dean Slattery has made, and Longmans, Green & Co. have published, a good biography of Felix Reville Brunot, "A Civilian in the War for the Union and President of the First Board of Indian Commissioners." Every clergyman of any prominence is pretty sure to arrive at a biography. Laymen, however worthy, are less fortunate—if that is the right word. Mr. Brunot's biography is on this account all the more welcome. It was worth while to write this story of a business man's career, "to encourage the others" in the best possible sense. He was a man of high character and great public spirit. "Wise men are not always wise," and his unwisdom was manifested in his advocacy of a Christian amendment to the Constitution of the United States. His judgment was habitually sound. He was a forerunner of Mr. Carnegie in Pittsburgh, a principal founder and benefactor of the Mercantile Library of that city. During the Civil War he was an ardent and active patriot. His interest in the sick and wounded soldiers took him to the front, where he was arrested as an army surgeon and taken to Libby Prison. His experience there made him more efficient after his release on behalf of the Sanitary Commission. In his whole life nothing was more creditable to him than his presentation and active support of the "Brunot Resolutions," as they were rightly called, at the General Episcopal Convention of 1862. Mild as those resolutions were in support of the Union and the war, they marked the highest point of loyalty to which the Episcopal Church attained. When the war was over, Mr. Brunot was one of those who sustained Horace Binney's resolution rejoicing in the return of peace and the destruction of slavery; but he and his friends were voted down. Mr. Brunot's service on the Board of Indian Commissioners was highly honorable, and Dean Slattery does not exaggerate its influence on Indian affairs.

From the University Press at Strassburg we receive Dr. William A. Dunn's interesting inaugural dissertation on 'Thomas De Quincey's relation to German Literature and Philosophy.' This is far from a typical "Einfluss" thesis, to be passed with the summary remark that the author knows little of De Quincey or of German literature and philosophy, but is strong on the "relation." On the contrary, Dr. Dunn seems to possess more than a conventional knowledge of German letters, and of De Quincey's moral and literary personality he is a just yet kindly critic. The final result of the study is, as it should be, chiefly negative. De Quincey was almost a life-long amateur of things German; but, as Dr. Dunn shows clearly, he never came to that passionate preoccupation with them which made Coleridge and Carlyle leaders in the better sort of Teutonizing. His interest was rather that of the curious inquirer, and his business was to spread such an interest in salable articles for the magazines. In the case of Jean Paul, with whose highly imaginative mind the Opium-eater felt much sympathy, there may have been some actual influence. But even here it is scarcely wise to refer the similarity of rolling sentences, pervaded by vague, elevated sentiment, to any conscious imitation on De Quincey's part. Dr. Dunn's work is scholarly in detail, and stylistically can be read without discomfort.

Of the authors of 'Elements of the Theory and Practice of Cookery,' Mary E. Williams and Katharine Rolston Fisher (Macmillan), one is supervisor of cookery in the public schools of Manhattan and the Bronx, in succession to her associate. They make no pretension that their work is more than a primer of household cookery and science—"to draw into closer union teachers and students of household science, homemakers, and all who are interested in the welfare of American homes." They have grappled bravely, hopefully, and intelligently with their task, and in the 326 pages of which the book is composed they have concentrated a great amount of very useful information in relation to every detail that concerns the household and the feeding of its members. Whatever may be our reluctance, we are lured on from the "kitchen fire" to the "potato"; we are entangled in the meshes of "tissue-building food: eggs and milk"; but rally at "bread," and are hopeful at "food and its relation to life"; and so on from one inspiring topic to another until our joy culminates in "beverages: tea, coffee and cocoa." To be specially commended is the section devoted to "cuts: marketing, and food-value of meats." This will prove genuinely helpful to the young housekeeper, in fact to any purchaser of meat for the household. It is to be regretted that as much cannot be said for some of the recipes. Two in particular, one for "drawn butter" and the other for "Tartar sauce," if concocted literally as given, would surely lead to painful episodes in any family in which they were attempted.

Probably few phases of the prevailing interest in things out-of-doors have encountered as formidable obstacles in the direction of suitable literature for the beginner as Mycology, or, more nearly correctly, Mycophagy. Until very lately, the ambitious novice, like the specialist, has been obliged to go to scattered memoirs and learned revisions for the desired information. Hence, to many who desire to be introduced to this group of plants, 'The Mushroom Book,' by Nina Marshall, will be a welcome aid. It belongs to the series of popular-science works from the press of Doubleday, Page & Co., already well represented by 'The Butterfly Book' and others. 'The Mushroom Book' introduces the beginner, through descriptions and plates, in part colored, to the most important edible and poisonous forms, placing him quickly in possession of the facts most important to the successful mycophagist. In general, the illustrations and text are clear and fairly accurate. An introductory key familiarizes the reader with the larger groups, and facilitates the work of identification.

Those who are acquainted with Bergen's 'Elements of Botany' will be glad to learn that Ginn & Co. have just put out another book by the same author, entitled 'Foundations of Botany.' The body of it consists of two parts, dealing respectively with structure and function and with the relations of plants to their surroundings. The chief facts of plant anatomy and plant physiology are stated with admirable clearness and proportion; and well-chosen experiments, of a nature perfectly practicable for pupils of secondary grade, amply illustrate the principles enunciated. The principal features of gross morphology follow, and the usual instructions concerning the homology of parts finds place. Part i. closes with several chapters on cryptogamic forms, and directions are given for the study of the most significant features. In part ii. the writer has avoided the extreme to which many writers of recent elementary text-books have seen fit to go concerning ecology in the high school. Totally to omit a discussion of this interesting phase of botany would be to ask the pupil to close his eyes to many of the most significant and accessible of plant relations; but to expect him to deal satisfactorily with problems of physiographic ecology, especially when obliged to accept half-tone substitutes for nature, seems certainly to invite criticism. In the book under discussion the author has reached the golden mean. Part ii. closes with a chapter on the struggle for existence. Four floras of modest pretensions have been prepared for as many sections of the country. They cover about six hundred species each. Professor Tracy furnishes that for the Southern States; Alice Eastwood of the California Academy of Sciences contributes floras for the Rocky Mountain and Pacific editions; the author himself, that for the edition of the Northern and Central States. The book as a whole is characterized by practicability and balance, and is plainly the

work of an experienced teacher who knows his subject.

Some years since, Mr. R. B. Marston, the author of 'A List of Books relating to Fish, Fishing, and Fisheries, to Supplement the "Bibliotheca Piscatoria" of T. Westwood & T. Satchell, published in 1883,' just issued in London by Sampson Low, Marston & Co., said that "the best monument they [Westwood and Satchell] could have would be a revised and enlarged edition of their work, brought down to date." This publication covers so much of the labor of the undertaking that, with its assistance, the task of making the "monument" to those men who did the vast amount of arduous and gratuitous work for the cause of angling literature, would not be a hard one. Mr. Marston's compilation has about 950 titles (the 'B. P.' has something over 4,000), and he has apparently solved the difficulty as to what entitles a book to admission to an angling catalogue by entering many written on other subjects and having incidental references to angling; *e. g.*, 'Wet Days at Edgewood' (by "Ik Marvel," but catalogued under 'Edgewood'); 'White's Natural History of Selborne,' 'Norwood,' by H. W. Beecher, etc.; besides numerous railway advertisements. Why should a railway company which states with general untruthfulness the chances for sport open to travellers by its lines, or a novelist who introduces a fishing scene to enliven the pages of his book, be immortalized in future editions of the 'Bibliotheca Piscatoria' as angling authors? Mr. Marston's 'List' is interleaved for the purpose of enabling its possessors to enter the titles of books hereafter published.

The evolution of the religious press from folio form to that of the periodical has overtaken the *Home Journal* of Willis & Morris, founded in 1846, along with a change of name to *Town and Country*, and, of course, the introduction of process illustrations.

The *Geographical Journal* for March contains the addresses at the Queen's commemoration meeting of the Royal Geographical Society, the main topic of which was the growth of the Empire during her reign. After sketching the expansion in America, Australia, and Africa, Sir G. T. Goldie said, what no one conversant with its history can deny, that "the chief aim in dealing with the colored races has undoubtedly been beneficence, though this aim, like other human ideals, has too often been marred by imperfect knowledge or faulty judgment. But perhaps the dominant note throughout this period of expansion has been the devotion to duty of those concerned in it, whether soldiers, sailors, or civilians." Col. Sir T. H. Holdich, speaking with the experience of thirty years' service in India, bears eloquent testimony to the personal loyalty of the Indians, especially the soldiers, to their Empress, a feeling which he believes has "bound together the sympathies of all the scattered nationalities" of the land. In an account of explorations of the Canadian Rockies, at the source of the Columbia, the fact is noted that "very few minerals of any value have been found so far. The chief wealth of the country lies in its scenery." Sir John Murray, in his bathymetrical survey of the freshwater lochs of Scotland, remarks that in Loch Leven an American weed (*Elodea canadensis*, or choke-pondweed) has become firmly established, and "is causing a great deal of trouble, all the means hitherto tried for the purpose of destroying it being only of temporary benefit." This article is illustrated by eight colored plates.

The annual report of the Woman's Education Association of Massachusetts gives special prominence to the thirty-five travelling libraries sustained by it. These, aggregating a thousand volumes, have been sent to thirty-two towns—the most urgent calls coming from the remote villages—and have had a circulation of 4,000. There are also twelve sets of pictures which have made 113 visits to 89 towns during the past year. They have been hung in churches, Sunday-schools, town halls, private houses, libraries, and, in some towns, in every school. A new and valuable branch of the work is the publication of a list of books recommended for small libraries. Attention is also called to the fact that Miss Caroline F. Stewart, "who has held one of our fellowships, has just won her Ph.D. degree at the University of Berlin, being the first American woman to receive this honor. It has only once before been conferred upon a woman, a German Jewess. The candidate for this degree has publicly to defend his dissertation against three judges, besides delivering a closing address. The award of this degree to a woman was so exceptional an event that the hall was crowded to suffocation with curious spectators."

The Berlin *Reichsanzeiger* gives a preliminary account of a noteworthy archæological find made by Dr. Koldewey, who has for a year and more, under the direction of the Orientgesellschaft, been making researches in Babylon. He has found the Procession Street of the god Marduk, paved with limestone blocks, each a metre square, and with small red and white plates of breccia, nearly all of them bearing as an inscription the name of Nebuchadnezzar. Then it has now been definitely settled that the building discovered in the hall of Amrum in May, 1900, is none other than the famous national shrine of Babylonia, the great Marduk temple Esagila. This discovery determines a number of questions concerning the topography of ancient Babylonia. The plan of this gigantic shrine, which Dr. Koldewey now has in preparation, promises to be of exceptional interest for archæological research; and since the contemporary of Alexander the Great, the Baal priest Borossos, made use of the archives of this temple, important scientific results are expected. This is all the more probable as the dirt of ages that covered this temple has been the best protection of archæological material against modern vandalism.

To every serious-minded German it must be disheartening to know that the enlightened Government of Prussia does not see its way clear to provide for every child in the kingdom the full blessings of that common-school education which has long been considered the chief pride of Germany. Recent debates in the Prussian House of Representatives have again brought out the fact that the lack of teachers in that state is both chronic and acute, and that, while it is by far the worst in the provinces east of the Elbe, it prevails more or less in all parts of the state. Its main and fundamental cause is the too frequent misery of the teacher's existence, and its results are either closed school-houses or such unreasonably large classes that instruction becomes well-nigh impossible. About one-fourth of the common schools of Prussia are in this condition, which does not exist in other German states. The only effective remedy of the evil is better pay and a more generous treatment of the lower ranks of teachers. That the state still fails to apply this remedy is the more astonishing and pitiable as reliable statistics, covering a period of many years, show that, in Prussia at least, popular education reduces lawlessness and criminality, and that, with good educational advantages, even a denser population reaches a higher moral standard than the people of the less populous districts in which the schools are neglected.

On the 15th of last October, Prof. August Mau, the greatest living Pompeian scholar, celebrated his sixtieth birthday. As a part of that celebration, a sum of money was collected among his friends in Rome, with which careful copies of some of the Pompeian wall paintings might be made. These copies were to serve as the basis for a new and definitive work on the subject. Meanwhile, the plan has been enlarged, and an international committee in Rome, headed by the Secretaries of the German Archæological Institute, has taken the matter in charge. The sum of $7,500 is needed in order that the copies of the paintings may be made by thoroughly first-class artists and their accuracy assured. In view of the close relations existing between the German Institute and the American School of Classical Studies in Rome, and of the debt which all scholars owe to Professor Mau himself, at the request of the committee in Rome an American committee has been formed to cooperate in this work. This committee consists of Professors Hale of Chicago, Kelsey of Michigan, Marquand of Princeton, Norton, Director of the School in Rome, Peck of Yale, Platner of Western Reserve, and Smith of Harvard. This committee will shortly issue a detailed circular. Those who may desire to aid in this matter or to obtain further information, are requested to address the Secretary of the Committee, Professor Platner, No. 24 Cornell Street, Cleveland, Ohio.

—Echo of a forgotten controversy seems to be a fit characterization for the 'Memorandum' of the plaintiff in our latest arbitration. So fast has history been made of late that the mishaps of the American pelagic sealers *James Hamilton Lewis*, *Cape Horn Pigeon*, *C. H. White*, and *Kate and Anna*—who felt the claws of the Russian bear outside the three-mile limit and were seized on the open sea as lawful prizes—already attract little notice. There is nothing remarkable in their story. Russia, following our lead in violating the law of nations, seized several of the pelagic nuisances which were hovering around her seal preserves, with intentions doubtless like those of Tom Hall in Kipling's ballad, but wholly within their rights, until a trespass or other overt act had been committed and witnessed. Now, by an agreement of September 8, 1900, the claims for damages are to be submitted to Councillor Asser of the Netherlands for arbitration. Russia is to have three months to reply to the 'Mémorandum de la Partie Demanderesse à l'Honorable Arbitre, M. T. M. C. Asser, etc., etc." (London: Chiswick Press) now submitted; within three more a memorandum in rebuttal may be filed by the claimants; and three months more are provided for papers in sur-rebuttal. A prorogation of thirty days is permitted dur-

ing the proceedings, and the arbitrator is allowed six months for consideration, so that about two years must elapse from the agreement to arbitrate and ten years from the date of the alleged injuries before a final settlement will be attained. It may be remarked, in passing, that the acts which will, altogether, cause a loss to the United States of a million and a half of dollars, were caused not by any direct action of the Department of State, but by a regulation of the Treasury which it was warned was illegal before it was put into effect, but which the Treasury, apparently without reference to the State Department, proceeded to enforce. The possibilities involved in such independent action by a department not charged with the conduct of foreign affairs, and without authorization by the Executive, are too obvious to require further comment.

—The day of the 'Complete Letter Writer' is happily dead, but there will always exist amiable persons who are eager to instruct in matters that every one ought to know, and, incidentally, to contribute one more volume to the world's superfluous literature. The compiler, H. E. Gavit, of 'The Etiquette of Correspondence' (New York: A. Wessels Co.) devotes herself nominally to the form of the modern letter or note, and the etiquette of present-day usage in the matter of styles of address, paper, ink, seals, etc. But the modern mania for an appearance of thoroughness and historical treatment invades even this little handbook, and we are not spared the tiresome and inevitable savage with his "red clay or burnt wood," or the insufferable Pliny, till, through Elizabeth and Victoria, we are guided to the suitable epistle to be addressed to President McKinley. Some amusing and occasionally astonishing rules for "correct form" follow. Coupled with a warning not to use ruled paper in social correspondence is the information that, in writing a request to an acquaintance, "it is good form always to enclose a postage stamp." This, at any rate, is something new. On page 40 the writer speaks of hatchments as though their use were obsolete, but that is not the case, at any rate in London. The mention of hatchments in connection with letter-writing is a pardonable irrelevance. The book is apparently designed for those whose social correspondence has been thrust upon them late in life, so that we have no fault to find with the minute directions as to how to address an envelope, and the proper place for the stamp, or the warning not to put "En ville" outside a letter or "Kind Friend" as a form of address within. We particularly commend to the social aspirant the letter "with a strong society dash" (p. 141), or that "with less airy persiflage and more dignity" on the same page. We wish that we had space to reproduce these gems. The postal regulations condensed from the Official Guide are, of course, useful. The final glossary of Latin, French, and Italian phrases recommended for use in correspondence is a cruel snare for the feet of those that seek after "correct form."

—'Chapters from Illinois History' (H. S. Stone & Co.) represents the chief part of a work which the late Edward G. Mason was preparing upon the annals of his own State. While it must be regarded as a fragment, it covers a relatively long period, and would have formed the bulk of the book which was projected and begun, though never finished. Mr. Mason, who showed himself an eminent man in more than one way, had a great fondness for the study of records relating to Illinois, and we must regret that he was unable to complete his labor of love. What he has left is well studied, excellently written, and filled with a spirit of quiet enthusiasm which one always delights to encounter. After all, he succeeded in covering the best as well as the largest part of his field, for while he begins with the Champlain map of 1632, he reaches the Chicago massacre of 1812. Nearly two-thirds of the space is devoted to "The Land of the Illinois," a general subject under which discovery, exploration, occupation, and settlement are treated in separate chapters. "Illinois in the Eighteenth Century" comes next in point of prominence, with its studies of old Fort Chartres and Col. John Todd's 'Record-Book.' Illinois in the Revolution, the march of the Spanish across Illinois, and the Chicago massacre are the remaining topics. The text takes the form of a straightforward narrative, supplemented by bibliographical notes, and stripped of all philosophical observations or other extraneous matter. Mr. Mason seems not to have done much at first hand (in the archives of Paris, for instance), but for one who looked to the broad facts already ascertained rather than to the smaller details which may lurk in the background, he shows himself extremely well informed. One can follow his reading quite easily through the help afforded by numerous references, and it is clear that he had mastered the best literature relating to the connection between the Illinois country and New France. The two figures who loom up most prominently in these pages are La Salle and Col. John Todd, for both of whom Mr. Mason had a just and lively admiration. Concerning the former, he quotes approvingly the words wherewith "Tonty closes his brief and feeling account of the man whom he had served so well": "Behold the fate of one of the greatest men of the age; of wonderful ability, and capable of accomplishing any enterprise." As for Todd, Mr. Mason calls him "a pioneer of progress, education, and liberty, and the real founder of this Commonwealth, who served his countrymen long and well, and died a noble death, fighting for their homes and firesides against a savage enemy, and giving his life, as he had given the best of his years and strength, for the cause of civilization and free government in the western world." To those who think that modern Chicago has no history, it may be a new fact that so recently as June 22, 1893, the roots of the "gaunt old cottonwood" called the Massacre Tree were still extant, though buried beneath a strip of pavement. It seems a pity that the town could not have preserved this relic and made of it a kind of Irminsûl.

—When some years ago the present writer, an American, declared that the Japanese themselves would one day erect a monument in grateful recognition of Commodore Perry's successful mission to Japan, a hearty laugh greeted the suggestion. Nevertheless, the Japanese have formed the Beiyu Kyo-kai (American Association in Japan) and a definite resolution to do this very thing. They are now collecting subscriptions to carry their proposal into effect. It was at Kurihama, on the shores of Yedo Bay, that a temporary pavilion for the reception of President Fillmore's letter at the hands of Commodore Matthew C. Perry was erected by the Yedo Government in 1853. The object of the mission was "friendship, commerce, a supply of coal and provisions, and protection for our shipwrecked people." Recently Rear-Admiral L. A. Beardslee, who was a cadet in one of Perry's ships, visited Japan and was received with warmth and a pageantry that reproduced vividly the life and costumes of fifty years ago. Under the vigorous stimulus of Baron Kaneko, formerly a student in Harvard University, the memorial enterprise has been pushed forward. A committee of governors, mayors, and merchants have decided that whatever other magnificent things may be attempted, there shall be erected on the strand, on the very spot where stood the door to the treaty pavilion, a stone monument twenty-two feet high. Subscriptions will close in Japan on April 30, and the memorial is to be dedicated July 14, 1901. The unhewn stone shaft, from Sendai, will be 15 feet 5 inches high, and set on a pedestal 7x7 feet, the whole expense being 2,500 yen. The money is to be raised by popular subscription. If the amount subscribed exceeds the sum required, the remainder is to be applied in beautifying Perry Park and in building a suitable road to it. The town authorities have donated 1,500 tsubo (about 6,000 square feet of land), and have already inaugurated and inscribed a wooden shaft which will be replaced by the stone. The planting of the young pine trees, seven in number, by Admiral and Mrs. Beardslee and another American and four Japanese of prominence, was recently accomplished, making the beginning of the park. Subscriptions are received by Mr. Otani, President of the Seventy-second National Bank of Yokohama. Meanwhile, a larger memorial, in the shape of a lighthouse in Yedo Bay, with a statue of Perry upon the top, has been determined upon by a powerful body of men, who, nevertheless, are warmly interested in and are personally supporting the more modest enterprise.

—"If we measure the value of an historian by the number and importance of the facts for which we are indebted to him, there are few historians who can be compared to Flavius Josephus." So M. Reinach commences his introduction to the new French edition of Josephus's works. Josephus has left us four works in all, the largest and best known of which is the 'Jewish Antiquities.' The first ten books of the 'Antiquities' are a mere résumé of the contents of the Old Testament, valuable to the scholar only as they incorporate something of the oral tradition prevalent among the Jews in Josephus's time. The last ten, however, are an historical document of the first importance, our only source for the centuries of Jewish history immediately preceding the Christian era. The 'Jewish War,' recording the history of the Jewish rebellion of 66-70 A. D., is also a document of unique importance, practically our only account of that remarkable uprising. Besides these two greater works, we have an autobiographical sketch describing Josephus's personal relations to the Jewish rebellion, of which he was a general despite himself, and which forms a welcome supplement to his 'Jewish War.' The fourth work is the apology for Judaism, known as 'Contra Apionem,' in which he combats an anti-Jewish feeling not unlike the anti-Semitism of to-day. This work is

valuable chiefly for its long citations from Greek historians who had access to the sacerdotal annals of Egypt, Chaldæa, and Tyre, but whose works, except for these extracts, are entirely lost.

—Although Josephus was a Jew, and his writings deal exclusively with Jewish history and Jewish religion, his works have been, up to the present, altogether neglected by the Jews, he being looked upon in the light of a renegade. In the Christian Church, on the other hand, his writings were freely used from the beginning, and, with the revival of learning in the fifteenth and following centuries, numerous translations, chiefly of the 'Jewish Antiquities' and the 'Jewish War,' began to appear in various modern languages. There was a time when almost every family claiming to be educated possessed a Josephus. Latterly, however, he has fallen into neglect, and only a few technical scholars now read his writings; most students having recourse rather to more modern historical productions, where the material has been worked over and presented in a modern dress and with modern interpretations. In 1887 Niese, in Germany, began the publication of a new and critical edition of the complete works. This seems to have revived interest in Josephus, and called renewed attention to the great importance of his writings, as well as to the necessity of more modern translations from critical texts. In France Jewish scholars, making some amends for the neglect of the past, have taken up the study of his works, and the Société des Études Juives is now publishing, under the general editorship of M. Théodore Reinach, a French translation of Josephus, based in general on Niese's text, and provided with notes. There are to be in all seven volumes, four containing the 'Antiquities,' two the 'Jewish War' and the Autobiography, and the seventh 'Contra Apionem,' with fragments of the Jewish-Greek historians prior to Josephus, a general index, and perhaps a study of the life and works of Josephus. The first volume, translated and annotated by Julien Weill, containing the first five books of the 'Jewish Antiquities,' appeared in 1900, from the press of Ernest Leroux, Paris, and the general editor promises the succeeding volumes shortly. A similar work in English would, we should suppose, meet a demand. At present we have only Whiston's translation of Josephus's works (1737), and Traill's translation of the 'Jewish War' (1868).

THE ASCENT OF MOUNT ST. ELIAS.

The Ascent of Mount St. Elias [Alaska]. By H. R. H. Prince Luigi Amedeo di Savoia, Duke of the Abruzzi. Narrated by Filippo de Filippi. Illustrated by Vittorio Sella and translated by Signora Linda Villari with the author's supervision. Westminster: Archibald Constable & Co. 1900.

For many years past the great peak of Mt. St. Elias has excited the curiosity of geographers and the ambition of mountain-climbers, partly because it was supposed to be the loftiest summit on the North American continent, partly because it is an extremely noble object as seen from the Pacific Ocean. It was discovered and named by Bering, a German navigator in the Russian service in 1741, but no attempt was made to explore the region round it until 1874, when the United States, having purchased Alaska from Russia in 1867, sent an expedition which partly examined the prodigious glaciers encompassing the mountain, and so roused public interest that attempts to ascend the peak were made by an organized American party in 1886 and by an English party of Alpinists in 1888. The undertaking, in which these two parties had failed because the wrong side of the mountain was attacked and the weather was extremely unpropitious, was resumed in 1890, in a more systematic way. An expedition headed by Prof. Israel C. Russell of the United States Geological Survey explored the whole southern and eastern face of the mountain, and ascertained the proper route to the summit, but was prevented by bad weather from reaching the top. Another attempt in the following year brought the same intrepid and persistent explorer to a height of 14,000 feet, when heavy snowfalls compelled him to retreat. So things remained till 1897, when that which Americans and Englishmen had failed to accomplish was achieved by a group of Italians, headed by Prince Luigi Amedeo of Savoy (Duke of the Abruzzi), and aided by experienced guides from the Italian Alps.

Their difficulties, their hardships, and their ultimate triumph are clearly and modestly narrated in this sumptuous volume, which is copiously illustrated, and has been admirably translated into English by Madame Villari, wife of the distinguished historian, Pasquale Villari of Florence. No American will grudge to the Italian prince the honor of this first ascent of the loftiest of United States mountains, for success was secured by careful preparations, by judicious leading, and by great physical endurance. Mt. St. Elias does not seem to present difficulties of the first order as regards mere climbing. There is little or no rock work to be done; and though the glaciers, especially the ice-falls of the last one which the party traversed (the Newton glacier), are troublesome, requiring a great deal of care and making progress very slow, they would not appear to involve any exceptional risks. The last slope to the summit is comparatively easy. But many things beyond powers of nimble climbing and steadiness of head go to the making of a successful ascent, especially in a distant and little-known region. In this instance three serious difficulties confronted the explorers. One was the very low snow line. The limit of perpetual snow averages three thousand feet above sea level on this part of the coast (lat. 60° N.), so that, the mountain being 18,000 feet in height, 15,000 vertical feet, a height equal to that of Mont Blanc, was snow or ice, whereas in the Swiss Alps, where the snow line averages 8,500 feet, one has seldom more than 7,000 feet of vertical height represented by the part of an ascent which lies over snow. The second difficulty, arising from the first, was the immense length of the way over snow and ice from the foot of the first glacier to the top of the mountain. It took the party thirty days, on nearly all of which they were marching, to reach the summit; and during all this time they had to camp upon snow or ice. Thirdly, there is the weather. Owing to the climatic conditions which prevail in this region, it rains on most days on the lower slopes, and snows on most days above an altitude of 4,500 feet. Mists constantly hang over the hills, damping the traveller's spirits as well as his limbs, and greatly increasing the risk of his losing the way. The climber who starts from his comfortable inn on the Riffelberg at 3 A. M., reaches the summit of Monte Rosa by nine o'clock, and returns for afternoon tea at four o'clock, little realizes how much energy of will and what powers of physical endurance are needed by those who have to sleep every night for five or six weeks upon the snow, in a temperature always below, and often far below, freezing point, and walking during the day in clothes which are almost always wet.

It says a great deal for the skill with which equipments of all kinds had been selected that this Italian party kept their health the whole time, and seem to have suffered after their journey no disagreeable consequences. Fortunately, they had two advantages. The explorers of the great Andean peaks on the borders of Chili and Argentina suffered terribly from the incessant gales that raged around them, and from being obliged to remain for many weeks together at an elevation exceeding 12,000 feet above sea level. These things wore out their strength and prevented some of them from reaching the top of Aconcagua. But the skirts of Mt. St. Elias are, at least in July and August, seldom visited by tempests, and the Italian party had to spend only two nights, that immediately preceding and that immediately following the final climb, at a height exceeding 10,000 feet. It was only on that final climb, and not till they had mounted to a height of 15,000 feet, that they began to suffer from the rarefaction of the air. For the last 1,500 feet nearly all of the ten persons, including two out of the four guides, found progress extremely difficult, owing to want of breath, drowsiness, and (in some instances) headache. It is remarkable that these symptoms are now seldom experienced in the Swiss Alps, even at a height of 15,000 feet, and are constantly experienced by nearly everybody in Colorado at heights little exceeding 8,000. No traveller or physiologist has yet succeeded in explaining the cause of the singular differences between one mountain region and another in this respect.

The view from the summit of Mount St. Elias was very extensive, for the climbers had a brilliantly clear day. Its vastness, and the height of the mountain masses over which it ranged, gave it grandeur, but it was monotonous in the snowy desolation of the landscape. Forty miles distant a range was seen, whose highest point, named Mount Logan by Professor Russell, would, according to his measurements, be slightly higher than St. Elias itself—19,500 feet, against 18,100. And still further to the north, other peaks were descried in the far distance which may be as high as or even higher than Mount Logan. Thus it appears premature to assume that the United States possesses the loftiest piece of ground on the North American continent, for though St. Elias is now recognized as overtopping its Mexican rivals, Orizaba and Popocatepetl, its supremacy may be displaced by some one of these newly discovered summits within the British territory which lies behind Alaska. St. Elias itself appears to stand on the frontier.

The book is simply and pleasantly written, with no ostentation, and no attempts at rhetoric in the descriptive passages. It is a narrative of efforts most creditable to the courage and tenacity of the whole party, as

well as to the energy and skill of the Duke of the Abruzzi, who led them. It is enriched by maps, panoramic views, and a very large number of photogravures and smaller photographic illustrations, from which we receive an excellent notion of the scenery of the snow-fields and glaciers traversed. It has reports by eminent scientific authorities on the insects and minerals collected by the expedition, as well as appendices on mountain equipment and on meteorological observations. It renders a service to science by confirming the conclusion reached by Professor Russell, that there is no ground for the old notion that Mount St. Elias is a volcano, for the rocks are mostly schistose, and the highest peak appears to consist of diorite and amphibolite. But the question which the unscientific reader will, after all, care most to have answered, relates to the scenic aspects of the region and its availability for the votary of mountain-climbing. On this not much is expressly said in the book, yet it is not difficult for the reader to form his own conclusions. Climbing in Alaska is fit only for those who have plenty of time and money, for the distance is great, and it is necessary to hire a vessel for the latter part of the voyage, there being no regular service to Yakutat Bay. It is fit only for those who have exceptional strength and soundness of constitution, since the long continuous campings on the ice try the physical system severely. And as to the scenery, though it is in its way very grand, from the gigantic scale on which the mountains are built, it wants the variety of color and effect which pastures and woods give in the Alps and the Caucasus, and in the outer parts of the Himalayas. To beauty these things are essential. Moreover, although there are rock faces free of snow, there are not, so far as we can gather from this book, peaks or precipices of bare rock comparable in boldness and grandeur to those which Mont Blanc shows on the side of the Allée Blanche, or which Ushba, for instance, shows in the Suanetian valleys of the Central Caucasus. It is not to be expected, therefore, that these Alaskan mountains will greatly attract the lovers of the landscape picturesque, although adventurous climbers will find opportunities for winning fame still left to them in the yet unexplored and very lofty ranges which lie between Mount St. Elias and the basin of the Yukon River.

MACAULAY'S FATHER.

Life and Letters of Zachary Macaulay. By his Granddaughter, Viscountess Knutsford. London: Edward Arnold. 8vo, pp. 496. 1900.

Zachary Macaulay is known chiefly as the father of his son. His anti-slavery labors, which were surely worth remembering, are generally forgotten, and his name receives slight mention, or none, in books of reference. But the fame of F. D. Maurice, for instance, except with a small circle, was made by a posthumous biography, and something of the same kind may occur again. That hope is the occasion and excuse for a volume which to the uninterested will seem unduly large.

The MacAulays were an old Highland clan, supposed to be an offshoot of the MacGregors. Zachary's father and grandfather were ministers of the Kirk, but the two before them maintained their ancestral traditions in many a raid and skirmish. Their descendant was a fighter through life, but with modern weapons of peace. He was a precocious boy, self-taught, with some help from a busy sire, and was the tutor of younger brothers and sisters. This, with the foolish applause of his elders, made him forward and bumptious. At fourteen he entered a counting-house in Glasgow, where his company was not good. Early in 1785, when not yet seventeen, he went to Jamaica and became bookkeeper on a sugar plantation. Here his surroundings were demoralizing and hardening; but he had the Bunyan-like habit of making great sins in the retrospect out of little. In 1789 he sailed for England and was received in Leicestershire by Thomas Babington, who had married his sister. This serious and superior person speedily became to Zachary more than a brother or a second father.

And now began a new era, or, as he justly esteemed it, his real life. The boorish and opinionated youth found himself in an atmosphere of refinement, of domestic affection, of financial ease, of earnest and (according to the ideas of that time) enlightened piety. High standards, a deep sense of responsibility, altruistic views, prevailed. His response to the new influences was quick and glad, for he had found himself. Babington was associated with Wilberforce, Thornton, and the few others who had devoted themselves to emancipation, and incidentally to the new settlement of Sierra Leone. Thither their convert was sent on an informal mission at the end of 1790; there he soon became a Councillor, and was Governor from 1794 to 1799. Nearly one-third of the memoir is filled with the pitiful story of these years, which included French attacks, invasions, pillages, burnings, plots, insurrections, and countless reverses, discouragements, and annoyances great and small, from without and from within. Through it all the colony—then a private enterprise—somehow lived and grew, thanks mainly to its Governor. The situation called for infinite patience, prudence, faith, zeal, and all the abundant qualities of Macaulay's rapidly maturing character. It was the day of small things, of dirt and meanness and embarrassment, of entanglements and blunders, of false friends and resolute foes, of well-nigh hopeless material to work upon and dubious tools to work with, of scanty support and incompetent or obstructive helpers. But these were the first feeble steps in a mighty conflict; in his labors and sufferings Macaulay was sustained (as the remote reader is not in the perusal) by the consciousness that they were endured in a good cause, which was soon visibly to become a great cause—none greater.

Returning to England in 1799, he married and became Secretary of the Sierra Leone Company; this post he held till its work was accomplished and the colony transferred to the Crown in 1808. It was a change of place, but no respite from toil. In Jamaica he had seen the workings of slavery; in Africa he had studied the slave trade, root and branch. He now became the prompter of his friends in and out of Parliament, the storehouse of ammunition for the war of humanity. During the sessions "he was always at hand, either in the gallery of the House of Commons or below the bar of the House of Lords, able to furnish facts or suggestions to the leaders of his party, and ready to produce any Blue-book or state paper required for reference, or to point out some quotation apt to the subject" then in hand. His full and accurate knowledge, his retentive memory, his mastery of detail, his gift for analysis, his mental clearness and acuteness, made him indispensable. His labors might seem humble and obscure, but they were felt and acknowledged, then and long after, alike by friends and foes.

In 1808 he began a prosperous career as shipowner and merchant, with a house at Sierra Leone. But the triumph of 1807 did not mean repose for the victors; their work was not finished till the abolition of slavery in the British dominions in 1833. In view of this great end, his responsibilities became so arduous that, to devote himself entirely to the cause, he in 1823 abandoned the direction of his business, with most of its profits, to his nephew and partner, after taking precautions which seemed sufficient but proved futile. The result was financial ruin, and his later years, from 1826 to his death in 1858, were clouded by misfortune. His character was more than irreproachable; he had simply pursued a noble ideal throughout his adult life, and set the public interest above his own. As to the last years the material grows strangely scant. Had his memoir been written half a century ago by his children, the presentation of his private life and personal traits might have been more full, even, and vivid. But his granddaughter has inherited his cool, calm temper; she seems not unduly laudatory; the few shadows on the picture—his unedifying youth, his lack of a genial and winning manner, the slight and inevitable narrowness of his creed, his apparent imprudence in trusting his affairs to another, his decaying and sorrowful though undaunted age—are not concealed. Happy the life on whose great virtues and services there is so little discount!

The anti-slavery movement lay nearest Macaulay's heart, but merely as the first and most pressing of humanitarian reforms. He was deeply interested in missions in the East Indies, as well as in Africa. He edited (and to a good extent wrote) the *Christian Observer* from 1802 to 1816, chiefly because nobody else could be found to do it. His complaint to his friend Hannah More, in 1806, casts a side-light on the religious temper of the time: "On one side it is attacked as Calvinistic, while even our ally Scott stigmatizes it as Arminian. The Dissenters make a violent clamor against it as being High-Church, while the High-Church party abuse it as favorable to Methodists."

His paper, by the way, felt "a sensible satisfaction" that Pitt did not die a "philosophical death," with "a very deep regret that a regular attendance upon the duties of public worship" was not among the premier's virtues. Whether Macaulay penned or simply endorsed these sentiments, he had used the following knock-down argument in repelling an accusation that he was hostile to missionary efforts (he had had trouble with some cross-grained or incapable evangelists at Sierra Leone): "You will allow that there may be missions to which it would be proper to show no friendly disposition—for instance, a mission from the College of Jesuits or a mission of the disciples of Priestley." But these eccentricities belong rather to the period, or to its best peo-

ple, than to the man. He was of the Clapham set—his home was at Clapham from 1803 to 1818—but he was no fanatic. His goodness, like that of his friends, was clad in garments now obsolete. The character remains, though the clothes are out of fashion.

Sir George Stephen's statement, "Every friend to slavery well knew Macaulay to be his most dangerous foe," seems extravagant when one finds it on page 270; but as we read on, testimonies accumulate that the reactionaries hated this modest lieutenant as if he were general of the army of reform. In and out of the press, attacks, insults, calumnies, virulent libels, multiplied. After his death a newspaper wrapper was found among his papers, directed "To that Prince of Cruelty, if he can be found, Z. Macaulay, London." Wilberforce wrote him in 1832, "You have the hardest measure that ever man received for sacrificing his health, his spirits, his pecuniary interest, to a great public cause."

The man, taken inwardly and apart from his services, it is not quite easy to estimate. He was as far from picturesqueness as from pretentiousness; he makes no appeal to the imagination until the spiritual sense is touched by the note of moral beauty. One is tempted to say that he is not impressive; but the impressiveness is there in the end, after it has been sought. Now, as in life, he does not demand attention; he is no advertiser. The portrait which fronts the title may be passed with a hasty glance; but turn back to it, it holds you, for it discloses, by slow degrees, the man. The face, Quaker-like in its serenity and gentleness, with an "expression at once so earnest and so monotonous," suggests more than it reveals. Fourteen long and conscientious chapters leave us persuaded that their subject had every claim to respect, but no power to attract; yet almost on the last page this illumining passage is cited from "one who knew him well":

> "That Zachary Macaulay's understanding was proof against sophistry, and his nerves against fear, were conclusions to which a stranger arrived at the first interview with him. But what might be the charm which excited among his chosen circle a faith approaching to superstition and a love rising to enthusiasm towards a man whose demeanor was so inanimate, if not austere? That much was passing within which that ineloquent tongue and those taciturn features could not utter, and that he had won, without knowing how to court, the attachment of all who approached him closely—these were discoveries which the most casual acquaintance might make, but which they whom he honored with his intimacy, and they alone, could explain."

Unfortunately for the reader, Lady Knutsford was born too late to be of this favored circle; but we owe her a debt for reviving the memory of a benefactor, and making us acquainted with a pure and rare spirit. Her grandfather was

> "of the plain heroic breed
> Who loved Heaven's silence more than fame";

one of the quiet soldiers who win great battles, and take no part in the shouting and reporting; one who, as his tablet in Westminster Abbey says, "meekly endured the toil, the privation, and the reproach, resigning to others the praise and the reward"; a man of ideals and convictions, whose intense faith was shown by works, and not at all by words and theories. As if to make things even, his brilliant son was his antithesis, possessing all the gifts the father so eminently lacked, and as little as might be of the paternal qualities; singularly destitute of religious sensibility, but made to restore the family fortunes, to catch and hold the public eye and ear, to fill the trump of fame, so that but one Macaulay should be remembered.

AN AMERICAN WOMAN IN SPAIN.

Spanish Highways and Byways. By Katherine Lee Bates. The Macmillan Co. MCM. Pp. xii, 448.

The only unfortunate things about this book are the illustrations and the title. However pretty the illustrations in themselves are—and over all the forty there is the trail of the camera and the process reproduction—they have no living connection with the letterpress to which they are joined. They are evidently the official and professional pictures which right-minded tourists buy on their decent progresses over the beaten routes, not such little personal sketches as should have gone with Miss Bates's kindly and individual pen-work. The title, too, would suggest that we had here a string of pleasant notes by a stroller, sauntering along through less frequented roads and taking snap-shots of Spain from the outside. The opposite, rather, is true, and the strength of this book lies in a rare insight into Spanish characteristics and life, and a power of rendering that insight in exact and telling words.

The responsibility for the illustrations and the title lies, it is to be hoped, with the publishers. At least, we will leave it there; for we have no desire to find any fault at all with Miss Bates. Her book is too delicious for that, too much of an oasis for the weary plodder through the travellers' tales of the day. Since Borrow hawked Bibles in Spain and Longfellow opened his "Tailor's Drawer," there has been little written about that country with the brightness and charm, the lightness of touch, and the feeling of absolute truth in impression and rendering, which we find here. Spain is not an easy country for the tourist. Sleeping-bags, insect-powder, a knack for foraging, and infinite patience are needed by all except those who ramp through the land under the flag of Cook. Further, it is really an Oriental country, and the Arabs and their ways have never been driven out. As is the Egyptian beggar, so is the Spanish; and the courtesy of the desert is that of Andalusia. Which means that he who would know beggars and courtesy, and all the rest, to their core, must have such a tact and such a vision as come only by very rare nature. And these for Americans in the last bitter days must be raised to the *n*th power. Probably no American man could do it. That Miss Bates was able, though in fears often, and aided from time to time by being mistaken for an Englishwoman, is a tribute to herself and her opportunities. By some fortunate chance, she enjoyed an access to Spanish family and social life that falls to few birds of passage; and her knowledge of Spanish and her easy *camaraderie* carried her over the fencements that surround the railway traveller and sightseer, into converse with beggars and babies, nuns and pilgrims.

Passing from Mrs. Gulick's Girls' School, exiled to Biarritz through the war, she was introduced to one circle of friends at San Sebastian, to another at Madrid, and yet another at Granada, where (in the terms of Spanish hospitality) she possessed several houses, and had the happiness of living for a month on the Alhambra hill in a villa kept by descendants of the Moors; to another at Seville through Holy Week—persistently called Passion Week, in the headlines—to another at Cadiz; and again swung back to Madrid, apparently for a lengthened stay in a *pension*, certainly the best means of coming to know a people that has yet been devised. With all this went a sleety, chilly day in Burgos, the city of the Cid; a too brief dream of Cordova and of the mosque, the rival of that in Damascus in which the faithful still worship; a Corpus Christi procession at Toledo, that dead, frozen town of mystery and art, but the town, too, of Lazarillo de Tormes, whose light-fingered scions still flourish; a wildly independent (for a lone female) journey down the "Silver Road" from Seville to Cadiz, the way that Columbus went and Cortes from the foot of the Golden Tower; and, finally, a pilgrimage through the Basque provinces to the oak of Guernica and St. James of Compostela, a shrine to which many have trudged, from the Wife of Bath to Sterne's Ass, and where the throngs of pilgrims and tourists still gather.

But such an itinerary gives little idea of the value and power of this book. Many a one could journey through it and come back with empty hands, or, worse, a notebook brimmed with the commonplace. Here there is fulness of the best. It is true that the chapters on the Alhambra could not fail to be overshadowed by Washington Irving. But a modern and grippe-struck Granada gives fresh scope, and dreams on the Generalife are broken now by the new Spain. The last sigh of the Moors becomes tears for the *repatriados*, and echoes of Arab poetry and the tales of magicians fade into the symbolic play of the young Granadine poet Angel Ganivet, dead at Riga in his prime, and the hopes which he had for his country. And so it is through all the book. Everywhere Miss Bates has known how to pass beyond towered cities and pageants to the people and the life working behind them and in them. Most striking of all is the way in which she brings out that the mediævalism of Spain is not yet crystallized and rigid, but is growing in its own way and producing its own peculiar phenomena. Thus, at Compostela on the feast of St. James, there can still be seen popular gambols liker those of the mediæval Abbot of Unreason than anything else. Eight wickerwork giants parade the streets, lead the processions, and take part in the solemn cathedral service. This in itself is not, perhaps, so much, but the striking thing is that these are no mere survivals, but still add to their numbers. Two of them, "the leaders and prime favorites, are regular *Punch* caricatures of modern English tourists. John Bull is a stout old gentleman, with side-whiskers, a vast expanse of broadcloth back, and a single eyeglass secured by a lavender ribbon. The British Matron, in a smart Dolly Varden frock, glares with a shocked expression from under flaxen puffs and an ostrich-feathered hat." On the high day of the feast, the six subordinate boobies, Frankish and Moorish pilgrims of the Old World, fall discreetly into the background, and these two modern absurdities go up into the Holy of

Holies, and dance to the music of guitars and tambourines before the high altar. Evidently, the Church still knows how to hold the Spanish populace.

Again, genuine ballad poetry, sprung from the people and current on the lips of the people, is so extinct elsewhere that we distinguish it from modern imitations by calling it "traditional." That does not hold in Spain. Most charming of all Miss Bates's chapters is the one describing the choral games of children in the streets and squares. There the little girls dance and pipe songs untiringly, songs that they all know, though they do not know when or where or from whom they have learned them. Nor are they simply of old, unhappy, far-off things; life and growth is still in them, and they tell of the things of the day. There is a weird lament for the dead young Queen Mercedes, a song full of energy and life for the murdered Gen. Prim; and a snatch of genuine traditional melody glosses into romance the unsavory Isabella II. Another of these ballads must have originated since the leaning tower of Saragossa fell in 1892. Yet all is not so modern. The fate of Mambrú is sung still, and there are even echoes of the Moors. These and more are rendered with a happiness which recalls Longfellow's happy hand. There can be no question that Miss Bates has a rare gift in turning lyric verses, and we trust that she will use it further.

Other vital matters touched lightly but clearly, to which we can now only allude, are the education of girls and women in Spain and the sociological questions that spring from it—life in a middle-class *pension* brings one very close to such problems; religion in Spain, friars and nuns, the devout and the frivolous, with lay-folk, pious, equivocal, and indifferent; the social status of Protestants, and the work which their missions can do—some very sane remarks; the democracy of Spain, with its peasant saints and the rich, soil-sprung, truth-seeing, and truth-telling realism of Velázquez and Cervantes; the charm and grace of Spanish women; gypsies; bulls; politics; above all, the jostling, shrieking contradictions and paradoxes, which make the Spanish race a permanent mystery to all but students of the East. It is a charming and sympathetic portrayal of that mystery which we have in the present book, and it can be safely commended.

The German Sectarians of Pennsylvania: A Critical and Legendary History of the Ephrata Cloister and the Dunkers. Vol. II., 1742-1800. By Julius Friedrich Sachse. Philadelphia: Printed for the Author. 1900.

As only 350 copies of this work have been printed for sale, it is clear that the number of persons interested in Ephrata and Ephratana is small. A certain feeling of regret will be experienced by some of these after perusing this exhaustive work — a feeling based on the conviction that there are now few additional facts to be discovered regarding the Ephrata Cloister and its inmates. It was only about thirty years ago that Ephrata and its books became known to students of colonial history, and interest was continually awakened by the discovery of new facts. Manuscripts or music books, type dug up in the fields around the old buildings, a hitherto unknown broadside or pamphlet from the brethren's press, and even old deeds or letters relating to the cloister inmates, have been brought forth from time to time as valuable finds. Of all the workers in this field, the present author has been the most indefatigable, and his collection of Ephrata curiosities probably stands unrivalled. In the garrets of many a farm-house in eastern Pennsylvania had lain for fully a century old letters, manuscripts, account-books, specimens of needlework and ornamental penmanship, and even official diaries of the cloistered community, until recently brought to light by Mr. Sachse. Legends of families that had ancestors connected with the cloister, facts gleaned from letters in European libraries, and the results of the study of the Ephrata literature itself, are here presented and critically analyzed. The volume contains 535 pages with 28 plates, 80 facsimiles of manuscripts and title-pages, and 135 other illustrations. Together with volume i., already noticed by us, it constitutes an historical investigation such as has rarely been attempted in this country.

The German Bible printed by Christopher Sauer at Germantown in 1743 is discussed in the first chapter, and many new facts are brought out regarding its history. As some sheets have been found bearing the watermarks of the Ephrata brotherhood, it is proved that some of the paper was made at Ephrata's mill. The binding of the greater part of the edition was also done there, as appears from notices and advertisements in Sauer's newspaper. The author indeed regards it as probable that the Appendix was printed at Ephrata, as this is in a different type from the rest of the book. Tradition, moreover, informs him that much of the type-setting and proof-reading at Germantown was done by members of Beissel's mystic brotherhood.

Printing probably began at Ephrata in 1744, but the earliest known imprint bears the date of 1745. This was 'Die Ernsthafte Christen-Pflicht,' a devotional book which has since been issued in many editions in Pennsylvania. It and several others were printed by the brotherhood for the Mennonites, the one best known being the great 'Martyr Book' of 1748, a folio of 1,468 pages, the largest American publication of the colonial period. Altogether about sixty books and pamphlets were printed at Ephrata, and facsimiles of the title-pages of the most important ones are given by the author with interesting historical and critical notes. Of several of the broadsides and smaller pamphlets only a single copy is known to exist, and the information afforded regarding them will be very welcome to collectors of Ephratana. Of most of the bound books, however, numerous copies have been preserved, and can still be found in the Mennonite and Dunker communities of eastern Pennsylvania.

The Ephrata cloister was famous for its vocal music, and numerous manuscripts of the notes have been found; to these the author devotes an interesting chapter, giving not only facsimiles of the originals, but the same translated into modern musical notation. The rules and discipline of the sisterhood, the mystical incantations practised in order to protect the buildings against fire, the visit of Israel Acrelius to Ephrata, the life of Conrad Weiser, the pilgrimage of Beissel to the Rogerines of Connecticut, and the Dunker settlements in the Antietam and Shenandoah valleys, are treated in different chapters. That Ludwig Höcker, the schoolmaster of the community, gave regular religious instruction to children on Sabbaths and Sundays, is clearly proved by a letter written by one who attended that class, and also by printed reward cards which have been found. This Sunday-school was discontinued in 1777, seven years before the time when Raikes first taught children on Sunday. The secular school of Höcker enjoyed a wider popularity, but the exercises which the author calls "higher mathematics" will be found on analysis to be nothing more than the extraction of square and cube roots of numbers.

Conrad Beissel, the mystic theosophist of Ephrata, was the spiritual and temporal head of the cloister. He was a man of small stature, well proportioned, of nervous temperament, and possessed of a magnetic personality. His first theosophic ideas, particularly those of celibacy, were derived from the writings of Gottfried Arnold, a Lutheran mystic of the seventeenth century. True Christianity could be secured only by overcoming the bonds of the flesh; true wisdom could be attained only by becoming united with the celestial Sophia. Man was originally created as a perfect being, combining both the male and female elements; through the fall of Adam, these were separated until they later became united in the body of Christ. To become regenerated and secure perfect happiness in the next world, purity of life and renunciation of self were necessary; also, by right living, by renouncing human love and marriage, by inward reflection, and by outward praise of God, one might hope, through Christ, to attain to a mental condition in which the celestial male and female elements were united—a condition of absorption closely akin in Beissel's mind, as Seidensticker has shown, to that of Nirvâna. The brethren looked forward to union with the spiritual bride, and the sisters to union with the heavenly bridegroom. This is the constant theme of the hymns, sermons, confessions, and proverbs that were issued from the Ephrata cloister.

To the details of this mystic philosophy Mr. Sachse does not devote sufficient space. The theosophical proverbs contained in the 'Theosophische Lectionen' of 1745 are, for instance, splendid examples for the illustration of the bearing of Beissel's religious principles upon ethics. Indeed, the whole system is one that must claim a certain admiration, and in the hands of a broader-minded man it might have become a power in the Christian world. But the cloister life at Ephrata was upheld only by Beissel's personality, and the principle of celibacy was fatal to its success. That Beissel had a "vast influence," as the author claims, must be respectfully denied, unless it be among his few devoted adherents, who probably never at any one time numbered over one hundred. Upon his death in 1786 the cloister rapidly declined, and his successor, the learned Peter Miller, who translated the Declaration of Independence into seven languages, had not the religious fervor necessary to keep up its peculiar customs. The cloister gained no new converts, and at the end of the eighteenth century only a few aged monks and nuns were left to tell the story of its prosperous days.

It is with regret that the note must be made that the art of binding is not so well understood by the publisher of this book as it was by the brethren of the Ephrata

press. The first volume is bound in green, while the second is in an unpleasant red, and its sheets become easily loosened from the backing in a single reading. The typography is good, as also are most of the cuts, but the writer or proof-reader has occasionally been at fault. On page 473 the honored name of J. Max Hark, the translator of the 'Chronicon Ephratense,' is metamorphosed into J. Mark Hart. The bibliography of the Ephrata works should properly have mentioned the number of pages in each book. These inadvertencies are doubtless due to haste, and may be cheerfully overlooked in view of the great amount of research done by the author, and the interesting manner in which he has presented the history of this unique American cloister.

The Human Ear: Its Identification and Physiognomy. By Miriam Anne Ellis. London: Adam & Charles Black; New York: Macmillan. 1900. Small 8vo, pp. x, 225, illustrated.

To some extent the shapes of the human ears are useful for purposes of identification; they differ in individuals, and they are rarely, if ever, alike on the two sides of the same head. That the character of the owner is indicated by his ears is not proven, and that there is an intimate connection between the mind of a person and the shapes of his ears is improbable. The present is not a scientific book; it is to be placed with popular attempts such as phrenology, physiognomy, palmistry, etc., with claims beyond what they can substantiate, but with perhaps a small amount of science in their foundations. The text is largely made up of prattle about ears, some of it much resembling that of a fortune-teller. That the ear will show which is the quality with the strongest staying power, so that it may be relied on to help the other powers to keep the whole up to the mark without any exceptional talent; that the narrow ear seldom adapts itself to anything; that wherever a little knot occurs in the helix, that division possesses a power of specializing; that where the helix is shaped like a round roll instead of a folded-over rim, the owner instinctively aims at using and discussing laws of all sorts, whether abstract or concrete, that deal with large masses of people, or of ideas; that when the top of the left ear and the bottom of the right ear are in no way remarkable, the owner is not likely to be a notability in art, science, or literature; that each ear announces the way in which half of an undertaking will be carried out, the right ear the first half, in right-handed persons; and that although the ear indicates qualities waiting to be developed, we cannot tell which of them will be unfolded in the future, are statements which sufficiently expose the author's drift. It is said of Charles Dickens's left ear that it was nicked where division 3 should be, and the part is pushed outwards with a square form, showing an abundant flow of words; but it is not stated whether the shape of the ear or the flow of words was the determining factor.

Lavater receives a good deal of attention; other early authors are looked up without marked success. In the short notice of Albertus Magnus there is no mention of publication of what he wrote, or how he concerned himself with the ear. Porta, called Della Porta, has several pages; it is said that "his treatise on the Physiognomy of Man in six books, was printed in Venice in 1644, in an Italian translation. The second book refers to ears." This makes it appear as if only the translation was published, and that it was in six books, of which the second was devoted to ears. In 'De humana physiognomonia Ioannis Baptistiæ Portæ Neapolitani Libri iiii., MDXCIII, Hanoviæ,' only the eighth of the fifty-five chapters in the second book of the four books treats of ears. Those who are fond of discussing relations, usually more or less coincidental or supposititious, between the abilities and accomplishments of a person and his external features, will find much to interest them in Miss Ellis's book.

The Woodpeckers. By Fannie Hardy Eckstorm. Boston: Houghton, Mifflin & Co.

This little volume is a most welcome addition to the long list of popular bird books, and one quite out of the ordinary in its contents and method of treatment, being confined to a single family of North American birds, and having principally in view the intimate relation of structure to habits. The many peculiarities of this group of birds, in respect both to their ways of getting a living and special modifications of structure to this end, render them of exceptional interest. Mrs. Eckstorm shows commendable familiarity with her subject, her chapters being evidently based on original observation, as regards not only the habits of our American woodpeckers, but the modifications of bill, feet, tongue, and tail that so eminently adapt them to their peculiar rôle in Nature's economy. In her detailed accounts of the habits of particular species, she is not unmindful of their important economic relations to man, and carefully discriminates between the bad traits of a few and the general beneficent habits of the group as a whole. That she has a good grasp of the philosophy of her subject, and an easy way of imparting it to others, is evident in her chapter on "How Each Woodpecker is Fitted for his Own Kind of Life." After reviewing the points of structure in which woodpeckers differ from each other, and the correlated differences in habits, she presents the following summary and comment, which exhibit fairly the character and spirit of the book:

"As we try to group these particulars under general heads, we see that we have observed three things: That the structure of a bird is adapted to its kind of life; that the structure varies by small degrees with the kind of life; that the kind of life is conditioned largely upon the kind of food and upon the method of procuring it, more particularly the latter.

"These are not so much different truths as three aspects of one truth. When we study the first, we see why birds are grouped together into orders and families; we study their resemblances. When we observe the second, we see why they are divided into species, for we note their differences. But when we consider the third, and reflect that birds have the power to choose new kinds of food or new places and means of getting it, we see how it is that there can come to be new kinds of birds, new sub-species and species, springing up from time to time. Wonderful and improbable as it seems, there is more reason to believe than there is to doubt that new kinds of animals and plants are constantly in process of making; that the laws of change are constantly at work adapting creatures to their surroundings, or crushing them out of existence because they will not learn new ways."

'The Woodpeckers' is well calculated to inspire interest in nature study. An appendix contains a "Key to the Woodpeckers of North America," followed by "Descriptions of the Woodpeckers of North America," whereby each species can be readily identified. The five colored plates are by the well-known bird artist, Louis Agassiz Fuertes, and the cuts in the text, illustrating structural parts, by J. L. Ridgway.

Shakespeare in Music. By Louis C. Elson. Boston: L. C. Page & Co.

In the Boston Public Library there are more than 3,250 different works relating to Shakspere. He has been discussed from nearly every possible point of view, both wisely and foolishly. Concerning his relations to music much has been written, but Mr. Elson has capped the climax with his monograph of 354 pages on this subject. It seems a goodly number of pages, yet, after perusing the book, one is agreeably surprised to find that there are not too many, and that the author has succeeded in making every chapter entertaining. Mr. Elson's long experience as a lecturer came to his aid here. Though fond of antiquarian research, he never allows it to degenerate into pedantry, and always bears his reader in mind.

There is so much of music in Shakspere's writings that Dr. Johnson thought it necessary to apologize for the poet's love of that art; which leads Mr. Elson to remark that Johnson, "most unmusical of commentators," ought never to have edited Shakspere. There are certainly many passages in the text which must remain unintelligible to one ignorant of music. Mr. Elson has endeavored to throw light on all the dark points, and the literary commentators will have to consult him hereafter. They will be interested, among other things, in his suggestion that the word "dumpe" may have been derived from the Bohemian "dumka," the melancholy dance of which Dvorák is so fond.

Among the topics discussed are the musical instruments referred to by Shakspere, such as the consorts, fifes, viols, recorders, virginals, lutes, bagpipes (for which, we are glad to see, the author has a good word); the status of musicians, and the musical life of England in Shakspere's time; the dances of the period; drinking-songs, table music, ballads, mad songs; settings of the lyrics, and the use made of the dramas by opera composers and symphonists, etc. There are abundant illustrations in musical type, both mediæval and modern, and the poet's text is quoted freely. Mr. Elson concludes that Shakspere knew some of the technicalities of music and that he was himself a singer, his vocal allusions being more detailed and exhibiting a surer hand than those connected with instrumental music. He also brings forward a musical argument against the Baconians.

BOOKS OF THE WEEK.

Arnold, Edwin. Death — and Afterwards. New Amsterdam Book Co. 75 cents.
Aulard, A. Histoire Politique de la Révolution Française. Paris: Armand Colin. 12 fr.

History

RECENTLY PUBLISHED.

GORDY'S POLITICAL PARTIES IN THE UNITED STATES Vol. I., 1783-1809. 598 pp. 12mo. $1.75, *net special.*

A thoroughly revised edition. Vol. I. by itself is a well-rounded history of the Federal period.

To be completed in four volumes: the second may be expected early in September.

American Historical Review: "Treating with much care and considerable detail the formation of the Constitution, the great constructive measures of the early congresses, and the foreign and international difficulties of the new government, the work is *really more than a history of parties.* . . . Few writers have ever held the balance so firmly true, while weighing Hamilton against Jefferson. . . . *The candor, fairness, and good judgment* of Prof. Gordy are well displayed. . . . Careful and thoughtful students will find his book useful for reference, *sane, intelligent, reasonable.*"

McCRACKEN'S RISE OF THE SWISS REPUBLIC. **Second edition, revised and enlarged.** xi + 423 pp. 8vo. $2.00.

Prof. Albert B. Hart of Harvard: "This is the most convenient and serviceable book in English on Swiss history and development, and Americans have much to learn from the experience of our sister republic."

KUHN'S GERMAN AND SWISS SETTLEMENTS OF COLONIAL PENNSYLVANIA **A Study of the So-called Pennsylvania Dutch.** 268 pp. 12mo. $1.50.

JELLINEK'S DECLARATION OF THE RIGHTS OF MAN AND OF CITIZENS, Translated by Prof. MAX FARRAND of Wesleyan University. 16mo. (*In press.*)

LIGHT on LEGAL QUESTIONS.

There are many questions in regard to legal terms, legal history, and the principles of law which arise in ordinary reading and experience. When these questions are not serious enough to take to a lawyer, they can generally be solved by reference to **Rawle's Revision of Bouvier's Law Dictionary** (2 vols., $12.00 *net*), a standard book, ably re-edited and brought down to date, which ought to be among the reference books in every public, school, or private library. Maine Coast.

FOR SALE—On Penobscot Bay. A beautiful tract of 400 acres, with nearly four miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches; is much diversified in its surface with woodland and open fields, and commands everywhere most exquisite views of bay, islands, mountains, and ocean. There is a steamboat landing near the tract, giving daily connection with trains and boats to and from Boston. The property is on the main land, within five miles of Islesboro and Castine. It has several farm-houses, a pond, and trout-brook. It will be sold at a low price per acre to settle a joint account, and offers an exceptional opportunity for a gentleman wishing an independent estate, or for subdivision.

Address J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

WANTED.—A COPY OF THE MEMOIRS (Diary), of John Quincy Adams. 12 vols., J. B. Lippincott & Co. Address PORTLAND ACADEMY, Portland, Oregon.

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, New York.

"MAYA: A Story of Yucatan." By WILLIAM DUDLEY FOULKE. 12mo. Illustrated. $1.25.

"A delicately written story, half fact, half fancy, based upon what is known of the later history of the Mayas, the highly civilized artistic people whom the Spaniards discovered and despoiled in Yucatan."—*Manchester (Eng.) Guardian.*

"It is a contribution of value to the literature of the conquest, displaying as it does the life of one of the most interesting of American peoples."—*St. Louis Globe-Democrat.*

"Familiar acquaintance with the traditions and curious relics of early Yucatan enables the author to interweave much folklore and out-of-the-way information, which lends an air of enchantment to the whole story."—*Watchman, Boston.*

"The unusual and romantic setting given to a story even more ancient than the wonderful ruins which Mr. Foulke calls 'the noblest monuments of Aboriginal art,' is especially interesting and instructive."—*Christian Register, Boston.*

HOUGHTON, MIFFLIN & CO.'S

New Books

English Politics in Early Virginia History

By ALEXANDER BROWN, author of "The Genesis of the United States," "The First Republic in America," "The Cabells and their Kin." 8vo, $2.00.

Another sheaf garnered by Mr. Brown from his assiduous and intelligent cultivation of the early history of our country. It is a careful study of the sources of the American government, and of the conditions under which the colonies established political institutions, especially the influence of English policies and politics.

The Story of Eva

By WILL PAYNE, author of "The Money Captain," etc. 12mo, $1.50.

A strong character story. A young woman from the West and a young man from the East meet in a business house in Chicago, where both are employed. After various experiences, a fire gives them a moral shock, which is for them the beginning of a higher life. The story finely describes the development of their nobler selves. It has a powerful moral, and is of uncommon literary quality.

The French Academy, Corneille

By LEON H. VINCENT, author of "The Bibliotaph" and "Hôtel de Rambouillet." 2 vols., 16mo, artistically printed and tastefully bound, $1.00 each.

Mr. Vincent's account of the French Academy, its high objects, and its illustrious membership, is written with full knowledge and admirable skill. Equally valid and attractive is his sketch of the great dramatist Corneille.

Falstaff and Equity

By CHARLES E. PHELPS, Judge of the Supreme Court of Baltimore. With an introduction by the well-known Shakespearean lecturer, HENRY A. CLAPP, Esq. 12mo, $1.50.

A scholarly and entertaining book on the humor and legal knowledge of Shakespeare. It shows how Shakespeare became familar with law, and will have a special interest for lawyers who are students of Shakespeare.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., BOSTON
11 EAST 17TH STREET, NEW YORK

William Lloyd Garrison, 1805-1879.

The Story of his Life, told by his Children. Illustrated with over 40 portraits, views, etc. 4 vols., 8vo, gilt top, $8.00 *net.*

This important work (originally published by the Century Company) has been reduced in price from $12.00 to $8.00, a remarkably low sum for what is unquestionably one of the handsomest products of the American press.

"A masterpiece of modern historical biography. . . . To call the work a mine of information would be to convey a false impression; it is rather a well-arranged library in which attendant hands are always present to point the way to the exact thing wanted. . . . Finally, the work, while as instructive as the driest manual, is as interesting as a romance."—*Boston Advertiser.*

"A biography of almost world-wide importance. . . . It will be a standard work of reference."—*Charleston News and Courier.*

"In fact, Southern history is not complete without this work."—*Atlanta Constitution.*

"It is, for the anti-slavery record, final; and the service done to our national history is as great as that to a father's memory. Its one eminent trait, however, is its justice."—*Atlantic Monthly.*

*** For sale by booksellers. Sent, postpaid, on receipt of price by the publishers.*

"One of the strongest novels of the season. There is hardly anything in recent fiction more original than the tone and incident of this fascinating book which deals so capably with the most powerful human emotions."—*Buffalo Courier.*

To be published about April 15th.

ANTONIA

AN HISTORICAL NOVEL OF COLONIAL NEW YORK

By JESSIE VAN ZILE BELDEN

Beautifully Illustrated. $1.50

Mrs. Belden has written a tale of absorbing interest, and has studied her characters well. The period she has used is the early Dutch Colonial, and the plot is laid about New York, along the Hudson, and what is now "Schenectady." The book is sure to be one of the popular ones of the year. Its appearance and manufacture will be of unusual value, the book being designed and set up by the well-known Heintzemann Press, and being embellished with six full-page drawings in black and white, by Amy M. Sacker.

To be published about May 1st

A SUNNY SOUTHERNER

By JULIA MAGRUDER

Author of "A Magnificent Plebeian," "The Princess Sonia," etc.

Profusely Illustrated. $1.25

A charming love story, the scene of which is laid for the most part in Virginia, although it later shifts to Philadelphia and New York. The plot revolves about two principal characters, a Southern heroine and a Northern hero, and the story is written in Miss Magruder's usual clever style.

This book will be uniform in appearance and attractiveness with "Her Boston Experiences," and like "Her Boston Experiences," "A Sunny Southerner" also ran serially in the *Ladies' Home Journal.*

To be published about June 1st

THE HISTORICAL MEMOIRS BY

JOHN HENEAGE JESSE

IN FIFTEEN VOLUMES, AS FOLLOWS:

Memoirs of the Court of England During the Reign of the Stuarts, Including the Protectorate of Oliver Cromwell ..... 6 vols.

Memoirs of the Court of England During the Reigns of William and Mary, Queen Anne, and the First and Second Georges ..... 4 vols.

Memoirs of the Pretenders and Their Adherents ..... 3 vols.

Historical and Literary Memorials of the City of London ..... 2 vols.

THE original editions of these fascinating Historical Memoirs are rare and out of print. The only edition existing is a high-priced one, published by subscription, so that we are confident in offering this new and handsome edition to the trade that we have a set of books of value and importance. We are especially encouraged in this belief, owing to the success of our previous editions for the trade of the works of CATHERINE CHARLOTTE, LADY JACKSON, and the COURT MEMOIR SERIES.

In appearance, the JESSE MEMOIRS will very much resemble the COURT MEMOIR SERIES. The illustrations, however, will be even more numerous and attractive, there being not less than eight etchings or photogravures in each volume.

The striking cover design is by Amy M. Sacker.

Sold separately, or in complete sets, in cloth, or in complete sets only in three-quarters morocco.

Per vol., cloth ..... $2.50 **Per Set, 15 vols., cloth $37.50**

Per set, 15 vols., three-quarters morocco $75.00

April Publications

GENERAL MEADE.

By ISAAC R. PENNYPACKER. A new volume in the Great Commanders Series, edited by Gen. James Grant Wilson. With illustrations and Maps. 12mo, cloth, $1.50.

A discriminating, compact, and interesting study of the victor of Gettysburg, including his experiences in the Mexican War and services during the Peninsular campaign and afterward. A forcible argument is presented to show that General Meade was underrated by the Commander-in-Chief, and that he was entitled to the promotion given to another.

A SAILOR'S LOG

Recollections of Forty Years of Naval Life, by Rear Admiral ROBLEY D. EVANS. One vol., 8vo, illustrated, $2.00.

Admiral Evans's experiences have covered two important wars, a campaign against Alaskan pirates, hunting trips in China; service in every part of the world. It is a work of historical importance.

THE SPANISH PEOPLE:

Their Origin, Growth and Influence. By MARTIN A. S. HUME, author of "The Great Lord Burleigh," "The Courtships of Queen Elizabeth," and editor of the "Calendar of Spanish State Papers," etc. The first volume in the Great Peoples Series, edited by Dr. York Powell, of Oxford University. 12mo, cloth, $1.50 net.

Dr. Hume's story of the evolution of the Spanish people is told from a fresh point of view. He writes with all the advantages of the modern specialist, and his account of the development of the Spaniard will be found fresh, valuable and entertaining.

BIRD-LIFE

A Guide to the Study of Our Common Birds. By FRANK M. CHAPMAN, Associate Curator of Mammalogy and Ornithology, American Museum of Natural History; Author of "Handbook of Birds of Eastern North America," "Bird Studies with a Camera," etc.

New Popular Colored Edition, with numerous text cuts and seventy-five full-page lithographic plates, illustrating 100 birds in their natural colors after drawings by Ernest Seton-Thompson. $2.00.

M C M I

WAR'S BRIGHTER SIDE

By JULIAN RALPH, assisted by RUDYARD KIPLING, A. CONAN DOYLE, LORD STANLEY and others. With introduction by LORD ROBERTS. One vol., 12mo, $1.50.

Mr. Ralph vividly sketches the humorous and exasperating features of newspaper-editing in the field. A book so rich on the literary side and so picturesque in the circumstances of its origin deserves to be called unique.

Boarding and Day School for Girls. Students are prepared for college.

MARYLAND, Baltimore, 122 and 124 W. Franklin St.

EDGEWORTH BOARDING and DAY School for Girls—38th year will begin September 27, 1900. Mrs. H. P. LEFEBVRE, Principal. Miss E. D. HUNTLEY, Associate Principal.

MARYLAND, Catonsville.

ST. TIMOTHY'S SCHOOL for Girls re-opens Sept. 20, 1900. Prepares for College. Heads of School, Miss M. C. CARTER, Miss S. R. CARTER.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School.
Address the Dean,
SAMUEL C. BENNETT.

MASSACHUSETTS, Yarmouthport.

ELDRIDGE HALL.—Select School for Girls. Healthy location. Especial advantages for music, modern languages, domestic science, and English branches. For particulars address Miss SHOVE or Fräulein GROTE.

MISS ANABLE'S Boarding and Day School for Girls. Established in 1848. Circular on application. Opened Sept. 27. 1350 Pine St., Phila., Pa

MISS REYNOLDS' School, 66 W. 45th St., New York.—Special students admitted to regular classes. A few young girls received into the family.

Clark University
SUMMER SCHOOL,
WORCESTER, MASS.
July 15-27, 1901.

Courses in Psychology, Biology, Pedagogy, Anthropology and Mathematics. For circulars and further information address
LOUIS N. WILSON, Clerk.

McGILL UNIVERSITY,
Montreal, Canada.

William Dow Chair of Political Economy.

The Governors of McGill University are prepared to receive applications for appointment to the newly founded Professorship of Political Economy. Salary $2,500 per annum. Candidates are requested to forward applications, with any testimonials and references they may desire to submit, on or before May 15th, to W. VAUGHAN, Secretary, McGill University, Montreal, Canada.

The Gilman School
For Girls
Also called *The* Cambridge School

Pleasant home life, trained teachers, small classes, varied courses, complete laboratories, healthful surroundings, ample playgrounds, highest ideals. The Manual describes the school. Introduction required.
Arthur Gilman, A. M., Director, Cambridge, Mass.

Miss Baldwin's School for Girls
Preparatory to Bryn Mawr College

MISS FLORENCE BALDWIN, Principal. Within ten years more than one hundred and twenty pupils have entered Bryn Mawr College from this school. Diplomas given in both General and College Preparatory Courses. Fine fire-proof stone building. 25 acres beautiful grounds. For circular, address the Secretary, Bryn Mawr.

New York University
SUMMER COURSES.
SEVENTH YEAR, JULY 8-AUGUST 16.
Forty Courses in Fourteen Departments.

University Heights combines the advantages of city and country. For "Announcement" address MARSHALL S. BROWN, University Heights, New York City.

Rogers Hall School
For girls of all ages. Endowed.
Mrs. E. P. UNDERHILL, M. A., Prin., Lowell, Mass.

Educational.

Five Weeks of Outdoor Study

under competent leadership—study of nesting birds, of insect life, of trees and flowering plants and ferns, and of the varied Cheshire County landscape—are offered to men and women by

The Alstead School of Natural History,
ALSTEAD CENTRE,
New Hampshire,

whose third session will open on Tuesday, July 2, 1901.

The work of the classes is serious and earnest; the way in which the subjects are approached is new. The aim throughout is to gain close acquaintance with the things studied—such acquaintance as comes only from careful, systematic observation in the open air.

The instructors are Ralph Hoffmann, Merritt Lyndon Fernald, Hollis Webster, and William L. W. Field.

The membership fee of one hundred and fifty dollars covers all expenses of board, lodging, tuition, and excursions for the entire session.

For detailed information, early application should be made to the Secretary, W. L. W. Field, at Milton, Massachusetts.

University of Michigan
SUMMER SESSION,
June 24—August 9, 1901.

Courses will be offered in all leading Academic subjects, in Law and in Engineering.

For information and circulars address E. H. Mensel, 721 Monroe Street, Ann Arbor, Mich.

A PRACTICAL OUTING. Vacation School for Boys, Oxford, Me., July and August. Cottage homes. Study and recreation delightfully combined. Weekly excursions in geology, botany, etc. Golfing, swimming, boating, fishing. Coaching trip through the White Mts. A. F. CALDWELL, A.M., Prin.

School Agencies.

THE FISK TEACHERS' AGENCIES.
EVERETT O. FISK & Co., Proprietors.
4 Ashburton Place, Boston; 1505 Pa. Ave., Washington; 156 Fifth Ave., New York; 414 Cent. Bld., Minneapolis; 533 Cooper Bldg., Denver; 4 Evans Bldg., Oskaloosa; 203 Mich. Blvd., Chicago; 525 Stims'n Bk, Los Angeles; 420 Parrott Building, San Francisco.

ALBANY TEACHERS' AGENCY, 81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Rents and sells School Property. HARLAN P. FRENCH, Proprietor.

SCHERMERHORN Teachers' Agency, Recommends best schools, tutors, governesses. HUYSSOON & ROCKWELL, Mgrs., 3 E. 14th St., N. Y.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and tells you **that** is something, but if it is asked to about them recommend a teacher and recommends you, that is more. Ours **Recommends**
C. W. BARDEEN, Syracuse, N.Y.

RECENT ISSUES

COLUMBIA UNIVERSITY

Contributions to Philosophy, Psychology, and Education

Vol. VII., No. 2. THE ECONOMIC ASPECT OF TEACHERS' SALARIES

By CHARLES BARTLETT DYKE, A.M., Professor of Education in Hampton Institute, Virginia. 8vo. Paper. Pp. 84. price, $1.00, *net.*

"In calling the attention of the public to the unfortunate condition of the teaching profession in this country, and in suggesting the factors involved in the problem, Professor Dyke has performed a distinct service of no small value. The study gives evidence of careful research."—*Pedagogical Seminary*, July, 1900.

Vol. VII., No. 3. EDUCATION IN INDIA

By WILLIAM I. CHAMBERLAIN, Ph. D., President of Vellore College, India. 8vo. Paper. Pp. 107. Price, 75 cents, *net.*

"This is a work to be read by students of religion as well as by educationists. . . . Dr. Chamberlain's account of the reaction of the West upon the East is deeply interesting and suggestive."—*The Outlook*, January 27, 1900.

"It gathers up the main facts in Indian educational development as no other book that we know does."—*Madras Mail*, June 12, 1900.

Vol. VII., No. 4. HORACE MANN IN OHIO

A Study of the Application of His Public School Ideals to College Administration. By GEORGE ALLEN HUBBELL, A.M., sometime Professor at Antioch College. 8vo. Paper. Pp. 70. Price, 50 cents, *net.*

"The world knows Horace Mann and his educational labors and teachings in Massachusetts. His transference to a new and practical field in Ohio in the latter part of his life, which was so very critical for a mind of his ideals and nervous temperament, has never been adequately written up, and Mr. Hubbell, who was a pupil there, has here performed a real service."—*Pedagogical Seminary*, July, 1900.

Vol. VIII., No. 1. IMITATION IN EDUCATION

Its Nature, Scope, and Significance. By JASPER NEWTON DEAHL, A.M., sometime Fellow in Education, Teachers' College, Columbia University. 8vo. Paper. Pp. 103. Price, 60 cents, *net.*

Vol. VIII., No. 2. THE HISTORICAL DEVELOPMENT OF SCHOOL READERS AND OF METHOD IN TEACHING READING

By RUDOLPH R. REEDER, Ph.D., sometime Instructor in Theory and Practice of Teaching, Teachers College, Columbia University. 8vo. Paper. Pp. 92. Price, 60 cents, *net.*

BROWN BROTHERS & CO.,

NO. 59 WALL STREET, NEW YORK.

A SUMMER HYMNAL. A Romance of Tennessee. By JOHN TROTWOOD MOORE. Illustrated by STANLEY M. ARTHURS. **$1.25.** 12mo. Cloth extra. Mr. Moore has much of the quality displayed by James Lane Allen in his earlier work, "A Kentucky Cardinal." The scene of his romance is laid in the blue-grass region of Tennessee, and his pages are rich with tender sentiment, shrewd philosophy, poetic feeling, and an exquisite humor. Those who have read his charming short story, "Ole Mistis," will warmly welcome his first novel, and new readers are sure to be delighted. "Old Wash," the negro character who figures in some of Mr. Moore's short stories, reappears in this book.

THE TOWER OF WYE. A Romance. By WILLIAM HENRY BABCOCK. Illustrated by GEORGE GIBBS. **$1.50.** 12mo. Cloth extra. This is a story of early Maryland colonial life, full of incident and interest. Mr. Babcock has, more artistically than any other writer, caught the atmosphere of haze and marvel through which newcomers to the Western World saw all things. His book is new in treatment and holds the reader's attention fascinated from beginning to end.

OCTAVE THANET says: "It seems to me the best thing you have done, and Richard Smith a right valiant, noble gentleman. You have, I think, caught the very spirit of the time."

IN SEARCH OF MADEMOISELLE. By GEORGE GIBBS. Illustrated by the Author. **$1.50.** 12mo. Cloth extra, ornamental. Mr. Gibbs, the artist, in this, his first novel, deals with the romantic and highly picturesque episode in American history of the struggle between the French and Spanish for the possession of Florida. This furnishes the background for a charming story of the love of an Englishman for Diane de la Notte, a French Huguenot of noble family, who has been exiled from her native land.

CYRUS TOWNSEND BRADY says: "Mr. George Gibbs has chosen the most romantic and terrible episode in the whole range of American colonial annals as the historical basis of his vivid romance. He writes as he paints, with graphic force and spirit."

JOHN HABBERTON writes: "I've read your 'In Search of Mademoiselle' with great interest. I must congratulate you on your success in retaining throughout the novel the old-time atmosphere in which you began. No writer of historical novels has done this better than you; few have done it so well."

The Novels of Elizabeth Stoddard. (MRS RICHARD HENRY STODDARD.) *Library Edition. TWO MEN. TEMPLE HOUSE. THE MORGESONS.* Each $1.50. 12mo, with photogravure portraits. "They are essentially modern and in keeping with the choicest types of recent fiction . . . the pioneers of something new and real in the novelist's art. Mrs. Stoddard's novels appeal to us through a quality of their own. Style, insight, originality, make books like 'Two Men' and 'Temple House' additions not merely to the bulk of reading but to literature itself."—*Edmund Clarence Stedman.*

HENRY T. COATES & CO., Publishers, PHILADELPHIA.

LONGMANS, GREEN, & CO.'S NEW BOOKS

Bolingbroke and His Times

By WALTER SICHEL. With two Portraits in photogravure and Index. 8vo. Pp. x–550. $4.00.

This volume embraces the whole public career of the first Viscount Bolingbroke and the complete reign of Queen Anne. It is an attempt to present from original sources, and with the fresh materials recently to hand, some adequate portrait of a great genius and of the crowded background in which he moved.

Atonement and Personality

By R. C. MOBERLY, D.D., Regius Professor of Pastoral Theology and Canon of Christ Church, Oxford. 8vo, $4.00.

The Life and Times of Cardinal Wiseman

By WILFRID WARD, Author of "William George Ward and the Catholic Revival." New and Cheaper Edition. 2 vols. Crown 8vo, $4.00.

Ballast

A Novel. By MYRA SWAN, Author of "The Unattainable," etc. Crown 8vo, $1.50.

In Tibet and Chinese Turkestan

Being the Record of Three Years' Exploration.

By CAPTAIN H. H. P. DEASY, late 16th Queen's Lancers, Gold Medallist of the Royal Geographical Society. With Appendices, Maps, and Illustrations. 8vo, $5.00 *net.*

The most important work was done in Western Tibet and in the valley of the Yarkand River, where large tracts of previously unexplored country were surveyed, necessitating considerable alterations in all existing maps. The book tells again the old story of predominating Russian power, and the corresponding exclusion of other nations, and from this point alone it is entitled to recognition.

Charles William Ferdinand, Duke of Brunswick

An Historical Study, 1735-1806.

By Lord EDMOND FITZMAURICE. With map and 2 Portraits. 8vo, $1.50 *net.*

*** The subject of this study is the famous German General and Statesman. In 1806 he was appointed leader of the Prussian army, and was mortally wounded at the battle of Auerstadt in the same year. He was the father of the Duke of Brunswick killed at Quatre Bras, and also of Queen Caroline, the wife of George IV.

LONGMANS, GREEN, & CO., Publishers, 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, APRIL 18, 1901.

The Week.

Monday's decision of the Supreme Court, holding unconstitutional and void a part of the War Revenue Law, is ominous for the Government's Imperialistic policy of taxation. The point at issue was the right to levy a stamp tax upon an export bill of lading. By the majority of the Court it was held that this tax is, in effect, a tax on exports, and therefore prohibited by the Constitution. It will not be forgotten that a powerful part of Mr. Carlisle's argument before the Supreme Court was directed to the contention that the customs tax which American exporters had to pay on introducing their goods into Porto Rico and the Philippines was equivalent to an export tax. Surely it would seem, by parity of reasoning, that if a trifling stamp tax on a bill of lading is obnoxious to the Constitutional prohibition, a much heavier tax on the goods themselves must be set aside as unconstitutional. We know nothing, of course, about the working of the Court's mind in the larger cases yet to be decided, and judges can turn sharp corners, on occasion, like other mortals; yet this decision certainly looks toward a denial of the Government's pretension to tax goods arriving from or going to Porto Rico or the Philippines—or, as Attorney-General Griggs was forced to put it, under stress of argument, merchandise passing between Arizona and Texas.

Almost as significant as the decision itself was the refusal of the Court to be influenced by the argument from unpleasant consequences. It had been maintained by learned counsel that if the tax on bills of lading were to be declared unconstitutional, tonnage taxes and stamp taxes on ships' manifests must also fail. But Judge Brewer, who handed down the opinion, quickly disposed of this. "The validity of such taxes is not before us for determination," he said, "and therefore we must decline to express any opinion thereon, and yet it may not be improper to say that even if the suggested result should follow, it furnishes no reason for not recognizing that which in our judgment is the true construction of the Constitutional limitation." Here, too, is an intimation which will send cold shivers down the Imperialistic back of ex-Attorney-General Griggs. Did he not spend hours in haranguing the Court to show that it should not decide against the Government, because, if it did, it would make the country look ridiculous? How painful it is, then, to find these cold-blooded judges saying that it is their duty simply to construe the law and the Constitution, and let those take care of the absurd consequences who are responsible for them. It is, accordingly, conceivable that the Supreme Court will not think Mr. Griggs's dread of looking ridiculous, or even the President's, a valid legal argument.

The dangers of a despotic military government at a distance from home were well illustrated in the War Department's last mail from Gen. MacArthur. This contained Gen. Wheaton's disapproval of the action of a military commission, headed by Capt. Robert K. Evans, Twelfth Infantry, in sentencing to death five Filipinos, four on the charge of murdering an American soldier, and one because of allegations that he was a guerrilla. In the latter case the prisoner was not allowed to have counsel or to plead not guilty, and no witnesses were called to testify. In the trial of the other four Filipinos, Gen. Wheaton found that the case was not tried on its merits, the Commission taking no evidence, although the names of seven witnesses were appended to the documents. Such a travesty of justice could not be surpassed in the wilds of Mongolia. Capt. Evans, who has hitherto borne an excellent reputation, will escape with Gen. Wheaton's reprimand. It is a pity that he cannot be deprived of his commission, for the effect that it would have upon the rest of the army. The incident is an irresistible argument for the immediate introduction of civil rule in the Philippines.

An interview with President Schurman on Cuban affairs was printed in the *Herald* of Monday morning, dated at Havana. The general aim of the deliverance is to sustain the Platt amendment and urge the acceptance of it by Cuba. It contains some self-contradictions, however, and some omissions which should be noticed. The first paragraph, for example, says:

> "The people of Cuba are less excited over the menace to Cuban sovereignty supposed to be contained in the Platt amendment than are the politicians of Havana. Indeed, business men and owners of property universally favor an immediate acceptance of the amendment, though many told me they did not dare state so publicly."

But why should owners of property be afraid to avow any opinion to which the people of Cuba are not opposed? If their timidity is due to the fact that the politicians are opposed to the Platt amendment, we have presented to us a singular phenomenon—that of politicians taking a line of action contrary both to the masses and the classes. No such thing has ever been known on the American continent. It must be peculiar to the islands. A little later in the same interview, Mr. Schurman says that he has been "surprised by the earnestness with which both white and colored persons—colored perhaps more than white—have declaimed to me against the amendment as a menace to their liberties, and an insidious scheme for reducing them to colonial dependence as oppressive as that from which the war with Spain delivered them." So it appears, after all, that if the owners of property do not dare to express themselves in favor of the Platt amendment, they are afraid of the people rather than of the politicians.

"The knowledge of these people," says Mr. Schurman, "is ill proportioned to their zeal." The danger they see in the Platt amendment "has no existence"; it is "a product of their imagination." Is that quite true? The Platt amendment authorizes us to intervene in the affairs of Cuba "for the protection of life, property, and individual liberty." These are words of very wide application. They give the Federal Government more power in Cuba than it possesses in New York or in Louisiana. If, in the judgment of the President of the United States, life, property, and individual liberty are not safe in Cuba, then, under the Platt amendment, he can "intervene," but he cannot do so in New York or Louisiana except at the request of the Legislature of the State or of the Governor, in case the Legislature cannot be convened. What is a menace to life, property, and individual liberty? An attempt at lynching is certainly a menace to life. A riot growing out of a labor strike is a menace to both life and property. The suppression of a newspaper and the imprisonment of its editor constitute an attack on both property and individual liberty. The obvious truth is, that under this clause anybody in Cuba can make a case for foreign intervention by simply fomenting disorder, and then it depends upon the state of mind of somebody outside of Cuba to decide whether the disorder is of sufficient magnitude to warrant intervention, and how much intervention is necessary. Really it seems to us that the knowledge of these people as to the character of the Platt amendment is superior to that of their critic.

That the American claim for indemnity in China should be an example of moderation was to be expected; and the proposal to the other Powers to reduce their joint claim to a sum within the power of China to pay, is but in keeping with our Government's clear-cut and honorable attitude throughout these negotiations. It has perhaps saved the whole situation that this country and

Japan have refused to reckon indemnities *à la Russe*, and have, through their own moderation, gained the right to appeal for a like wisdom on the part of the more grasping Powers. Nothing could show better than the present instance that it is a genuine moral ascendancy that our Government has gained in Chinese councils. Our small military contingent played its part well, but it was the steadfastness of our Administration in opposing one or two simple principles of international morality to the suspicions and covert desires of the other Powers that really gained us the primacy. And, curiously enough for such as deny that ordinary morals have aught to do with policy, this simple and honorable attitude is likely enough to pass in history for high diplomacy.

No little interest attaches to the returns of this country's foreign trade in March, published by the Treasury on Monday. Our unprecedentedly large credit balance on merchandise trade account, which has played its part in the present industrial revival, has had three well-known causes. Europe's unusually large need for foodstuffs, after a harvest failure of its own, came first. It was followed by an almost equally urgent demand for manufactured goods—a result of industrial prosperity, abroad as well as here. On the heels of this movement came a similar inquiry for American cotton, based on the short supplies abroad and great activity in the spinning industry. These successive movements covered the period from the middle of 1896 to the close of 1900. But, with this year's opening, underlying trade conditions seemed to have changed. Since the foreign famine in 1897, wheat crops in Europe, and in the world outside of Europe, have reached a total yield larger than any previously known. The abnormal demand in foreign markets for iron and manufactured goods was next arrested by England's African troubles, by a collapse of German speculation, and by the Chinese trouble. Finally, at the end of 1900, Europe's needs for cotton appeared to have reached a normal level. Prices, which had been raised in that market 60 or 70 per cent., fell below those of a year ago, and weekly exports began to show similar decrease. Much the same experience was had in grain and iron markets.

The showing for March is that shipments of cotton for the month decreased nearly seven million dollars from 1900. So far as the statement can be analyzed, without the figures in detail for miscellaneous goods, shipments of manufactures for the month must have decreased about ten millions. For all commodities, the total export trade falls nine million dollars below March of 1900. On the other hand, when Europe's home demands decrease suddenly, when foreign prices fall and foreign producers are suddenly left without a market, it has hitherto been the almost invariable rule that exports to the United States increased enormously. The increase of $222,000,000 in the fiscal year 1880 seemed for a time to be in process of repetition during the fiscal year 1900, when the total increased $152,000,000. But the increase has not continued. This year, in the face of a home consumption of unprecedented magnitude, imports of foreign goods are actually decreasing. In March there were brought in $10,000,000 less than in the same month a year ago. For the nine completed months of the fiscal year, the decrease is forty-two millions; so that, despite the reaction in our export trade, the excess of exports, both for the month and for the fiscal year to date, is substantially larger even than in 1900. Apparently, it is the power of American producers and manufacturers to provide for even abnormal home demands which is creating these novel and very curious conditions.

There have been demands that the President should revoke the appointment as Civil-Service Commissioner of a man who voted only last year to "starve out the Commission" by refusing any appropriation for its support, but Mr. McKinley gives no sign of caring for such appeals, even when they come from the most loyal supporters of his Administration. It is one of this latter class which sums up judgment in the case when the *Outlook* discusses the matter in its latest issue. The editor explains that he has deferred comment hitherto in the hope that either some effective defence of the appointment would be made or that it would be withdrawn, but that the hope has proved in vain. The *Outlook* therefore reaches the only possible conclusion when it declares that

> "We must regard the appointment as distinct notice to the country by the President that the President does not believe in the Civil-Service Act, that he does not desire to see it enforced, that he approves of legislation the object of which is to impair if not destroy its efficiency. When the President appoints to the Civil-Service Commission a man whose only official act, so far as known, in respect to that Commission is an attempt to destroy its efficiency, the country has a right to assume that the President means to do what he can by executive action to make the act inefficient; and, unhappily, this conclusion is confirmed by other acts of the Administration."

Stock-watering by New Jersey corporations is made a delicate, not to say a dangerous, operation by the recent decision of the Court of Errors and Appeals of that State in the Smelting Company case. We know, in fact, that counsel for some of the great New Jersey corporations are reading Judge Dixon's opinion with searchings of heart and much inward quaking. It is to the effect that, under the laws of New Jersey, "when an original issue of corporate stock for property to be purchased is contemplated, it is the duty of the directors to see that the real value of the property is at least equal to the face value of the stock." Furthermore, even "the bona-fide judgment of the directors" is not to be held as conclusive, but "may be reviewed at the instance of existing stockholders"; and if a court of equity finds that the value of the property purchased is "less than the face value of the stock, the issue should be restrained." This, of course, is a remedy available only before the stock is issued as full-paid; after it is issued, the transaction cannot be set aside except for "actual fraud." But the general and sweeping principle is laid down that "an increase of corporate stock, voted for by the board of directors and by the requisite majority of stockholders in order to issue such stock for property worth less than the face value of the stock, should be restrained at the instance of dissenting stockholders."

First catch your dissenting stockholder. The very suit brought to enjoin the American Smelting Company, in which the Court has now pronounced judgment, was at the instance of a dissenting stockholder, but what became of him? Why, he was turned into a most harmonious and joyfully assenting stockholder under the very nose of the Court. Before Judge Dixon could fairly read his opinion restraining the increase of stock, all complaint was waived and the merger effected, to the high satisfaction of the stockholder who had been moving heaven and earth to prevent it. How his bitter dissent was transformed into smiling assent, the directors could perhaps explain. But it is evidently in just this line of taking care that existing stockholders have the best of reasons for playing the title rôle in "The Contented Man," that the lawyers will enable New Jersey corporations to cut the claws of this decision by the highest court of the State.

If there is little new in the first statement of the Committee of Fifteen, it is none the less a report of substantial progress. Its quiet tone and moderate declarations add to its force, and give assurance that the work of the Committee is to be of a permanent nature, at least until it has achieved some of the important results aimed at. It is but natural that its efforts up to this time have been largely of a preparatory character, and those who are disappointed that the Committee has not achieved more sensational results in the five months of its existence, should bear in mind that the wise general never moves until his forces are well equipped, the ground about him is well known, and his plan of campaign is thoroughly

mapped out. If the Committee shall accomplish nothing else than the driving of prostitution out of the tenements and the study of the social evil which it promises us, it will more than justify its existence. The Committee's suggestion as to meeting-halls in every Assembly district for free discussion of neighborhood problems is an admirable one. The success of the People's Institute and of the educational and semi-political meetings now being held in the Bowery shows that the mass of the people can be interested in social and municipal problems, if the work be but undertaken in the proper way.

We are certain that Mr. W. H. Baldwin, jr., will agree with us in regarding Mayor Van Wyck's reported attacks upon him as the best possible proof of the injury which the Committee of Fifteen have already done to the glorious Tammany business of making money out of the vice and degradation of New York city. The newspapers have disclosed the fact that the practical closing of the poolrooms is costing Tammany some $2,000 a day. Under these circumstances the wonder is not that Mayor Van Wyck finds reason to attack Mr. Baldwin, but that his language is comparatively so moderate. New York, declares the Mayor, is the most moral city in the world. There is no such thing as prostitution in the tenements, and any one who swears to the contrary, no matter what his documentary evidence, lies in his throat! Thus does the galled jade wince.

What policy Sir Michael Hicks-Beach will adopt in his forthcoming budget is a subject of anxious thought in other countries besides Great Britain. It has been made a subject of speculation on a large scale by dealers in sugar, who have been bringing in large quantities from Germany in the belief that a duty on that article will be proposed to meet war expenses present and prospective. The question underlying all others is whether England shall abandon her free-trade policy under the present stress for revenue. She might admit raw sugar free and put a tax on the refined article, whether imported or manufactured at home, in such a way as to exclude protection altogether, but this plan has not been proposed. There are probably technical difficulties connected with it, growing out of the export bounties of Continental countries. There is also a great craving for preferential duties in behalf of the West Indian colonies. To grant such preference would be one method of taking up a collection among England's poor to relieve the poor of the Caribbean Islands. This is not likely to meet with favor at a time when England needs every penny she can collect to pay the expenses of the Boer war.

Sir Michael Hicks-Beach knows full well that, if he admits one protective duty into his budget, he opens a floodgate for many more. The rush of other interests for similar favors will be incessant and irresistible. Mr. Chaplin and his followers will demand duties on corn in some guise or other. Mr. Chamberlain and his friends will push the federation scheme for preferential duties of the mother country in favor of the colonies, and vice versa—the arrangement of whose details would occupy many years, and might end in disruption of the empire. We might expect, in the fulness of time, a demand for protection for steel rails in the United Kingdom. Indeed, there is no assignable limit to such demands if the principle is once admitted. We may be pretty sure, therefore, that it will not be admitted even in the case of sugar. A somewhat different question is presented in the demand for an export duty on coal. This is supported by the plea that England's coal supply is narrowing and that she ought to take measures to conserve her resources. This is a question of great complexity. If any revenue is gained by an export duty on coal it must come out of the pockets of the owners of coal mines or out of the wages of the miners. The latter went through a strike a few years ago, the memory of which will probably deter any responsible statesman from taking a step which might reopen that fearful breach. Altogether the pathway of the Chancellor of the Exchequer is strewn with pitfalls.

The Zanardelli Ministry has presented a definite project of tax reform for Italy. It is prepared to remove the oppressive octroi taxes on grain and flour from all the cities of the third and fourth classes. This will leave only fifty-nine cities which tax food products at the barriers, and will relieve the agricultural population of its most burdensome contribution to the state. It means, however, a great reduction in revenue, which must be made good in some other way. The smaller cities must provide from other sources about $5,000,000 annually, and the national Treasury some $4,000,000. The poorer communes will find it impossible for a time to readjust their taxes satisfactorily, and many of them must temporarily receive state aid, either by remission of taxes or direct subsidy. All this means a great reduction in the general revenue, which it is proposed to make good by a progressive inheritance tax and by various taxes on commercial paper and the assaying of gold. The problem of redistributing the state taxes in such a way as to produce sufficient revenue is a serious one, and already the Ministry, in proposing to meet the enormous naval expenditures by "Treasury operations" (read Government loans), has evaded a chief difficulty. For the sake of Italy it is to be hoped that some such law for the abolition of the food taxes may be passed.

All doubts as to the friendly relations of France and Russia were set at rest by the return of the Russian squadron to Villefranche and the exchange of compliments between President Loubet and Admiral Birileff. In fact, the enthusiasm over this marked act of friendship between France and Russia quite overshadowed the interest in the long-heralded visit of the Italian squadron to the Riviera. The Duke of Genoa, as he enjoyed the courtesies appropriate to his rank at Toulon, but read of the demonstrations at Nice, must have felt keenly that his visiting squadron was by no means "the whole thing." The event quite justifies the tact of Russia in planning to withdraw her fleet and leave a clear coast for the Franco-Italian festivities. We shall probably hear little more of a Franco-Italian alliance, or of the withdrawal of Italy from the "Triplice," and the prophets of so momentous a change will hasten to explain that where they said alliance they meant only *rapprochement*—and a trifling one at that. It is, of course, gratifying that the somewhat overt unfriendliness of France and Italy is now formally at an end, and the Italians are unquestionably shrewd enough to remind the Germans and Austrians, before the triple bond is renewed, that other bonds are possible and even alluring. When Italy entered the Triple Alliance, she was made to feel that her admission was a favor. In 1903 it will be to her advantage if Germany and Austria are in the position of seeking rather than of granting favors.

The Russians, too, have a knack at fine phrases to cover up ugly facts. "Painless identification with Russia" is the happy term which a Russian Prince has invented for the process now going on in Mantchuria. It will do to stand beside "benevolent assimilation." Of course, it is not annexation; nothing so brutal as aggression or conquest. It is just the instinctive rushing together of two kindred nationalities. The "identification" may be admitted, as either actual or certain in the near future; but to one who recalls the Blagovestchensk massacres, the Amur choked with Chinese corpses, and the devastated villages, the propriety of the adjective "painless" might seem a little questionable. Still, these may be only necessary swallowing pains. Deglutition must precede identification, and the Russian bear is rather a rough feeder. But it must be a great comfort to the Chinese inhabitants of Mantchuria to know that they have not been annexed, only identified. And the foreign diplomats at Pekin will also plume themselves on the important distinction, due to their protest.

DISHONORARY DEGREES.

President Monroe, of blessed Doctrine memory, is associated at Harvard University with a precedent which has proved troublesome to the inventors. The occasion was his visit to Boston in 1817, when, as the late Edmund Quincy records in his biography of Josiah Quincy, "it had been thought due to his high station that the University should confer upon him her highest degree." In the "era of good feeling" nothing was more natural, and at that day, too, class and official distinctions generally counted for vastly more than they do now in the great democratic levelling up. In the summer of 1833, however, President Jackson, just entering on his second term, also took it into his head to make a tour through the Northern States, including Massachusetts. Remembering the honor done to Monroe, Josiah Quincy, then Harvard's President, "considered it the duty of the authorities of the University" to do no less by Old Hickory, who had, moreover, somewhat retrieved his reputation in Boston by his vigorous stamping-out of nullification. The Corporation agreed with President Quincy, and so did a portion of the Overseers, hastily assembled informally; and the degree of LL.D. was accordingly conferred. Much scandal was caused among those who could not separate the office from the man, and an effort was made at the next regular meeting of the Overseers to invalidate or censure the transaction. "But precedent, common sense, and the custom of learned bodies in the Old World," says Mr. Quincy, in defence of his father, "overbore the attempt, and Gen. Jackson lived and died a Doctor of Laws, entitled to all the privileges and preëminence thereunto appertaining."

The original dependence of the University on the State had led it, with much irregularity, however, to bestow the same degree on the Governor of Massachusetts, whose annual attendance at Commencement was signalized by the pomp of a cavalry escort. With varying degrees of merit in the incumbent, it cannot be said that any one had disgraced the office before Gen. B. F. Butler was elected to it. This dilemma presented itself in 1883, when the college authorities, reviewing his unprincipled career, and recalling his billingsgate abuse of such revered alumni as Judge E. R. and Senator George F. Hoar, took their courage in both hands and denied him the coveted degree. They did more: they abandoned the practice of honoring the office apart from the man, in disregard of "precedent, common sense, and the custom of learned bodies in the Old World." While the issue was still pending, we said of Butler, that "if he gets the degree, he will furnish the first case on record in which the degree has been bestowed on a Governor between whom and his office the college authorities have to make a distinction, in order to save their own credit, and in order to be able to look their young men in the face when charged with having prostituted the college honors." And we concluded: "If his case puts an end to this abuse of university honors, he will not have lived in vain."

These sentiments, we have no doubt, gave entire satisfaction to Senator Hoar, among other sons of Harvard. President Cleveland fell in with them when he subsequently declined the degree proffered by the University. His very office was his scruple against taking what did not palpably attach to him as a man, and, let us add, in view of the true nature of the degree, as a man of learning. Everybody is familiar with Thackeray's triple caricature of Louis XIV.—"Rex," the state wig and cloak of ermine supported by a lay-figure; "Ludovicus," the bald-pated, spindle-shanked scion of the house of Bourbon; "Ludovicus Rex,' the monarch robed. Cleveland had no mind to receive honors paid to his clothes, or that might appear to be paid to them. He, if any one, held that office was duty and responsibility, and that nothing else about it was awful or venerable. If the Presidency calls *per se* for the title of doctor of laws, then the degree is not properly a gift, but something due, and either to be standingly applied, like Honorable, or to be demanded of any institution the President may elect—when the honor would be conferred by him rather.

On so obstinate a partisan as Senator Hoar President Cleveland's example was, of course, wholly lost, but there was reason to assume that the lesson of Butler had been taken to heart. So far is this from being true that he is now engaged in forcing the hand of his university to secure a degree for President McKinley at the approaching Commencement. As is well known, our Chief Magistrate is on the eve of a fresh "swinging round the circle," in which no predecessor has rivalled him, and once more he will find himself in Boston. By a lucky accident his most ardent admirer (despite all Senator Hoar's denunciation of his "bully-ruffianism" in the Philippines) presides over the Harvard Alumni Association, and is master of ceremonies at the annual Commencement dinner, where the chief recipients of degrees are expected to make speeches. On his own responsibility, Senator Hoar invites Mr. McKinley to attend the feast, and, notifying the Corporation of his action, constrains that body to take cognizance of it, and to choose between neglecting the occasion for a degree and improving it. We understand that the Corporation, with a wry face, has concluded in favor of the degree, and that pressure will be brought to bear on the Overseers to consent. That there will be a counter-pressure we do not doubt—and not alone on the part of those who see the moral inopportuneness of the time for honoring the man who has just flaunted anew his faithlessness to his trust and to his professions in his appointment of Rodenberg to be Civil-Service Commissioner, and who is exhausting his fund of artifices to annul the national pledge, of his own framing, respecting the independency of Cuba.

We believe that the impartial historian will pronounce every tour of McKinley since he became President to have been attended by a distinct lowering of the public tone. His demoralizing platitudes have everywhere left a false idea at once of his character and of his intentions. He has known how by adroit rhetoric to allay suspicion and inspire confidence which no amount of betrayal can shake. How otherwise could we possibly see him smugly revisit a community which upheld Senator Hoar for reëlection in spite of the latter's impassioned "treason" to the new American idea of Expansion and Imperialism? And how could that community, unless already debauched by former visits, welcome his return under Senator Hoar's auspices—except as a huge joke in that part of the continent where some of the humor of Quincy and Lowell and the abolitionists generally may still be presumed to lurk? But we take leave to point out that the deception will be mutual. If McKinley carries off his degree, he will be far from making the fine distinction between the laurel due to his office and that due to his career. It will confirm him in fresh acts of duplicity, as conveying the sanction of the oldest and foremost university in the land, and it will breed more Senator Hoars to "wither and adore" at his feet. Will the Overseers of Harvard University make of their highest certificate a public calamity?

THE FAILURE IN CUBA.

The Cuban Convention having finally refused to accept the so-called Platt amendments, the Administration gives it out that it is "not disturbed." This defiant action of the Cuban delegates, continues the inspired dispatch from Washington, "disposes of the Constitutional Convention, composed of revolutionists," and the Government of the United States will go right on in "full military control of Cuba." Hard words break no bones, neither do they alter facts. Who are these revolutionists, thus summarily bowed out of the door? They are the representatives of the Cuban people, freely elected to express the popular will. This fact is certified in the most explicit way by our own Military Governor of the island. On July 25, 1900, Gen. Wood, acting under the direction of President McKinley, issued an order for the election of a Constitu-

tional Convention. In it he said that the Cubans had established municipal governments, "deriving their authority from the *suffrages of the people given under just and equal laws*," and that they were then ready, "*in like manner*, to proceed to the establishment of a general government which shall assume and exercise sovereignty, jurisdiction, and control over the island." It seems a little cool, to say the least, to denounce as revolutionists the men of whose character and representative quality we had nothing but good to say so long as we thought they would be docile tools in our hands. Nor can any taint of revolution attach to them for having disregarded the President's instructions. They were to "frame a Constitution for Cuba." This they have done. No breath of serious criticism has fallen upon their handiwork. In addition they were to formulate what, in their opinion, "ought to be the relations between Cuba and the United States." This, too, they did. They said that the relations ought to be of intimate friendship, with close trade connections. Wherein, then, have they offended? What suddenly changed them from authorized exponents of the Cuban will into incendiary revolutionists? Why, merely the fact that they found themselves unable to serve two masters; that they could not obey two contradictory sets of instructions; could not make an independent Cuba and a dependent Cuba at the same time—could not, in a word, without stultifying themselves and betraying their constituents, accept the Platt amendments which were insolently thrust in their faces at the eleventh hour.

The interview which took place between the delegates and Gen. Wood on April 4 throws light on the question who are the real revolutionists in Cuba. The Military Governor summoned them to the palace to explain, or explain away, the Platt amendments. Whatever their exact language, the President thought, Secretary Root thought, that it didn't mean anything in particular. The delegates received this in silence. Then Gen. Wood declared that the American Government was very anxious to leave the island, and that the Cubans ought to hurry to complete their government. The delay was not *his* fault. Thereupon a delegate, Señor Tamayo, broke the painful silence to say that the Convention was most desirous of terminating its labors, but that the Platt amendments were the sole obstacle, since they imposed impossible conditions upon any possible Cuban Government. Wood exclaimed that this was all a mistaken notion; but the delegates looked at each other, said nothing, and were soon dismissed.

This incident really marked the final failure of Gen. Wood's Cuban policy. It is no secret that there have been two rival plans for settling Cuba's business before the Cabinet at Washington. One was Secretary Root's, and was the plan of bluntness and "thorough." There was to be no nonsense in dealing with the Cubans; no foolish attempt to square our conduct with our promises. Just tell the beggars fairly and squarely what they had got to do, and so grasp the nettle firmly from the start. This was the scheme of Mr. Root, as set forth last fall by Mr. Walter Wellman in the *Review of Reviews*. There was to be a "Cuban Republic—Limited," and of this new Cuba, Mr. Wellman wrote, "Secretary Root may be called the father." It is evident that he had his way with the President at the time the election of the Cuban Constitutional Convention was first provided for. In the original instructions, the delegates were "to frame a Constitution, and *as a part thereof*" to fix the relations with the United States. That was the Root idea. Make them put it down in black and white right in their Constitution.

But an outcry was raised. The Cubans protested. Ex-President Cisneros came to Washington to declare that this would never do. Then arrived Gen. Wood, and got the President's ear. Such violent methods were unnecessary. Leave all to an expert diplomat like himself. He would wheedle everything out of the Cubans without the slightest trouble. So the back track was taken, the delegates were told to make their Constitution and determine the relations of the two countries separately, and the policy of oily blandishment was substituted for that of stern command. But it has broken down. The sunshine of Wood's favor has not warmed the cloak off the Cuban back; and in spite of his daily confident telegrams that the Convention would surely accept the Platt amendments, the fact is at last clear that it will not.

Here ends the first attempt in acknowledged fiasco. What is to come next? A delegation of Cubans are to visit President McKinley; but they have armed themselves in advance against his seductiveness, for they are to come instructed by the Convention in regard to the modifications of the Platt amendments which they are to demand. Certainly it would be too shameful for us to insist upon the third amendment, authorizing us to intervene to protect not only life and liberty, but *property* in Cuba. A more direct invitation to overturn any Cuban Government on trumped-up charges could not well be framed. But the serious thing is not any mere detail like this, but the whole situation. Our Cuban policy is all down in a heap. How shall it be reconstructed? The President might well abandon his Western tour, and wrestle with this most urgent problem in Washington until some solution is found consistent with our national honor.

WORKING TOWARDS INDEPENDENCE.

An incident which occupied but half a dozen lines in Thursday's dispatches from the Philippines, is really one of the most striking and hopeful bits of news which the cable from Manila has ever brought us. Judge Taft has appointed Gen. Martin Delgado to be Governor of the province of Iloilo, comprising one-half the island of Panay, with an estimated population of 1,000,000. The appointment was rapturously received by the people. An American army officer was at the same time made temporary Treasurer of the province, but "the other officials are natives."

So far the news; now for the interpretation thereof. Who is Gen. Delgado? He is the man whom Gen. Miller, in his report to Gen. Otis of date of December 28, 1898, described as "commanding general" of Iloilo. He sent an aide out to the American expedition, then lying in the offing, to ask if "we had anything against them—were we going to interfere with them?" The Spanish had evacuated the island, and the natives were in full control. Their government was orderly, Gen. Miller himself being witness. The American forces had been ordered to Iloilo for the purpose of protecting life and property, and on an ostensible petition from business men. But one of the first communications which Gen. Miller received at Iloilo was a document signed by the leading merchants, begging him not to provoke "a conflict with the natives," which, in the belief of these commercial houses, "would seriously prejudice and harm the trade of these islands for years to come." But presently came illegal orders from the President of the United States to "extend American sovereignty" to Panay; then followed the outbreak at Manila; insurrection flamed out in the Visayas as well; and the island of Panay was the scene for two years of the hostile operations of Gen. Martin Delgado. Now this same "rebel," vouched for by our Gen. Hughes as "honest, capable, and popular," has been named Governor of the province which we have been fighting him all this while to wrest from his control.

There could not well be a franker confession of our original pitiful blundering. But we shall waste no tears now over that spilled milk. The American people have the faculty which Lord Rosebery has ascribed to the English, of "floundering through somehow," and we are too much encouraged by the tardy reversion to correct principles at Iloilo to tear open old wounds. At last our faces are turned in the right direction in the Philippines, and if we are still floundering to get entirely free of the morass, it may be said in our praise, as Dr. Johnson said of a writer of his day, "he flounders well." To show what a rightabout we have exe-

cuted at Iloilo, it is necessary only to recall the reason which Gen. Miller gave to Gen. Otis for requesting permission to attack the natives. He said that they were "in possession of the city," that they were "collecting customs," and "running post-offices," and then he sapiently added that the longer they were allowed to discharge these functions of civil government, "the more they will be confirmed in the *idea that they can do it.*" The judicious reader will pause to heave a sigh, or mutter a curse, at the pig-headedness of an American general who could carry such perilous stuff as that in his bosom, and who conceived that the true way to set up self-government was to take alarm at the first actual bit of self-government he found and beg leave to destroy it. But let all that go. The funny thing is to find the Americans now putting those same natives back into the custom-houses and post-offices, and urging them to show that they "can do it." We seem to have found out that the longer we try to run their government for them, the more we are confirmed in the idea that we can *not* do it.

What we have done, finally, is to turn to the natural leaders of the people. We must bear in mind that the Philippine "Generals" are the product of no regular military establishment. They attain rank, not by the slow process of promotion, but through spontaneous election by their followers. This is always the case with an improvised patriot army. It was so, to some extent, with our own Revolutionary army. We see it strikingly true in the Transvaal. De Wet, Botha, Delarey—butchers, farmers, policemen turned generals—are but the fittest coming to the front. So in the Philippines, the men who have led the troops in the field are the men who would lead in civil life. There ought, therefore, to be no hesitation in making the speediest and fullest use of the insurgent military officers in the work of building up local government. They are the men to whom the people look; they are the men to whom we must look. In this aspect of the matter, Judge Taft has risen to real statesmanship in his choice of the chief rebel of Panay to be the chief ruler of Panay.

But the thing cannot stop there. The policy which leads to the appointment of Gen. Delgado has in it the promise and potency of ultimate Philippine independence. In that fact lies its chief significance. We have begun to admit that the Filipinos must have the government they want. If we give it to them in the Sulus, we must give it to them in Panay. If we give it to them in Panay, we must give it to them in Luzon. And where shall we stop? There is no stopping short of independence for the whole group, as soon as it becomes established beyond all question that the natives want independence. There is no half-way house in this business. You cannot arrest the avalanche part way down the mountain. Rule must be either arbitrary or built upon the wishes of the ruled. And when you once begin to consult them, you must go on consulting to the very end. If the first vote of the Parliament of United Australia were to be in favor of Australian independence, Great Britain would concede it without a murmur. So must we, when the time comes, in the Philippines. To that all rational government of the archipelago surely points; and it is because we see a foregleam of Philippine independence in the wise decision of Judge Taft respecting the government of Panay, that we hail it as a welcome flash of light from the Orient.

PUBLIC SERVICE WITHOUT OFFICE.

The achievement of the great reforms recommended by the Tenement-House Commission, through the approval of their proposed code of laws by Gov. Odell on Friday and the early establishment of the Tenement-House Department of the city government under the new charter, is an event of much more than local importance. While the necessity for such legislation grew primarily out of conditions existing in New York city, and most flagrantly in the Borough of Manhattan, the laws apply equally to Buffalo, the other one of "cities of the first class," where evils demanding like correction have already developed. Moreover, the example set by New York in this matter must challenge national attention, and secure imitation in other large cities where the tenement-house problem is already becoming serious.

One feature of this most laudable movement now crowned with success merits particular attention amid the general felicitations. The members of the Tenement-House Commission have rendered a great public service, but they have done it without holding public office. It is a curious fact that people have generally come to regard the expression public servant as signifying a man who holds a position in the civil service, such as that of Legislator, Congressman, Judge, Mayor, or Governor. In like manner such a phrase as "the opportunity to render public service" is ordinarily interpreted as meaning the chance to fill an office of some sort. In point of fact, the history of this Tenement-House Commission shows that a man may do work of immense value to the community without holding any office, in the ordinary sense of the term.

The act constituting it provided that it should be the duty of the Commissioners to "make a careful examination into the tenement-houses in cities of the first class, their condition as to the construction, healthfulness, safety, rental, and the effect of tenement-house life on the health, education, savings, and morals of those who live in tenement-houses, and all other phases of the so-called tenement-house question in these cities that can affect the public welfare"; and that they should make a full report of their work to the Legislature, with such recommendations as they deemed wise "to enable the best and highest possible condition for tenement-house life in said cities to be attained." For all of which services, it was further provided, "the members of the Commission shall receive no compensation." This was a task of immense difficulty. It involved laborious investigation of a host of buildings, in order that the Commissioners might know by personal inspection what the average tenement-house really is. It required a careful study of the whole question of constructing such a building with a view to its being at once safe, healthful, and at the same time "commercially practicable," as a current expression runs. It demanded a thorough inquiry into the question how far the education, savings, and morals, as well as the physical well-being, of the tenement-house population are affected by existing conditions, and how far improvement in those respects may be promoted by changes in the laws governing their construction and occupancy. It proved to involve a most important feature of the war against vice in this city, because it was found that the distribution of the social evil through the crowded districts of the city is largely due to the lack of provisions in the old laws by which decent moral as well as physical conditions in tenement-houses can be compelled.

The Commissioners were busy men. They included representatives of the architects, builders, lawyers, physicians, merchants, philanthropists, and "organized labor" of the metropolis. Among them were men who have dealt practically and successfully with the problem of constructing tenement-houses which are decent and at the same time profitable, a man who had been Health Commissioner of the old city of New York, and another who had been chief of the Fire Department. Whatever their occupations, they were all men who were engrossed with their private affairs, and who found it a hard sacrifice to give what amounted to months of their valuable time in visiting tenement-houses, oftentimes in the heat of summer, examining experts, studying the results of experiments in dealing with this problem in large cities abroad, considering all the complex conditions involved. Yet they went through all this unpaid labor and vexation not only without complaint, but with more than the earnestness and enthusiasm of a young politician holding his first salaried office.

The Tenement-House Commissioners are in the public eye to-day because the

results of their labors have just found their way into the statute-book. But this body is only one of a number that might be named whose members have rendered like laborious but unpaid service. Among these the Charter Revision Commission ought to be mentioned specifically, because the results of its arduous work are just now under consideration—results the excellence of which must not be obscured by the tampering of legislative meddlers and muddlers, for several great principles which they have incorporated in the charter are certain to remain, whatever the fate of the jobs which the politicians have tried to work into it. Nor must we fail to name also the Committee of Fifteen, whose unselfish performance of most disagreeable work commands the admiration of all right-minded people.

There is undoubtedly a growing recognition by public-spirited citizens of the obligation to render public service through other channels than those of public office. This is true, the country over, as it would be easy to cite many illustrations to prove. It is a most hopeful sign of the times.

MME. REINHARD'S REMINISCENCES—I.

PARIS, March 28, 1901.

The Baroness de Wimpffen, granddaughter of Reinhard, has just published for the Society of Contemporary History the letters written by Madame Reinhard, wife of the diplomat who occupied important posts under the Directory and the Empire, to her mother, from 1798 to 1815, perhaps the most interesting period of French history. These letters are well worth reading, as they give the opinion of a very intelligent foreigner (Madame Reinhard was a German) on French affairs at the end of the eighteenth century and in the first part of the nineteenth century.

Reinhard himself was born and educated in Germany, and studied theology in the Protestant faculty of Tübingen. He published in his youth some poetical pieces which attracted the notice of Gessner, of Wieland, of Schiller. He became a tutor in a Protestant family of Bordeaux. He was in that city when the Revolution broke out, became a member of the "Friends of the Constitution," a friend of the famous Girondists Vergniaud and Guadet, and followed them to Paris, where he made the acquaintance of Talleyrand and Sieyès, who judged that diplomacy was the career in which he could render most service. He was sent successively to London in 1792, as Secretary of M. de Chauvelin, and, when the war broke out between France and England, to Naples, to Hamburg, and to Tuscany. It was at Hamburg that he became acquainted with Christine Reimarus, the daughter of a doctor; he married her on October 12, 1796. She was a person of high culture, knowing several languages, and very well fitted to become the wife of a diplomat. Her letters were always impatiently expected by her family, at a time when communications were rare and often difficult.

The publication begins with the letters written during Reinhard's mission to Tuscany, in 1798-1799, and takes us from Milan to Florence. The French Minister was presented to the Grand Duke (Ferdinand III., son of Joseph II., and brother of Francis I., Emperor of Austria), and to the Grand Duchess (daughter of the King of the Two Sicilies). "The reception was very gracious; but we must have no illusions, and it is difficult to admit that our present Government can be viewed with sympathy by any monarchical government." Mme. Reinhard made in Florence the acquaintance of Mme. Leclerc, Pauline Bonaparte (who afterwards became Princess Borghese). "The sister of Bonaparte has come here," she writes, "unexpectedly. She is young, pretty, very natural, gay, and *bon enfant*. She likes to amuse herself, to talk about clothes; the new fashions have extreme importance for her. . . . I have tried in vain to find some elegant lady with whom I could put her in relation, and have been thrown back on the diplomats who are devoted to the ladies."

News arrived of the landing of Bonaparte at Alexandria. The day after, at a great dinner, a Cisalpine Minister drank the health of the hero in a glass of Cyprus wine, expressing the hope that, thanks to Bonaparte, this would soon be a French wine.

The Reinhards were left in profound ignorance of what was going on in France and in the world; the Apennines formed a great barrier. The occasional couriers were military men coming from Milan and from Rome. They heard, however, by a letter from Sieyès the news of the naval battle of Abukir, of the agitation caused in Naples by the triumph of Nelson. "Queen Caroline has a word of greeting for all the Englishmen she meets; at the opera she shakes her handkerchief towards the box of Lady Hamilton. Acton kissed the King, and said to him: 'Now, your Majesty's crown is firm on your head.'" Nelson arrived at Naples and was received with great acclamations. The Neapolitan army attacked the French on Roman territory, and advanced towards Rome in three columns. "Our army," writes Mme. Reinhard, "is not strong enough nor sufficiently well organized to defend Rome; we must look for its falling back on Tuscany."

The details given by Madame Reinhard on the alternations and incidents of the war in South Italy and in Tuscany are most interesting. In March, 1799, she writes to her mother that the Grand Duke had to leave Florence.

"Tuscany will not be revolutionized; it will be administered by a provisional government, composed of well-intentioned patriots, at the head of which will be placed my husband, with the title of Commissioner. . . . I am interrupted by a popular demonstration. The love of liberty has taken on incredible proportions, in the space of a night, among this inflammable people. Hundreds of patriots surround our hotel; they wear the Phrygian cap, the tricolor flag, and shout 'Vive la République!' My husband makes speeches from the window, and urges them to be orderly."

Madame Reinhard, after having spoken of the departure of the Grand Duke and of the Pope, who was living in a *Certosa* near Florence, adds: "I will not insist upon acts which circumstances have rendered necessary, but every heart bleeds at the thought that an honest man, animated with the best intentions, as the Grand Duke certainly is, has been obliged to leave the roof under which he lived happy, to confront the vicissitudes of exile with a wife *enceinte* and four little children." The Pitti Palace was empty; liberty trees were planted in the squares of Florence, and great festivities celebrated the triumph of the Revolution. Scon afterwards came disastrous news: the Austrians had crossed the Adda; the French Gen. Schérer had been beaten; the Austrians had entered Milan; Turin had been evacuated by the French. Madame Reinhard left Florence for Pisa and Leghorn, and her husband sent her back to France. He himself left Tuscany. Italy was for a time evacuated by the French.

On his return to Paris, Reinhard was appointed by the Directory Minister of Foreign Affairs (on the 2d Thermidor, An VII.) in place of Talleyrand. He entered on his functions the 18th Fructidor An VII. (September 14, 1799). His wife's letters give an account of the life of diplomatic society at that time. The great event which put everything in commotion at the end of 1799 was the return of Bonaparte from Egypt. The account given by Madame Reinhard of the 18th Brumaire differs from all those (and they are very numerous) which I have seen. Her husband had seen the "hero" some days before, and his impression was "excellent." She deplores, however, the weakness of Bonaparte towards his wife. "This man, who is all courage and audacity, permits his name to be dishonored and dragged in the mud. The fear of ridicule disarms him, and in France there is nothing worse than ridicule." Bonaparte went to a reception of Madame Reinhard's on the 16th Brumaire; it was her first:

"The unexpected arrival of Bonaparte made it interesting; I had not counted on him. This meeting with the General was a piece of good fortune for everybody; many of the distinguished foreigners, of the diplomats' wives, had never seen him. . . . I found Bonaparte such as I had represented him to myself, modest as a *dominateur*, unaffected as a man who can pretend to everything. . . . The expression of his face is noble, his eyes are piercing; he does not try to be amiable, and he is right, as amiability in his case would be called condescension. The other day a young man of his acquaintance asked him to endorse a request he was making of the Directory. 'I cannot,' answered Bonaparte, 'render you this service. Wherever I am, either I command or I am silent.' This answer is characteristic of him."

It is, in fact, truly imperial, and, as Victor Hugo said:

"Et déjà l'Empereur perçait dans Bonaparte."

On the 19th Brumaire Madame Reinhard writes to her mother:

"The events of yesterday fill all minds. . . . Yesterday morning Charles [her husband] entered my room with a smiling face. 'You don't suspect,' said he, 'that we are in full revolution? Bonaparte commands at the Tuileries. The Council of the Ancients has been deliberating since seven o'clock this morning.' I was dumfounded. The reconciliation between Sieyès and Bonaparte was no secret to us, and we both knew that they would unite their efforts to drag their country from the mire; but the methods they were to employ were unknown to us."

Reinhard went to the Tuileries, where he found Bonaparte, Sieyès, and Roger-Ducos.

"While I am writing," says Madame Reinhard, "the two Councils are together at Saint Cloud. . . . Noise and speechifying will not be wanting with the Five Hundred; but the speakers will soon have the feeling that their words will not go further than the sound of their voices. This revolution has a military character, it cannot be denied. The necessity of such measures

was apparent, if France was not to roll into an abyss. The thinker who lives in his dreams will deplore this necessity; but the enlightened spectator will recognize that the salvation of the country was to be bought at that price. The downfall of Barras will give courage to all honest people, and the united names of Bonaparte and Sieyès will inspire confidence in foreign lands. I cannot foresee the influence which yesterday's event will have on our own destiny. I don't know if Charles will keep his portfolio; but I can confide to you that he wishes to be relieved of his burden. I had informed the Directory of it."

Talleyrand, who was behind the scenes during all the preparation of the 18th Brumaire, was placed by Bonaparte in the Foreign Office, and Reinhard accepted a diplomatic post; he was appointed French Minister to Switzerland. When Talleyrand pronounced, in the Institute, the eulogy of Reinhard (this was in 1838, and, as he was already very old, Talleyrand's speech was quite an event at the time), he made an enumeration of the various posts which Reinhard had occupied, and said:

"In the numerous employments which were confided to him, sometimes higher, sometimes of an inferior order, there seems to be a sort of incoherence and an absence of hierarchy which nowadays we should find it difficult to understand. But at that epoch there were no more prejudices for offices than for persons. In other times, favor, sometimes discernment, was the way to all eminent situations. At the time of which I speak, rightly or wrongly, all situations were won by effort. Such a state of things leads rapidly to confusion."

We will now follow Mme. Reinhard and her husband, first to Helvetia, and afterwards to the numerous posts and strange countries where the events and wars of the Empire led them.

Correspondence.

FILIPINOS AND SCIENCE.

To the Editor of The Nation:

Sir: Amid the clash of arms rending the nations apart, men are prone to forget the quiet labors of science that bind them together with ties indissoluble even by the strong hand of might. At the meeting of the Berlin Anthropological Society, June 23, 1900, there was read a letter of condolence on the death of Dr. F. Jagor, a distinguished German traveller and ethnologist, and an authority on matters connected with the Philippines. This letter was addressed to Prof. Rudolf Virchow, the dean of German science, by Emiliano B. de Dios and Capetano Lukbán on behalf of themselves and other Filipinos. The letter, translated with due regard to the Spanish idiom in which it is couched, is as follows:

"Dear and Highly Esteemed Sir: With deep sorrow we have received the sad news of the death of the celebrated, learned, and distinguished Philippinologist, Dr. Fedor Jagor, whose love for the Philippines met in us Filipinos a corresponding regard and affection for him. We know the close ties of love and friendship between you and the aged man whose loss to science and to his country we bitterly deplore. This motive impels us to ask you to accept this evidence of our share in the grief at such an affliction. So we entreat you to be the interpreter of our very deep sorrow to the family of Dr. Jagor and to the Anthropological and Geographical Societies of Berlin, who have lost one of their most illustrious members.

"The Philippines at this moment are passing through one of the most painful crises known to history. This will not allow of our expressing in a more solemn and appropriate manner our feelings with respect to the sad occurrence. Such being the case, we Filipinos, whose names are subscribed to this letter, convinced that we represent faithfully the feeling of our country, echoing its grief, take upon ourselves to give it expression here. We ask you to consider this letter of condolence the expression of the grief of all the Filipinos. We also take advantage of the occasion to express to you, sir, who are one of the worthiest glories of modern science, our admiration and respect, praying God to grant you many more years of life for the welfare of humanity."

This letter belongs to the international literature of science. Its writers are the countrymen of Rizál, the Lunas, the Del Pilars, Alejandrino, and others whose genius in art, literature, and science were an equipment such as no non-white people (the Japanese excepted) ever had when first trying their wings for flight in the free air of nationhood. The world will one day know how largely the contest in the Philippines has been one of the might and arrogance of the Spaniard and his heir, the American, against the ideal of independence, cherished by the masses, shaped and ennobled by the learned and the scientific in the Archipelago. Alejandrino, for example, the friend and pupil of Rizál, is more in touch with modern science of the true sort than any American General or Admiral who has set foot on the Philippines. Rizál was shot by the Spaniards for alleged "treason," and now it is whispered that Alejandrino will be shot by the Americans for the same "crime"! How rapidly the United States can follow in the wake of Spain!

FUNSTON IN THE CAUCASUS.

To the Editor of The Nation:

Sir: The following episode of the war in the Caucasus, as related in Koch's 'Kaukasus' (p. 155), may offer Americans some food for reflection. The date is the close of the third decade of the last century:

"Paskévitch decided to make war upon the Jars too if they failed to submit instantly. A part of them continued to resist, however, and it required a new expedition to bring them to submission. But as soon as Paskévitch was called away, Hamsad Bey persuaded his countrymen to drive the Russian rulers out. Four cannon fell into his hands, and the Jarian republic was more of a menace than ever, especially because already Kasi Mollah had carried out his plans in the northeastern part of the Eastern Caucasus. Lieut.-Gen. Rosen tried at first to win the chieftains by persuasion. But, as they refused obstinately to submit, the Russian general captured Hamsad Bey and his brother Murad Bey treacherously during a parley, and sent them in irons to Tiflis. But the Tsar [Nicholas] disapproved such a treacherous violation of the rights of nations, and ordered them to be immediately set at liberty with rich gifts. Meanwhile, Rosen had again overrun the valleys of the Jarian Republic and reduced the entire little country to submission. The fortress of Sakatal was built in it and dominated it like the castle of Uri. Highly indignant, the two chieftains hurried to the mountains, sent all the gifts back to Tiflis with contempt, and became the bravest adherents of Kasi Mollah." O. T.

April 12, 1901.

EXPANSION THE MENACE OF REPUBLICAN INSTITUTIONS.

To the Editor of The Nation:

Sir: Will you allow me to call your attention to what seems a very striking comment on a passage in your recent editorial (of April 4) on "The Capture of Aguinaldo"? You there declare, justly:

"The political future of the Filipinos is of little consequence to the United States, except as it is connected with the question whether the spirit of the American republic is to be preserved as it was handed down to us. Can a free people govern an empire and maintain the institutions which distinguish them from monarchical governments and privileged orders? All history says No."

In the March number of the *North American Review* Sir Charles Dilke, Bart., M.P., has an article on "The King of England." In this he speaks of himself as "one of the least monarchic and the most republican in inclination of British members of Parliament." But then he goes on to say:

"I cannot but feel that, in the last quarter of a century, the growth in the empire of India and of the colonies has withdrawn the adoption of republican institutions from practical politics. To bring India within the working of a Parliamentary Constitution which would also include such democratic states as the Australian commonwealth, is, in my mind, impossible; and the alternative means of keeping together the empire is rather an increase than a diminution of the status of the King. Just as the Austro-Hungarian empire has been kept together by the personality of the Emperor Francis Joseph, so the fabric of the British empire must be kept together by full use of the sentiment which attaches to the person of the King."

Here is a man who, by his ability and experience, to say nothing of his confessed political predilections, is entitled to speak on such a subject. And there seems to be no doubt in his mind that "expansion" means "monarchism" and ultimately "imperialism."

Yours truly. Boyd Vincent.

LAW PREVAILING OVER LYNCHING.

To the Editor of The Nation:

Sir: The fast-multiplying instances of the divorce of the administration of the law from the hands of the constituted authorities, and its violent and unwarranted assumption by bodies of individuals justly termed "mobs," is, of necessity, the theme for anxious consideration on the part of the thoughtful, law-abiding, and conservative element of the community at large. That "lynchings" are not in evidence exclusively south of Mason and Dixon's line; that whites as well as blacks constitute the victims; that rape or attempted assault is not the only determinant crime; that the ignorant and essentially criminal classes are not the sole sources from which the mobs draw their individual factors; that women and children are more and more becoming participants; that this form of violence is increasing numerically, as well as in the variety of infernal devices and methods employed; and, finally, that it is becoming a more or less *popular* form of the administration of the law, over larger and larger areas of the country, each year—these are patent facts.

Through the daily narration of the manifestations of this phase of mob rule, one may usually search in vain for a ray of hope. With genuine pleasure, therefore, I report a recent instance in which the law, as it exists, was duly enforced, and mob violence was restrained. Save for a col-

lateral feature or two, this outcome should not command attention. But, viewed as an example of a self-created "splendid isolation" in these troublous times, it is, indeed, worthy of note. The narrative, compressed, is as follows:

Locality, Arkadelphia, Arkansas.

Date of crime: December 3, 1900.

Crime: Attempted criminal assault.

Criminal: A negro.

The criminal fled, was pursued, and was apprehended on December 29, 1900.

Identified by victim, February 7, 1901.

Trial set for February 18, 1901.

Court appointed two attorneys for the defence.

Trial lasted two days.

Verdict, Guilty.

Criminal hanged, March 23, 1901.

The execution, as planned, was to have been private; but, a bill having been passed by the State legislators, March 20, 1901, "providing for the public execution of convicted rapists," the original plan was abandoned, and "a public execution" was substituted.

It is hardly germane to discuss the wisdom of capital punishment for crimes of this character, nor the advisability of "public executions"; suffice it to observe that in this instance a fair trial was secured, the existing laws of Arkansas were administered, and an execution in consonance with prevailing legislation completed, all without overt violence; and this, too, in a community where racial instinct and prejudice prevail, and excitement had fast developed to an intense heat. Thanks to the courtesy of Christopher C. Scott, Esq., of Arkadelphia, I have been able to secure copies of papers bearing somewhat extensively upon this matter which I enclose (but refrain from quoting through lack of space); also, this personal letter, which exhibits the views of a gentleman of judgment narrating scenes of intense excitement:

DR. N. W. SHARPE, St. Louis, Mo.:

DEAR SIR: I mail you to-day three copies of the *Siftings Herald* and one of the *Little Rock Republican*. These are all the papers I could find bearing on the subject. The *Standard* had none left. These papers will give you a very good idea of the affair. The feeling in the community was most intense, and, but for the conservatism of the people (the men) in Arkadelphia supporting Sheriff Abraham, and the willingness of the victim and her father for the law to take its course, the brute would have been burned at the stake. The town was full of armed men breathing vengeance, and the lynching seemed almost certain the day of the trial. The Court-House was packed and the Court-house yard was full of excited men.

At the beginning of the trial occurred a scene perhaps never witnessed in a court-room before. Sheriff Abraham arose and asked permission of the Judge to offer a prayer before proceeding with the case. His request was granted, and the Sheriff began his prayer. Perfect stillness pervaded the whole house while that prayer was offered, and when he had finished, the danger of lynching was over. All my life, since a child, I remember hearing

> "The Devil trembles when he sees
> The weakest saint upon his knees."

This was a living exemplification of it.

The case proceeded. The testimony of the victim, Miss Cleveland, was taken in a private room in the rear of the court-room. The jury returned a verdict of "Guilty," after a few minutes' deliberation. Every one in the court-room was required to keep his seat until the prisoner was safely back in jail.

Some idea of the strain on the Sheriff may be gathered from this fact that, since the execution, the relaxation has been so much that Mr. Abraham had to take to his bed from weakness. He looks like he had had a long spell of sickness. Altogether it was a fearful experience for all concerned, and it is to be hoped that the like will not occur again.

If what I have written in a disconnected kind of a way will serve your purpose, I will be glad.—Truly, etc., C. C. SCOTT.

ARKADELPHIA, ARK., April 2, 1901.

In closing, it is apparent that stress should be laid upon the sane action pursued by this community, and in particular upon the unusual personality of the Sheriff of Clark Co., Ark., James H. Abraham. Statements, oral and printed, concede him to be a man of consistent Christian character, and unswerving in his devotion to duty. Rarely are the turbulent proceedings of such a trial calmed and controlled by the earnest prayer of a godly man, an officer of the court. The dominant influence of this well-poised and faithful public servant, in the midst of an excited and tumultuous community, is noteworthy. We do well to honor such a man.

NORVELLE WALLACE SHARPE.

ST. LOUIS, 3505 FRANKLIN AVE., April 4, 1901.

DISTINCTIONS OF BIRTH.

TO THE EDITOR OF THE NATION:

SIR: Is there no escape from the conclusion to which we are being pushed by such expressions of opinion as those recently noticed by your correspondent in the *Nation* of April 4, as to the changing of the old order of American ideals? Can no stand be made against a new social régime similar to that which the *Nation* makes against a new political one? It would seem that educated women in the United States might use their influence in more queenly fashion than in the formation of Societies of Daughters of Colonial Governors, Colonial Dames, and what not. It is possible I misunderstand the purpose of such societies; but, whatever historical end they may serve, one effect they produce is that of an effort to raise up class distinctions founded on an accident of birth, in a land whose founders surely had in mind the glorious ambition of founding a democracy of intellect, from whose governing body none with sufficient intelligence and character to attain to it could be excluded.

It is a misfortune that against the first meaning of the word aristocracy, "a governing body composed of the best men in the State," the dictionary-maker must now write "obsolete and very rare." To rouse the best women in the land to a broader outlook on humanity, we shall need to paraphrase the stern admonition of Sir Richard Grenville to Amyas Leigh in 'Westward Ho!'—"Do thou do thy duty . . . to thy country . . . and thy God; and count thy life a worthless thing as did the holy men of old. . . . Is there respect of persons with God?"

ELLEN JUDITH GOULD.

LAKE FOREST, ILL., April 8, 1901.

THE ELEVATION OF THE STAGE.

TO THE EDITOR OF THE NATION:

SIR: Andrew Carnegie's is, apparently, the name to conjure with at present. His more than princely gifts for libraries make everybody who has a pet scheme to work turn towards him. A subventioned theatre and newspaper, a permanent orchestra, are the things he is expected to provide in due course. The first might, indeed, be considered a more urgent necessity than the multiplication of libraries, by any one who has critically examined, during the season now drawing to a close, the metropolitan theatre bills. The literary element, not to mention the poetical, is almost entirely eliminated from present play-production. Who can recall the name of the author of any one of the plays now holding our stage? The novel-made play has verily landed us at the nethermost pit of literary effort in playwriting. The tailor-made girl, at least, finds Worth's or Redfern's name on the bill for their creations—writ large, too; from the play-bill of the novel-made drama, the author's name is benignantly omitted. It is a far cry, indeed, from this to Schiller's postulate that the stage should be made a moral institution. Nor are things theatrical much better in Europe, although the many German court theatres, and the two national theatres in Paris, to earn their subvention, still devote some of their efforts to the service of a nobler art than "Camille" and "David Harum." There are, year in, year out, more Shakspere representations in Germany than in America and England and all her colonies combined. Goethe, Schiller, Lessing, Molière, and Racine still furnish a considerable portion of the répertoire of the better German and French theatres. Our own German stage has given lovers of the classic drama the opportunity to see "Minna von Barnhelm," "Egmont," "Faust," "Iphigenie," "Tell," "Kabale und Liebe," and so exquisite a drama as "Hero and Leander," by Grillparzer, whose unspeakable name, Byron said, later generations would be compelled to struggle with. The Irving Place Theatre was, indeed, almost the only resort for plays of literary merit. I would not detract from the merits of such artists as Coquelin and Bernhardt, or their Rostand répertoire, but there are, probably, now more Americans in New York familiar with German than with French. The French actors never fail to draw full houses, while the German theatre, offering a more varied bill, is not nearly as well patronized as it deserves, especially not by educated Americans, to whom it would give object-lessons in German far more instructive than all the "methods" in the world.

The theatre, subventioned by a Mæcenas, would therefore seem to have become a necessity here where the State is precluded from supporting it, though it is by no means clear that the State or the city is, for any valid reason, debarred from providing the taxpayer with tickets to see "To Have and to Hold" on the stage, when he furnishes the public library the means of placing a hundred copies of the novel on its open shelves. Italy, too, dreams of a subventioned theatre. Disgust with the "horrid photographs of every-day life," it is reported, has taken hold of La Duse, once an "inspired" impersonator of "Camille," but now dreaming of a national theatre, like Wagner's, where Peace, Purity, and Truth are to reign, and the great and ancient drama of Greece is to be performed, to rescue the crowd from the baneful influences of the demi-monde and novel-made plays which oppress the soul. And her great confrère, Novelli, wants to establish a "House of Goldoni," a coun-

terpart to the House of Molière. The German Parliament has been in due form petitioned to create, by legislative enactment, a "Goethe-Stiftung" to encourage serious poetic and literary activity, as against the million-copy novel and the novel-made play.

The Stiftung is also to become the residuary legatee of all expiring copyrights, thirty years after the author's death, to prevent mere speculative and commercial exploitation of such rights—a novel solution of the question of perpetual ownership in literary property. What such copyrights in the possession of the Stiftung yield, together with a proposed appropriation of 250,000 marks yearly from the State treasury, is to furnish the means for carrying out its objects. The management is to be intrusted to thirty directors, named by the (already existing) Schiller Stiftung and German Authors' Association, to exclude politics, Government influence, and censorship.

The trouble is, not so much the absence of seriousness in the literary activity as the inability and unwillingness of the masses to take interest in and encourage it. The dear public, it is to be feared, cannot be changed until a new Carnegie comes to subvention their mental equipment rather than the theatres they frequent.

E. LEMCKE.

NEW YORK, April 10, 1901.

CORN IN GERMANY.

TO THE EDITOR OF THE NATION:

SIR: Systematic efforts, it is well known, have recently been made to interest the German public in Indian corn as a food-stuff. To all appearances, such efforts have not yet met with very flattering success, and the American producer and German army authorities, unless they have already given up hope, will have to place their reliance on the subtle influences of time. But if it could be shown that these efforts are far from being the first ever made in this matter, then, indeed, the case would present an even less promising aspect.

In turning the pages of Hebel's once exceedingly popular treasure-house of story and anecdote, the 'Schatzkästlein des rheinischen Hausfreunds' (1811), I have just stumbled on a piece, "Das Welschkorn," from which a few brief sentences, with their delicately archaic flavor, may not be without interest to your readers:

"Bisher hat man das Welschkorn fast bloss zur Mastung angebaut und benutzt. Aber das ist ein grosser Fehler. Denn

"*Erstlich*, so kann man aus dem Welschkorn, wenn man 's ins grosse anpflanzt, Zucker gewinnen, und hat ihn nicht mehr nötig dem Engländer abzukaufen. [A delightful glimpse into the history of the sugar question, Germany's beet-sugar industry not being much over fifty years old.]

"*Zweitens*, die Körner, wenn man sie nicht an dem Stock hart werden lässt, sondern halb reif abnimmt, geben auch für die Menschen ein sehr gesundes, angenehmes und nahrhaftes Nahrungsmittel, das man durch Kochen auf allerlei Art zubereiten kann.

"*Drittens*, man kann daraus ein gutes Bier brauen, item einen sehr starken Fruchtessig, item einen guten Branntwein.

"*Viertens*, die trockenen dünnen Häute, welche den Welschkornkolben umgeben; diese geben ein sehr feines Postpapier. Item, wenn man sie gehörig verarbeitet, so können sie anstatt des teuern Rosshaars zu Ausfüllung von Sesseln, Matratzen etc. gebraucht werden."

It must be admitted Hebel does no scant justice to the general usefulness of corn to human kind: a vegetable for the table, beer, sugar, vinegar, letter-paper, brandy, and—corn-shucks mattresses. If the unappreciative Germans, for ninety years, could resist the temptations of this array of good things, beer included, what hope can there be of ultimate victory over such perversity of taste?

But, jesting apart, it is interesting to notice that Hebel in the entire article does not refer by a single word to the use of corn in the form of meal.

A. R. HOHLFELD.

VANDERBILT UNIVERSITY, NASHVILLE, TENN., April 5, 1901.

THE ETYMOLOGY OF BOSS, 'CALF,' 'COW.'

TO THE EDITOR OF THE NATION:

SIR: The call "Co' boss" is familiar to most of the inhabitants of our Northern States and Canada. In fact, it has something poetic about it for many of us, reminding us of fields and lanes and woods and the mysterious suggestiveness of the coming on of night. And so it is not strange that the word *boss* has for most Americans an interest which other farm words lack, and that people often inquire as to its origin. Its practical identity in form and meaning with Latin *bos*, together with the improbability of farm hands dropping into Latin diction in hailing cattle, has wrapped the etymology of the word in a tantalizing mystery. I have long tried to dispel this cloud and get at the plain facts of the origin of the word, and, now that I have succeeded, it seems to me that the general interest in the expression warrants me in publishing its history in a non-technical journal.

Bartlett was, probably, the first to call attention to the word, which he presents in the diminutive form *bossy*, with reference to Greek μόσχος 'calf.' It then entered the larger dictionaries, and is referred to Latin *bos* in Webster, the Century, and the so-called Standard. The first gleam of the truth is to be found in the Century, where the Icelandic call *bās* is referred to: "cf. Icel. *bās*, *bās*, an exclamation used in driving cows into their stalls (*bāss*, a stall, boose: see *boose*)."

In America the word is rarely heard except in the call, where it has acquired almost the character of a name, and is often written with a capital, and sometimes confounded with *Bess*. The form of the call does not vary much, being *Come boss* or *bossy* or *Co' boss* in the North, and *Sook boss* or *Soo' boss* in the Midland. In England the word seems to be rare in calls: the only certain information that I have received comes from Somersetshire, where Mr. G. Sweetman of Wincanton reports *Coop Bossey* (that is, *Come up, bossy*), as a call to calves. Perhaps the call, *Boosh, booshie*, that Miss K. Irvine of Lerwick reports from the Shetland Islands, as used in calling cows and calves, is the same, for the Old Norse call *kus kus* appears in northern England with *sh: cush, cusha, cushy*, etc. But the word is in frequent use in southern, or Saxon, England, as a common noun. It occurs in the forms *bos* or *boss*, *bus* or *buss*, *bossy*, *bossy-calf*, *bossa-calf*, *boss-calf*, *buss-calf*, and *busk*, with the meanings, 'young calf,' 'unweaned calf,' 'calf too long unweaned,' 'child too long unweaned,' 'spoilt child,' 'milk-sop.' Most of this information is derived from the invaluable 'English Dialect Dictionary' of Professor Wright, who erroneously compares Hessian *busseling*, Low-German *bötlink*, 'young steer,' which would require a *t* in the English word.

The diversity of form seen in *boss, buss, busk*, is important. It can be explained only on the supposition that the forms represent the detached first element of a compound in which an old long vowel suffered shortening at two different periods of its development. Such a compound is *bosscalf* or *busscalf*. The *k* of the variant *busk* is simply the detached *c* of *calf*. At first sight, *bossycalf* or *busscalf* strikes one as a compound of two equivalent words, like *pussycat*. When we remember, however, that the *o* and *u* of *boss* and *buss* represent a long *o*, later long *u*, which became short before the consonant group *sk*, we see that the first part of the compound is no other than the word *boose, boosy*, Middle English *bōs* **bōsy*, Old English **bōs, bōsig*, 'cow-stall.' A *boss-calf*, or *buss-calf*, is, then, a *boose-calf*, that is, a calf that is still allowed to stay with the cow in the boose, or stall. Exactly the same notion is found expressed in dialectic German *Stallkalb*.

The use of *boss* or *buss* for *boss calf* or *buss calf* is parallel to the use of *Jersey* for *Jersey cow, pug* for *pug dog, Shanghai* for *Shanghai chicken, canary* for *canary bird*, etc. That what was originally a word for calf has come to designate a cow, is to be observed in many similar cases. The animal grows up, but its owner continues to call it by its baby-name, which thus becomes a sort of pet-name, for which a diminutive, like *Bossy*, may be formed. Similarly, *Sook*, originally a form of *suck*, still addressed in Great Britain and some parts of our country to calves only, is in most of our Midland and South the usual call to cows, appearing as *Sook boss, Soo' cow*, and in many variations.

I may take this occasion to state that many more answers to my test-questions must come in before I can complete the task of outlining our dialect districts, which I began some years ago. Every one is, therefore, urged to devote a postal card and a few minutes' time to the answering of the following few questions. If there is uncertainty as to any point, it should simply be passed over, and those questions be answered that can be answered without difficulty or delay.

(1.) Name the town, county, and State for which you are reporting, whether you live there now or not.

(2.) Do most people in your neighborhood say "Get a pail of water" or "Get a bucket of water"?

(3.) "Fry it in the spider," or "Fry it in the pan," or "Fry it in the skillet"?

(4.) Does the *ho* in *hog* resemble *ha!* or *haw?*

(5.) Does the *o* in *on* resemble *ah!* or *awe?*

(6.) Does the *a* in *past* resemble that in *part* or that in *pat*, or is it intermediate in quality?

(7.) Does the *a* in *calm* resemble that in *cart* or that in *cat?*

(8.) Does the exclamation *Bah!* rime with *He stood at the bar?*

(9.) Spell as best you can the word or sound that farmers use in calling cows from pasture.

(10.) Your name.

Replies should be sent to me at No. 1033 East University Avenue, Ann Arbor, Michigan. If written on a postal card, as shown below, lengthwise, as the print runs on the other side, these replies can be directly incorporated in the files without my copying them. Thus:

1. Battle Creek, Calhoun Co., Mich.
2. Pail.
3. Spider.
4. Ha.
5. Ah.
6. Pat.
7. Cart.
8. No.
9. Co' boss.
10. J. W. Wilson.

GEORGE HEMPL,
President of the American Dialect Society.

Notes.

A new edition of 'Lippincott's Pronouncing Dictionary of Biography and Mythology,' a work of approved excellence, is in the press.

About May 1 McClure, Phillips & Co. will publish 'Five Years of My Life,' by Alfred Dreyfus, including his Devil's Island diary and correspondence with his wife.

A novel by Prof. W. H. Venable, dealing with Aaron Burr's southwestern scheme of empire, is announced by Dodd, Mead & Co.

'Reconstruction in Mississippi,' by James Wilford Garner, and 'The First Interpreters of Jesus,' by George Holley Gilbert, D.D., are nearly ready with Macmillan's imprint.

'The Land of the Wine,' a comprehensive treatise on the Madeira Islands, by A. J. Drexel Biddle, will be issued by the author next June in two large volumes, fully illustrated with engravings, maps, and charts (Philadelphia).

Cassell & Co. announce 'Oral Sepsis,' by William Hunter, M.D.

Recent additions to the companionable Dent-Macmillan "Temple Classics" are Jeremy Taylor's 'Holy Dying' and Emerson's 'Essays,' the first and second series. The latter reprint in two volumes has the bibliographical interest of representing faithfully the first London edition, 1841, to which Carlyle contributed a characteristic preface. The curious reader who buys the little volume for pocket use may find a certain pleasure in comparing this text with his copy of Emerson's final revision of 1876. The changes, usually in the interest of compression, are slight, but instructive to the reader of rhetorical bent.

Though a brief essay justifies the title 'The Rise of the Book-plate' (A. Wessels Co.), the chief value of Mr. W. G. Bowdoin's handsomely printed book lies in the reproduction of some hundreds of selected examples of book-plates, new and old, classified by countries. It is thus a convenient repertorium for the student of this minor decorative art. Suggestions on the collecting and keeping of book-plates, a bibliography of the subject, and a register of the more important recent American designers and engravers of book-plates, are additional features of a book to which possessors of the more ambitious treatises of Mr. Charles Dexter Allen and Mr. Egerton Castle will yet be inclined to give shelf-room.

The industry of the compiler of 'Morris's Memorial History of Staten Island, New York' (Memorial Publishing Co.) will not be disputed, but his discipline as a writer is clearly defective, and he has been unable to digest and coördinate the mass of his material. Chapter i., for instance, closes with two pages about "the savage occupants of the island," which should have formed part of chapter ii., devoted wholly to "the native Indians." Again, the fundamental natural feature of the terminal moraine which constitutes the hilly portion of the island, is hidden in a footnote. In short, so far as construction and proportion are concerned, this history cannot in any way be commended; nor is there such a reference to sources as to inspire confidence in the authority of the narrative. Chapters 35, 36, are a dictionary of Staten Island loyalists. Chapter 37 is an unalphabetized jumble of local names. "Superfluous matter" marked, by the author's confession, the first draft of volume ii., as it does volume i.; but a happy delay secured its elimination. Here the chief interest and (subject to correction) worth lie in the accounts of old Staten Island families. An apologetic chapter is devoted to Aaron Burr, though he was not a native of the island, and though he should have been entered, if at all, under chapter xiii., "Distinguished Residents and Guests." The illustrations are a mixture of old and new, the photographic more numerous as the work proceeds.

The second issue of Mr. Herbert Morrah's 'Literary Year-Book and Bookman's Directory' (London: George Allen; New York: Francis P. Harper) has a portrait of Bishop Creighton for frontispiece. The preliminary matter touches on the year's work, analyzes agreements between author and publisher; examines in orderly fashion the book sales of 1900, in which one remarks the generally descending values of Kelmscott Press, the invariable increment of Vale Press, publications; exhibits the copyright decisions of the past year, etc., etc. Part ii. opens with a list of members of the French Academy, and this is followed by other lists—of agencies for the placing of articles and books, press-cutting agencies, book-illustrators, authors (with mention of any work issued by each in 1900 where practicable), bookbinders, printers, and sellers, libraries, library-searchers, photo-engravers, publishers, periodicals, societies, etc. The books of 1900 are selectively listed, with parallel reviews from different critics—not always harmonious, of course. This year-book has a principally English aspect, but Americans creep in, on no clear principle of discrimination. On the whole, the information here given, if not exclusive, is conveniently brought together.

There is an index, but no table of contents to the well-filled third volume of Transactions of the Mississippi Historical Society (Oxford, Miss.). The weightiest paper is from the hand of the editor, also the Secretary of the Society, Mr. Franklin L. Riley, on the "Transition from Spanish to American Rule in Mississippi." Worthy of mention, too, are Lee's "Campaign of Vicksburg," Brough's "History of Banking in Mississippi," Halbert's "Funeral Customs of Mississippi Choctaws," and Hilgard's "Geological and Agricultural Survey of Mississippi." Rowland's "Plantation Life in Mississippi before the War" frankly dwells on only the pleasant features of it, admitting that slavery ("the labor system") there "had much in it that was cruel, revolting, and oppressive," though this was never acknowledged by "the chivalrous, courtly, courageous Southern gentleman of the ante-bellum period," who, in this writer's heartfelt conviction, was "the grandest embodiment of the most superb manhood that ever graced a forum or died upon a battle-field." The volume contains two maps and one illustration.

The "College Latin Series" (Boston: Allyn & Bacon) adds an edition of the 'Andria' to its list. Professor Fairclough, the editor, has been a careful student of the text of Terence, deriving his inspiration in that direction from Prof. Minton Warren, whom he rightly characterizes as "undoubtedly the best Terentian scholar in America." About half the eighty-page introduction is devoted to a general sketch of the development of Roman comedy. The various editions of separate plays, each with its general sketch of this kind, raise the question of economy. The editors of such a series as this might provide in cheap form a general sketch of the Classical Drama, which could be used to introduce any of the plays of Plautus or Terence included in their series. The editions of separate plays could then be reduced in bulk and price—a change which would be most welcome to students. The text of the play before us occupies sixty-six pages, while the introduction, commentary, and appendix fill two hundred. The matter is all good, but it seems disproportionate in amount for ordinary undergraduate work.

The Vatican Press has just issued the official Papal year-book for 1901, 'La Gerarchia Cattolica, la Famiglia, e la Cappella Pontificia.' The full title of the incumbent of the Papal chair, himself being the 263d Pope, is as follows: "Vicar of Jesus Christ, Successor of the Apostolic Prince Peter, Supreme Pontifex of the Church Universal, Patriarch of the Occident, Prince of Italy, Archbishop and Metropolitan of Roman Church Province, Sovereign of the Temporal Possessions of the Holy Roman Church." This last title has lost its significance since the fall of 1870, but is no doubt retained as a protest. Only this can explain the further fact that in the Vatican's governmental organization there are still the two offices of "Magistrate of Rome" and "The Ministry of the Interior," but significantly without any incumbents. The total number of officials of all kinds constituting the hierarchy is 1,225, of whom Leo XIII., in the twenty-three years of his pontificate, has appointed 234. The Cardinals' College, officially a body of seventy, has now a membership of fifty-six, but of these thirty-one are Italian, and of the cardinals resident in Rome twenty are Italians. There are still three cardinals in the college who were appointed by Pius IX.

We have received the first number of *American Medicine*, published at No. 1321 Walnut Street, Philadelphia, under the editorship of Dr. George M. Gould, in the avowed interest of "independent and professional journalism." This weekly paper, we read, is "founded, owned, and controlled by the medical profession of America," as incorporated in the *American-Medicine* Publishing Company.

Mr. Cleveland's two recent Princeton lectures on the Venezuelan affair of his administration will appear in the *Century* for June and July.

Happily, for binding at least, the new

Korea Review is of the same size and shape as the *Korean Repository* which it succeeds. Within its hundred pages are poetry, proverbs, grammatical notes, folk-lore, notes and queries, calendar of events, and whatever will help the Westerner to know how and why the native of Korea thinks and acts. The "wisdom of many and the wit of one" are illustrated in the native proverbs, racy and original. One of them (in vol. i., No. 2), "While the sages play, the axe-handle rots," refers to the Korean version of the Rip Van Winkle myth. The linguistic researches of Professor Hulbert confirm his theory of the southern origin of the Korean people. He finds that "between the Korean pronouns and those of the Southern Turanian dispersion there is practical identity, while between the Korean and the North Asian peoples there are no marks of similarity whatever." He is thus strengthened in his belief that "both Japanese and Korean are far-off echoes of a southern tongue, which, at some period enormously remote, dominated the primitive world." Valuable notes on the new seaports just opened, and on the prosperous American gold-mining companies operating in the northern provinces, with the second instalment of Prof. H. B. Hulbert's History of Korea, conclude this very satisfactory second number.

The fourth number of the *Ephemeris Archaiologiké* for 1900 is given entirely to an account by Soteriades of his excavations, in 1897-'99, in behalf of the Archæological Society at Athens on the site of Thermus, the ancient capital of the Ætolian League. Thermus lay outside the circle of ordinary "classical" Greek life, and is not so much as named by any extant author before Polybius, in the second century B. C., nor does its name appear in the indexes to the histories of Holm and Curtius; yet, according to Polybius, it had more than two thousand statues, which were overthrown when Philip V. sacked the place in the third century B. C. Its identification is now certain, and the ancient descriptions are found to be accurate, although modern travellers have been uncertain as to the site. The sanctuary of Apollo is a great quadrangular enclosure of irregular form, about one thousand feet in length and six hundred in width. The enclosure wall is preserved to a height of six feet, and has tetragonal towers at intervals of about forty-five feet. Ruins of a stoa or porch of more than five hundred feet in length were found, but far the most interesting of the discoveries were the remains of the temple of Thermian Apollo. Of the temple which was rebuilt after the sack of Philip, little is left; the stones seem to have been used by the peasants for their own purposes. But terracotta ornaments have been found which were part of a much earlier temple, erected in the sixth century before our era. This early temple was of the Doric order, and was built of wood, like the Heræum at Olympia, and had a row of columns through the middle of the cella, like the so-called Basilica at Pæstum. Like the Heræum of Olympia, this temple was built over the remains of many sacrifices (*i. e.*, the worship at that place was far older than any temple), and as at Olympia, again, votive images of bronze were found in these sacrificial ashes. In the history of art, these discoveries are of importance in many ways, but particularly as confirming the view that Corinth was the birthplace of Greek temple architecture, and that the architects of the temples in Etruria and in Sicily received their inspiration if not their lessons from Corinth.

The second "specimen number" of the Russian *Journal of Financial Statistics* is a portly volume of nearly 500 pages, and is distributed to all who may be interested. Like its predecessor, this number has a strong flavor of an official publication, but it contains much comment by "G. B. V.," which lightens its pages and at times makes them almost readable. The object of this journal is to disseminate accurate information on the finances of Russia; but the plan has been drawn upon too extensive a scale to accomplish this end, and the tendency of the editor to "run amuck" when he wishes to answer a criticism or discovers an error in another, is more amusing than instructive. In spite of this personal quality, the volume is of value, containing much interesting material on the production and commerce of Russia. The essays or statements on the profits of joint stock companies, on English companies in Russia, on the iron, coal and petroleum industries, and on the budget and railways, give some idea of the wide range of subjects covered, while the sections devoted to "official discrepancies" and the emancipation of the serfs enable the editor to exploit his vagaries. The English investor, long indifferent to Russian securities and enterprises, is evidently intended to be instructed, but the lessons may profitably be read by those who know of Russian finance only through interested essays proving that the empire is bankrupt or is prosperous beyond measure.

Man's influence upon the earth is treated suggestively by Professor Woeikof of St. Petersburg in the *Annales de Géographie* for March. He dwells first upon the effects of cultivation and deforestation, having especial reference to his own country. The rapid and disastrous erosion caused by the injudicious substitution of cultivated plants for the natural vegetation, and the destruction of forests, is shown by the fact that on a road between two towns in central Russia, only thirty-two miles apart, "there were two bridges in 1860 and forty-six in 1892. The new bridges were built over ravines of recent date." Another Russian writer discusses the origin of the Finns, whom he believes to be the remains of the aboriginal inhabitants, and not, as is generally held, a branch of the Ugrian race who had migrated from the east. Other articles are a description of an educational geographical excursion in the Ardennes, and physical accounts of the Trans-Alai and Pamirs, and a district on the west coast of Africa, each of which is illustrated by photographs. The narrative of a journey made by order of the French Minister of Foreign Affairs to establish a hospital at Chengtu, the capital of the province of Szechuan, is an interesting indication of the activity of the French in the Yangtse valley

The "American danger," as a German paper styles our impending "conversion from an agricultural to an industrial nation," in a striking article given at length in the Consular Reports for March, does not affect France in one particular. The experiment made some thirty years ago of replanting vineyards destroyed by the phylloxera with American vines has been so successful that now there are 2,414,495 acres of these vines, and our Consul at Lyons says that "no vines will be planted in France or in any other European wine-producing country unless they are from American grafts, . . . or from original plants from the United States." He also calls attention to the confidence of the French wine-growers in the efficacy of cannon to prevent hail, which in the Department of the Rhone alone in 1897 caused a loss of two and a half million dollars; and he describes a powderless cannon charged with acetylene gas mixed with air, a recent Italian invention. The main provisions of the German law requiring invalid insurance of all wage-earners above the age of sixteen show the five classes into which they are divided according to their wages, the highest including those who earn more than $5 a week, the manner (by stamps), and the time for the paying of the insurance contributions. The weekly payments of the fifth class are eight and a half cents; of the first, three cents. Attention is called by the Consul-General to the raising of rubber in Guatemala. After describing the methods of cultivating the trees, the price of land, and the rates of wages, he adds: "I know of no enterprise or business requiring as little money as the cultivation of rubber." From a table showing the world's wheat product of the past two years, it appears that the greatest gain was made by Rumania, followed by Turkey in Europe and Bulgaria, and the greatest decrease by France (of fifty-six and a half million bushels).

The first public school for colored children in Philadelphia was established in 1822, and was named the James Forten School, in 1871, after a colored man distinguished for his success in business and for his beneficence toward his own people. Under the management of a local board, elected by the citizens of the ward, which contained the most degraded population in the city, the school became utterly demoralized, and the authorities were on the point of giving it up when Miss Anna Hallowell came to the rescue. She had long been interested in the education of the children of this quarter, and, having become a member of the Board of Education, she was enabled to assume control of this school, and to introduce there the system of manual training. The results of this experiment are set forth in a paper by Mr. F. W. Speirs, and show that training of this kind is peculiarly adapted to the needs of the "submerged" classes. At the same time it appears that the proportion of colored children has rapidly declined since 1894, their places having been taken by the children of recent Jewish immigrants. As in London, so in Philadelphia, when these immigrants establish themselves in a particular locality, other races withdraw and leave them in exclusive possession. The same tendency appears in the schools, the eagerness of the Jews to obtain education for their children having the effect of crowding out children whose parents are less interested in such ends.

—*Scribner's* for April opens with an illustrated article on "The Southern Mountaineer," by John Fox, jr. Mr. Fox confirms, if confirmation be needed, Charles Egbert Craddock. His facts are her facts, his mountaineers her mountaineers. This type "was not discovered until the outbreak of the civil war," although it was a century old then. There are some three millions of these mountaineers; they occupy a region

as large as Ohio and Pennsylvania put together, one of the richest in the world in natural resources, but hitherto practically isolated by its conformation from the rest of the world. The life of the people, their households, their customs, their religion, their politics, their moral code, their folk-songs and superstitions, are practically what they have been for a hundred years; and what these people were a hundred years ago their ancestors on the other side of the ocean had in some respects been ages before. Their clan blood-feuds antedate the Middle Ages; many of their idioms are as old as Chaucer. That they have had a good deal of influence on the development of the United States can be doubted by no one who recalls the career of Andrew Jackson, and the sources from which that savage statesman drew his strength. It is still the pioneer world, with pioneering left out, and the whistle of the encroaching railroad daily screaming out its ultimate doom. The third instalment of Mrs. Gilbert's Stage Reminiscences concludes these papers. Perhaps for New Yorkers her incidental sketch of Mr. Augustin Daly is as interesting as anything in them. While it is very eulogistic, it leaves no trait out, and gives a picture of the career of a manager and playwright unique in its own day, and not likely to be repeated. Of his audacity, which may fairly be said to have been phenomenal, she gives one or two amusing instances. Not only did he successfully introduce Miss Irwin to London, France, and Germany, notwithstanding that he was warned by his advisers that her fun was "peculiarly American"; not only did he improve Shakspere with Dalyan jokes, but he actually brought out in Paris before a French audience a version of his own of "Les Surprises du Divorce," and this in the very theatre where it had originally been brought out by an uncommonly good French company; and made it "go." All his company seem to have held him in a certain kind of awe. His management was a sort of spell; under the influence of it they produced results which they themselves did not understand. "Skipper," by Sewell Ford, with illustrations by Frederic Dorr Steele, reproduced in colors, is a little too much in the order of "Black Beauty" to be called original, but is a pretty story. E. W. Hornung's "The Last Laugh" (part of his "Adventures of the Amateur Cracksman"), with illustrations by F. C. Yohn, will no doubt appear in a book; the isolated tales show a good deal of ingenuity.

—*Harper's* most valuable article is Sidney Whitman's "Rise of Berlin." The development of German town life in the last half century is not in itself extraordinary, for the same thing has been going on everywhere; what makes it seem extraordinary is the fact that, in Germany, modern urban life has suddenly made its appearance in a country which in so many other respects preserves the picturesque and antique effects of earlier times. We find Milwaukee cheek by jowl with Rothenburg, funiculars running up Nerobergs, "up-to-date" peep-shows a stone's throw from the Cathedral of Cologne. Berlin is a city of yesterday; the paternal government which makes it perhaps the best-regulated city in the world is antique in its origin, modern in its ideals. Prussian police is a by-word even in Germany itself. Ambulance stations at street corners, arrows on the houses to show the stranger which way the numbers run, a cab system in which overcharging is absolutely prevented—all these little details are thoroughly Prussian, as is the "relentless, never-ceasing, systematic war" that is "carried on by day and by night against dirt, adulteration, and every other form of human negligence and dishonest manipulation." To an Anglo-Saxon, with his inherited ideas of personal liberty and dislike of petty governmental interference, there is too much of this; but the tree must be judged by its fruits, and the tree is not Anglo-Saxon. Luxury is making its way in Berlin; but, notwithstanding the extraordinary wealth of the city, "the number of people whose riches would accord with English and American ideas of great wealth is still exceedingly small." Only twelve persons have an income of over $250,000, and the richest man in Berlin is worth only some $7,000,000. Pooh! one is inclined to say—a one-horse town after all. Still, brother billionaire, it is a better policed town, and a better swept town, and a better managed town than that in which even our billions cannot prevent ash-can and newspaper-littered streets, nor Tammany police, nor yellow press. Of the illustrated papers, the most noticeable continues to be Woodrow Wilson's instalment of his "Colonies and Nation." "Serpent-Worshippers of India," by Walter H. Tribe, and "The Australian Squatter," by H. C. MacIlvaine, are also worth looking into.

—The magazines have all had their heads more or less turned by the demand for fiction, short and long; there is, however, still a large public which desires something more solid than mere entertainment. For this the *Century* makes provision, not only in Augustine Birrell's "Down the Rhine," which this time carries us from Coblentz to Rotterdam, but in three or four other papers. "The Transportation of Iron," by Waldon Fawcett, is an interesting paper, giving some account of an industry of whose features few have more than a vague idea. Perhaps the most remarkable thing about it is the fact that means should have been found of getting such work as the handling of ore done by machinery. "Of a part of the ore it may be said that, from the time it leaves the hills of the Northern wilderness until it is set down in the smoky valleys that lead up from the Mississippi, not a human hand touches it." Mechanical shovels, doing the work of scores of men, shovel it into the cars at the mines; gravity carries it from there to the holds of the lake iron-ships; and, the voyage over, mechanical arms unload these into farm-wagons." Charles Dudley Warner's "Fashions in Literature," a posthumous critical paper, suggests as many questions as it answers. "A great deal of the reading done," it says, "is mere contagion," a sort of communicated disease; and nothing is lost by not having it. This, however, is a law of nature, connected with man's mimetic disposition, and we cannot escape it. Fashions have succeeded one another in literature, as they have in clothes, but the trouble just now seems to be that fashions are actually *bred* like "cultures," and that the breeders sow them in otherwise healthy organisms for profit, with great success, until there is no mental health in us. There seems to be no cure in sight, except for those happy individuals who learn to know a good book from a bad one—a matter as certainly possible, says Mr. Warner, as to know a fresh egg from a stale one. The anonymous article giving "personal reminiscences of Queen Victoria" is worth reading. The writer saw her constantly in the summer of 1886, during a "four-weeks' peep into English court life, while temporarily forming part of the suite of an Illustrious Personage, a guest of the Queen's, at Osborne Cottage." Victoria, as here seen, differs from Victoria as usually painted in displaying a certain *bêtise* and aloofness, perhaps the result of age. "Malaria and Certain Mosquitoes," by L. O. Howard, Chief Entomologist of the Department of Agriculture, at Washington, is one of those fairy-tales of medical science which make us dream of a future for human life free from disease.

—Mr. Edwin Burritt Smith has an article in the *Atlantic* on "The Next Step in Municipal Reform." The first step he considers to be the effort to establish the merit system in the civil service. Achievement in this field may be as yet but "tentative"; but "we have finally reached clearness of vision and unity of purpose." The second step must be to strike at boss control in another stronghold—that of "public-service corporations," *i. e.*, those which supply water, gas, electricity, and transportation. Such corporations, Mr. Smith thinks, must be controlled by the city, or the bosses, through them, will control it. If their rapacious corruption cannot be controlled, then all "public utilities" must be vested in the public itself. To many people this seems only disguised socialism. If there is anything in the argument, it must apply elsewhere than in cities; and indeed the legal substance of it has been applied by the Supreme Court to the railroads in the Granger cases. Mr. Smith thinks the idea of public-franchise charters creating irrepealable contracts, the profits of which are to go to private stockholders, "abhorrent"; and perhaps the Croton water works are less conducive to boss rule than the New York traction system, but certainly the Federal Post-office has not been productive of purity in government at Washington. To our mind, the "public utility" question cannot be settled by any abstract proposition, and if the management of all the "public utilities" of New York were vested to-morrow in the city, they might be only more power in the hands of Tammany Hall. Tammany, by the way, is, we believe, an eleemosynary corporation, founded for charitable purposes; do not let us be deceived by names. "The Household of a Russian Prince," by Mary Louise Dunbar, is an account by an English lady of her life as governess of the daughter of a Russian prince. It is full of life-like touches, and bears internal evidence of veracity; but is not the spelling "Petumpkin," for Potemkin, rather a novel variation?

—Byron's 'Letters and Journals' are outstripping the Poems in Mr. John Murray's definitive edition (New York: Scribners) which we have several times had occasion to praise. Volumes iv. and v. of the 'Letters' have appeared since our last notice, but so far we have only three volumes of the 'Poetical Works.' We may hope that the slower progress of the latter indicates more care in the proofreading, and consequently a better text, than the third volume exhibited. The abundance and richness of

the new materials which Mr. Murray has at his disposal are no less striking than heretofore. Volume iv. (November, 1816—March, 1820) contains fifty-six unprinted letters, including several to Byron's sister Augusta, to Wedderburn Webster, and to Richard Hoppner. Volume v. carries the correspondence through December 21, 1821, and also brings out much fresh material. Mr. Prothero's preface misdates the limits as "April, 1820—October, 1821"—an almost unaccountable lapse in so accurate an editor. The latest letter is numbered 785, as against 431, the number which it bears in Halleck's American edition, heretofore the most complete. Together, these volumes cover Byron's stay in Venice, his visit to Rome, his residence at the Palazzo Guiccioli in Ravenna, and his removal to Pisa. "Manfred," the last canto of "Childe Harold" (what Mr. Henley would call "the fourth Harold"), five cantos of "Don Juan," and the unapproachable "Vision of Judgment," with several dramatic pieces, were produced in this period. As for the letters, new and old, they are as entertaining as anything can well be. Byron could hardly draw on his banker without individualizing the document. Besides the letters, there is a great mass of miscellaneous material, either from Byron's pen or illustrative of his life. The most important addition to our previous stock is the complete text of the 'Detached Thoughts,' now first printed from the manuscript (chapter xxiii). Volume v. also contains Byron's Diary for January and February, 1821. Mr. Prothero's editorial labors are marked by the same elegance and diligent accuracy that we have more than once commended. The illustrations are pertinent and well executed.

—In a remarkable paper on 'The Sources of Titus Andronicus,' just published by the Modern Language Association, Mr. Harold Fuller comes very near to settling a vexed Shaksperian question—we should say that he had quite settled it if such matters ever allowed themselves to be finally disposed of. Mr. Fuller has subjected the German "Tragœdia von Tito Andronico" and the Dutch "Aren en Titus" of Jan Vos to a searching examination, comparing them with the tragedy that goes under the name of Shakspere. He finds convincing proof that neither the Dutch nor the German play is derived from the extant English "Titus Andronicus," and he makes it equally clear that neither of them is an adaptation of the other. The reader has no difficulty in admitting these points. Then comes one of the prettiest combinations we have ever seen in an essay of this kind. By means of a full, lucid, and admirably arranged analysis of the three plays, Mr. Fuller brings out the unexpected but indubitable fact that Vos and the German tragedy, taken together, provide the whole plot of Shakspere's "Titus Andronicus," supplementing each other in a way that only the most credulous incredulity could ascribe to chance. The inference follows almost of itself: in these two foreign dramas we have translations or adaptations of the lost English play or plays that lie at the basis of the extant tragedy. For sufficient reasons, Mr. Fuller decides for two such plays rather than a single one. He shows that no other theory will account for the situation without raising more difficulties than it lays, and he cites testimony from Henslowe's 'Diary' for the existence of these two plays. Mr. Fuller supports his main thesis not only by arguments from plot—though these are sufficiently convincing—but by a discriminating study of the style and imagery of the Shaksperian "Titus" as compared with the Dutch and the German. Particularly subtle is his discovery and treatment of certain passages in which "the mind of the author [of the English "Titus"] has been so stimulated by certain hints in his originals that he has created images and conceits and dramatic artifices which are not identical" with their prototypes. In conclusion, Mr. Fuller expresses the opinion that Shakspere is the author of the English tragedy that we have, and that it dates from 1594, promising to return to these theses in a future investigation. Professor Baker appends a learned and closely reasoned note, in which Mr. Fuller's interpretation of Henslowe is substantiated by evidence drawn from the history of the actors' companies toward the end of the sixteenth century.

—Dr. Furnivall has issued a circular in the form of a letter to librarians in the United States that deserves to have every attention paid to it. It is a plea for the Early English Text Society, in which his own interest has always been so active and so great. He offers to libraries all its Texts, to the end of 1900, at the reduced price of $3 a year for each series, instead of $5.25. "The English language," he says, "is the birthright of every American as well as of every Englishman. Cynewulf, Cædmon, Alfred, Bede, Wyclif, Langland, Chaucer, and their successors belong to every one in the States as much as they do to every one in Britain. But we in England have the old men's manuscripts; you in the States have none, or hardly any. Your scholars and students want prints of these MSS. for the study of our common mother-tongue. With such prints as they have, your scholars have done admirable work; but they and we want more Texts to work on. The poor Early English Text Society has been doing its best since 1864 to supply this want; but it has never had enough money to print the Texts its editors have offered it." Dr. Furnivall thinks that if American libraries would support the Society, the necessary money would be forthcoming, and American scholars would profit at very small cost. He does not hesitate to declare that the Early English Text and the Chaucer Societies have not had a tenth part of the help they are justified in expecting from America, "considering the right of the States in the past of English speech." And he concludes with a reminder that the new century is a good time for a start, and an earnest request that all United States libraries subscribe at once to the Society and buy its back Texts as soon as possible. It may be that nothing but just such a personal appeal was needed to arouse the attention and interest of the directors of the principal libraries throughout this country.

THE HAGUE CONFERENCE.

The Peace Conference at The Hague. By Frederick W. Holls, D.C.L. Macmillan Co. 1900.

Political history, like biography or personal memoirs, suffers sorely from the tyranny of caution. The most lively and often the most important details do not see the light till the generation which could best enjoy them has passed away. Through the belated publication of Saint-Simon's writings his contemporaries certainly lost in them far more than we have gained. In like manner the secret diplomacy of Louis XV., with which the Comte de Broglie of the eighteenth century might have thrilled his public, falls rather tamely from the academic pen of his nineteenth-century kinsman. Secrets, like claret, lose their flavor with over-keeping.

Mr. Holls has gone into print without delay, but with the true reserve of the diplomatic personage. He is no mere chronicler, for he appeals to the general reader as well as to the student. But though he has placed the official acts of the Peace Conference in a narrative setting as picturesque as the etiquette of his profession would permit, we cannot but regret his failure to show us the inner workings of the game, the faces of the cards played by his colleagues and fellow-members. Like Thucydides, he gives us neat reports of the principal speeches, all admirably translated, and a full account of the more important debates, such as that on the dum-dum bullet. But these were formal utterances, and intended for eventual publicity. He tells us nothing of the unofficial discussions, or of those silent conflicts of policy which are all the better known because never openly mentioned. The rest of the acts of the Conference, and all that it did or failed to do, and why his Holiness was excluded, and how the Germans were won over, are they not written in the book of the private chronicles of Mr. Holls? But these things may never be revealed to our generation, though reporters shall run to and fro and the knowledge of the press shall be increased. When so able a writer has been behind the scenes, and, as an important member of the United States Commission, has had such ample means of information, his silence seems particularly unkind. However, we must rest content with what he gives us, a succinct history of the proceedings of the Hague Conference, and the only complete account of it that has appeared in English.

His tone may be thought somewhat extravagant in its optimism, especially in view of certain recent events, wherein the article of the Second Convention which forbids pillage has been openly set at nought by several of the signatory Powers. But his avowed conviction that the Conference "accomplished a great and glorious result" is chiefly based on the Convention for the Peaceful Adjustment of International Differences, popularly known as the Arbitration Treaty, and, as to that great work, it would be premature to assert that his praise is exaggerated. Certainly his cheerfulness is preferable to the pessimism displayed by M. Geouffre de Lapradelle, whose recent commentary on the Conference is the French equivalent of Mr. Holls's book. The French professor indulges in sarcasm or in bitter regrets over the selfishness of particular states, especially of England, and the timidity and inefficiency of the Conference. Mr. Holls abuses nobody; he endeavors to point out the solid benefits attained, and bids us be thankful for them. This surely is the more helpful and sensible course.

The introductory chapter gives a short account of the events that led up to the Russian rescript of August 24, 1898, proposing a reduction of armaments, and to the much broader circular issued by Count

Muravieff on January 11, 1899, which added to the original proposal seven other subjects for international discussion. The eight points named in that circular formed the programme of the famous Conference which met at The Hague on May 18, 1899. The second chapter describes the opening of the Conference, and gives a full list of the delegates, the inaugural speeches, and the assignment of the committees. The three following chapters describe the work of the First, Second, and Third Committees respectively, giving the final text of the three Conventions, article by article, interspersed with historical comment. It may be noted that the fifth chapter, which covers the elaboration of the Arbitration Treaty by the Third Committee, is much longer than the two preceding chapters put together, namely, those which discuss the humanizing of war and the extension of the Geneva Convention to maritime warfare. This is partly perhaps due to the fact that Mr. Holls was himself a member of the Third Committee; partly, no doubt, to his belief that the Arbitration Treaty is by far the most important fruit of the Conference.

The sixth chapter, a short one, summarizes the efforts made by the United States, as in 1856, to secure some agreement for the immunity of private property at sea. These efforts failed, owing apparently to "absence of instructions" alleged by the British and French envoys, and no action was taken by the Conference, beyond expressing a "pious wish" that the subject might be further considered in the future. Here Mr. Holls has been so discreet that we do not learn what were the obstacles to an agreement, though from the Rouen debate of last year it may be conjectured that they were serious.

The seventh chapter, headed "The Conference from Day to Day," gives some interesting hints as to the difficulties which beset the assembly, together with a list of the original "adhesions" (since increased) and a report of the closing addresses. Here appears also the letter from Leo XIII. to Queen Wilhelmina, in which the moral support of his Holiness is bestowed upon the Conference, and, as an indirect protest against his exclusion from it, the fact is mentioned that he was even then acting as arbitrator between two South American States.

The eighth and last chapter discusses hopefully the work of the Conference in its general bearings, and vindicates the right of the Arbitration Treaty to be regarded as "the Magna Charta of International Law." There follow the full text of the Conventions in the original French, accompanied by an English translation, the report made to Mr. Hay by the American Commission, an account of the Grotius celebration, and an index.

Such is an outline of this practical work, which should be viewed as a handbook rather than as a treatise. Probably many of the omissions that we may regret were made deliberately, in order to employ large type and yet keep within the limits of a single volume. But if economy of space was an object, we cannot see why the entire contents of the three Conventions, the six "Wishes," and the three Declarations need have been printed twice—first in the text proper, and again in the appendix; nor why, for the student's benefit, a few more modest footnotes—the foundation-stones of a learned book, as Andrew Lang happily calls them—might not have been inserted. The treaties on the laws of war and on the extension of the Red Cross system to naval warfare are of first-rate importance, yet the comments devoted to those documents seem distinctly meagre. They do not even explain the points of difference between the former treaty and the Geneva articles of 1868, nor between the latter treaty and the Brussels project of 1874.

In his laudable desire to exhibit only the best side of the Conference, our author veils its chief weakness, the avoidance of difficult questions. When discussing, for instance, the article of the Second Convention on the right of non-combatants to resist invasion, and the more liberal rules proposed by the British and Swiss Envoys, to which Germany and Russia successfully objected, he does not mention that the Conference failed to legalize the rising of a population in territory once occupied by the enemy, and to condemn the infliction of reprisals upon districts in which such risings occur. If Germany should again invade France, nothing in these Conventions would prevent her army from repeating the famous General Orders of October, 1870. This is almost as much as to say that in one respect the Conference made no improvement. Again, in his remarks on Art. 25 of the Second Convention, which forbids the bombardment by land forces of undefended towns, the author does not explain, or even record, the failure to extend this beneficent prohibition to the naval bombardment of open ports or of coast towns, such as The Hague. In short, we think that the practical bearings, as well as the origin, of those important regulations, might, without appreciable increase in the size of this volume, have been made more intelligible.

It is when he comes to his favorite treaty, on Good Offices, Mediation, and Arbitration, that Mr. Holls is at his best. His commentary throws much light not only on the meaning and purpose of the clauses, but also on the difficulties which surrounded their birth. This history should therefore be read by all who may be inclined to blame the Conference for accomplishing little. Our author's modesty is worthy of note. For, besides originating the eighth Article (on Special Mediation) and going at a critical juncture on a mission to Berlin, he played an important part throughout the proceedings. Yet in his book he often appears disguised under the title of "the American representative."

To those who underrate the results accomplished at The Hague we may answer, with Mr. Holls, "It was a Conference of practical men, not of dreamers and enthusiasts, and its work is to be judged accordingly." While it did not perform miracles, such as the abolition of war, it certainly took more practical measures for the mitigation of war and the preservation of peace than were ever adopted by any previous gathering of the peoples. To those, on the other hand, who overrate its achievements, we may point out that its rules for war are not particularly original, and its safeguards of peace not completely effective. The peaceful settlement of international disputes still depends, as of old, upon the principle that where there's a will there's a way. The only difference is that the Arbitration Treaty now shows us a more excellent way. A lofty and impartial tribunal stands henceforth organized, before which nations may obtain a prompt hearing, and the action of which will not be delayed by questions of jurisdiction or procedure.

That no agreement should have been made for the compulsory submission to this tribunal of certain classes of cases was to many persons disappointing. Such an agreement, as shown in this journal at the time, was much to be desired, and would indeed have been an immense step forward. But the nations are timid, and cannot be driven. To have made them step together, even without stepping forward, is in itself no mean achievement. This the Conference accomplished. We ought not, therefore, to condemn it too severely, if progress was occasionally sacrificed for the sake of unanimity. The "Wishes" and Declarations may, and the regulations of warfare must, do ultimate good. Time alone can show whether the Permanent Court will fulfil the sanguine hopes which Mr. Holls has voiced with so much temperate conviction.

THE INDIAN OF COMMERCE.

For purposes of literary classification, all Indians may be divided, quite regardless of linguistic affinities, into three sole tribes —the human, the inhuman, and the superhuman. There is the actual aborigine, interesting to competent fiction as to science because he is a man and at the same time a living archive from the childhood of the race. There is the wooden eikon which stands for questionable cigars or unquestionable penny-a-lining—in either case a mere peg upon which to hang commercial profit. And there is also the Red Man of Rhapsody—a conveniently distant fiction to carry heroics which would seem rather too absurd if fathered upon poor human nature as we see it next door. With the last-mentioned tribe deals one of the handsomest and one of the most preposterous books of the season, 'A Child of the Sun,' by Charles Eugene Banks (Stone). Brilliant as a parrot in mechanical coloration, the text also seems to have undergone some mental "three-color process." Fenimore Cooper was cold ethnography to this, and even Prescott's Empire of Montezuma quite as true to life. There is nothing Indian in these pages, except the good intention. A curbstone version of the "legend" of the Piasau serves for warp; and into it the author has woven a truly curious fabric of girl-graduate mundiloquence and scope. Nominally in prose, the book is in fact very largely couched in wilful and poor Hiawathan measure, doubly cheap by being masked in "long type." Perhaps the most diagrammatic comment on the quality of the volume is in its own exemplary lines about "Pakoble," belle of the "Arctide" tribe, who was "so perfect in beauty that the artists of the Arctides often begged the favor of her time, that they might preserve her loveliness to future generations." It must be said that the fifteen "color-type" illustrations, by Louis Betts, are far and away above their company and their sort. Of no value as racial types, they are very uncommonly attractive and sympathetic, and not without a touch of real poetry in conception as well as in color-scheme. Its whole dress would befit a worthier volume.

In boards and "bleating buckskin" (born sheep) and of a cover design grateful to the æsthetic if not to the scientific eye, 'An Alphabet of Indians' (Russell) is a

posthumous collection from Emery Leverett Williams. The twenty-six folio-page drawings, bluntly posteresque, are not ill-done in their sort. As to verisimilitude, however, they are much closer to the alphabet than to the Indian—as doubtless should be expected of diversions in this category, under which the dragon's teeth of Cadmus come up, with the processional years, as Brownies, Gibson-Girls, Pickaninnies, Wild Animals I Have Guessed At, and so on. It is a special altruism of the alphabet that it furnishes more or less pretext for just about the largest number of drawings that may safely be marketed at once. All twenty-five of the tribes here compulsorily foregathered look much more like one another than like themselves, and the ethnic differentiation of them would be hopeless but for the convenient lettering. The alternate pages of text are wholly commonplace, and very largely misleading—thanks, chiefly, to an apparent system of attributing traits, heard-of as "Indian," to the tribe whose page chances to have most space left. "Travvis poles," and jackrabbits that burrow, are among the contributions to knowledge here presented. Children, at whom the book is seemingly levelled, will find no special thrill in its pictures, and no competent information whatever in its letterpress.

George Bird Grinnell's 'Jack among the Indians' is a boy's book, in which interest must derive from no special magnetism or impulse of the author, but from his peculiarly matter-of-fact habit of narration, as of a real happening in settings as familiar to him as attractive to all boys. This is not necessarily dispraise. Like Mr. Grinnell's more serious work, this tale is an unimaginative, every-day presentment of Western and Indian themes by a man who has a very unusual practical familiarity with both.

Amid the perennial output of books which might in fact just as well be about any other topic whatever, but, for considerations of the market, are anilined with a weak suffusion of Indian, it is a grateful pleasure to commend Albert Ernest Jenks's honest and unpretentious story of 'The Childhood of Ji-Shib, the Ojibwa.' It is for "popular" consumption, but Dr. Jenks's technical paper on "The Wild Rice Gatherers of the Upper Lakes" gave us reason to expect the accuracy we find here. Without special literary grace, beyond its directness and homely intuition, the little book is workmanlike, interesting, and informative. It will appeal to unspoiled children of any age, and will repay their interest with principle. The author's decorations can hardly be said to better the page. Nor does Professor McGee's introduction add to the accuracy of a generally reliable book, with his gloss upon "the Red Man" and the "Red child." Our aborigines are brown. A veritable "Red Indian" would be as much a treasure for any museum as a marked man among his people. With much more creditable observation, *he* calls *us* "red."

For reasons not particularly obscure, our generic Indian policy seems not only not to stimulate, but in fact to strangle, the individual and potential mentality which all first-hand students have detected in our American aborigine. Politically denied the civic status and responsibility which should develop him; submerged in an interminable tutelage which is devised rather for the tutor's convenience than for the ward's betterment, and has no logical plan of majority; bound down to a scheme of "education" which is almost exclusively materialistic, it is small wonder that he has failed to give us a literature which should have been fascinating and precious almost beyond compare—the unadulterated expression of a people clear-thinking, unsophisticated, far nearer to nature than we may ever again come, and of opportunity for a valuable connotation of our own history. That which should have been the foreword of any real conspectus of "American Literature," the word of the First Americans, has somewhere been smothered in our processes. The great Government print-factory schools turn out still faster their bolts of human calico, and in more unvarying patterns of mediocrity. With another generation, the literal aboriginal mind, with all its value of originality, individuality, and nearness to the unsophisticated fact, will have disappeared. There will be Indians no longer, but smatters of "white men" under a brown complexion. We have somewhere, somehow, wasted our chance to bring out one of the most significant, instructive, and delightful members American scholarship might have had—the classics of the First Americans. And this is strange, for a consciously superior nation. We have thus far developed nothing to rival, nor even fairly to suggest, that astonishing "school" of American Indian poets, essayists, theologues, and historians evolved and nurtured by Spanish rule in Mexico, Peru, and other American colonies, more than three hundred years ago. The poetry, the oratory, the simple but adequate philosophy, of our own tribes, have been clearly enough vouched for, and more or less competently recorded, by our students of their folklore, their ethnology, and their history—but why not by themselves? Why have we had no Tezozomoc, no Camargo, no Diego Duran, no Salcamayhua, no Ixtlilxochitls, to give us American history from the side of the invaded? Why not even a Garcilaso de la Vega, whose notorious 'Comentarios Reales' and 'Florida del Inca' are quite as scientific and sober history as much that still sells enormously among us in three-volume editions; whose sixteenth-century ethnology is still unconfessedly followed in very many pretentious works; and whose rare and hardly known little volume of poems (1581) is as saturated a solution of Virgil as the best Harvard undergraduate of them all could write now if he tried?

The answer is, of course, that our Government plan of Indian education is neither devised nor operated by poets and historians, nor yet aimed at producing them. It has devolved some Indian police, some Rough Riders amenable to Rooseveltian discipline, several very tolerable brass-bands, and football teams much more than tolerable. But these are its jewels. Its average output is of cobblers, tinkers, typesetters, and the like, who can have no livelihood if they go home to their nomad fathers, and who presently will be "looked after" by the labor unions if they presume to practise these industries in competition with "Americans." Also, farm hands—not at all farmers, for they are taught by non-farmers, mostly, and in every event taught the tenets which are not only useless but prejudicial when applied to the unlike climatic conditions where their tribal lands are situated. Most vital of all, as a smotherer of human development, our system takes the Indian child away from home (confessedly, the farther the better), for more convenience of the instructor, and teaches him not only without, but practically against, the filial and human affections. In effect, the Indian home figures in this plan simply as a potential breeder of more pupils—who must, however, be taught, with more or less brutal directness, to despise their parents, and who are forced to abandon any language in which they might converse with those parents. The vital wisdom of the old plan, perhaps unformulated, but so basic that its common-sense humanity atoned for and outweighed the feudal and ecclesiastic coloration, was that it taught and uplifted the home and the child at the same time. If the child must learn Spanish, so did his parents. He was still able to talk with his mother—and now in two languages. It is notorious that in our scheme many children are sent home unable to speak to or understand their mothers in any tongue whatever. There was in the old régime a certain devout patience (lacking in ours) which did not have to extinguish the native tongue to teach the new one. Under that mediæval system, the pupil was part of the family and part of the State; not a mere unit of raw material for a machine-tender to "work up" on salary.

Yet now and then, by sheer character, an Indian does rise superior to our Governmental planing-machine—not because of our system, but in its direct despite. For instance, it is notorious that the remarkable papers of Zitkala-Ša in the *Atlantic* brought down upon her head an avalanche of instructorial wrath—most of it in ludicrous rhetorical contrast to her clean and high-minded style. Yet those papers were true and of serious value, as field students know, and from the merely literary viewpoint had an uncommon quality and a humanity as unsullied and refreshing as a mountain brook.

Entirely different, but of no less significance, is 'The Middle Five,' by Francis la Flesche, son of the Omaha chief E-Sta-maza, and well known to students by his collaboration with Miss Fletcher upon the folklore and songs of his people. It is an unaffected, admirably human, story of Indian boyhood at school—a modest Omaha 'Tom Brown'; charming because so real and unconscious a human document; valuable because so literal a transcript of the aboriginal mind. In the introduction, Mr. La Flesche says, in the quietest way, many things whose apparently innocent sarcasm will doubtless be least felt by those who are most in need of it. The frontispiece, a sympathetic drawing in colors, adds to the virtue of the book, for it is by a young Indian girl striving against mostly objective odds to make a living as an American illustrator, Miss Angel de Cora. Thoroughly likable for its own sake, this little volume must have its place with libraries and students as one of the very few, and one of the most considerable, literary productions of our conterminous American Indian.

Cæsar's Conquest of Gaul. By T. Rice Holmes. The Macmillan Co.

In this thick but not unwieldy volume, the author, who is favorably known to English readers by his 'History of the Indian Mutiny,' presents the results of eleven years of patient toil. His point of view is that of the historian rather than the philologist; his aim at the beginning was simply to tell

the story of Cæsar's campaigns in Gaul in such a way as to "relieve the weariness of the schoolboys, whose lot it is to flounder, in ceaseless conflict with the Ablative Absolute, through the pages of the 'Commentaries.'" Being a conscientious worker, who could not rest satisfied with superficial explanations, he soon found himself overwhelmed with the number of difficult problems suggested by the Latin text, and by the enormous literature which has grown up around it. The student of history who is impatient of the slowness with which good work is done, may derive no little consolation from the author's confession, which is worth quoting as a statement of a high ideal (preface, p. vii):

"I had no intention of writing a history of the Gauls; my subject was their conquest by Julius Cæsar; but I was bound to take as much pains to understand their history as if I had been ambitious of writing it. As I plunged deeper and deeper into the slough, I saw that many of the problems were insoluble; but this did not absolve me from the duty of grappling with them. Even if an historical or geographical problem cannot be solved with mathematical certainty, probability may be attainable; and, if one solution is as good or as bad as another, the reader has the right to ask the reason why. It is something even to fix precisely the extent of one's ignorance. Either I must leave the subject alone, or I must master it. If the study of Cæsar is arduous, it is fascinating. Year after year I read on and on, quite as much for the delight of learning as for the ambition of instructing."

The genesis of the volume gives the key to the contents. In Part I. we have a clear and graphic narrative of Cæsar's conquest, divided into nine chapters; in Part II., which fills more than 650 pages of smaller print, Mr. Holmes undertakes to elucidate all the important questions that suggested themselves to him in the course of his work. Besides these main divisions, there are, at the beginning, three excursuses upon the busts of Julius Cæsar, the bibliography of the Gallic War, and the reliability of the results obtained by Col. Stoffel in his excavations on the sites of Cæsar's camps. The full general index is supplemented by a useful index of authors; besides the map of Gaul, there are several plans and illustrations, and, from a mechanical point of view, the book is well made.

The narrative begins with a portrayal of the conditions which made the conquest of Gaul by the Romans not only possible, but inevitable; it ends with the termination of the struggle, in 51 B. C. It follows the text of Cæsar closely, and admits nothing from other sources without good evidence; yet it is much more than a translation, and, while attractive to the general reader from the vigor of its style, it will be found of interest to more advanced students of the 'Commentaries' for the reason that it embodies the main conclusions of the author's special studies.

Of the dissertations and notes in Part II. it is not too much to say that they form the best commentary on Cæsar's masterpiece available in any language. They are grouped in seven sections. In the first the author discusses briefly the manuscripts and editions of the 'Gallic War,' and the date of composition, which, with the majority of scholars, he is inclined to assign to 51 or 50 B. C.; he then reviews at length the arguments for and against the credibility of Cæsar's narrative, concluding with a strong and, as we think, successful vindication of its general trustworthiness.

The second and third sections, on the ethnology and geography of Gaul, together fill nearly a third of the volume. How meagre are the data, how uncertain the conclusions, how great the number of obscure monographs which one who wishes to make a contribution in these fields must search out and examine, is best known to him who has already tried to trace a single thread in the tangled and broken skein of pre-Roman Gallic history. Mr. Holmes is perhaps at his best in this part of his work. He has shirked no difficulty; and for the convenience of the reader he has followed the more general discussion with a Geographical Index, in which the names of the various tribes and cities appear in alphabetical order, with a summary of the evidence regarding the location of each; those only are excluded the location of which has been accepted as settled beyond question.

In the remaining sections are more than a hundred notes and excursuses, ranging in length from a few lines to a dozen pages, each article being complete in itself. Here one finds a digest of practically all that has been written upon the social, political, and religious condition of the Gauls at the time of the Conquest, the organization, equipment, and tactics of Cæsar's army, and a number of difficult questions presented by the interpretation of the Latin text of the 'Commentaries.' The author's conclusions in each case are stated concisely, but not without a clear indication of the reasons which seemed to him to have most weight.

That Mr. Holmes has not only read but mastered the extensive literature of his subject might be inferred from what has been said. His work, however, is judicial rather than encyclopædic. He has subjected the evidence derived from all sources to careful criticism, and his conclusions possess the value of independent judgment. He has done for Cæsar's 'Gallic War' what Mr. J. G. Frazer lately did for Pausanias; he has brought to bear upon the interpretation of a text the results of investigation along all lines touching it, and thus has distinctly advanced the study of his author.

It by no means follows that all of Mr. Holmes's conclusions can be accepted; and it would be unreasonable to expect that a work dealing with so great a multiplicity of details should be free from error. Slips of the pen, like that on p. 29, where Lucius Cassius is named as Cæsar's kinsman instead of Lucius Piso (see Bell. Gall. I. xii. 7), are rare. The author's footing is insecure when he treats matter purely philological, such as the variant readings of manuscripts and the spelling of Celtic names. In his unfavorable attitude towards the minutiæ of philological study Mr. Holmes is at one with the late Professor Freeman, seemingly having forgotten that, in the case of the historical and so-called natural sciences, as well as of those which deal with language, progress is made chiefly by the improvement of method and the elimination of error, so that every advance, no matter how slight, involves the discarding of earlier material as useless rubbish; yet no one will deny that the accumulation of impossible conjecture about the text of the 'Gallic War' is extraordinarily large.

It would be easy to cite a score of instances in which, as in the identification of Portus Itius with Wissant rather than Boulogne, Mr. Holmes, by a fresh working over of the evidence, has thrown new light on a perplexing problem. But the reader who is attracted to the subject should refer to the book itself, the shortcomings of which are obvious and relatively unimportant, while it has the rare merit of being at the same time scientific and interesting. The future writer upon things Cæsarian will be obliged to reckon with it; and a copy of it should be kept upon the desk of every teacher of Cæsar in the land.

Dog Watches at Sea. By Stanton H. King. Boston: Houghton, Mifflin & Co.

It is a pleasure to meet with a sailorman whose story, told simply, truthfully, directly, and concisely, gives indisputable evidence of being a record of actual personal experience. Such a narrative is found in 'Dog Watches at Sea.' It is, moreover, a document of exceptional value, as it depicts the life of the man before the mast on sailing-ships at the close of the nineteenth century. It offers, therefore, a basis of comparison between what we know of that life in the earlier and middle decades and the conditions as they exist to-day; for it is only within the past ten years that the author has abandoned a seafaring career to become superintendent of the Sailors' Haven at Charlestown, Mass. The story reveals that little or no change has taken place in the treatment of the sailor during the past hundred years. He is subject to the same injustice; his quarters on sailing-ships are as comfortless and cramped; and while his food on many vessels is more abundant and varied, the brutality of officers is only slightly diminished. Torture is modified merely to escape penal retribution; but the ever-ready belaying-pin, capstan-bar, seaboot, and knuckle-duster, to subdue the refractory or hasten the laggards, still possess tonic qualities that the average mate considers necessary adjuncts of the marine pharmacopæia.

The author gives an instance of this when he was serving as ordinary seaman, fifteen years ago, on the American ship *Hagerstown*, about to sail from Antwerp to Philadelphia. The vessel was hauled out in the stream, and the crew was engaged in rigging out the jib-boom, setting up the gear, and bending the head sails. Things were not moving with the rapidity that the officers thought the occasion demanded, so the belaying-pin was brought into use. "The first man tackled," says the author, "was 'Frisco,' the 'cock-of-the-walk.' It was wonderful how four men, the two mates, the boatswain, and carpenter, sober, and armed with authority and belaying-pins, could sail in among a drunken crowd, and in a few minutes, by spilling a few drops of blood, subdue the lot and make them 'hop light and come a-running.' I was glad I was a boy, as very little attention was paid me."

The author is a native of Barbados, one of a family of twenty-nine children, all of whom were born and reared on the western slope of the island at the edge of the sea. All vessels passing in and out the harbor of Bridgeton were visible from the windows of the home. Proximity to the water and the fascination which it exercises upon certain temperaments were not to be resisted. All but one of Mr. Stanton's brothers in succession adopted a seafaring life. He, in turn, yielded to the impulse, and at the age of thirteen shipped on a schooner trading between Barbados and Bermuda, and thence to New York. Of his experience on shipboard, and of

the perils that beset him in New York, the reader will find ample details; for if there be one quality which distinguishes the author above all others, it is naïve frankness. He conceals nothing, not even the actual names of ships on which, and of officers under whom, he sailed, or those of people with whom he was brought in contact; neither does he abate or soften in any manner the record of his shortcomings, nor the demoralization that overtook him through association with the seafaring scum, of which, more than the average sailor-man, he appears to have had his share. That he was able, ultimately, to shake it off, the position he holds now offers complete evidence.

In the chapter headed "A Starving 'Lime-Juicer,'" an English bark commanded by a Norwegian, the author gives an account of an ill-found ship and ill-fed and rum-sodden crew, which leaves nothing to the imagination. The captain was a "blue-ribbon" or temperance man of the sternest convictions. He managed to get about him a lot of as enthusiastic devotees of the bottle as were ever collected together in one ship, from the mate, an ancient mariner who had met with disappointments, to a deserter from the English army, a "stowaway," who emerged from the hold two days' sail from Bermuda, with a thirst that bankrupted for the time being the mate's spirituous resources. No more realistic picture of the vicissitudes—excepting shipwreck—that may befall the man before the mast, was ever drawn than is found in the account of the voyage of this English bark from Bermuda to Hayti, thence to Antwerp.

It is unnecessary to follow the author through the various phases of his career in the merchant service. He tells, however, of one incident that will account for our happy chance in the naval battle at Manila. The ship on which he was a sailor, while loaded with hemp at that port, was set on fire by some disgruntled members of the crew. As the burning vessel was a menace to other shipping, a Spanish gunboat was ordered to shoot holes in its sides below the water-line. The Spaniards were such poor shots that they succeeded in splintering the bulwarks only. The author closed his seafaring life as a sailor in the United States navy. In this capacity he made a three-years' cruise in the U. S. S. *Alliance*, attached to the South Atlantic Squadron. In some respects this experience forms the most interesting portion of the volume. Nowhere do we remember to have met with so frank and vraisemblant an account of the life of a sailor on board a modern ship-of-war. Melville did it for the old navy. As a rule, the average man-of-war's man is not intellectually competent to do it; or if he be competent, his imagination leads him to stray far from the reality. There is none of this in Mr. Stanton's story. No man who has acquaintance with naval life can fail to acknowledge the convincing accuracy of his statements.

Newest England: Notes of a Democratic Traveller in New Zealand, with some Australian Comparisons. By Henry Demarest Lloyd. Doubleday, Page & Co. 1900.

The enthusiasm with which Mr. Lloyd discourses of the socialistic experiments undertaken by the Government of New Zealand is so manifestly genuine as almost to disarm the critic. Had he lived at the time of the French Revolution, he would have been found among those who thought that the millennium had begun with Year I. of the Republic, and that human inequality could be suppressed by the decrees of the Convention. It is impossible not to hope that the members of the Parliament of New Zealand may have solved the problems that plague other societies, and a superficial reading of Mr. Lloyd's glowing periods would encourage this hope. His rhapsody is relieved by argumentative passages, statistics, and the testimony of witnesses; and whenever the figures make a bad financial showing, the cheerful suggestion is offered that, even if the experiment is a losing one, the people like it. The truth is, that Mr. Lloyd is so enthusiastic a democrat as to despise the ordinary ideals of human welfare. That the will of a majority of the people should be carried out is the *summum bonum;* if it results in the accumulation of wealth and the increase of virtue, so much the better. But *vox populi vox Dei* is, at all events, the fundamental principle of political action.

To those holding this creed Mr. Lloyd's descriptions of the policy of the New Zealand Government must be extremely pleasing. The rights of property in that country are curtailed by many taxes and restrictions. There is a progressive income tax, a progressive succession tax, a system of progressive taxes on landed estates, a Government life and accident insurance company, a system of loans by Government on bond and mortgage, nationalization of railways, of land, of banks, old-age pensions—and this is only the beginning. The land and income taxation is "to redress the social balance between the too rich and the too poor. But little more, however, has been achieved than to point the way and take the first step." From every quarter there come urgent demands for governmental aid, and the people have now elected rulers who understand that these demands must be complied with. It takes money, but the money can be borrowed, and the charges met by increasing the taxes of the rich. Democracy, Mr. Lloyd says, can do business at a loss and still make money. "Public ownership can be a great economic success even when it makes no profit." We are familiar with these paradoxes in the case of our own protected industries, and we find that they signify protection in New Zealand. But to apply to the Government for a railway or some other subvention for the benefit of a particular community or interest, is not there called lobbying; it is "the legitimate participation by the people in their own business."

Under our system of protective duties the farmers generally get the worst of it; but in New Zealand they have been more successful. The Government will carry their fruit and vegetables any distance at the rate of twelve cents for fifty-six pounds. It will carry fertilizers to their lands for nothing, and is equally liberal in the case of live stock for breeding purposes, or that returned from fairs. They can obtain land in moderate quantities for very small payments, and they have practically exempted themselves from direct taxation. Mortgages are taxed as the property of the lenders, improvements on land are not taxable, and land itself is exempt to the extent of $2,500. Out of 90,000 land-owners only 13,000 pay the land tax. But estates above $25,000 in value are taxed heavily. The succession tax on estates worth more than $100,000 is 10 per cent., and more if the decedent was an absentee. It must be said, however, that the fiscal results of this system of graduated taxation are not very satisfactory. The land tax yields $1,075,000; the graduated tax, the absentee tax, and the income tax together produce somewhat less. It is not surprising that the receipts from the land tax are steadily decreasing. At present three-fourths of the revenue is derived from customs duties, principally on the necessaries of life. Of this revenue $2,000,000 is devoted to public works—taken, according to a New Zealander quoted by Mr. Lloyd, "from the masses of the people to be spent on railroads to enhance the wealth of the land-owners."

Taking a dispassionate view of the situation, we find it impossible to share Mr. Lloyd's exultation. The public works are carried on with inefficient labor, in order to give employment to the inefficient. The railroad rates are high and the accommodations poor; yet the rates have been reduced so that the interest charges are hardly met. All sorts of discrimination in rates and service are practised under the name of protection or of the general welfare. The soil of New Zealand is, in places, of wonderful fertility; Mr. Lloyd tells us of land which produces eighty bushels of wheat to the acre. Its climate is the best. It has great advantages; "practically every resource for the support of life and the creation of wealth." With American institutions, great prosperity would be expected from such conditions, but what showing does New Zealand make? During the last ten years the population increased from 626,658 to 756,506, hardly 2 per cent. a year, and the birth rate is declining. The revenue from the customs increased from £1,541,395 to £2,042,602, while that from other sources is diminishing. The public debt is, in proportion to population, the largest in the world, and it has increased $40,000,000 since 1891. The Old-Age Pension Act had been in force eighteen months last April, and it was then absorbing $950,000 a year. Since then the Government has lowered the rate of postage on foreign letters to one penny, at an estimated loss of $400,000. Mr. Lloyd gives some of the particulars of the purchase of a rotten bank by the New Zealand Government for the sum of $26,000,000. They are not such as to create in us that implicit confidence in the integrity and wisdom of the rulers of New Zealand which he feels. Indeed, we are inclined to regard its Government as not far from insolvency, and we should advise sincere Socialists not yet to appeal to the example of New Zealand as conclusive.

Constantinople: The Story of the Old Capital of the Empire. By William Holden Hutton, Fellow of S. John Baptist College, Oxford. Illustrated by Sydney Cooper. London: J. M. Dent & Co.; New York: Macmillan.

This is the title of the latest volume in the dainty little series of "Mediæval Towns." Mr. Hutton describes his work as a "holiday task, very pleasant to him, of a college don to whom there is no city in the world so impressive and so fascinating as the an-

cient home of the Cæsars of the East." He seems to have a special predilection for theological and ecclesiastical controversies, which enables him to deal sympathetically with the story of Byzantine Constantinople, where those controversies played so important a part in the life of the people and the fortunes of the state. Emperors rose and fell on ecclesiastical issues, and theological subtleties were the favorite themes of popular discussion. At times, Mr. Hutton becomes a partisan, as in the contest between the iconodules and the iconoclasts, where his sympathies are altogether with the former.

"Leo the Isaurian, and after him his son, Constantine V. (nicknamed Copronymus by his people, probably "from his devotion to the stables"), of whom the latter certainly had no sense of the reality of religion, embarked on an ill-omened attempt to purge from the Church, and to destroy in the sacred buildings themselves, all the brilliant pictures and mosaics which commemorated the saints and received the homage, bordering no doubt on superstition, of the faithful. . . . As dear to the hearts of the Greek Christians as their subtle questionings into the deep meanings of divine things, their determination to be satisfied with nothing less than a precise and logical definition of the faith once for all given to the saints, was their craving for outward and visible signs to represent the gifts of God at once in the Divine Life and in the lives of the saintly followers of the Lord, and their own reverence and consecration of all that was beautiful in the work of man" (pp. 57, 58).

The Pope of Rome, Gregory II., opposed the Emperor with all his might, and the conflict between them "laid the basis of the distinction between the Greek and Latin Churches." Much of southern Italy was at this time "practically recolonized" by the immigration "of persecuted monks and priests, as well as lay folk," from the Eastern Empire.

But, for all Mr. Hutton's sympathy with the theological and ecclesiastical element, he does not contrive to make the history of Byzantine Constantinople interesting, nor to render manifest the really great part which the city played in the world's history, on the one side in mediating culture and civilization to the semi-barbarian West, and on the other in so long stemming the tide of Oriental invasion that, when the city at last fell before the Turks, Europe was able to meet the invaders behind a new line of defences, and finally to force them back. True, Mr. Hutton says that this was the rôle which Constantinople played, but it does not appear in the history which he records, which is a succession of palace intrigues and mob riots, relieved here and there by bright episodes or spicy scandals. One obtains from his pages a conception of incompetent, extravagant, and luxurious rulers, and a fickle, restless, and trivial population, neither of them awake to the mighty possibilities of Constantinople and the great mission intrusted to it. Our only wonder, as we read the wearisome tale, is that Constantinople did not fall long before it did. The saddest and dreariest part of all is the story of the Crusades, and the cruel sack of Christian Constantinople by the Western knights of the cross. After that follow a couple of centuries of pitiable meanness, until we are almost glad when at last the death agony is over and the city passes into the hands of the Turks.

The story of Turkish rule is told from a different and less sympathetic standpoint, but is in some ways better told, for here we are shown the causes which led to the decay and downfall of a state at first so violently aggressive as to threaten the speedy conquest of all Europe. The modern situation is viewed from the standpoint of an English conservative.

Two-thirds of the little book is taken up with this historical sketch of Constantinople. In the last third Mr. Hutton deals with the churches, the walls, the mosques, the palaces, and antiquities. This part is more interesting, and, we believe, more valuable, than the other, for, although the author has nothing new to present, he makes a discriminating use of the best and most recent authorities, and has brought together in small compass much desirable information. His is a handy book for the visitor to Constantinople to use in connection with a regular guide-book, like Murray's, and all the better because it is small enough to be carried in one's side-pocket. Moreover, it is pleasant to look upon, both without and within. The illustrations, by Sydney Cooper, add distinctly to the artistic effect of the pages, although it must be confessed that, where one looks for accurate details of topography, these artistic illustrations are inferior to the half-tone reproductions from photographs, of which there are a few in the volume. It is a pity that the pages of a book so dainty and attractive in appearance should be marred by careless proof-reading.

Oriental Rugs. By John Kimberly Mumford. Charles Scribner's Sons. 1900. Pp. xiii, 278.

That which has been absolutely unknown till now is given at last to the world of students. There have been big books, folios even, with excellent colored plates of fine rugs. From that extraordinary German production which contains mathematically drawn representations of Eastern carpets found copied with minute care in fifteenth-century Italian pictures, to Vincent Robinson's two thin folios with drawings (by the collector's sister) of pieces in the Robinson collection—drawings admirably truthful and reproduced with singular success—there is a great succession of colored plates, separate as in periodical publications, or grouped without much system in what may be criticised as mere picture-books. The chief of these collections is the very large and costly one issued by the Austrian Imperial Government; though the plates are not in color, photography is to be accepted as certainly a better rendering of the effects of a fine rug than any but the very most successful colored reproduction.

The volume before us gives us such photographic renderings, a dozen of them, and it contains also sixteen colored plates which render the effect of the soft pile surface, of the subdued coloration, with greater success than could have been thought possible. In a few cases there is too much gloss on the surface; but if the student will turn these plates so that the reflection does not disturb him, he will find them as effective as those which have not that particular fault. It is, however, in the text of this book that its value especially lies. The illustrations had to be taken, as the preface indeed states, from "large trade collections, where many rugs of each variety could from time to time be compared." Several owners of private collections have also contributed, but still the representations of rugs as given in this book can certainly be matched elsewhere. That which has not been done before is the systematic research into the facts concerning the manufacture of Eastern rugs, and the careful and patient following up in the East itself, with the consequent verification or disproval of assertions which are constantly made without adequate authority.

No one can have purchased Eastern rugs with any interest in their quality, in the character of their design, in the nature of their dyes, in the superiority, real or fictitious, of ancient over modern productions, without having felt and suffered from the almost complete impossibility that has existed of getting information which can be trusted. In conversation not many years ago with a great London dealer, one who was distinguished also for his admirable private collection, the statement was made that nothing could be ascertained with any certainty, because the only persons who ransacked the carpet-weaving regions of Persia and Tartary were the dealers, and because they were more desirous to keep the world from gaining knowledge than the world seemed to be to acquire it. This statement was smilingly accepted by the gentleman referred to. Although his own successful business, or the business of any one of his neighbors, might involve the keeping secret of only one village, or one small district, or of two villages in different parts of the country—although, in other words, rugs were being made especially for him in those places only—it was still admitted that the interest of the dealer was that the lands of northern Persia should remain as unknown as possible to any except the dealer. Where ancient rugs have been bought is a matter still more difficult to ascertain, because there is often something very questionable in the way in which the purchase has been brought about. Too frequently has it happened that rugs belonging to some Eastern prince have reached the Western purchaser through indirect means and even dishonestly. On the whole, then, the best informed and the most powerful class of rug-buyers have been disinclined to aid in the study of the geographical origin of rugs, whether modern or ancient. The appearance of Mr. Mumford on the scene has changed all that, because he has desired of all things to go straight to headquarters and find out on the spot what are the truths, so far as they are now ascertainable, concerning the origin of the manufacture, the origin of the designs, and the subsequent development of both the weave and the ornamental style. In this latter branch of the subject the discussion may be thought somewhat inadequate. Thus, the reference to Owen Jones as an authority (page 64), and the citation from him of the wild assertion that "Chinese art is in essence Mohammedan," argue the lack of intimate knowledge of the subject of decorative design. And yet the general conclusions drawn in this chapter on Design are sound. It is evident that the author has a keen eye and a discriminating taste which may be trusted. It is only to want of practice as a writer, and probably as a thinker on subjects of decorative design, that these criticisms apply.

The discussion of the ruinous influences existing in modern times, the invasion of the most sacred regions of the East of Europe by chemical dyes, the slight efforts made by Oriental potentates to keep them out of

the country, and the destructive influences upon design of their adoption, the setting up in India of carpet factories by Western dealers, and the extensive making of rugs in the prisons of India under the authority of the English Raj—all subjects of the greatest importance to the modern student—are discussed with admirable good taste, good temper, and thoroughness in chapter xiv.; but all this is a mere summing up in spirit, at least, of what had been said so frequently before in the course of the work. If, on the strength of this book to start with, more research, more inquiry, more discussion should result, and, most of all, if public collections of rugs could be made, the separate specimens being then open to criticism, and their attributions, geographical and chronological, open to public dispute, this most important of all the arts of western Asia would become the subject of a certain amount of exact knowledge. There has been seldom furnished to the world a book which, coming first into the field, has been as thorough and trustworthy as the one under consideration.

The Riddle of the Universe at the Close of the Nineteenth Century. By Ernst Haeckel. Harper & Brothers. Small 8vo, pp. xii, 391.

This is said by the author to be the final exposition of his monistic philosophy, not to be changed during the remainder of his days. It repeats many views published at various times earlier in life; it is a rounded, more complete expression, but contains little that is new. Pride is taken in being consistent, and in not having, like Kant, Virchow, Wundt, Baer, Du Bois-Reymond, and others, by increase of years and wisdom, put aside youthful conclusions for others of riper age. In this is perhaps a reason for the impression left that science has moved on while Haeckel lagged behind. As taught here, matter and energy are the fundamental attributes of a universal material, unified by the Law of Substance, which knows nothing of beginning or end; the development of the universe is a monistic mechanical process without trace of a controlling purpose; every phenomenon has a mechanical cause; the duration of the world has no beginning and no end, it is eternity; all objects are accidents or modes of substance; life originated spontaneously, and is evolved through natural selection; all stages of organic life are from physiological functions of sensation and movement; heredity is a physiological function of the organism; consciousness exists only in men and others of the higher animals; there is a psychological unity of the organic world; the soul is a natural phenomenon; the spirit world and immortality are products of poetic imagination; there is no revelation; the true source of rational knowledge is nature alone; there is no freedom of the will, and no action at a distance; the best that can be desired, after a life of doing good according to one's light, is the eternal peace of the grave; and the cult of the true, the good, and the beautiful is to displace the ideals of God, freedom, and immortality. The monistic shroud is from Spinoza, the frills are Haeckel's. In construction the book is admirable; it includes a great deal of food for thought; as a study of the Haeckel mind it is of surpassing interest. Scientists can accept only parts of its conclusions; some require more proof and others more faith. The creed is not one to be generally acceptable; it is out of the current, and appears to have no present likelihood of getting in. Such efforts may push the solution further on; they do not solve the riddle. From Christians, the special objects of sarcastic intolerance, the author may expect his best return in the use of his own formula, "Lord, give him an eternal rest."

The American Slave Trade: An Account of its Origin, Growth, and Suppression. By John R. Spears. Illustrated by Walter Appleton Clark. Scribners. 1900. Pp. xviii, 222.

Mr. Spears's book naturally suggests comparison with Mr. Du Bois's 'Suppression of the African Slave Trade,' but a slight examination shows that the resemblance is superficial. The present work has few of the evidences of critical scholarship so strikingly apparent in the volume of Mr. Du Bois, nor is the legal and documentary history of the matter much gone into. What we have here, rather, is an easily written narrative, painful and harrowing in interest, of the conduct of the slave trade at different periods, with particular reference to its personal incidents and characteristic routine, its growth in spite of the efforts to check and suppress it, and the financial aspects which constituted its chief appeal to those engaged in it. In this respect the book makes a useful supplement to the more formal work of Mr. Du Bois, and supplies to the full the element of vivid and horrible reality which the latter, primarily concerned with statutes and official reports, keeps in the background.

The general superficial features of the African slave trade, so far as America is concerned, are by this time tolerably familiar, and Mr. Spears has not told us much that is positively new or that has not been set out in the pages of earlier writers. It was worth while, however, to bring together in convenient compass and readable form these scattered incidents which now seem hardly possible, and to show something of the real nature of a traffic which, bred of national rivalry and religious and humanitarian purpose, and nurtured from economic considerations still too little understood, grew ere long into one of the most lucrative branches of foreign trade, and withstood for years, notwithstanding its atrocious concomitants, every effort of law and moral agitation to do away with it. The figures which Mr. Spears gives showing the financial side of the business and the enormous profit which could reasonably be anticipated from a successful voyage, constitute, we think, the most valuable part of the book, and, incidentally, throw light on the related question of the sincerity of Southern advocacy of slavery in the generation immediately preceding the civil war.

One is hardly expected, in the case of popular writing of this sort, to dwell much upon slight inaccuracies and minor details. We do not think, however, that the slavery provision in the Massachusetts Body of Liberties proves that voluntary slavery was "common" (p. 12), or that the "Association" of 1774 declared against the slave trade from any sympathy for the unfortunate negroes, as Mr. Spears seems to imply (p. 105). The "Association" is stated to have been agreed to as likely to "prove the most speedy, effectual, and peaceable measure" for obtaining the redress of certain grievances, of which the slave trade was not one, and was to continue only "until such parts of the several acts of Parliament" enumerated were repealed. Mr. Spears is even more severe than Professor von Holst on Charles J. Ingersoll, declaring that in his report of the House Committee on Foreign Affairs on the *Amistad* case, April 10, 1844, Ingersoll "deliberately falsified dates, and built his argument on a false date" (p. 192). It is to be noted that Ingersoll's latest biographer does not refer to the incident.

The dozen full-page illustrations, based on the most striking or most repulsive incidents in the story, will have a mortal fascination for some readers, though their appropriateness would be enhanced if they faced the pages to which they refer.

BOOKS OF THE WEEK.

Allen, Mrs. William. The Love Letters of a Liar. Ess Ess Pub. Co.

Atlas of the Philippine Islands. Special Publication No. 3, Coast and Geodetic Survey. Washington: Government Printing-Office.

Barrière, Marcel. Le Nouveau Don Juan: (1) L'Education d'un Contemporain; (2) Les Ruines d'Amour; (3) Le Roman de l'Ambition. Paris: Alphonse Lemerre. 3 fr. 50c. each.

Science.

Henry Holt & Co.

29 W. 23d St., New York. 378 Wabash Ave., Chicago.

HAVE RECENTLY PUBLISHED:

Schenck and Gürber's Outline of Human Physiology

Translated by Dr. William D. Zoethout. With Preface by Prof. Jaques Loeb of the University of Chicago. 339 pp. 8vo, $1.75 *net.*

A clear and compact statement of the main facts of the science in the light of the most recent scholarship.

Prof. Theodore Hough, Massachusetts Institute of Technology: "A compend which for accuracy and comprehensiveness is incomparably better than any similar work I know of."

Prof. Henry B. Ward, University of Nebraska: "It seems to me altogether the most scientific arrangement and treatment of material of which I am acquainted in college text-books on this subject. I think we shall be able to make use of it in our work next year."

Reighard and Jennings's Anatomy of the Cat

By Prof. Jacob E. Reighard and Herbert S. Jennings, both of the University of Michigan. With 173 original figures by Louise Burridge Jennings. xx+498 pp. 8vo, $4 *net.*

For use in the laboratory to accompany dissections. The book is limited to description of normal anatomy and the direct linear action of each muscle taken alone has been given. Other matters relating to physiology and all of histology have been excluded. The figures have been drawn from actual dissections and have been carefully chosen for their direct usefulness to the dissector.

Prof. Henry F. Osborn of Columbia:—"It brings the subject of mammalian anatomy within the range of a large number of students in a compact form for introduction to medical courses.'

IN PRESS

Remsen's College Chemistry

By Prof. Ira Remsen of Johns Hopkins. (*August.*)

An entirely new work, intermediate in size and method of treatment between the author's *Introduction to the Study of Chemistry* and his *Inorganic Chemistry*, following in general the plan of the latter The constitution of compounds is treated less fully and more simply. The conceptions of physical chemistry are liberally utilized, as also the latest results in the application of electrolytic methods.

Remsen's Introduction to the Study of Chemistry

xix+435 pp. 12mo. (*American Science Series, Briefer Course.*) *Revised and Enlarged.* $1.12 *net.* (*May.*)

Again this book has been thoroughly revised and reset. Recent developments of the subject have been utilized so far as they seemed appropriate in an elementary book. The quantitative experiments are somewhat more strongly emphasized than in the earlier editions, though it has not seemed wise to introduce a lot of such experiments which cannot be properly performed by the students in the time usually at their disposal. The modern theory of solution is as fully presented as seems profitable for the stage of study in view, and some use is made of the theory dealing with certain classes of reactions.

Ganong's Laboratory Course in Plant Physiology

By Prof. W. F. Ganong of Smith College. (*April.*)

REFERRING TO WISHART'S

MONKS & MONASTERIES

Albert Henry Newman, D.D., LL.D., Professor Church History, McMaster University, Toronto, in a signed review in the American Journal of Theology says: "It may be said at once that he has produced by far the best book on the subject in the English language, and that it would be hard to find in any language a better general discussion of the various questions involved in the history of monasticism."

With four photogravure portraits, $3.50 net.

COMMENTS ON DR. C. C. ABBOTT'S

In NATURE'S REALM

"Of the artist's work nothing can be said in criticism; its delicacy, truth to nature, and decorative effect are as admirable as they are unusual."—Evening Post, N. Y.

"The charm of such books as these lies in their essential simplicity and naturalness, but the special value of Dr. Abbott's lies in the fact that he never becomes so absorbed in the study of component parts as to fail in an adequate comprehension of nature as a whole."—The Outlook, N. Y.

With photogravure frontispiece and ninety drawings by OLIVER KEMP, $2.50 net.

At booksellers', or delivered, on receipt of price, by

ALBERT BRANDT

Publisher, Trenton, N. J.

HAVE YOU READ

"God Winning Us"

By Rev. CLARENCE LATHBURY? If not, this is the time to do so, for we will send you a copy for the purpose of introducing it to you at our trade rate of 32c., including postage. (The regular price is 40c.)

It is a book of 159 pages that contains some new thoughts, many old thoughts in new and interesting forms, and is written in a clear and telling way. It is a book that interests young readers as well as older ones.

Send us 32c. to-day and we will mail you the book.

To the Doubting, the Sorrowing, and the Truth-Loving.

Death and the Future State.

By Rev. S. H. Spencer. Price 30 cents.

SWEDENBORG PUBLISHING ASSOCIATION, Germantown, Pa.

BEACON BIOGRAPHIES

of Eminent Americans. Cloth, 75 cts. each. Blue lambskin, $1.00 Send for circular about them.

Small, Maynard & Company, Boston.

Pocket Size Standard Novels.

Thackeray's Works and Dickens' and Scott's Novels. Thinnest printing paper in the world used. Large type, easy to read. Size 4¼ by 6¼ inches and not thicker than a monthly magazine. Bound in cloth, $1.00 each. Prospectus mailed free on request, or books sent prepaid on receipt of price. THOS. NELSON & SONS, 37 East 18th St., New York.

Monsieur Beaucaire?

A Great Book. $1.25.

LIGHT on LEGAL QUESTIONS.

There are many questions in regard to legal terms, legal history, and the principles of law which arise in ordinary reading and experience. When these questions are not serious enough to take to a lawyer, they can generally be solved by reference to **Rawle's Revision of Bouvier's Law Dictionary** (2 vols., $12.00 *net*), a standard book, ably re-edited and brought down to date, which ought to be among the reference books in every public, school, or private library. Published by

The Boston Book Co.,

Penobscot Bay.

MAINE.

FOR SALE.—The finest large shore tract in this section left unoccupied and for sale at prices of ten years ago. The property comprises 400 acres of land, with nearly four miles of shore front; has beautiful headlands, cliffs, coves, and beaches. The land is much diversified in character, alternating between heavy woodland and open fields. There is a great variety of beautiful drives through and around the tract. Steamboat landing, with daily communication with Boston, near the property. Most exquisite views of bay, ocean, islands, and mountains everywhere. Islesboro and Castine are within five miles of the land. There are two farmhouses and a pond on the property, and several salmon privileges on the shore. Address

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 206 to 210 Broadway, New York.

JOHN WILEY & SONS'

SCIENTIFIC PUBLICATIONS

HOUGHTON, MIFFLIN & CO.'S

New Books

COMPLETE WORKS OF LORD MACAULAY

New *Cambridge Edition.* With an Introductory Essay, by HENRY D. SEDGWICK, JR., and an extended Bibliographical Sketch, by W. DAWSON JOHNSTON.

THE HISTORY OF ENGLAND, in five octavo volumes, with a full index, $10.00.

ESSAYS, in three octavo volumes, with an index, $6.00.

MISCELLANIES, including Speeches, Letters and Poems, in two octavo volumes, with an index, $4.00.

The set, 10 vols. 8vo, $20.00.

This edition of Lord Macaulay's Works will appeal strongly to readers who wish his writings in thoroughly handsome library volumes, edited with scholarly care. These are printed from large, beautifully clear type on paper of high quality, and bound in simple but handsome style. Each of the volumes has a frontispiece portrait, the ten including two of Macaulay and eight of notable persons who figure in Macaulay's pages.

CHRISTIAN ORDINANCES AND SOCIAL PROGRESS

The Noble Lectures at Harvard University for 1900. By The Very Reverend WILLIAM HENRY FREMANTLE, D.D., Dean of Ripon. 12mo, $1.50.

Dean Fremantle is one of the most conspicuous Broad Churchmen in the English pulpit, and in this book he offers a large-minded interpretation of historic Christianity as illustrated in the Bible, creeds, sacraments, worship, and preaching, in their relation to the world of to-day. The book is a valuable and interesting contribution to current religious thought.

THE SUCCESSORS OF MARY THE FIRST

By ELIZABETH STUART PHELPS, author of "A Singular Life," etc. Illustrated. Crown 8vo, $1.50.

An entertaining story of the experiences of a family in a New England suburban town with their servants. There was a fine variety of these, of several nationalities, all degrees of ignorance, and shades of incompetence. The story is thoroughly interesting and well illustrated.

PENELOPE'S IRISH EXPERIENCES

By KATE DOUGLAS WIGGIN, author of "The Birds' Christmas Carol," etc. 16mo, $1.25.

Penelope and her companions, Francesca and Salemina, go through Ireland, as before they went through England and Scotland, and discovered at every turn of the road occasions for merriment, and find hospitality, cheerfulness, and beautiful scenery. The story is full of entertainment, and as an English critic remarks: "Penelope has some spell to make the colors freshen on this threadbare world."

UNDER THE REDWOODS

By BRET HARTE. 16mo, $1.25.

Bret Harte has told many scores of incomparable tales, and here are nine more, breezy, genial, strong, full of the vast and venturesome West.

He adds to the stories a chapter of autobiography, entitled "Bohemian Days in San Francisco," which lends a peculiar interest to this book.

Sold by all booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston.

11 East 17th Street, New York.

Some Recent

EDUCATIONAL BOOKS

Five Weeks of Outdoor Study

under competent leadership—study of nesting birds, of insect life, of trees and flowering plants and ferns, and of the varied Cheshire County landscape—are offered to men and women by

The Alstead School of Natural History,
ALSTEAD CENTRE,
New Hampshire,

whose third session will open on Tuesday, July 2, 1901.

The work of the classes is serious and earnest; the way in which the subjects are approached is new. The aim throughout is to gain close acquaintance with the things studied—such acquaintance as comes only from careful, systematic observation in the open air.

The instructors are Ralph Hoffmann, Merritt Lyndon Fernald, Hollis Webster, and William L. W. Field.

The membership fee of one hundred and fifty dollars covers all expenses of board, lodging, tuition, and excursions for the entire session.

For detailed information, early application should be made to the Secretary, W. L. W. Field, at Milton, Massachusetts.

Teachers, etc.

PARENTS GOING ABROAD,

or for other reasons wishing to place two or three little girls in the country for the summer, may find a pleasant home for them with a lady who will give them the best of care. Special attention paid to outdoor interests, the study of flowers, birds, etc. Beautiful mountain region. Highest references given and required. Address MISS H., care of the *Nation*

AN EXPERIENCED TRAVELLER and Tutor will travel in Europe and tutor youths during summer. Address TUTORING, care of the *Nation*

IF YOU ARE THINKING
of introducing a course on

The Macmillan Company's NEW BOOKS

THE NOVELS ARE

Arrows of the Almighty
By Owen Johnson

12mo, cloth, $1.50

"THE novel is lofty and pure in tone, strongly human in its characters, admirable in its literary style and finish—a novel, in short, of exceptional worth."—*Chicago Tribune.*

Robert Annys: Poor Priest
By Annie Nathan Meyer

12mo, cloth, $1.50 (*Second Edition*)

"AS for her story, it needs no apology. Its style is one of delightful clarity, just sufficiently tinged with the necessary archaisms to satisfy one's sense of the appropriate."—*Commercial Advertiser.*

The Making of Christopher Ferringham
By Beulah Marie Dix

Author of "Hugh Gwyeth," "Soldier Rigdale," etc.

12mo, cloth, $1.50 (*Third Edition*)

"THIS vigorous and compact tale bristles with stirring adventure by land and sea; it is graphic; its fights and seafaring ventures are portrayed with no uncertain hand, and yet the simple love story which threads the harsher incidents into natural sequences is told with a winning sweetness. . . . The book is almost uniquely innocent of dialect and technicality and the style is pure and vigorous."—*The Chicago Record.*

The Heritage of Unrest
By Gwendolen Overton

12mo, cloth, $1.50 (*Third Edition*)

"BY far the most striking and brilliant novel on our list this week is 'The Heritage of Unrest,' by an American lady named Gwendolen Overton."—*The Spectator.*

Voysey
By R. O. Prowse

12mo, cloth, $1.50

A very clever book, written in a delightful style.

The Crisis
By Winston Churchill

12mo, cloth, $1.50

THIS novel, now in press, will be eagerly awaited by those who know "Richard Carvel." It is rumored that this story is of more absorbing interest than that celebrated book.

OTHER WORKS ARE

The Evolution of Immortality
By Rev. S. D. McConnell

12mo, cloth, $1.25

"THIS is the pivot on which Dr. McConnell's argument turns. Man is potentially immortal, but not all men reach that stage where they may be said to possess a soul."—*New York Tribune.*

Politics and the Moral Law
By Gustav Ruemelin

Edited by F. W. Holls

16mo, cloth, 75 cents net

THE translation has been made by Dr. Rudolph Tombo, Jr., of Columbia University, and the introduction and notes are by Frederick W. Holls, Esq., late member of the Peace Conference at The Hague. In the notes striking passages of parallel reasoning from John Stuart Mill, Lord Lytton, and others are quoted, and interesting examples of modern statesmanship, notably of Bismarck and Gladstone, are given with some detail.

Talks on Civics
By Henry Holt

12mo, cloth, $1.25 net

THIS book was written in the hope of doing a little something to develop in young people the character of mind which is proof against political quackery—especially the quackery which proposes immediate cures by legislation for the abiding ills resulting from human weakness and ignorance.

A Year in China
By Clive Bigham

8vo, cloth, $3.50

IT was the author's privilege to serve under both Sir Claude MacDonald and Admiral Seymour, having accompanied the latter on the first relief expedition. He gives an excellent account of that exciting episode.

The Working Constitution of the United Kingdom
By Leonard Courtney

8vo, cloth, $2.00 net

"THE work is something between a book to be read and a book of reference, full of accurate information, full of good sense, which will speedily find its way into the libraries of most men who occupy themselves much with public affairs."—*The Spectator.*

The Writings of King Alfred
(D. 901.)

By Frederic Harrison

Paper, net, 25 cents

AN address delivered at Harvard College, Cambridge, Mass., March, 1901.

THE MACMILLAN COMPANY
66 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, APRIL 25, 1901.

The Week.

We may never see the rough draught of Aguinaldo's manifesto to his people, or learn in what way and to what extent the screws were put upon him. The document is hardly gushing, but it is explicit in its declarations for peace, and will have its influence in bringing about that consummation. It is equally unambiguous in accepting American sovereignty, though this seems to be thought of as a temporary step, pending the realization of "those promised liberties" of which Aguinaldo speaks. What are they, and who promised them? Unless they include ultimate independence, we can see in the phrase only the threat of new misunderstandings and bitterness. At any rate, there is not a word in the proclamation which would prevent Filipinos, or Americans who believe in Philippine independence as the only sure solution of a difficult problem, from pressing steadily towards it as their final goal. We observe that the Washington authorities are in a mood of silly hopefulness that the manifesto will "reduce the criticism of the Administration." This is an old trick of Imperialists. What they want is support, or else silence. They are urging us all to keep still about Cuba—whatever you think, do say nothing. But censorship and deportation are not yet established here, whatever may be the case in Manila, and till they are, the Administration will have to get on with the pesky critics as best it can.

The announcement that the War Department has decided not to raise any of the 12,000 Filipino troops authorized by the last Army Law, would seem to indicate that there is not yet that full trust and confidence in our Oriental subjects which some assumed to exist as the result of the capture of Aguinaldo. The decision is the more interesting since it is known that the authorities are anxious to decrease the number of American troops in the archipelago, and it was thought that this might be accomplished by the enlistment of Filipinos, for which Judge Taft was so anxious. Meanwhile, Gen. Young's statement as to the necessity for 60,000 troops for some time to come seems borne out by renewed insurgent activity. The truth is, that as long as the United States fails to win the confidence and support of the Filipinos, it must enforce obedience to its wishes by a display of military power. Whether it can ever win their affection and trust after its procedure in the last three years is another question. After more than a century of English domination in India, it was not deemed safe to weaken the strong English army in that country except by a brigade or two when the defeats in South Africa in 1899 led to a demand for all available men; and this despite the fact that the native Indian army musters considerably over 100,000 men.

Settlement of the Philippine friar question is glibly announced in the Imperialistic newspapers. The only fact they have to go upon is the declaration by Judge Taft that he will not, at present, insist upon the restoration of the religious orders to their former parishes. This simply means that the friar question is temporarily shelved, not that it is settled. To order the return of the friars would be only to inflame the people, and to cause the smouldering insurrection to blaze out more fiercely than ever. The decision of Judge Taft not to provoke such a catastrophe is obviously wise, but it does not go to the root of the difficulty. The friar question is really a land question, as was clearly shown in the last report of the Philippine Commission. When we have found a way to buy up the 500,000 acres of land which the religious orders hold, and hold under the unquestioned titles that we, by the treaty of Paris, bound ourselves to protect, we may begin to talk of having settled the friar question.

There is an excellent reason why the Administration press keeps so still about the approval of the Platt amendment by the Cuban planters and merchants. This reason is, that they explicitly condition their acceptance of the American terms upon a great reduction in the American duties on Cuban products. Early in the month, for example, the society of planters (*Circulo de Hacendados*) took public action urging the Convention to agree to the Platt amendment, "*provided* that an additional clause establish a régime of reciprocity between Cuba and the United States, which is to *begin* by a reduction of 50 per cent. of the duties on Cuban products." No wonder that such a qualified acceptance is not a cause of jubilee among our protectionist manipulators of Cuba. If Senator Platt were to go to his Connecticut tobacco-growers and tell them that half the tariff on Cuban tobacco was to be removed, we think their cries of rage would lead to his amending his amendment in short order. And the repeal of 50 per cent. of the duty on Cuban sugar would throw the "new Republicanism" of the South into convulsions, and make the beet-sugar men of the mighty West reach for a handy missile. It really would not do thus to uncover the ultimate purpose and effect of Cuban annexation prematurely. So the Administration lies low, and studiously pursues its Brer Rabbit policy of saying nothing.

All circumstances considered, the fact that one-sixth of the $300,000,000 British loan should be taken in New York is less surprising than the fact that so few European securities should as yet have been placed here. It is the disinclination of the American investing public to such use of its funds on a really large scale which marks the present situation as peculiar in our history. It is true that nearly $50,000,000 in English and German Government bonds was taken last year by New York syndicates. Fairly large blocks of new national bonds of Russia, Switzerland, and Sweden have found their way into the hands of New York bankers, and by them have been distributed locally. In addition, American bankers have acquired a share in several loans of German municipalities, culminating in last month's subscription to the $3,700,000 Frankfort bonds. All this, regarded as a tendency, has been both interesting and significant. But there has not by any means been indicated such an outflow of capital into fixed foreign investments as characterized, for instance, Great Britain's disposition of its surplus capital early in the century, or the outflow of French and German capital in the last generation. Compared with either of these three European movements, recent foreign investment of American capital has been trifling. Then, as all financiers and economists are aware, there is an almost irresistible tendency, in international markets, for high-grade securities of a wealthy community, originally placed abroad, to flow back sooner or later into the home market. This is what happened very quickly in the case of our own Government bonds, when placed abroad—the foreign allotments of 1895 returned in about six months. It happened more slowly, but none the less surely, in the case of our railway securities, and there is little reason to suppose that the same return movement will not occur in the case of our present or prospective holdings of English and German public loans. It is, in fact, an open secret that a very large part—perhaps the greater part—of the $28,000,000 Exchequer bonds placed with New York bankers last August, have already been resold to London at a profit.

The ballot law passed at the recent ex-

tra session of the Maryland Legislature had its first trial at the city election in Frederick on Tuesday week. The substantial agreement of the reports published by the Baltimore *American*, the leading Republican newspaper of the State, and the Baltimore *Sun*, the chief Democratic journal, appears to furnish conclusive proof that good can come out of this Nazareth. Names upon the ballot are arranged alphabetically for each office, that of the candidate in every instance being followed by that of his party. This is in a sense an educational test, but it was proved at Frederick that the illiterate black Republican or the illiterate white Democrat can be instructed so as to distinguish his candidate for each office by the appearance of the word describing his party—as, for instance, that "Democratic" has a round letter the fourth from the start, and that "Republican" has one letter which drops in part below the line. The *Sun's* correspondent says that he talked with a number of old negro men who were reared in slavery and never learned to read, and that every one assured him that the new ballot was as simple as the old one.

One excellent feature of the new law appears to be that it promotes independent voting. The elector must make a mark against the name of one candidate for every office if he would do his full duty, and there were many "split tickets"—the Republicans polling only 921 votes for Mayor, but 1,017 for City Register, and the Democrats 1,054 for Mayor, but only 926 for the Registership. In a few cases Republican tickets were marked only for Mayor, and it is explained that "these were cast by extra dull negroes, who could not be trusted to mark the whole ballot, and were instructed to vote for the one name, so as to make sure of that much." We can see no reason to suppose that the Frederick election was not a fair trial of the new law, and we are glad to believe that, whatever may have been the motives of those who were credited with a desire to disfranchise ignorant blacks without also ruling out ignorant whites, the result has been a statute which is reasonable and just to both races and both parties.

Mayor Van Wyck's veto of the Charter Revision Bill is a document in every way worthy of his position as Executive of the metropolis. He says that on such an occasion the Mayor should act and speak for the people of the entire city, and this is what he does. Of course, Mr. Van Wyck exposes some of the chief jobs loaded upon the bill in the Legislature—the provision authorizing the School Board to give public-school money to private schools, the $160,000 corporation advertising scheme, the Brooklyn magistrate job, and the device for giving detective sergeants higher rank and pay than they deserve; though we regret to see that he fails to condemn the amendment allowing graduates of the Normal School to become teachers without passing any examination. The Mayor's discussion of the change recommended by the Charter Commission, and endorsed by the Legislature, whereby the old Board of Estimate and Apportionment is replaced by a body in which the Presidents of the various boroughs are to exercise great power, is dignified and impressive. It must be conceded by every fair-minded man that this is an experiment which may work badly.

When the organization of the New York Public Library's circulating department is complete, presumably those private libraries which now receive a city subsidy according to circulation will have to choose between merging their identity in that of the Public Library and losing the city aid which they now receive. That this will work injustice in the case of the library of St. Patrick's Cathedral was asserted last week in an interesting address by Archbishop Corrigan. He explained that it was impossible for the Cathedral Library to enter the proposed consolidation without losing its distinctive character and usefulness. No other library so carefully scrutinizes its books; of the 57,000 on the shelves, not one could harm the morals of a child. Other libraries give free entrance to books subversive of good morals and sound political ideas. No other library in town fairly covers the field of Roman Catholic science and philosophy. It would be ungracious to point out the mediævalism of such arguments as these, or to analyze too closely a familiar address made by a Roman Catholic prelate before an audience of the faithful, were it not that the considerations advanced must, sooner or later, be faced by the city. If, then, the largest Roman Catholic library in town is to receive city aid and to control three branches, why not a Hebrew library, a Christian Science library, a Presbyterian, an Anarchist, a Seventh-Day Baptist, a Spiritualist, a Unitarian, a Socialist, and so *ad infinitum?* Any such politico-religious apportionment would be clearly impracticable, and, if possible, disastrous. Nor is there any injustice to these religious and political sects in denying them control of any part of the Public Library. A voice they already have. If a Roman Catholic scholar needs a book on Catholic theology, the Public Library will do its utmost to get it for him. If the Fathers are incompletely represented, it is because other demands are more urgent and other needs greater. It is the element of public support that must determine policy. The more libraries privately controlled and supported, and the more diverse their aim, the better. But any aid that the city has accorded to sectarian libraries has been provisional in default of a better system. When the city has its own library sytem, aid to libraries not therein included should be discontinued.

Not unnaturally, the passage by the New York Legislature last week of the bill giving women tax-payers in villages and towns the right to vote on propositions to raise money by tax or assessment, is treated by Miss Anthony as "the entering wedge," which will result in the early adoption of full woman suffrage by New York. The bill commanded such overwhelming votes as 84 to 29 in the Assembly and 27 to 14 in the Senate. While neither men nor women presented any sufficient argument against granting the privilege sought, nevertheless, many of the majority in each branch for the bill just passed would have opposed the wider proposition, on the familiar grounds that there is no such evidence of a desire for the ballot among women generally as was manifested by female tax-payers, and that indifference or opposition to full suffrage on the part of women is the rule. The important element in the case everywhere is the attitude of the women. They got full suffrage in Colorado and Idaho a few years ago because they showed that they wanted it. They have not yet shown this in any Eastern State.

An important innovation has been made by the city of Detroit through an ordinance allowing street railway companies to carry freight within the city limits. The ordinance provides certain regulations, which appear to be in the main salutary, and the experiment will be watched with great interest throughout the country. Its consequences may obviously be far-reaching, and while the business of the steam railroads may not be affected, that of the express companies and other distributing agencies will certainly have to conform to new conditions. The ordinance contains one provision which carries the pretensions of the labor unions to a pitch hitherto unparalleled. It requires all the conductors and motormen to be not only citizens of the United States, but also "members in good standing of Division No. 26 of Detroit, or some other division of the Amalgamated Association of Street Railway Employees of America." Such requirements have been held unconstitutional whenever the courts have passed on them, and the attempt to discriminate is here so gross as to invite judicial condemnation. It would be unfortunate were so interesting an experiment as this to be spoiled by a bold attempt to create a privileged class of citizens.

In a letter to the *Evening Post* of Thursday, Mr. William D. Foulke calls

attention to the fact that "the last session of Congress was the first one where the House of Representatives did not go through the annual farce of voting down the appropriations for the Civil-Service Commission in Committee of the Whole, before they finally passed them on a count of the yeas and nays," and he expresses the opinion that "the President is entitled to some of the credit for this." It is right to mention this circumstance, although we must tell Mr. Foulke that prominent Congressmen, never distinguished for love of the competitive system, hinted privately at the time that there seemed no reason for making the old fight against the reform when the vitality of the system had been so much reduced as it is now. However this may be, no fair-minded man will ignore, as Mr. Foulke does, the infinitely more important fact that, at the last session of Congress but one, Representative Rodenberg of Illinois not merely shared in the annual farce of voting down the appropriations for the Commission in Committee of the Whole, but was recorded in the negative on the call of the roll; and that it was a man who had thus tried to "starve out" the Commission, whom the President recently appointed as a member of the Commission, to enforce the law which he would like to see repealed. It is not by such tenderness towards "backward steps" on the President's part as Mr. Foulke exhibits in this matter, that politicians are to be convinced that they cannot afford to break personal and party pledges to maintain and extend the reform.

That the Canadians have little to learn from us in the conduct of practical politics is shown in the thrifty arrangement by which the governing party tried to use the census enumerators as party agents. Each enumerator of the Province of Ontario received, in addition to his official papers, a blank to be filled out, which recorded the name, age, politics, nationality, and religious denomination of every male sixteen years of age and over. This very interesting and valuable information was to be returned to no Government office, but to the Liberal candidate in the last provincial election or to the nominee in the next one. Of course the presentation and the filling out of this circular were regarded as acts of sheer good-will on the part of census enumerator and private citizen, respectively, but the carping critics of the Opposition took amiss, as calculated to deceive, the quasi-official form of the circular, and in deference to such criticism the plan was dropped. This shows that, if the Canadians equal us in practical politics, they are still behind us in casuistry. No trans-laurentian Representative Hull rose to explain that the census enumerator who is content to fulfil only the letter of his contract is a "drone," and unworthy of his appointment.

The present excitement in England over an export tax, partly designed to keep coal from going out, recalls the agitation at the time that import duties were first reduced so as to let coal in. This was in 1824, when the Chancellor of the Exchequer proposed to repeal one-half the duty on sea-borne coals. One of Canning's political squibs was provoked by the resulting anger of the mine-owners, and in it he suggested that they ought to regard the scheme as a new kind of Popish plot, the coal being desired to light "new fires in Smithfield." When English taxes became onerous in consequence of the Crimean war, those who had opposed the war as needless and therefore wicked, were entitled to point to their previous warnings John Bright did not hesitate to do so, and when the income tax rose to 16 pence in the pound, he sarcastically congratulated the war party on the fact that each one of them was "carrying a Turk on his back." Mr. Chamberlain may now say that all the Boers he is carrying are dead, but, even so, every corpse costs $5,000, and the burden will cause a stoop in John Bull's shoulders for years to come. And as Lord Salisbury has lived to admit that the Crimean war, with all its terrible sacrifices, was a huge mistake, so a future Prime Minister of England may acknowledge that Chamberlain's war with the Transvaal was a blunder, as needless as costly. Meanwhile, the two great Powers of all the world which had boasted that they were free from the burdens of compulsory military service, under which every workingman has a soldier strapped upon his back, have stupidly bowed their necks to carry Boer and Filipino, thus assuming the taxes necessary to support an army without even getting the army.

If anything is more amusing than the loyalty of that German artist who portrayed as St. Elizabeth of Hungary and her mild-mannered husband the present Empress and Emperor of Germany, it is the general protest that his action has aroused among the devout of either confession. One would suppose that it was a case for laughter rather than for serious discussion—the German war lord as the almsgiving and somewhat henpecked Louis of Thuringia! If offence there were in this quasi-canonization of the imperial pair, it might well have been remembered that the mosaic was, after all, destined for a blind asylum where the offence must be slight. No such considerations, however, touched the ecclesiastical sense of humor, and, in deference to the representations of both the Lutheran and Catholic authorities, the offending mosaic was withdrawn. Should Mr. McKinley ever appear in saintly guise on window or wall of an American blind asylum, even the most hardened Anti-Imperialist would feel that the case called for no stronger protest than a smile.

The French Ministry is planning the general abolition of the "octroi" taxes in the cities. Perhaps nothing strikes the traveller as more "foreign" than this custom of stopping every one at the barriers of a city and exacting payment upon provisions and other imports; and in fact the "octroi" is an oppressive and mediæval form of taxation, which has little in its favor save ease of collection. It is, of course, a simpler matter for the collector to find cabbages in a cart than securities in a safe-deposit box. But the injustice of collecting taxes daily from the farmers who supply the city markets, and of raising the price of food for the poor of the cities, is flagrant. Italy is trying to free herself from such a burden, and France now hopes generally to substitute other taxes for this. Lyons is the first city in which the experiment will be fairly tried, and the attempt to raise the two million dollars of revenue formerly drawn from the octroi by taxes on liquors, leases, and real estate, and by special compensatory taxes falling chiefly on those whom the removal of the octroi most relieves, will be watched with great interest in France and Italy. If this readjustment of taxation at Lyons works well, we may expect to see her lead gradually followed by the cities of France.

The recent popular elections in Rumania challenge comment, if only to point some musty moral concerning the mutability of public favor. In the elections of two years ago the Liberals carried all but twenty-seven seats in the Chamber and Senate. The recent election leaves them in opposition, with a beggarly eleven seats out of 295. Such a victory for the Government is too good to be real. Resting as it does largely upon the gerrymandering of election districts and the supervision of the vote, it puts the Administration in the position of a ship doubly cargoed with ballast—with shifting ballast, too; for a majority of this kind must crumble from its own lack of a cohesive principle. It is a difficulty from which all the southern nations of Europe suffer. Where there are no parties, it is as easy to find a "Ducdame," to call all the political fools into a circle, as it is impossible to hold them there. As the rolling up of a great majority is a mere trick, so the rallying of a dozen groups for the ousting of a Ministry is the cheapest form of parliamentary legerdemain. The lesson of parliamentary government is yet to be learned in Rumania.

COURAGE.

The debate over President McKinley's proposed degree at Harvard is fairly launched in the press. What troubles members both of the teaching and of the governing bodies of the University is the situation so artfully—or shall we say so naïvely?—created by Senator Hoar. They feel assured, to quote from a private letter from one of their number, "that the great body of younger alumni, besides many of the older, would be as offended at a neglect and slight to the *office* as others would be at the honoring of the *man*." No doubt this is true, but only because they have failed to digest the precedent set in the case of Butler, which, so far as Harvard herself is concerned, is final as to her liberty of action in the premises.

It is idle to say that the office of President of the United States is vastly superior in dignity to that of Governor of Massachusetts. The Governorship had, nevertheless, come to be regularly treated as entitling the holder *ipso facto* to Harvard's doctorate of laws. A single breach in that practice, growing out of consideration of the character of the man, brought the whole fabric to the ground. The degree instantly became worth something, while the office was invested with an added dignity, as reserved, in Harvard's opinion, for men of principle and probity. What is now contemplated, in the name of reverence for the Presidency, is really an attack upon its preëminence. Honors paid to a licentious clergyman, to a quack doctor, to a rogues' lawyer, undermine popular respect for these professions. Just so surely the way to bring the Presidency into contempt is to make of it a blanket to hide the nakedness of the incumbent. This will be felt by the luckless official charged with the duty of preparing the Latin elogy to accompany the bestowal of McKinley's degree.

In a republic like ours, distinctions between office-holder and citizen tend properly and inevitably to be minimized almost to effacement. The universal passion for office is a proof of this, because the vulgarest ambition is capable of being gratified somewhere along the line. At no point in a hierarchy created and maintained by universal suffrage can Office, viewed abstractly, suddenly become an object of worship. Power, patronage, and emoluments will make one more enviable than another, but none can arrogate to itself Gessler's hat and the freeman's uncovering. A United States Senatorship, for instance, has every title to respect, as office, that the Presidency has. In concrete terms, Quay, whom Senator Hoar has never felt ashamed to be associated with at the Capitol, might, at a Harvard Commencement, especially if there by Hoar's invitation, exact university recognition on equal grounds with McKinley. It would only be necessary to "separate the office from the man." Moreover, when we reflect that the President is often chosen by a minority of the electors, it seems incontestable that a mere Presidential *candidacy* should have some claim to the degree of LL.D. Bryan's is the nearest unsuccessful example; and we ask those who (sincerely, we will allow) feel constrained to do more by Mr. McKinley than to be civil to him and to give him a seat on the platform, what their "plain duty" would have been if Bryan had got the votes and the chair of state. That the Corporation and the Overseers would have put the shutters up and gone out of town, on a hint of the peripatetic "Presidency" dropping in on them during his Administration, is as certain as that they did so once on an ill-timed call from the neighboring "Governorship."

The truth is, the doctrine we are now asked to accept in order to help the University out of the embarrassment contrived by Senator Hoar, is a sheer apotheosis of "get there" in politics. Take a position peculiarly qualified to inspire esteem for the holder, namely, that of Federal Civil-Service Commissioner, directing machinery designed to secure capable and honest administration, not by the checks and balances of a counting-room or a fidelity insurance company, but by a common-sense principle of impartial selection of the fittest. It is no exaggeration to say that, as much as to any in the list, appointment to such an office should redound to a man's reputation. Yet why has Mr. Rodenberg even lost reputation by taking it? Because the moral sense of every man of conscience is offended by the ex-Congressman's consenting to assume a statutory function which, as a devotee of the spoils system, he had done his best to impede and abolish. Here we not only perforce separate the man from his office, but from his mode of taking office. And if we judge McKinley's appointment of him candidly, without reference to Harvard commencements and degrees, we must join the President in the same condemnation with Rodenberg, but *à fortiori*. It was *contra bonos mores* on both sides. But then, having been so bold, if we inquire under what circumstance McKinley gained the Presidency in the first instance, we shall find a fresh reason for avoiding paying university honors to that office so long as it is vested in him. It was as deliberately purchased for him in 1896 by money as any article that ever seemed desirable or necessary to Mr. Hanna; it was repaid with a Senatorship for Hanna, and would have been repaid with a Cabinet office but that that worthy declined the cheaper consideration.

A good Catholic may be excused for crossing himself, on reading the Papal year-book, when he comes upon the offices of "Magistrate of Rome" and "Ministry of the Interior," which are not even sinecures, for Leo XIII. has sufficient humor not to fill them. Equally a simulacrum is that Office which it is now sought to personify apart from the humanity that alone gives it the breath of life. The incident of conferring a degree on McKinley, if it come to pass, will emphasize the complete substitution of form for substance in our political evolution. What was it that cajoled us from stage to stage of the descent into war with Spain, against the wishes of the vast majority of all sections of the country? It was: Trust—not William McKinley, but—the *President*. Who was it that was always sagacious, always just, always humane in his arbitrary dispositions regarding the Philippines? Not William McKinley, but—the *President*. Who was it that earned for his Eastern policy as damnatory censure as ever escaped from Senator Hoar's lips? Not William McKinley, the Well-Beloved, but—the *President*. Now comes Harvard to honor neither, but the soulless "Presidency." On these terms, one wonders how long it will be before the Boss-ship steps up for its degree.

We are well aware that we shall be charged with magnifying a mole-hill; but the act contemplated at Harvard—and reluctantly contemplated—cannot be judged apart from the circumstances and the times. The history of the past three years has been one of national helplessness in the face of what friends and foes of Expansion and Imperialism agree in admitting to be a revolution in the nature of our ideals, our professions, and our institutions. This has been largely the result of a prolonged state of war, which in the freest countries on earth has never been effectually controlled by popular sentiment—has, indeed, never failed to enlist public sentiment when once entered on, however improvisedly. But also, and this is the melancholy aspect of it, there has been, in the most moral portion of the community, a want of courage and concert with which generations to come will justly reproach us. Harvard's mole-hill would turn into a mountain if, after the discussion now in progress, the Overseers should steadfastly resolve against throwing the University into the scale of non-resistance. And this mountain would be a beacon of hope to those who still cling to the faith of the fathers as expressed in the Declaration of Independence and the words spoken at Gettysburg.

EXPLAINING IT TO THE CUBANS.

If patronizing condescension were what the Cuban Committee sought in

coming to this country, they certainly would need to be in no fear of going back empty-handed. All our officials concerned are making ready to take them gently by the hand and explain to them kindly how very silly and childish they are. Senator Cockrell perceives the real trouble with them. They "do not grasp their status." He is going to help the President in the benevolent work of showing the delegates how misled and mistaken they are. So, it is reported, is Senator Platt of Connecticut, author of what the Cubans call "la enmienda Platt." He is thought to be the very one to explain it all to the Cubans.

All this goes, of course, upon the theory that the Cubans are but children crying in the night; that they know nothing of international law; that they have not read the *Congressional Record*, and are wholly unacquainted with the public sayings, three years ago, of those statesmen of ours who now say something wholly different. Senator Platt of Connecticut, for example, might well dread meeting a delegation familiar with his own record. As an explainer, he would have to begin explaining himself. At Philadelphia, week before last, he referred, in a published address, to "certain self-constituted and virulent critics" who maintain that, under the joint resolution of Congress, we are bound to "retire" and have "nothing further to do with the affairs" of Cuba. It is always hard to identify such unnamed critics, but we have detected one of the malicious class in the person of Orville H. Platt, United States Senator from Connecticut. He said in the Senate on April 16, 1898, that if Congress by solemn act, by joint resolution, declared that the people of Cuba were free and independent, "we mean that they are free and independent *in the sense in which we are free and independent*, and when we go to the island of Cuba we must treat that people as a free and independent people."

Well, the joint resolution was adopted in precisely those terms. The question is, therefore, if Senator Platt would consider it the duty of Americans to "retire" from a country which is, according to him, free and independent in the sense in which we ourselves are free and independent. We submit that on his own showing he would be bound to retire, even at the risk of taking his place among the virulent critics. We are aware that he now says that we are under obligation to "provide for the *orderly* continuance of a *genuine* republic" in Cuba. But this is not written in the bond. No word or phrase in the joint resolution can be twisted into such a meaning. We were to stay in Cuba only until the island should be pacified, and we have the certificate of our own Military Governor that it is now pacified. Senator Platt said in Philadelphia that it would be folly to withdraw until we had taken guarantees against "foreign demands." But he answered himself by anticipation in 1898, when he said, what is the undoubted truth, that the Monroe Doctrine is alone a sufficient shield against "foreign interference" in Cuba.

His greatest present fear, however, is that the Cubans are unfit for self-government. The discredit which, in his Philadelphia address, he cast upon their character and their capacity, is not a happy means of ingratiating himself with our Cuban visitors. They might even, on the strength of it, class him among his own "carping critics." But, of course, he and all his fellows go steadily upon the supposition that the Cubans cannot read and have no press. If he imagined that they had access to that not exactly secret document, the correspondence accompanying the Treaty of Paris, he would not have been so rash in exposing himself to confutation out of it. At Philadelphia Senator Platt said, decrying self-government in Cuba, that "the experiment of free government has never been attempted under circumstances less favorable to success." Now this was exactly what the Spanish Commissioners at Paris urged in opposition to ours. They asserted that the Cubans had not the capacity to govern themselves. But what did our Commissioners reply? Why, they said, in the protocol which they filed on October 27, 1898:

> "The American Commissioners are unaware of the ground on which it is asserted in the Spanish memorandum that the United States has been compelled to admit that the Cuban people are as yet unfit for the enjoyment of full liberty and sovereignty. It is true that an intimation of such unfitness was made in the note of the Spanish Government on the 22d of July last. The Government of the United States, in its reply of the 30th of July, declared that *it did not share the apprehension of Spain in this regard.*"

After such language, solemnly held by our accredited Commissioners, who framed a treaty on the theory that the country meant to live up to its pledge to Cuba, it is a little cool for those who now mean to violate it, to dodge and hedge with their belated doubts about Cuban fitness for self-government. Not only in the joint resolution of Congress, but, as we have now seen, in the formal declaration of our Commissioners at Paris, the public faith of this nation is committed to the view that the Cubans are fit to govern themselves. The only honest explanation which Senator Platt and the President can give to the Cuban Committee of the difference between our attitude and utterances in 1898 and in 1901 is that, in the former year, we were not speaking the truth.

THE BRITISH BUDGET.

"You show an ignorant impatience of taxation," Sir Robert Peel is said to have once exclaimed testily, when some of his budget proposals were objected to in the House of Commons. The phrase gave a handle to his enemies, but it was really only a kind of unconscious reflex of Sir Robert's absorbing interest in his own schemes of taxation. English Chancellors of the Exchequer have, indeed, had such great opportunities to make important contributions to the theory and practice of taxation that it is not strange to find them fascinated by their task. No other finance ministers in the world of representative government have so free a hand and so vast a power as they. Yet no others have to run the gauntlet of a keener criticism in Parliament and in the press. The natural result has been to call to the office men of first-class ability. Gladstone, trained in the school of Peel, was undoubtedly the most brilliant Chancellor of the Exchequer whom the past century saw; but the names of Robert Lowe, Goschen, Harcourt, and Sir Michael Hicks-Beach are enough to suggest the high order of talent and debating power which English public finance has attracted to its official headship. Gladstone's budget speeches were oratorical treats. He had the imaginative power to make the dry bones of malt taxes and stamp taxes live, and a charmed House would listen to his eloquent expositions for four or five hours; their only fear being, as Ben Jonson said of Bacon's auditors, "lest he should make an end." He was also a master of detail and business as well as of rhetoric.

English taxation has the great merit of simplicity of aim. It is for revenue, and revenue only. Ever since the last of the protective taxes were hunted out of their holes by Mr. Gladstone, Chancellors of the Exchequer have simply had to ask themselves the question, "How can I, in the least burdensome and most economical manner, raise the money necessary to carry on the Government?" Of course, in those words "least burdensome" lies a root of social bitterness. In applying that canon of Adam Smith's, that taxation should fall heaviest on those best able to bear it, there is an opening for class distinctions in taxation, if not for discriminations in favor of certain industries. Sir William Harcourt's budget of 1894, with its enormous increases in the death and succession duties, was savagely attacked at the time as Socialistic; but no one has since ventured to propose its repeal. Whatever its social implication, it was a great success as a revenue-producer. Sir William was unconsciously preparing to help finance the Boer war. Under the general head of "estate duties," for example, there was paid in during the past fiscal year the sum of $64,000,000. But for such large returns from such taxes, the Exchequer would have had to borrow more than it has been compelled to in order to develop Mr. Cham-

berlain's "neglected estates" in South Africa.

But English taxes for revenue only are, nevertheless, not laid in entire oversight of their effect on English trade. The general principle observed is to interfere with trade the least possible. But there must be some interference if there is to be any taxation at all. There are, for example, certain taxes on imported food—or what amounts to food—tea, wines, beer, tobacco. In no case are they equivalent to such a bread-tax as were the corn laws, laid expressly in the interest of English agriculture; and no corn-law rhymer, no Ebenezer Elliott, has ever risen to denounce them. The reason is that these duties are purely revenue taxes. So would be a small tax on sugar, though it might have some incidental effect on the question of sugar bounties. But what working-people are most interested in is the free importation of the materials of manufacture. As Mr. Gladstone clearly laid it down, the way to do the laboring classes the maximum of good is to free the articles which give them the maximum of employment. So there may be food taxes as a necessity of revenue, but we shall not see a Chancellor of the Exchequer daring to levy duties on cotton, or wool, or any of the raw materials of English manufacture.

It is in the light of these well-settled principles of English taxation that Sir Michael Hicks-Beach's proposals laid before Parliament on Thursday have to be considered. He closed his financial year with a surplus, above the estimates, of nearly $15,000,000. Almost all of this gain arose from unexpectedly large receipts from the income tax and from customs. Returns from the latter source may well have been swollen temporarily by the rush to withdraw goods from bond before higher duties fell upon them. The surplus, however, would have been a deficit of more than $250,000,000 had not money been borrowed to carry on the war. The total ordinary receipts were about $650,000,000. Supposing that under existing laws they remain at nearly the same figure for the ensuing twelvemonth, how is Sir Michael to cover the difference between them and an estimated expenditure of $940,000,000, including a war estimate of $290,000,000? That, in simple terms, is the problem to which the Chancellor of the Exchequer addressed himself.

Sir Michael Hicks-Beach was well fitted for the rôle of embodied Nemesis, which he played so successfully. A Tory and a financier of the old school, he was just the man to come forward after a mad Imperialistic dance, with grim reminders that the piper must now be paid. Both of you, he bluntly said to Liberals and Conservatives, have been having your fling in a policy of rioting and extravagance; now settle the bill. The Chancellor's unflinching exposition of the cost of "this small war" (he put the figures at $750,000,000), which he said, in his cold-douche manner, had "brought the Transvaal to the verge of ruin," was a fitting addendum to Sir Alfred Milner's discouraging report from South Africa. In the whole affair M. Bloch will find strong confirmation of his argument that war will soon become impossible through becoming so frightfully expensive. Over a mere difference of two years' time in naturalizing Englishmen on the Rand, Mr. Chamberlain brought on a war which, he has now been compelled to hear his own Chancellor of the Exchequer say, has almost broken the back of English public finance.

For his increase of direct taxation, the Chancellor has gone first to that great resource, the income tax, which has two pence in the pound added to it, making the total fourteen pence. This is the highest rate since the Crimean war, and shows once more who it is that has to "Pay, pay, pay" for a Music-Hall war. Almost revolutionary in English taxation seems, at first sight, Sir Michael's proposal of an export tax of a shilling a ton on coal—an expedient, as the Chancellor himself points out, unknown in England during forty-five years. That this tax is designed not only to raise the estimated $10,000,000 revenue, but in a degree to restrict a trade movement at which England has lately looked with some misgiving, the Chancellor himself admits. "Even supposing," remarked Sir Michael to Parliament, "that export of coal is checked, I am not sure that even that result will be an evil." What he meant may be partly judged from a few figures of recent English trade. Prior to 1894, the largest annual export of British coal had been 31,000,000 tons. As lately as 1898, the total rose no higher than 36,000,000 tons. But from this figure it steadily increased to a total, in 1900, of no less than 46,100,000 tons. An increase of 30 per cent., within two years, in an export which Professor Jevons, thirty years ago, described as a menace to the permanency of England's industrial position, has made many Englishmen stop and think—more particularly since the accompanying rise in the domestic price of coal, as compared with 1897, has amounted to the equivalent of fully three dollars per ton. The ruinous increase in fuel bills of railways and manufactories, and the consequent heavy cut in the profits of such enterprises, were among the most serious handicaps to English industry last year. One interesting economic problem, however, which is still left to be settled, is the question how far even the tax of a shilling per ton will actually curtail exports. It is a little curious that Sir Michael Hicks-Beach while intimating such restriction in trade as probable, nevertheless estimates as the product of the tax a sum which would require a total export fully up to the recent average.

HIGHER EDUCATION MADE IN GERMANY.

M. Gaston Deschamps, in his very entertaining account of recent lecturing experiences in the New England colleges, expresses his surprise at the dependence of American upon German scholarship. At Yale he found that they knew and used the standard German text-books on all subjects, ignoring the French, and generally that in all its higher studies the university looked to Germany. M. Deschamps adds, with a certain bitterness, that the French, who for a generation have done nothing but advertise German methods, are to blame for their own lack of honor in America. M. Deschamps has correctly observed the fact. In a score of lecture-rooms to-day American professors trained in Germany are lecturing in an English intelligible only on condition of having first learned German. And hundreds of incipient Doctors of Philosophy are seeking their academic salvation in "Grundrisse," "Abrisse," "Aufsätze," and "Abhandlungen." But the French observer has curiously misjudged the cause and the importance of this fact of the partial Germanization of the American university.

When Edward Everett and George Bancroft, early in the last century, went to Göttingen, they went not so much for definite facts as for inspiration, and the movement of which they were pioneers has been a veritable evangel of sound learning. As Americans, our inheritance was a certain contempt for science and an invincible confidence in rule of thumb—"the English notion," as Matthew Arnold called it, "that you can do a thing right by doing it, and not first by learning how to do it right, and then doing it." This swaggering insouciance our social conditions have tended to exaggerate, and if it has been corrected, it is largely due to that spirit of disinterested love of science, and of confidence in the ultimate value of the orderly search for any kind of truth, which America has since learned from Germany. Professor Paulsen of Berlin says that you find in the German university "the spirit of inwardness; the calm delight of her employment, the faithfulness of work, and the love of truth." These were things worth studying and worth imitating. And it was properly and worthily the ideal of every young scholar—American, French, or Italian (the English only were blind)—in the fifties, sixties, and seventies, to study in a German university and bring back its degree.

What they sought, to be more specific, was the vaunted scientific method—*wissenschaftliche Methode*. This formidable phrase meant chiefly thorough-

ness, the willingness to count no fact small and no effort great in the search for truth. It meant, besides unsparing industry in the mere accumulation of facts, a certain constructive quality of mind which mastered the facts and set them in philosophical relations. These qualities the great German scholars, the Grimms, the Diezes, the Rankes, had preëminently; and they held themselves—their knowledge and their ideals—at the disposal of every youngster who sought the life of research. It is one of the proudest titles of American scholarship that it early recognized that intellectual good was to be found in Germany; that it sought it there, and brought it back to be the fruitful principle of our own intellectual life.

To deplore the fact that our scholarship has a strong German tinge would be like apologizing for the loins from which we sprang. And yet it is a question if of recent years we have not followed German methods too exclusively and too unintelligently. You may crack a filbert with a trip-hammer; you may put *wissenschaftliche Methode*, too, to the most trivial uses. The Germans themselves often so misuse it. Scholarship suffers from an enormous overproduction of monographs in which an ambitious method stretches a thin substance to the cracking point. As Kant imagined a pure reason (*Reine Vernunft*), so we are in danger of coming down to pure method (*Reine Methode*). There is a craze, not to prove something valuable, but merely to prove something. Such a *doctorandus* gives two years to prove than an Anglo-Saxon translation of a well-known Latin text is based upon manuscripts of class x rather than of class y. It is all valuable, but when all is said and done it is matter for a footnote, and the investigation has tested rather the industry than the intelligence of the candidate. For such work one retains a certain respect. But what shall be said of the graduate student who sorts and weighs the descriptive adjective in a popular novel of the day, and proves that on a basis of a thousand the rose is red 333 times; crimson 197; blushing 96? It would not be fair to hold the Germans wholly responsible for such caricature of their method. But they themselves are ready to acknowledge a defect in their scholarship which ours has not escaped. Large intelligence has always been the characteristic of the German scholar. A fine sense of form has rarely been his. The enthusiasm which carries him to a difficult result expires when the result is reached, and the scholar who will give ungrudgingly half his life to the discovery of a new principle, often grudges the time to present that principle clearly and attractively to his colleagues—so much so that it is sometimes as difficult to read the account of a research as to conduct the research anew. This comes partly from a defect in national temperament, but even more from the fact that the German scholar writes only for scholars, and evades the discipline of writing for the larger educated public. In his scorn of the popular he is likely to fall into the formless and the obscure.

Now the sense for form is almost as much a matter of good morals as it is of good taste. French scholarship has it in a high degree. The most erudite scholars write in a form to be read with pleasure by the average person of culture. The most learned among them condescend to present the results of their investigations in popular form. The result is a type of scholar with a juster sense of proportion, a better knowledge of the world in which he lives, and, without any impairment of his position as a specialist, with a far greater influence than is commonly the portion of the German scholar of equal rank.

We have surely gone too far the German way, and when M. Deschamps pokes fun at the German flavor of higher studies at Yale, he touches a sore spot. It is well for us that we have made our own everything that is good in German scholarship. But loyalty to our foster-fatherland need not extend to imitating its defects and accepting its limitations. It is a hopeful sign, from this point of view, that our graduate students look in increasing numbers towards France. French scholarship—and our own traditions may well reinforce the lesson—has this to teach us, that there should be discrimination even in the ardent search for truth, and that a slovenly presentation of results demeans the most notable investigation. Nothing our universities have learned from Germany is to be disowned; an added grace is to be sought—the admirable clearness, intelligence, and attractiveness of Latin scholarship.

THE AMERICAN ORIENTAL SOCIETY.

New Haven, April 19, 1901.

Some years ago, Matthew Arnold, in his peevishness, scolded us because we rejoiced so unnecessarily in the name American. To the hypercritical or fretful there is no object in inquiring whether the offensive fact be founded on the rock of good sense, still less whether the cause the fault-finder assumes be justified in any way. Arnold thought that it was national vanity which induced the super-Americanism he took exception to. But, in point of fact, in the case of our learned societies, most of which prefix "American" to their titles, the cause, far from being vanity, is the excessive modesty which distinguishes all genuine Americans. The Oriental Society, though it preceded the German Oriental Society by several years, modestly admitted, in its prefix American, the precedence of the Royal Asiatic Society, as being essentially the original Oriental society. It is probably on account of the same universal feeling of modesty that somewhere in the outland of the spiritually-minded West there has just arisen a new society, which, being theosophically disposed, has taken to itself the title "American Oriental Psychological Society," thus incorporating, by mere chance, the essential elements in the titles of two more venerable Eastern institutions. As the Oriental Society has no desire to claim any of the glory that may attach to its Western namesake, it may be well to announce at once that the latter has no further connection with it than is made by the complimentary but quite unexpected assumption of the Oriental Society's title.

The annual Meeting of the Oriental Society took place in New York at its regular date, the last three days of Easter week—a time of year appropriate, perhaps, to things Oriental, but usually very inconvenient to the many clerical members, whose duties just then seldom allow them to stray far from home. For this reason it is good to meet on occasion in New York, where some, at least, of the members thus ordinarily prevented from attendance can spare time for one or more of the sessions. Otherwise, it must be confessed, New York is not a very good place to meet in. It is too big, too expensive, and, it may be added, too attractive. Too much time and money is expended in getting about, and in hotels, while even Orientalists have enough Occidental interest in the life here and now to be seduced from the theatre of activity in the East to those on Broadway. Notwithstanding this drawback, however, the meeting was very successful, and the many interesting papers were listened to by audiences that filled a good-sized lecture-room at Columbia, despite the fact that this was the second meeting within a year.

President Gilman found at the last moment that he was unable to attend, his absence being regretted especially since he had promised an address on The Scope of the Society, which was looked forward to with particular interest. As he was reëlected President before the Society adjourned, it may be hoped that this President's Opening Address will not be lost, but will be delivered at the next regular meeting. Another absentee, owing to illness, was Professor Lanman, who is rarely away from the yearly gatherings; but he sent an account of two works which are coming out in the Harvard Oriental Series. Missed, too, was Professor Jackson, who is at present in India.

Among the general papers, which were presented on Friday afternoon, may be mentioned first, as is due to the distinguished scholar whose life-work formed the subject of the address, the Secretary's memorial to the late Professor Salisbury, for many years the stanchest upholder of the Society in more ways than one. A member of the Society for nearly sixty years, almost since its foundation, he was its Corresponding Secretary for eleven and its President for ten years. Incessant in working for the Society, both in contributing articles to its *Journal*, which he largely supported at his own expense, and in inspiring others to write for it, he had perhaps more than any one else an influence for good in the early years of growth, and always aided in the development of the Society in its maturity. To him, from the outset, it was to be an organization which should concentrate activities till then scattered and unshaped. There are, indeed, few liv-

ing who know how much Professor Salisbury accomplished for the Oriental Society. His own contributions to its *Journal* were numerous and of high character. He was from the first an original investigator, and presented in his various memoirs not only lucid expositions of subjects of which he made résumés, but also special translations of his own from sources till then not used by others. His long career as the Nestor of Orientalists in this country, the distinguished position he held as occupant of the first chair of Sanskrit ever founded in America (and one of the first in any country), his untiring zeal in behalf of the Society, and the liberality, not only of purse but of mind which was characteristic of him, give him a place unique in the history of the country as well as of the Society.

Other distinguished members who had died since the last annual meeting—seldom has the Society had to mourn the loss of so many in one year—were commemorated by different scholars; the life and work of Max Müller, who had been an honorary member for thirty years, being fittingly presented in a paper sent by Professor Lanman, while Professor Toy and others paid tribute to the work of the late Professor Everett.

The impossibility of reading *in extenso* forty papers—somewhat more were offered at this meeting—in the ten hours occupied by the four sessions of a meeting, led some years ago to the establishment of a rule whereby only fifteen minutes are allotted to each paper. In some respects this rule works for the greater happiness of the Society. In the old days it was no uncommon occurrence for a member with more zeal than discretion to revel for half an hour in the reading of a statistical paper, while his patient victims waited with Oriental stolidity for the final summing up. All such matter is now relegated to its proper place, and the members have at least the satisfaction of knowing that results, and not the machinery of a paper, are to be spread before them. But in other regards the promptness with which the fifteen-minute limit is applied, though the necessity of the rule is admitted, brings a keen sense of disappointment. This was the case in the sudden eclipse of the luminous paper offered (and only partly read) by the Rev. Dr. Peters on "Recent Theories of the Origin of the Alphabet," which gave a clear outline of a subject attractive to every member present, few of whom were in a position to gather for themselves data so admirably disposed. So, too, the study of the "Symbolic Gods" offered by Professor Bloomfield had the unusual quality of being intelligible and interesting to both the Aryan and Semitic members, and every one felt it was a pity to have these gods decapitated before they had fairly become familiar. The Society ought really to encourage theosophy enough to annihilate the limitations of time and space. Perhaps a member of some other society which has been in this dilemma and learned how to extricate itself without this last resource, will kindly publish its recipe for an ill which must be common to all such gatherings.

Another interesting paper which had to be unduly condensed was that of Professor Ladd, who described at length a ceremony rarely witnessed by Europeans, the funeral ritual of a Hindu. Some notes on Parsi ritual were contributed also by Professor Jackson in a letter from India sent a week before to the Society. Another letter from the same scholar arrived by post at the exact minute when in alphabetical order the writer's name, as it stood on the list of contributors, should have been called by the Chairman—a Mahâtman-like performance that was quite startling. The letter contained a curious modern folk-tale, picked up at Ujjain, of Kālidāsa, the great mediæval poet of India, which showed that popular imagination treated him much as it did Virgil in the Middle Ages, making out of the poet a magician who could (though by the aid of the gods, as the pious Hindu interprets it) turn a fish into a holy book, and the water dropping from it into ambrosia.

Falling to the special session of the Section for the Historical Study of Religions, were read several papers of general interest, among which may be named that of Professor Haupt on the "Beginning of the Babylonian Nimrod Epic"; that of Professor Jastrow on the "Hebrew and Babylonian Accounts of the Deluge"; Dr. Johnston's "Fall of Nineveh"; and Dr. Gray's "Indian Parallels to the Apocryphal New Testament." The Semitic contributions outnumbered the Aryan, though not by a large majority, and there were some papers that bridged the chasm between the two different (though allied) camps; while Orient and Occident were united in Mr. Remy's study of "Zoroaster in German Folk-Lore." The presiding officer (and Vice-President), Dr. Ward, described the use of jade celts and cylinders; and a paper, read by Professor Jastrow, was sent by President Warren on pre-Babylonian cosmogony. Other special studies were offered by Professor Barton (on "The Pantheon of Tyre" and the "Blau Monuments"), whose pupil, Miss Hussey, appeared as a new member, not empty-handed, as she brought a paper on cuneiform ideographs. Two other new members came from Johns Hopkins, likewise with tickets of admission in their hands in the shape of interesting papers—Mr. Oussani, who spoke of the Arabic dialect of Baghdad, and Mr. McPherson, who explained the perplexing behavior of Gideon's water-lappers. Other Semitic papers were read on a variety of subjects by Professor Driscoll, Dr. Arnold, Dr. Grimm, Dr. Ginzberg, Mr. Blake, and Mr. Foote. India was represented further by Dr. Ewing and Mr. Schuyler, with papers on the Hindus' notion of breath and their dramatic manuals, respectively; Persia, by Professor Mills, Mr. Yohannan, and Mr. Michelson; and Egypt, by Mr. Dennis. Even Japan had its voice at the meeting, Mr. Fenollosa giving a study of the Japanese lyrical drama; but no one said anything about China.

Of particular interest to the Society was Professor Lanman's announcement in regard to the long-expected translation of the Atharva Veda made by Professor Whitney. This work forms the fifth and sixth volumes of the Harvard Oriental Series. It is not a translation only, as the critical commentary is an important feature of the work. No account so systematic and complete of any Vedic text has ever before been undertaken, and its publication will mark a new epoch in the history of Vedic criticism; while the translation itself will offer important material to students of folk-lore, of the early history of medicine, and of primitive religions.

In the course of the meeting the Society had an opportunity to inspect the unique collection of Avestan manuscripts recently sent to Columbia University by the Parsis of Bombay as a compliment to Professor Jackson. The few rare days of endurable April weather with which the Society was favored, and the hospitality of the local committee, made the Meeting as agreeable physically as it was enjoyable in other regards. H.

POLITICAL PROBLEMS IN PORTO RICO.

SAN JUAN, April 11, 1901.

The civil government of Porto Rico has been in existence less than one year, but during this time two problems have been solved which presented, probably, as many difficulties as any that will be encountered while Porto Rico remains under a colonial form of government. The first popular election has been held, and the revenue system of the island has been reconstructed. The former passed off creditably, without scandal, and practically without disorder; the latter has now been virtually accomplished, not without opposition and emphatic protest, it is true, but with a diminishing opposition which proves, to the friends of the change at least, not only that some reform was necessary—this was not disputed—but that the steps taken were in the right direction. The election was remarkable chiefly as an exhibition on a grand scale of the part pride plays in the life of the Spanish-American. The Federals became piqued at some alleged injustice in the registration, and the whole party refrained from voting, practically to a man. Commercially, pride makes the Spanish-American the safest creditor in the world; politically, it makes him a sulker. Rebuke him, and he immediately pouts or withdraws or resigns. During the military government of Porto Rico, the Governor-General actually had to issue a general order prohibiting municipal officials from resigning when corrected or slightly censured.

The avowed object of the Federals was to "unite in an eloquent protest of silence." When it became apparent, however, that the legislative session would probably pass without party dissension among the Republicans, and without the passage of a single discreditable or revolutionary law, the policy of silence was abandoned with a crash. The cause or the pretext of this unfortunate emergence from the policy of masterly inaction was the introduction into the Legislative Assembly of a revenue bill known in Porto Rico as the Hollander Bill. Contrary to the reports spread in the United States by the so-called "Porto Rican Commission," the bill was not "railroaded" through the Legislature, but was introduced nine days after the convocation of the Legislature, and consequently was under discussion more than a month and a half. The Revenue Act consists of a property tax, a system of excise taxes, and an inheritance tax. The latter is unimportant *per se*, but it represents a policy of the civil administration that is worth noting. One of the first acts of the military government was to abolish the general system of taxing transfers of property, and the inheritance tax disappeared with this system, of which it was a part. When the Revenue Act came up for consideration, the Administration insisted that the inheritance

tax should be replaced. They were told that its yield would be insignificant. The reply was, that the tax was intrinsically one of the least objectionable in use; that, as the island increased in wealth, it might become very productive; that the people were accustomed to the tax, and that it would be a mistake to allow it to fall into disuse. In this specific instance the reply may have been right or wrong, but the policy involved is worthy of the highest praise. The Administration has consistently maintained, occasionally at the cost of considerable ill-will, that the future of the island should be protected. The treatment of franchises is a case in point, although illustrations could be multiplied indefinitely. Not a franchise has been granted by the civil government which is not specifically taxable, revertible to the state, and modified by a clause giving the state a share in the proceeds or profits.

The internal-revenue system of Porto Rico is modelled upon that of Mexico, which is far less annoying to producers of the articles subject to taxation, and costs much less to operate and enforce, than that of the United States. Excise taxes are imposed upon alcoholic liquors, tobacco, proprietary medicines, playing-cards, firearms, and matches —matches being practically a mere "supplementary commodity" to cigars and cigarettes in Porto Rico. The rates are in general about one-half of those prevailing in the United States, and the proceeds go to the insular and municipal treasuries, not to that of the United States. It may be worth while, in connection with the criticism of the Hollander Bill, to call attention to the fact that the whole tenor of the interpretation of the internal-revenue laws of the United States by the Federal Courts has been to the effect that these laws apply to subject territory, and that it was at the earnest solicitation of Treasurer Hollander, while acting as Special Tax Commissioner to Porto Rico, that the provision excluding Porto Rico from the operation of the internal-revenue laws was placed in the Foraker Act.

The tax on rum seems to have been the most obnoxious feature of the excise taxes. Under the old municipal octroi, rum paid from thirty-five to forty cents a gallon. Under the new law it will pay a uniform tax of sixty cents a gallon. Naturally, the wildest rumors concerning the destructiveness of the tax have been afloat. The manager of one large hacienda was reported to be dumping his molasses in the river. Investigation showed the report to be absolutely unfounded—the story really deserves stronger language. It was freely predicted that the manufacture of rum would be abandoned, and that the sugar industry, which yields rum as a by-product, would be destroyed. In point of fact, the economic event, *par excellence*, of the civil administration has been the revival of the sugar industry. The reduction of the tariff to 15 per cent. has acted as a heavy bounty, and, despite the additional tax, more rum will be produced in 1901 than in 1900. In the former year, the fifty-four largest distillers of the island produced 801,853 gallons. According to estimates of the same distillers, made under oath and with every inducement to underestimate rather than overestimate, the aggregate production in 1901 will be 881,249 gallons. Peon and planter are able to get as much rum as ever—quite as much as is good for them—and at the same price.

The property tax was designed to take the place of the tariff between Porto Rico and the United States, which expires by limitation on March 1, 1902, but which, according to the official programme of the Republican party, will be abolished, by request of the Legislative Assembly, next December. The tax was imposed in accordance with specific provisions of the Foraker Act, which authorizes the imposition of "taxes and assessments on property, and license fees for franchises, privileges, and concessions," and is essentially similar to the familiar property tax of the United States. Tools, furniture, wearing apparel, religious, scientific, and charitable societies, and the property of persons owning less than $100 are exempt. Mortgages are treated as an interest in the property; and unless they contain some clause making the taxes payable by the mortgagor, are taxed to the mortgagee with a corresponding exemption to the mortgagor. Debts may be subtracted from credits; and corporations are treated substantially the same as individuals.

The property tax and its provisions are as interesting for what they displace as for what they are. In the first place, the law provides for a force of permanent and salaried collectors, instead of a number of tax-gatherers drawing 8 per cent. of the amount of their collections. In the second place, it will give an insular assessment, instead of an unsystematic and haphazard valuation at the hands of nearly 200 disconnected local boards appointed by the various municipal councils. That the old method of assessment was bad, follows from the mode of appointing the assessors; just how bad it was may be gathered from the fact that under the old law, with no exemption limit, there were a little over 40,000 taxpayers on the rolls; while under the new law, which exempts every person whose property is worth less than $100, there will be more than 60,000 taxpayers.

Probably the most desirable change effected by the bill was the repeal of the industrial and commercial tax and of a number of *octroi* or municipal *consumo* taxes. The latter require no comment; they have been unanimously condemned by writers upon finance from Adam Smith to Professor Bastable, and their history in Porto Rico bears out all that has been said against them. The former was a system of license taxation under which the assessment of a business house was determined by the nature of the business and the size of the town in which it was established. The latter standard was thoroughly illogical; the former exposed the law to systematic abuse the like of which is unknown in the most ring-ridden American municipality. The industrial and commercial law, it is said (and the story is true in spirit if not in letter), was framed by the Spanish as opposed to the Porto Rican merchants, "to push and pull with"—to push your competitor out of business, and to pull about as you wished when your own rating was under consideration. Characteristic and perfectly credible instances of the abuse of this tax may be found in *Harper's Weekly* of February 16, from the pen of an apparently disinterested correspondent. One of them I know to be authentic. An electric-lighting company, paying the industrial and commercial tax, as such, imported a cargo of coal. The municipality promptly imposed an *octroi* of sixty cents a ton. Upon its refusal to pay the tax, the company was immediately assessed $750 as an importer, and, when it leaked out that the coal had been paid for by a draft drawn on New York, an additional $750 was clapped on, the excuse being that a person who draws drafts is a banker and must be taxed as such.

The "Porto Rican Commission" and other critics of the property tax are not saying much about the rate of the property tax; a maximum rate of one per cent. for insular and local purposes is not calculated to arouse widespread sympathy in the United States. The strong point of the Commission has been the provision of the law which limits the period in which property sold for taxes may be redeemed, to three months. This part of the Revenue Law is based upon the old Spanish Collection Law, which, in many respects, was greatly superior to similar laws in the United States. Every one knows that the laws respecting tax sales are practically non-operative in most sections of the United States; they are complicated, cumbersome, and so defective that the tax sale has become a farce, in which the property is knocked down for a song to some speculator, who is willing to risk a little money in the hope of making a great deal. The owner is practically dispossessed, the purchase becomes a speculation, and the net result is uncertainty and expensive litigation. The Spanish law, on the other hand, was at least an effective law: it brought the tax-dodger to book with inevitable regularity, and titles acquired in tax sales were good titles. It had its defects. The sale was conducted by an *apremiador* appointed for the special purpose, who added his expenses and a commission of seven per cent. to the amount of taxes to be collected by the sale; and no period of redemption was allowed.

When the time came to adopt some method for the sale of delinquent taxes under the new law, it was decided that an attempt should be made to provide a procedure that would be less costly to the delinquent and less liable to abuse by irresponsible officials than the Spanish system, but which, in the case of confirmed or vicious tax-dodgers, would prove absolutely effective. To meet these requirements the old Spanish procedure was modified so that no sale can take place without the written consent of the Treasurer; sales will be conducted by the regular collectors, without extra charge or commission; and a short period of redemption has been granted. Under the present civil administration a thorough revision of the old tax rolls and a firm administration of the laws have resulted in an increase of more than 100 per cent. in the average monthly receipts from the old direct taxes. Notwithstanding this increase, there has not been a single sale of real property for taxes, and there is no reason to believe that this policy will be changed. But it was the effectiveness of the law which made the sale unnecessary.

The assessment of property has now been practically completed, with the result that the taxable property of the island is found to be worth just $100,000,000 in round figures. Two hundred and twenty-five assessors, of whom more than two hundred are Porto Ricans, were employed during the month of March, and about seventy-five of these will sit ten additional days as boards of revision. As the assessment has proceeded and the people have become thoroughly acquainted with the Revenue Act, criticism

in Porto Rico has disappeared. For a while, Treasurer Hollander went about, sorely against his will, with a detective at his heels; at present, he would meet with a cordial reception in almost every town in the island.

As a matter of fact, the early criticism of the bill was based almost entirely upon ignorance. A few days before the bill was passed, a large delegation of influential business men visited the Treasurer to protest against the bill. Their criticisms and suggestions were so wide of the mark that the Treasurer was led to inquire how many of the delegation had read the bill. Not one of them had, or even possessed an accurate general idea of the bill's import. Printing facilities in Porto Rico are so limited that the law could not be widely circulated. The "Porto Rican Commission" complained that they could not secure a copy of the bill until the day before they sailed. Now that a knowledge of the law has disarmed criticism in Porto Rico, the campaign has been transferred to the United States, where ignorance of the law and of Porto Rico and its conditions makes misrepresentation comparatively safe. I may mention one characteristic misstatement because its falsity may be shown in a few words. It has been stated in a responsible New York paper that the supervisor of assessment is a young and inexperienced man who has been in Porto Rico but a short time, and has neither a knowledge of Spanish nor adequate training for his present work. The present supervisor, in point of fact, landed in Porto Rico just thirty days after the American army; went into the real-estate business, and devoted himself to a systematic study of real-estate conditions. When the time arrived for the execution of the election law, he was placed in charge of the registration and election, and conducted this difficult work so satisfactorily that the Governor determined to make him a Judge in one of the Porto Rican courts, and it was only at the earnest solicitation of the Treasurer that his appointment was deferred until the work of assessment could be finished. The gentleman in question is a lawyer and a college graduate, and not only speaks Spanish, but French and German as well. T. S. A.

Correspondence.

MORALS AND RELIGION.

To the Editor of The Nation:

Sir: Not very long ago I read in a religious journal the obituary of one who was instrumental in building the American College in Turkey. It is generally supposed that, in such a memorial, the writer notes those transactions of which he and his friend when alive would be proud, and which could be referred to with satisfaction. It appears from the obituary that the ground for the contemplated college had been secured, but permission to build thereon was withheld for some years. The promoter at last found his opportunity. A prominent naval officer, Admiral Farragut, was about to make an official visit to Constantinople, and he was requested by the promoter to ask one question of every Turkish official whom he might meet, and to make no reply to any answer he might get. The question was: "Why is not the American College built?" This question was thus put until a prominent Turkish officer asked the instigator of the scheme "why the great Admiral was asking this question. Was he sent to see that the college was built?" The answer to this question was "skilfully evaded." The whole intent of this chicanery was to create the impression that Farragut and his ship had been sent to secure the building of the college. I have not yet seen any condemnation of this trick. Of course, the tone of the paper is moral and religious; but one such instance of successful lying will offset a large amount of pious reflection.

We have the indemnity for the destruction of the college at Harpoot mixed up with the price of a gunboat, and, so far as the public is aware, there is a willingness to receive it in this fashion. As if Paul would have consented, for the loss of all his goods and for his bodily sufferings, to have taken a lump sum mixed up in the cost of a trireme for Elymas, the sorcerer. While the Turk has so far managed to hold his own, his less fortunate heathen brother of China not only has not escaped, but has actually reversed the experiences of the early martyrs, who took joyfully the spoiling of their goods, in that he, under proper manipulation, gladly parts with his goods to reimburse the losses of his Christian brothers. Surely the various societies at home having agents abroad owe it to all interested to make full inquiry into these matters, and if the Babylonish garment and wedge of gold be found with any of them, while I would not urge the punishment that befell their great prototype, some action should be taken to show the heathen in his darkness that his teacher must at least observe the doctrines he teaches.

A writer in a recent religious journal, the *Outlook*, defends the collection of the now notorious one and one-third, on the ground that it is the custom of the country, and a prominent authority on international law in the same issue defends Funston's forgery, on the ground that the Filipinos were not signers of the Hague Convention, and hence were not entitled to its benefits and immunities. As they were not invited thereto, and would not have been permitted to participate if present, it is hard to see how they could have availed themselves of its provisions, but easy to see the degradation of their conquerors by the violation on their part of its laws.

Only a week ago my own religious journal, while admitting the fearful effects of war in the demoralization of the public conscience and general depravation of morals, lest I should think that it alone would work this evil, informed me that peace and prosperity are "liable to develop a moral corruption equal to that which follows war." The corollary of this proposition is, I suppose, that a good, hard war is a panacea for the evils of peace. But how is war to be cured, as peace is no better in its effects and leads to the same deplorable results?

Baltimore, April 16, 1901.

LITITZ AND EPHRATA IN 1852.

To the Editor of The Nation:

Sir: If many of your readers were as much interested as I was by the notice of Ephrata in your last number, they may find some amusement in my early recollections of the place evoked by that pleasant article.

It was in September of 1852 that I drove with a party of friends from Lancaster, Pa., to the Moravian village of Lititz, there being at that time no railroad within six or seven miles. Lititz then consisted of one long street, paved with cobblestones, without sidewalks, between two rows of low stone houses a story and a half high, with deep eaves, penthouses, stoops, and front doors opening in half, horizontally, as though for the let and hindrance of small children. The small windows were full of flowering plants. At either end of the street was a good-sized square building two or three stories high (brick, if I remember right), one a boarding-school for boys, one for girls. They stood each within a paling in a little park (to use the word in the French acceptation) of perhaps an acre, laid out in straight walks, grass-plots, and flower-beds, with great box-bushes, clipped into the shapes of globes, pyramids, and hour-glasses. There were signboards in English and German courteously beseeching visitors not to molest "the little birds"—a touch of tenderness which apparently appealed to the feathered folk, as even at that late season these enclosures were open-air aviaries, vocal with the warbling of spring and summer. No carriage, horse, mule, or cow was allowed thoroughfare of this single street, and as we walked from end to end on the penitential cobblestones, my friends told me some of the strict, quaint rules and customs of this place. None but Moravians were allowed to settle there; no private house must be higher than its neighbors; no two persons must follow the same calling; there was, therefore, but one shoemaker, one carpenter, one butcher, baker, candlestick-maker, etc. Whether this system produced skilled labor or kept up prices, I did not ask, being only seventeen and unconcerned with political economy. I believe that some of the Lancaster gentry patronized the Lititz handicraftsmen, and that the place had its peculiar industries, of which, however, I can remember only certain striped globules of candy, almost too large for an average mouth, yet defying the strongest teeth, inducing absolute silence as they melted under the palate. These were called dough-balls—I never could guess why—and were dear to schoolboys and girls beyond the limits of Lancaster County, or even of the State, and, as far as I know, they were a specialty of Lititz. I had not been to Europe since early childhood, and this place struck me as more foreign than any I could call to mind. It was difficult to believe that this was America; one seemed to be in a dream suggested by Grimm's Household Tales or some story of Hans Andersen's. Since then I have been to Germany and the Low Countries, and the prim cleanliness of the typical Dutch village, and the quaintness of Nuremberg in 1870 (without its picturesqueness), strongly recalled the little Moravian town of central Pennsylvania.

One end of the Lititz street led to a grassy walk under a double row of large buttonwoods beside a stream flowing in a straight paved channel from a great transparent spring, which broke through the base of a low hill and formed an irregular basin well shaded by old trees. This was a favorite resort of young men and maidens, but when we were there not a soul was to be seen nor a sound to be heard except the birds. The purity of the water, the shade, the quiet, the sense of peace, affected me so deeply that I

expressed a premature wish to be buried there.

From Lititz to Ephrata it was between seven and ten miles further into the country, which lost some of its agricultural character and became more thickly wooded and hilly, with an intimation of not distant mountains. As we drew near the old Dunker settlement, however, the land was well farmed, and the general aspect reminded me of the approach to the Shaker tract at Lebanon, N. Y.; even the two big buildings, the Brothers' and Sisters' houses, and the great barns and other outbuildings, suggested the abodes of those thrifty celibates. But while Lebanon and Tyringham in Massachusetts were buzzing with an industry, energy, and commercial sharpness which tended little to religious seclusion, and did not point directly towards the extinction of our sinful race, silence and solitude brooded over the cloister homes of the Dunkers. The two houses were constructed on the same plan; they were square and had, I think, three stories. In each story there was a room some twenty feet square and high in proportion. This was for general social reunions, I understood, but exclusively for the inmates of that house—the Brothers and Sisters met only in the chapel, which was on the ground floor and inscribed with German sentences, my friend said, of an age so remote that no one living could decipher them. The three aged Sisters, clad in black, whom we found at work sewing or knitting in one of the living-rooms repeated this assertion. I do not remember the dining room or refectory; the bed-rooms were small whitewashed cells, with a wooden bench or bunk crossed at one end by a log slightly hollowed, for the sleep of the just. We did not enter the Brothers' house, which was in all respects like the Sisters'; the sole male servitor of the community was a venerable figure with a gray, forked beard, chopping wood in the yard. When we reached the chapel, which was under the roof of the Sisters' house, we found wooden benches and whitewashed walls inscribed, in clear black lettering of very good pattern, with the mysterious verses, which were merely texts from Luther's Bible.

The Sisters were simple, kindly, intelligent women, not without education (they could read English and "Pennsylvania Dutch," though not pure German); they were serious, as well became the last of a fraternity once so flourishing, yet they were not melancholy. When they three and the old Brother should die, that would be the end of the Dunkers of Ephrata. But we were sad as we took leave of them and set out on our long sunset drive. We were old enough to feel the spirit of the past in men and things, but too young to follow out plain logical consequences. I knew that, in the seventeenth century, books in Latin and German were printed at Ephrata; beautifully illuminated music was engrossed there to be sung by the choruses of the devout. I had seen a book, entitled "Delicia Efratensis' (I would not now swear to this *f*), which I remembered as a specimen of fair typography with a graceful colophon. The ancestor of friends of mine had been educated there, and had corresponded for years afterwards in Latin with the learned head of the community; Sauer had printed his Bible in a house belonging to the same family, which was still pointed out in Germantown as late as 1860. Beside the Wissahiccon, then a wild, wooded stream, to be reached mainly by footpaths, but crossed at intervals by millroads, were the ruins of a Dunker monastery. In a little overgrown graveyard of Mt. Airy, a bent old man, hatless, with long, gray hair, and forked gray beard, the very incarnation of Father Time, used to be seen mowing the high grass with a scythe. His name was Heilig (holy), his secular occupation clock-mending, and he was the sexton of a little church which held, I was told, the last handful of Germantown Dunkers. But Ephrata I had imagined as the abbey, the stronghold, and sacred seat of the sect.

This was what I found it in 1852. I do not know whether any trace of it exists. I have not been there since, nor to Lititz, which, however, now has a railroad, a hotel, and is open to all comers. The Moravian heart of the place is dwindling into the kernel of a constantly enlarging pulp of busy worldly prosperity like Bethlehem on the Lehigh, so lovely and tranquil fifty years ago. But these are my school-girlish recollections of those haunts of primitive piety. I cannot vouch for their accuracy even at this time; only for the depth and distinctness of my impressions.

S. B. W.

April 17, 1901.

Notes.

Ginn & Co., Boston, have in press or in preparation 'A History of English Literature,' by Prof. Francis B. Gummere of Haverford and Alfred C. Garrett of Harvard; 'A Plot-Book of Some Elizabethan Plays,' by Prof. Geo. P. Baker of Harvard; 'A Latin Grammar for Schools and Colleges,' by Profs. W. G. Hale and Carl D. Buck of the University of Chicago; 'Syntax of the Moods and Tenses of the Latin Verb,' by Prof. Hale; 'A Grammar of Oscan and Umbrian Dialects,' by Prof. Buck; Cicero's Orations and Letters, edited by Profs. Greenough and Kittredge of Harvard; 'A History and Description of Roman Political Institutions,' by Prof. Frank Frost Abbott of the University of Chicago; 'A Practical German Grammar,' by Prof. George Hempl of the University of Michigan; 'Original Investigation; or, How to Attack a Geometrical Exercise,' by Elisha S. Loomis; 'Elementary Physical Geography' and 'Manual of Physical Geography,' by Prof. William M. Davis of Harvard; 'The Stars in Song and Legend,' by Jermain G. Porter; and 'Old Indian Legends,' by Zitkala-Ša.

Shortly to appear from Houghton, Mifflin & Co. are a new volume of poems by William Vaughn Moody; 'Everyday Birds,' by Bradford Torrey; 'John Marshall,' by Prof. J. B. Thayer (in the Riverside Biographical Series); and 'Substitutes for the Saloon,' by Raymond Calkins.

Funk & Wagnalls Co. are to reprint Croly's 'Tarry Thou till I Come; or, Salathiel, the Wandering Jew,' freely illustrated, partly in color, by T. de Thulstrup.

The Pilgrim Press, Boston, will soon publish a volume of Orations and Addresses by the late Dr. R. S. Storrs.

'The Social Problem,' a critique of John Stuart Mill's school of political economy, is promised shortly by James Pott & Co.

George W. Jacobs & Co., Philadelphia, will presently issue 'The Fallen God, and Other Essays in Literature and Art,' by Joseph Spencer Kennard, with illustrations; and 'A Book of Bryn Mawr Stories,' by Margaretta Morris and Louise Buffum Congdon.

'A Little Book of *Tribune* Verse,' by Eugene Field, is about to be published by Tandy, Wheeler & Co., Denver, Col.—gleanings from the Denver *Tribune*, with which the poet was connected for two years.

Quite the most formidable challenge to long purses that we remember to have recorded is the proposed subscription to a set (of twelve) of the "St. Dunstan Illuminated Volumes" undertaken by George D. Sproul, No. 150 Fifth Avenue. These quarto embodiments of old Omar, Shakspere's Sonnets, Petrarch's, Mrs. Browning's from the Portuguese, Tennyson's "Holy Grail" and "Guinevere," Drake's "Culprit Fay," Rossetti's "Vita Nuova," Milton's "Comus," and Spenser's "Epithalamium" are intended as shining examples of "a revival of the lost art of illumination" through the instrumentality of Mr. Ross Turner and the University Press of Cambridge, Mass. The subscription price of $12,000 includes binding in individual fashion by Trautz-Bauzonnet. We can only say that the prospectus gives every evidence that taste and skill will preside over the typography at least.

We printed early in January a detailed announcement of the intention of the Archæological Institute of America to print a final Report on the remarkable excavations conducted under its auspices at Assos in 1881-1883. We are now informed that more than half the necessary two hundred subscribers to the work have been secured, but appeal must still be made to fill out the quota. "The book," writes Prof. C. E. Norton, "is desired by students not only in this country, but also in Europe. It will do credit to America, and it would be matter of regret on many accounts were its publication to fail through lack of support." A prospectus, with specimen illustrations, will be sent to any address by the Treasurer, Mr. W. F. Harris, No. 8 Mercer Circle, Cambridge, Mass. The subscription is fixed at $25.

Albert Dürer's designs, intended to illustrate the Revelation of Saint John, and embodied in the most elaborate woodcuts of his time, are reproduced by photographic process and published by R. H. Russell. The reduction is to half the width and length, but this does not involve the making of pictures too small for a fair presentation of the designs, for the original prints are very large, nearly eleven by fifteen inches within the black outline. The enterprise has been guided by Mr. Fitzroy Carrington, who has contributed a very interesting introduction, giving at once an account of the original woodcuts, their price, and their estimation in Dürer's time: the probable eagerness of Dürer to attack, in this way, the Roman hierarchy of the epoch; the ready curiosity which he is known to have felt and followed up in regard to strange forms of beast and fish, horn and wing: the daring of the artist, and his immense services to wood-engraving and to descriptive design. It is a good preface, in which one regrets only a somewhat too partisan Protestant leaning. The book is covered with rough-surfaced leather, stained crimson.

There seems to be a lively demand for books containing short sketches of the lives of the great composers. The latest two that have come to us are 'Masters of Music,' by Miss Anna Alice Chapin (Dodd, Mead & Co.), and 'First Studies in Music Biography,' by

Thomas Tapper (Philadelphia: Theodore Presser). Miss Chapin has selected twenty masters, from Palestrina to Wagner, and woven the most picturesque incidents in their lives into more or less connected stories. Her book is for young folks, and will entertain them, as it is full of anecdotes and dwells especially on the human side of the composers. Mr. Tapper's book is also intended for beginners, but it gives more attention to the works of the masters than Miss Chapin's does. Only ten masters are discussed in this volume. Each sketch is followed by a tabular view, to aid the memory, and by a series of questions which add much to the value of the book. The author presupposes that the reader will continue to learn, and will therefore extend his investigation of the subject to other books; but he omits to give a list of such as would be most useful for that purpose.

A set of impressions or sketches entitled 'French Life in Town and Country,' by Hannah Lynch (Putnams), may fairly lay claim to more intimate knowledge of a not very accessible subject than is common with many foreign writers on France. These *causeries*, however, show more familiarity with life in the upper and the lower social strata than among the vast intervening medley of the bourgeoisie. For instance, as regards the habits of small parsimony with which the French are so often charged, it should be acknowledged that, in a well-to-do professional or commercial *milieu*, anywhere in the country, domestic comfort and hospitality harmonize perfectly with sensible thrift. In judging of character, customs, manners, and so forth the author's point of view remains essentially foreign; this may help to account for the *hors d'œuvre* to which her readers are treated in the form of an arraignment of Jesuit education, conventional sneers at the French Academy, and special tirades at plausible but rapacious landladies.

This being the year when Alfred's "millenary" is to be celebrated—July seems now to have been fixed upon, at Winchester—there is a special appropriateness in Mr. Warwick H. Draper's 'Alfred the Great: A Sketch and Seven Studies' (Elliot Stock). The subject is appropriate to the year, and the writer, who shows on the title-page as "late scholar of University College, Oxford," is appropriate to his subject; for since he belongs to the college in connection with which Alfred's name has been taken in vain, there is nothing invidious in his giving an account of the founder and the foundation of his college in an unambiguous "study" entitled the Oxford Myth. His life of Alfred is carefully done, and he would have freed Alfred completely from the disfiguring cloud of old-wives' tales which have gathered around him, if he had not a weakness for the notion of Alfred as in a certain sense the founder of the English navy. The sense in which Alfred can be credited with founding the English navy is very far-fetched indeed; else how came it that there was no navy to defend the English coasts against Norman invaders? Mr. Draper would have done better to leave Alfred as the founder of a navy to the more florid dissertation on Alfred for which Sir Walter Besant not many years ago made himself responsible. But this is a very small flaw in a most serviceable book. There is a great deal of very accurate archæology in Mr. Draper's seven studies appended to the life; particularly useful is his account of "Alfred as a Man of Letters," of "The Vale of the White Horse," and of "Alfred's Burial-place." Among the illustrations, the frontispiece and the thirteenth-century MS. portrait of Alfred, the cuts of Alfred's Jewel, and the sketches of Athelney and of the White Horse of Ashdown are specially interesting, as are the antiquities of the ninth century given opposite page 34. There is a curious pointlessness for the American reader about the preface written by Dr. Percival and signed "J. Hereford."

The tenth of the world's islands in size, if not in importance, is at length endeavoring, through railroads and advertisements, to attract the attention it deserves. Politically Newfoundland is likely to be prominent in the near future through the expiry of the modus vivendi between the British and French Governments as to the ambiguous fishing rights of the latter Power over 700 miles of its coast. As, admittedly, these rights have ceased to be of any notable pecuniary advantage, nothing but the excusable sensitiveness on the part of the French to part with one of the few remaining vestiges of their American empire embarrasses the negotiations. Meanwhile, access to the island has been made regular instead of intermittent by the establishment of a steam ferry from Sydney, Cape Breton, to Port aux Basques, the southwestern terminus of the Newfoundland Railroad; and travel across the island has been made rapid and comfortable by modern train service. Thus the exquisite scenery and excellent fishing of the west coast, the best deer-hunting accessible to our sportsmen (on the Barrens of the interior), and the deep fiords of the Atlantic Coast can now be readily reached. It is with a view to bringing these advantages to the knowledge of our sun-baked summer tourists that the Government of Newfoundland has issued a compact and handsomely printed handbook, illustrated with maps and half-tone engravings: 'Newfoundland in 1900: A Treatise on the Geography, Natural Resources, and History of the Island, Embracing an Account of Recent and Present Large Material Movements' (St. Johns, N. F.; S. E. Garland; New York: The South Publishing Co.).

Attention may be drawn to an index to American portraits, by Bunford Samuel, in the April number of the *Pennsylvania Magazine of History and Biography*. Mr. Samuel's scheme includes references to fifteen magazines, English and American and one French, ranging from 1732 to 1851. The gallery thus obtained is extended by reference to seven other magazines (1821-1896) for the same subjects. For instance, John Adams is cited from the *European Magazine*, August, 1783, and this entitles him to a selection from any or all of the seven sources last named. As a matter of fact, Mr. Samuel does more, for he includes portraits of Adams from nine books. The curious can compare the work of engravers after the same original, as, to stick to our example, there are five engravings after Gilbert Stuart's John Adams. The engraver's name is given where known.

The desolate region in Arizona and Mexico traversed by the old Yuma trail is described by Mr. W. J. McGee in the *National Geographic Magazine* for April. He attributes its transition from "populous activity to utter desert" to the "long-continued and short-sighted overtaxing of its meagre resources" by the Caucasians who succeeded the semi-migratory Papago Indians; and he calls attention to the fact that other regions in the West are suffering in like manner through the destruction of forests, injudicious cultivation and grazing, and the exhaustion of the water supply. Gen. Greely contributes a summary of the geographical explorations of the last century, and Señor Dr. Navarro of this city gives some interesting facts about the Mexico of to-day. Among these are some encouraging educational statistics, as that in 1898 Mexico had 130 public libraries. He refers further to legal provisions denying the right to religious corporations to hold real estate in any form, the object being "to prevent the stagnation of real estate constantly produced by those corporations having two characteristics—indefinite duration and possession in common." This interdict has a special interest in view of the serious difficulty with respect to the landed property of the religious orders in the Philippines.

A general survey of our foreign trade is the leading feature of the Consular Reports for April. It is accompanied by an interesting map showing the distribution of our exports of manufactures, so that the general character of our trade with each country may be seen at a glance, as, Peru, tools, hardware; Tripoli, machinery; Fezzan, jewelry, wooden houses! Notwithstanding the marvellous growth of our commerce in the last decade, the United States has a smaller merchant marine than Germany, even though the vessels of the Great Lakes be included. Of the Council of Labor which has just been authorized for Marseilles, it is stated that it will consist of three elements, employers and employees, elected by their respective syndicates, and *prud'hommes*. This *conseil des prud'hommes* is an ancient Marseillaise institution, dating back to the Roman times. It consists of employers and employees in equal numbers, and has for its object the settlement of all labor disputes. It is said that "the judgments rendered are highly respected, and very rarely reversed by the superior courts." The scope of the new council is broader, its mission being to give advice upon all questions bearing upon labor. It will be divided into six sections for the consideration of matters relating to each department of industry.

The 'Report of the Superintendent of the Coast and Geodetic Survey for 1899,' which is just at hand, contains less matter of scientific importance than usual. Nearly two-thirds of the total 960 pages are devoted to the subject of levelling, and a large part of this space is filled with mere descriptions of points whose elevations have been obtained. The old method of precise levelling has been found to be affected with marked temperature errors, owing to the slowness with which the operation was conducted, and accordingly a more rapid process has been introduced. The transcontinental line of precise levels has now reached the summit of the Rocky Mountains, and is being pushed forward to the Pacific Coast. The magnetic work has been extended, and the results of a complete magnetic survey of North Carolina are given. The California-Nevada boundary, begun several years ago, but interrupted on account of lack of appropriations, has been completed by the establishment of a line 400 miles long, from Lake Tahoe to the Colorado River. Extensive hydrographic and topographic operations have been carried on at the mouths of the two greatest rivers of Alaska, the Yukon and the Copper, with a view to determining

the best route of entrance for ocean steamers. Accurate maps have been made of the passes at the head of Lynn Canal and the adjoining region. An important achievement was the establishment of compass ranges on the coast of California for the use of vessels. The number of hydrographic and topographic charts issued in 1899 was 83,197, in addition to numerous tide-tables and directions to mariners. The expenses of the Bureau for the year amounted to $625,000, which enabled field work to be carried on by sixty-eight parties. A distinctive flag has been adopted for the Survey, as also a special one for its Superintendent, these being shown in gay colors in a frontispiece to the report.

A notorious instance of the ever-present influence of the money power in the political affairs of the world is the turning of the scales in favor of Charles V. by the Fuggers, at the time of the rivalry between the houses of Valois and Hapsburg for the Imperial Crown. Four years after the election, Jacob Fugger could write to the Emperor: "It is known and evident that your Imperial Majesty could not have obtained the Roman Crown without my aid." Dr. Richard Ehrenberg, writing in the April *Rundschau* on the "Origin and Significance of Large Fortunes," declares, on the basis of investigations of his own, this bold statement to be fully justified by the facts: it was the credit of the Fuggers, withheld from Francis I., that determined the choice of the Electors. Ranke, in his account of the election of Charles V., does not state the case quite so bluntly, but there is no conflict between his statements and Ehrenberg's.

The publications of the German book trade in the year 1900 numbered 24,792, showing an increase of 1,077 over the preceding year. In examining a table, printed in *Hochschul-Nachrichten* for March, it is interesting to notice an advance along the whole line of the eighteen classes in which the publications are arranged, with the exception only of works on military science and of "sundries." The largest increase is found in works on jurisprudence and political science (from 2,313 to 2,599), which is probably due to the introduction of the new code on January 1, 1900, and in the department of natural sciences and mathematics (from 1,233 to 1,390). The German universities issued 2,342 publications from August 15, 1899, to August 14, 1900. Of these, 2,109 were dissertations and theses, and the University of Erlangen enjoys the questionable fame of heading the list with 225. One hundred and fifteen *doctores juris* went forth from this comparatively small university, to nine from Berlin, seventeen from Munich, three from Bonn, one from Leipzig, and none from Heidelberg, which, a generation ago, was the Mecca of law students bent upon winning their academic degree on the easiest conditions.

—The single section L-Lap, with which Mr. Bradley introduces the sixth volume of the Oxford English Dictionary (New York: Henry Frowde), is most remarkable as the beginning of what is probably the middle volume of the series. But in the prefatory announcement, "with the profoundest regret," of the death of Dr. Fitzedward Hall, there is a sad reminder how many laborers have already fallen by the way ere this gigantic enterprise has been half completed. It so happens, says the editor, that "the latest page which contains his [Dr. Hall's] additions is that with which the [present] Section ends." The letter L itself is, of course, the first rubric, and furnishes another nut for phonetic reformers who are (literally) "all ears" when attempting to improve our English spelling. "In certain combinations an original *l* has regularly [there is, then, a method in our madness] become silent after having modified the sound of the preceding vowel. In most of these cases the *l* is still written, and serves to indicate [to the eye] the pronunciation of the preceding vowel. The following combinations of letters . . . . may be regarded as compound phonetic symbols of almost unvarying value," to wit, *alf, alve, alm, alk, aulk, aulm, olk.* Much more frequently in the dialects, and especially in Scotch, than in standard English, this silence has obtained. No American contributor to the Dictionary appears to have furnished it with a quotation for L=elevated, as in New York's "L-roads." Historical up-to-dateness is visible in a South African military quotation from the *Times* of October 25, 1899, for *laager.* Under *lady*, the original correspondence of lord and lady is pointed out, and the subsequent extension of lady to correspond with gentleman. But, "as the traditional association of *lady* with *lord* still survives, the former is a title of ostensibly higher dignity than *gentleman.* Hence, and not directly as the result of the sentiment of gallantry, the customary order of words in 'ladies and gentlemen.'" Further on in the same article it is remarked that the broad use of lady for wife or consort was prevalent in the eighteenth and the former half of the nineteenth century, "but is now regarded as vulgar, especially in the phrase *your good lady.*" Hence it follows that what is regarded as vulgar affectation when "John Jones and lady" is entered on our hotel registers, is a mere survival. In printing "lamb-like, lamblike," the Dictionary reflects the divided usage in the case of this suffix as respects the hyphen. The *b* being a silent letter here, the hyphen is perhaps to be preferred, as preventing (say, on the part of a foreigner) such a pronunciation as lam-blike.

—Parts 3-5 of the exemplary 'Catalogo Generale della Libreria Italiana (1847-1899)' issued through Ulrico Hoepli in Milan (New York: Lemcke & Büchner) carry the work on to Cesare Cantù, that prolific historian whose 'Guide to Lake Como' dates back to the earliest limit of this Catalogue, and whose 'Il buon Fanciullo' (1848) has gone into thirty editions, while other writings have attained upwards of twenty. No doubt Part 4 will show him occupying more space than the late industrious and learned R. Bonghi, who fills nearly a page—a little more than Boccaccio. It is noticeable, by the way, in the exhibit of editions of the Decameron, how there were intervals of eight years (1866-'74) and even eleven (1877-'88). The year 1897 saw the only recorded attempt at expurgation of this classic. Beccaria's 'Dei Delitti' was reprinted in 1884, and in 1889 his 'Di alcuni luoghi difficili e controversi della Divina Commedia.' Botta's History of the United States was revived in 1850, as part of the revolutionary agitation in the peninsula; Turin followed in 1852, and a second edition appeared in Milan in 1856, another in Florence in 1857, and the last in Turin in 1858-'59. Among current writers, the authoritative architectural critics, Lucas Beltrame and Camillo Boito, make a good showing, as does the scholarly librarian Guido Biagi. Each decade in the last half of the nineteenth century witnessed a publication of some one of Mrs. Stowe's works (she is here entered among the B's as "Beecher Stowe, Enrichetta"). 'Uncle Tom's Cabin' was promptly brought out in 1852 in four volumes, and there were no fewer than three different translations the next year. The latest issue was in 1898, and in 1888 there was even seen an 'Uncle Tom' prepared for children. Byron—the association with Mrs. Stowe is here made natural—is still a living force in Italy. The latest 'Don Juan' and 'Childe Harold' appeared in 1897. Of Bulwer something was reproduced as recently as 1898. Blair's 'Rhetoric' was still in vogue in 1864. A hundred songs of Béranger were rendered into Italian in 1881. It is significant that there was no call for Louis Blanc after 1850. Even Bentham-Dumont fared better than that (1854). We must not omit to remark the frequent reference to works relating more or less incidentally to the author whose bibliography is displayed in this instructive Catalogue.

—The 'Sixth Annual' of the British School of Archæology at Athens is devoted largely to a report of the very interesting excavations conducted in the spring of 1900 by Arthur J. Evans of the Ashmolean Museum and D. G. Hogarth, Director of the British School at Athens, on and around the site of ancient Cnossus in Crete. The report is called preliminary, since certain topics are reserved until the completion of the explorations by Mr. Evans of the ancient palace of Minos, but the present publication in most respects is complete and independent. Of the palace, as was reported in the *Nation* for August 2, 1900, an area of about two acres was cleared last year, including the throne-room, extensive corridors, and magazines, with elaborate frescoes. One of the most interesting discoveries was a whole library of clay tablets, some with lineal and others with a sort of hieroglyphic script. The earliest remains are thought to be from not later than two thousand years before Christ, while the palace was destroyed about twelve hundred years before our era, a little earlier than the fall of Mycenæan civilization in Greece proper, and curiously near the time of the sack of Troy, according to the traditional date. The palace clearly was ransacked for valuable objects at the time of its destruction, but, during the last three thousand years, the site has been disturbed only by an occasional peasant grubbing for stone slabs to use in his own structures, and by an amateur digging a few years ago for antiquities. Mr. Evans says that over parts of the site not even a ploughshare can have passed, and that trees could never have been planted there, or their roots alone would have caused greater ruin. Mr. Hogarth's search for old cemeteries, "Mycenæan graves," did not lead to the result for which he looked, but he discovered a well-preserved primitive town, which contained masses of early pottery of the Mycenæan and pre-Mycenæan periods. His most interesting work, however, was in the Dictæan Cave, which ancient myths associated with the birth and early childhood of Zeus. Here many votive offerings were found, including nearly five hundred objects of bronze—figurines, knives, swords, spearheads, etc.—most of which were simulacral, and not intended for actual use.

—The report of the ordinary work of the British School of Archæology at Athens invites to a brief comparison with the American School of Classical Studies. The two institutions stand side by side on the slope of Lycabettus, and have similar aims. The American School was opened in 1882, the British in 1886; the former has had a few more than one hundred students, the latter has had sixty-three. A comparison of the lists of students seems to show that the colleges and universities of this country make better scholastic positions for the former students of their School in Greece, and that thus the influence of the School is here more widely felt in the higher education. The American School keeps in closer touch with education at home also by sending to Greece each year, as an associate to the Director, a professor from one of the institutions which unite in the support of the school—Prof. Perry of Columbia University, for instance, serving this year as professor of the School at Athens. The incomes of the two schools are about the same. The British School receives £500 from its Government, while the American School receives nothing from its Government, but has about $3,000 as interest from its endowment fund, which is unhappily not yet completed. The British School receives the greater part of its additional income from private subscriptions, but has £100 each from the two great Universities of Oxford and Cambridge, £50 from Newnham College, and £55 in all from six British colleges, while the American School, according to its last report, received $4,225 from American colleges and universities. The American School seems to provide more instruction for its students, for the last Director of the British School writes in his report that "students from English universities will never have the love of formal lectures which distinguishes those from America."

—The Bibliographical Society has issued an elaborate treatise, full of minutely intricate details, on the Printers of Greek in the fifteenth century, prepared by Mr. Robert Proctor of the British Museum. The volume, of 217 quarto pages and more than sixty facsimiles of early Greek founts of type, would seem to promise little general interest; but to those who have watched the recent efforts to introduce a legible, reasonable type for the printing of Greek text-books, Mr. Proctor's facsimiles and his account of how the fashion in Greek letters came to be set, will afford considerable entertainment. The replacement of the clear, strong types used in printing Greek during the first half century of typography by the delicate, flowing, confusing form of letter whose descendant founts are the joy of oculists at the present day, is one of the most curious incidents in the annals of the manufacture of literature. Aldus of Venice, the most influential printer of his time, was responsible for the change. His predecessors had used a form of type derived from the book-hand of a previous century, and admirably adapted to the more rigid demands of typography. Aldus, with keen business sense, determined to introduce a new form, resembling the easy running hand of contemporary scribes. The delicate fineness of the type which he secured gave an apparent beauty to his pages which is entirely lacking in the angular, broad lines of the letters he displaced. But the earlier type was easily read, whereas that of Aldus, when not almost illegible, is most wearying to the eyesight. The new style, however, appearing in the books of the greatest printer of the day, caught the popular fancy, and printers all over Europe hastened to copy the prevailing mode. Succeeding type-cutters have added regularity and evenness to the point of monotony, and they have secured mechanical simplicity despite all the complexities of Greek text, but without attempting to alter the traditional thin lines and illegible minutiæ of the letters. A few, notably the Englishman Baskerville a century and a half ago, have tried to introduce greater legibility, but the inevitable sacrifice of regularity and of the traditional canons of typographic beauty prevented for four hundred years any effective reform.

—'The Municipal Year Book of the United Kingdom,' which is edited by Robert Donald and issued by Edward Lloyd of Salisbury Square, London, is an annual publication of great utility, and the volume for 1901 is even richer in its contents than its predecessors. It has the advantage, moreover, of remarkable cheapness, for it contains some 550 pages of closely printed text, and costs only half a crown. We have to say "some" 550 pages, indeed, for the publisher has pursued the plan, towards the end of the volume, of interpolating advertisements in the text in a very annoying fashion, so that, *e. g.*, to get from statistics of municipal taxes to the list of clerks of county councils, we have to pass through an intervening territory occupied by somebody's red gum and somebody else's sulphur candles. We will hope that, as the circulation increases, these little devices to attract advertisers may become unnecessary. The statistical and descriptive information which the Year Book contains is arranged mainly under the names of the several towns; and it is significant of the changes coming over England that the editor has now seen fit to add the statistics of the Urban District Councils. But this is followed by a complete review of certain important recent developments of municipal activity, brought together under the heads of Water Supply, Gas Supply, Electricity Supply, Tramways, and Housing. The past year has seen the adoption of the policy of municipal street railways in a great many localities; and the desire to secure additional sources of revenue in order to provide funds for housing schemes has led even so conservative a municipality as Glasgow to petition Parliament for power to tax "ground values." It is noticeable, also, that, during the past year, a considerable number of town Councillors who were likely, even indirectly, to have business relations with their municipalities, have been compelled to resign by the pressure of public opinion. The editor is obviously in favor, in a general way, of "municipalization," and his accounts of success in this, that, and the other direction are probably not uncolored by his own optimistic opinions. But the intelligent reader will know where to suspend judgment; and if he cares to compare what he finds here with the evidence recently given before the Joint Committee of the Lords and Commons on "Municipal Trading," he will not lack material for a more dispassionate verdict.

TURKEY IN EUROPE.

Turkey in Europe. By Odysseus. London: Edward Arnold. 1900. Pp. 475.

There is really very little in this book to demand anonymity, unless the author were very high up in the service, or, indeed, at the top; and that, probably, no one will suggest. We seem left to conclude that behind the *nom de plume* lie business considerations, and that the writer, while he may be a diplomat, may also be a newspaper correspondent, a missionary (but hardly), a commission agent, a private student—anything. A remark on page 144 suggests that he, at one time, at any rate, exercised consular functions in Turkey. But, to leave such comparatively fruitless imaginings, whatever else the author may be, he is unquestionably and in his own right a master and an authority in his subject. He knows Turkish, colloquial and literary—two very different things—through and through. He knows it also as a philologian, has traced its roots in their ramifications into Central Asia, and can tell its degree of cousinship with the tongue of the Mantchus. He knows also the Turks themselves by long residence and varied intercourse with them. Isaac Disraeli asked, "What does my son know of dukes?" With grand viziers and pashas at least Odysseus has an extensive and peculiar acquaintance. But that was not in the way (as so often) of being crammed with apocryphal political secrets to be passed on to a curious public; there is not one sentence of the kind in his book. It was to study the Turk, his racial psychology, his ambitions—so far as there are any—and his fears. That he evidently did most thoroughly, not only among pashas, but down to darwishes and peasants. Further, he knows modern Greek and the Greeks at first hand, and for their history he has worked diligently at his Finlay. He knows, equally at first hand, the Balkans, peoples and languages.

This is a truly gigantic "order," and it is some comfort to find signs that the weight of learning is here borne rather heavily. The learning undoubtedly is there, but with it, in spite of much free and breezy intercourse with the peoples on their own hills and in their own villages from Albania to Wallachia, there goes a flavor of the professor at his desk, a suspicion of a blackboard on which to sketch race-charts and illustrate phonetic laws. Yet it must be confessed that no man who had the slightest strain in him of the philological enthusiast could wander in the Balkans without such risk. It is the more surprising that one in whom the strain is so prominent and whose linguistic training had been so excellent, should have kept so open an eye for the people themselves apart from their language. It may be said generally that an outstanding characteristic of the book is this union of vivid and personal perception and scholarly, clear-cut tabulation of statement. Further, it is evident that "Odysseus" passed through these lands as an inquiring traveller and had no settled life there. With Constantinople, on the other hand, he was too familiar to waste on it any words. There is no evidence of a knowledge of Armenian, but much of a knowledge of the Armenian people. Arabic he knows with curious limitations; he uses Palmer's translation of the Qur'an, but not slavishly, and he has access to native commentaries. With Muslim theology and

law he has much more than the bowing acquaintance which some professed Arabists seem to think sufficient. This does not mean that the canon-lawyer or the theologian could not criticise some of his statements. When he describes the scope of the canon law as being real property, he is hardly accurate. It is, rather, so far as matters which we should call legal are concerned, questions of marriage, divorce, and inheritance. Nor is the status of the Shaykh-al-Islam and of his *fatwas* defined with perfect exactness. Similarly, in theology, the doctrine that the verbal expression of the Qur'an is absolutely of divine origin is not so hard and fast as he states it; dogmatic theologians, among themselves at any rate, would allow more elasticity. Its statutes, too, have by no means the absolute authority here and commonly ascribed to them. One of the most singular features of Islam is the way in which the agreement of the Muslim people has overridden plain Scripture. But, in spite of all this, "Odysseus" has evidently an exceptionally clear and accurate knowledge of his subject, derived to a great extent from native and first-hand sources. It is noteworthy, too, that that knowledge suddenly ceases at the Persian frontier. Of the Shi'ite positions he speaks in tentative and guarded terms.

With such an equipment, a book of high value was a certainty, and this book is of the highest value. Its object may be described shortly, as being a description and appreciation of the various elements entering into the existent Turkish problem as it centres at Constantinople. Egypt, Syria, Arabia, the Senussi state, and the great question of the Ottoman Sultan, as Khalifa of the Muslim world, with its consequences—consequences hardly realized yet by Europe—all these are outside of "Odysseus's" scope. It is the Turk in Europe, his past, and that of his subject peoples, but especially his present on all its sides and in all its conditions, and his future—what is going to become of him? The problem is serious enough, and yet few of those who declaim on Turkish atrocities and talk of abolishing the Turk, know what the situation is and what are the elements involved. Once the Turk had hold of Europe and had pretty definite ideas what to do with it; now Europe has hold of the Turk and has not an idea how to deal with him. Without doubt, this is due in part to international jealousies; the Power that has Constantinople will hold the gorgeous East in fee more perfectly than ever did Venice, and it will also dominate eastern Europe. But it is due far more to helplessness before a recognized problem, the existence of the Turks there and through all Asia Minor. They cannot all be killed off; the method would be effective, but it is impossibly crude. The application of constitutions and reforms produces no result; that has been tried. A forcible suppression of the Turkish state and a division of its territories among the European Powers would bring about a condition of things little better than the present. For one state to emend by force the internal affairs of another is to do evil that a very problematic good may follow. Even we are coming to realize that. And when the head of the erring state is the Khalifa of Muhammad and the ruler in sacred things of almost all the Muslim peoples, the crime becomes a blunder.

That some solution must be found and will in time be found is certain. But it can be no rough-and-ready one; no treating of the symptoms with gunboats and demands for indemnities. It must be based on the broadest and fullest knowledge, even though that may lead at first to most pessimistic conclusions. We may have to learn that there are actually people in the world who would rather be ill-governed by their own kin and kind than be excellently governed by strangers; who see—even yet—no reason why there should not be subject races with no more rights than those which their superiors allow them; who actually prefer their native and comfortable inconvenience and ignorance to all the resources and enlightenment of our civilization; who have a code of morals which is often different in its sentences from ours, but which they regard as better; and who, most startling of all, regard themselves as superior beings, far before us in stage of development. So, at least, they would put it if they ever listened to the profane heresies of Darwin. In their own straightforward expression, it would run that we, with natural differences in size, color, kind, were all simply pigs. A good many things will come and go, and eggs will be broken for many an omelet, before these people will clamor to be admitted to the comity of the Christian nations and to be given a place in the procession of trade and prosperity.

The truth in the matter is that the East knows only one side of the West, and the West, as a whole, knows nothing of the East. The Turk knows Europe as a bundle of exceedingly powerful states which have no idea of living and letting live, but which are for ever requiring him to do the most absurd and dangerous things. He is in mortal fear of his Christian Rayahs; Europe insists on giving them more power. He knows that a Turk will never obey a Rayah; Europe insists that Rayahs should be appointed to administrative office. He feels that he is getting along very comfortably and making the financial ends meet; Europe insists that he cannot last another year, and must go through the bankruptcy court. Europe, on the other hand, sways between that old theory of specially Satanic origin which changed Tatar into Tartar, and an equally absurd idea that it is a gentle and cultured race, cruelly handicapped, and persecuted by Armenian nihilists and Russian intrigues. That the Turk will ever come to understand Europe may be doubted; it is essential that Europe should attain to some better knowledge of the Turk, and books like the present are the only means of bringing that about.

The field thus to be covered is large, and it is covered very completely. The state of things in the Balkan peninsula before the Turkish conquest, with its warring races, Greek, Slavic, Bulgarian, and the rest, is first sketched with precision and brilliancy. The differing and often most puzzling divisions, by states, by languages, by blood, and by religions, are brought out, and the antecedent conditions of the present ethnological chaos are shown. Then comes a similar description of the situation after the Turkish conquest, forming a sociological study in the widest sense. The Turks themselves are then taken up, as they pour out of Asia, part of that mighty swarm of barbarian invaders which the Great Wall of China turned to cover the West. This chapter, too, is sociological, and there are ten pages in it (90-100) of a convincing lucidity and satisfactoriness in characterization of the Turkish people that we have never seen equalled. The masterly chapter on Muhammadanism which follows, shows the same strength of pregnant characterization. Evidently, it is not the narrowed and bloodless, if accurate, work of a man of books in his study, but of one who has been able to understand and interpret his books through people whom he knew.

Chapters on the Orthodox Church in its twelve or thirteen divisions, on the Greeks, and on the Bulgarians and Serbs, on the Albanians and Vlachs, and on the Armenians form the second half of the book. From these it is plain that "Odysseus" has no great faith in the principle of nationality which Mr. Gladstone found so attractive, at least as applied in the Balkans. As he shows it, a man may be a Greek one day, may turn a Bulgarian the next, and a Servian on the third, and may have been a Vlach all along. The Albanians seem to be the only definite "race," and no one knows what their race is. When Kinglake travelled, in 1834, from Belgrade to Constantinople, he crossed the present Bulgaria, but that name never appears in 'Eothen.' Forty years ago every educated man there would have called himself a Greek. Now they are all Bulgarians down to the north shore of the Aegean, except that another change is beginning. The first was the disentangling of the Slavic races as a whole from the Greeks and the emancipating of them from Greek dominance. Now, the different Slavic races are being disentangled from one another, and a Servian propaganda is striving to push back the limits of the Bulgarian race and make all Servian to the Aegean and to the Black Sea. As race, in this sense, means language and religious connection, and as every inhabitant of the Balkans seems to be at least bilingual, for a Bulgarian to change into a Servian means no great leap. As a consequence, race-maps of the Balkans must be regarded with suspicion. These are continually changing, and the politics of their constructors have much to do with the changes.

But all this is an exceedingly inadequate description of a really important and in its way helpful book. It recognizes the precise point of the problem, puts the Turks before us as they are, for good or for evil, and admits that their case is hopeless. But it has no panacea to offer, none of the easy methods and short ways that are so alluring at present. Its effect is, therefore, depressing, and with the depression which comes on the first acknowledgment of a real difficulty. The helpfulness, on the other hand, lies in the clear-sighted statement of so many sides of the situation. For that we cannot be too grateful to "Odysseus," whoever he may be.

A few corrections and additions in points of detail may be added. On page 21, Buhawids should be either Buwayhids or Buyids. To the note on page 110 may be added that Ignacz Kunos's translation into Hungarian of Turkish folk-tales has been translated further into German in the *Ungarische Revue* for 1888-89. He has also published Turkish folk-songs in the Vienna *Zeitschrift für die Künde des Morgenlandes*, vols. ii. and iii. On page 189, 190, the remarks on sobriety and chastity in Islam are highly misleading. No student of Muslim history and literature can have failed to see how dead a letter is the statute against the use

of intoxicating drink. The passages in the Qur'an supposed to forbid it are ambiguous, and the legal praxis is so arranged that a conviction is next to impossible. For example, the addition of water to wine makes it legal. Again, it is certainly not European influence that has made the upper classes in Constantinople drink to excess. Their ancestors did so as far back as we can trace them, and the people is still to be found which has not used and abused inebriants. In one respect the Turkish attitude is different from the European. The European professes some more or less innocent object for his drinking; the Turk settles down honestly to get drunk. The other matter is more difficult to handle. It is true that illegitimacy among Muslims is almost unknown. So it is in Ireland, and the reason in both cases is early marriage. But, besides this, the *harim* life and the patriarchal nature of the Muslim household make a case of illegitimacy practically unprovable. That it is regarded as possible and occurrent is shown by Muslim terms of abuse. If "Odysseus" were to read 'The Thousand and One Nights' through, his horizon for drink and women in Islam would be wonderfully widened. But, further, that prostitution is unknown is simply not the case. Naturally, the foreigner comes little into contact with it, but it is there. Other and essential aspects of this subject cannot well be discussed except in the decent obscurity of a learned language; to these "Odysseus" makes not the slightest allusion. On the use, by the preacher, of a sword as a staff in the mosque of St. Sophia, noticed on page 205, it may, perhaps, be worth remarking that such is the custom in all places taken from the unbelievers by force of arms.

Two maps, of the Balkan peninsula and of Asia, which accompany the text, are quite unworthy of it.

THE SUCCESSORS OF DRAKE.

The Successors of Drake. By Julian S. Corbett. Longmans, Green & Co.

This work, designed as a sequel to the two volumes upon 'Drake and the Tudor Navy,' sustains the reputation made by its author in the earlier work. It covers the period of Elizabethan history which extended from the death of Sir Francis Drake to the conclusion of the Spanish war shortly after the death of Elizabeth and the accession of James the First. Naturally, it treats mainly of the naval history of that period, but less exclusively than the preceding volumes, which had for their main topic the career of Drake and his contemporaries. Military matters and land operations became more linked with those upon the sea, so that they could not be ignored in the narrative. The sea became the pathway for results that could only be definitively attained by the forces upon the land. The Earl of Essex, Sir Walter Raleigh, the Earl of Cumberland, Lord Mountjoy, and Sir Richard Leveson were the men whose personalities were so prominent and distinguished as to become worthy to be named as the successors of Drake during the period under review.

The pendulum of the world's opinion upon the value of sea power swings to and fro in the course of time from one extreme to the other. Just now it seems to favor the sea, but it will doubtless soon swing back as the limitations of sea power are recognized, along with the fact that most of the world lives upon the land. This the author perceives, as well as the fact that the most famous of Drake's successors were all originally soldiers, and came to need the fleets they were handling and the land forces they were directing not as separate entities, but as integral parts of one great force with one great aim in view. Although land and sea operations have each their legitimate spheres, they also have their common objectives. In reviewing the English wars against Spain in the time of Elizabeth, we cannot help agreeing broadly with Sir Walter Raleigh, when he says that "if the late Queen would have believed her men-of-war as she did her scribes, we had in her time beaten that great empire in pieces, and made their kings kings of figs and oranges, as in old times." Sir Walter, it is true, preached always better than he practised, and more than once the failures of the men of war in action were due as much to themselves as to the Queen. Still, things were done by halves, and impotent invasions and badly sustained attacks did teach the Spaniards how to defend themselves, and, by seeing their own weakness, provide the necessary cure.

The first of the new leaders to appear upon the scene was the young Earl of Essex, the heir of Drake's earliest patron. Whatever else may be said of the characteristics of this young Earl, he was not lacking in the power to lead men and to inspire them with the finest heroism—a quality belonging only to a born leader. And yet, with this quality, were others so fantastic that, as the author says, when "we follow him through his brief and brilliant career, we seem never, even in his most serious operations, to be out of the tilt yard, nor even to lose the accompaniment of Spenser's unreal singing like music at the play." Probably this very accompaniment, being common to the men of his time, added to Essex's qualifications for leadership among men, while detracting nothing from the necessary requisites for a favorite at the Court of Elizabeth. Having won his spurs in Normandy, he came back to the Court with so high a reputation as a soldier that he ventured also upon the more hazardous, and to him less successful, career as a politician.

Another successor of Drake, Sir Walter Raleigh, is discussed with much freshness of material and with so novel a treatment as to make us feel as if a new character had emerged from the Elizabethan age. Our author is too severe in his judgment, but we give his summary of Raleigh in his own language and with its own shading. He says:

"There can be no doubt, then, that, at the revival of the war, such reputation as he had acquired for being a man fit for naval command, rested mainly on the force of his personality. The ardor of his far-sighted desire, the strenuous belief in himself and his powers, the daring originality of his mind, and his 'bold and plausible tongue' had persuaded many to credit him with capacities that he had never displayed. Still, it is doubtful whether any man of first-rate ability, except his friend and kinsman, Sir George Carew, ever believed in him. By the bulk of his contemporaries, he was detested as no better than a pushing and selfish adventurer. For us that view of him is forgotten and forgiven in his prophetic dream of empire and the witchery of his tuneful pen. We read phrased in perfect cadence the wisdom he uttered when all was over; but if we seek for it in action, when the war was hot, it is to find little but cold miscalculation. No single exploit, no single well-timed resolution, lifts him amongst the great captains. His immortal Virginian dream, failure as it was, is his real monument. If that be put aside, and if, by an effort hardly possible, we can free our judgment from the spell of his pen and personality in order to follow dispassionately his career at sea, it will look as cold and bare to us as it did to those of his contemporaries who were best able to judge."

The expedition to Cadiz, and the attack that followed upon the fleet and city, stand out as one of the most brilliant of the operations recounted in the work before us; yet some of the glamour of this famous attack disappears when we compare it with the preceding one of Drake. Howard contrasts badly in his want of method, and still more in his want of enterprise, with his former companion at arms. Essex and Sir Francis Vere, however, redeemed all this hesitation and delay, and the brilliancy of the attack upon land compensated for the want of vigor afloat. Raleigh has generally had the credit of being the man of action of the engagement, but we think Mr. Corbett is justified in exhibiting him mainly as a restraining spirit, and giving to Essex, Vere, and the younger Howard the laurels of the action, as a whole. The withdrawal from Cadiz, and the subsequent want of success, did much to cloud the results of the expedition, which suffered from having over it too many commanders, with the inevitable discordance.

George Clifford, the Earl of Cumberland, was another one of the successors of Drake who became prominent in the latter days of Elizabeth. He had the good fortune, however, unlike many of the others, to succeed where Drake had failed. This was on his twelfth as well as last expedition, commanded as well as equipped by himself; for, like many others of his time, he had taken to the sea to repair the fortune he had lost on land. Sailing in March, 1598, from England, after unsuccessfully cruising along the Spanish coast and the Canary Islands, he proceeded to San Juan, Porto Rico, and succeeded there, where all other Englishmen before had failed. The pecuniary reward, nevertheless, was small, as the gold mines of Porto Rico were worked out, and the products of the island at this time were the less valuable sugar, ginger, and hides. The customary sickness and fevers breaking out, the place taken so brilliantly was eventually abandoned, and the expedition returned to England, leaving Porto Rico under the flag of Spain for three hundred years more. With this return may be said to have closed the last of the great privateering expeditions begun by Drake—an end which occurred almost simultaneously with the close of the career of Philip the Second of Spain.

The insurrection in Ireland under Tyrone tempted the young successor of Philip, and the war between Spain and England still continued. The failure of Essex and his subsequent rebellion and death called the attention of the world anew to that stormy country, and Mountjoy became in turn on land and sea what Drake had stood for in times past. He had been ridiculed in his earlier days as a text-book soldier, but so had his contemporary Prince Maurice on the Continent, who was just then revolutionizing warfare on land in such a manner as to cause a cessation of mirth on the part of his critics. Mountjoy at thirty-six be-

came the Lord Deputy of Ireland, and, like Drake, knew how to build success upon a sagacious use of the command of the sea. British soil was invaded at last, but, ably seconded by Docwra and Sir George Carew upon the land and Sir Richard Leveson upon the sea, Mountjoy received the capitulation of Aquila, the Spanish commander, and with it the town and port of Kinsale. Thereafter, Ireland was defended by operations on the coast of Spain, and to Sir Richard Leveson is due the credit of operations which kept the Spanish fleet occupied on its own coast, and gave to the end of the war on the English part a brilliancy equalled by the efforts of the Dutch and the courageous but futile resistance of Spinola and his galleys. With the return of Leveson and Munson and the defeat of Spinola came the death of Elizabeth, and "when she died the war died with her."

The successors of Drake were not his equals afloat, until Nelson appeared in later days. None the less interesting is this graphic account of them as told by one who has shown more than ordinary capacity as an investigator and historian.

Herod: A Tragedy. By Stephen Phillips. London and New York: John Lane. 1901.

Beauty of a sort this new play of Mr. Phillips's undoubtedly possesses. Critics have already quoted again and again certain of its lines and passages, till the public knows them well.

"And he shall still that old sob of the sea,
And heal the unhappy fancies of the wind,
And turn the moon from all that hopeless quest."

. . . . . .

"And all behind him is
A sense of something coming on the world,
A crying of dead prophets from their tombs,
A singing of dead poets from their graves."

. . . . . .

"Those eyes that bring upon us endless thoughts!
That face that seems as it had come to pass
Like a thing prophesied."

Mr. Phillips is a virtuoso of the romantic shiver. He is a master of that art recommended of Keats, the art of folding "a rose-leaf round the finger's taperness" and detecting through the enchanted silence "Aeolian magic." Nor is it simply in single images, or single verses, or brief lyrical passages that the undeniable beauty of his play resides. Mr. Phillips is a crafty manipulator of stage effects, and he manages his curtain with the practised hand of a thrice-seasoned playwright. If the spectator has no qualms over the patness of the incidents, he will find very impressive the situation with which act ii. closes—the arrival of Cæsar's messengers, their sonorous recital of the Oriental names of cities and regions presented by Cæsar to his new ally, Herod's vain repetition of the list of his honors, and his unavailing appeal to the dead Mariamne for her sympathy in his triumph. Equally strong, in the same somewhat dubious fashion, is the close of act iii., where, again, the opportune envoys appear with new honors which they thrust on Herod, who is this time dumb and blind, "rigid" with a mysterious seizure, ransoming his "outward victory with inward loss." The scenes, too, in act i. between Mariamne and Herod have much sombre splendor; they are excellent examples of what a youthful critic of "Tristan und Isolde" once termed "heavy passion."

Herod—That star is languorous with divine excess!
Mariamne—O world of wearied passion dimly bright!
Herod—Now the armed man doth lay his armor by,
And now the husband hasteth to the wife.
Mariamne—The brother to the sister maketh home.
Herod—Now cometh the old lion from the pool.
Mariamne—And the young lion having drunk enough.

You may like the effect of all this, or you may dislike it. But the effect is incontestably there—a lyrical effect, perhaps, rather than a dramatic one, but an effect of rich beauty.

"Now stand we on the hill in red sunrise,"

exclaims Herod; and Mariamne's phrase.

"How bright the towered world!"

calls up with romatic glamour the distant regions toward which Herod is hastening off on his adventurous mission.

Nor is the play by any means merely a tissue of fine phrases, burnished images, and telling situations. It has unity and climax; the story moves straight on from start to finish; at times you almost hear the inveterate note of fate. Evidently you are intended to hear it; plainly enough it is nothing less than a "Fate-drama" that Mr. Phillips has proposed to write.

"The first step is with us, then all the road,
The long road is with Fate,"

exclaims Herod. And again, at the close of act ii.—

"It was foretold of me
That I should slay the thing that most I loved.
Fate is upon me with the hour, the word."

Unity of atmosphere, too, the play certainly possesses; the reader's nerves are kept a-tingle all the way with a sense of some mysterious dissonance in nature; the air is heavy—dully threatening, even in the moments of Herod's most passionate bliss or most showy triumph. The diction, the imagery, the invented situations, the natural background are all conceived in keeping, and come from the poet's imagination, tinged with a certain sombre splendor and suggestiveness.

All which being duly recognized and duly set down to Mr. Phillips's credit, why does the play leave in the mind of the discerning reader such a feeling of discontent? Why does he turn from it to one of Browning's plays, or even to the "Cenci," with such a sense of escape into a worthier region? Of course, an old-fashioned reader will at once justify his discontent by accusing the play of being hopelessly decadent in tone and atmosphere. One can fancy such a reader's tirade of disgust. He will call Herod's passion a kind of madhouse mania, and the action of the play merely a clever compound of "nympholepsy and catalepsy." He will aver that the atmosphere of the entire drama reeks of sensuous perfumes and unguents like the inside of a Cairo dance-house. "A hashish nightmare," "Double-distilled extract of 'Tristan und Isolde,' and of D'Annunzio deadly night-shade"; so he will reel off his epigrams. Herod's "*liquid* language of Eternity" he will stigmatize as "*absinthe* language of the boulevards." Grotesque as such exaggerations may be, they, perhaps, contain this much truth, which even the most modern and open-minded critic should not fail to record—the truth that there is hardly a single breath of sweet, natural life throughout Mr. Phillips's play; even the lovely face of the boyish Aristobulus has a hectic flush. It is an ailing earth that Herod and his court inhabit.

Nevertheless, magnificent dramas have doubtless been now and then wrought out of such ominous material. More difficult to forgive than the decadent atmosphere is the *factitiousness* of Mr. Phillips's tragedy. When all is said and done, the play is too clever by half; it is too ingeniously wrought, too craftily engineered. The truth of the matter seems to be that Mr. Phillips is a lyrical poet, with a very exceptional gift, who has been for many years an actor and has mastered the tricks of playwriting from the actor's point of view; his play is lyrically beautiful and technically ingenious, but dramatically artificial, flimsy, and thin, when judged by exacting standards. The action, though it is in a way plausible and direct enough, seems much of the time guided by the actor's need of points and situations. Again and again, a reader of the play is apt to catch himself fancying how Mr. Beerbohm Tree in his buskins would render an incident or declaim a lyrical passage. Mr. Tree out-Herods Herod in the reader's imagination; probably he did the same in the poet's. The characterization, too, is flimsy. Apart from Herod and Mariamne, the characters are purely conventional. Mariamne is well enough in her way—a good, savage piece of womankind to woo and quarrel with on a summer's day; her love for Aristobulus is quite what it should be, and her satanic pride is worthy of the old Asmonean lineage of which she so fondly boasts. As for Herod himself, his character is far from consistent or impressive. He is described as the "brain" of Judæa, a master of strategy and craft; yet he lets himself be easily bamboozled by evil counsel into two cruel deeds of futile folly—the murders of Aristobulus and Mariamne. These deeds may be historical, but their presentation is not convincing. The destruction of Aristobulus in particular, as Mr. Phillips represents it, is stupid and gross—but convenient for the fate-development, which at once begins. In truth, Herod impresses the reader as far more a man of words than a man of action. He rants egregiously over his successful visit to Cæsar, and later, when the people grow discontented with his policy, he is as eloquent as a modern "campaign orator" in the use of slippery commonplaces to persuade the people that he has only their welfare at heart. After the death of Mariamne his frenzied rhetoric takes up almost the entire third act. Doubtless, this act may have on the stage a certain grisly effectiveness; but the nervous chills that it superinduces, must be somewhat dearly bought at the expense of Herod's prolonged exhibition of hysteria. Altogether Herod's character *means* next to nothing. The Physician at the very close of the play moralizes Herod's madness as a heavenly visitation to punish him for his "brief brightness." Surely, this is a most lame and impotent conclusion of the whole matter, not at all necessitated by what precedes.

The fundamental defects in "Herod" as a tragedy are due to the fact that Mr. Phillips is as yet but an amateur in the art of life. If he could be trepanned and have an ounce or two of Mr. Kipling's gray matter inserted in his brain, the result would be excellent. Mr. Phillips has apparently done most of his living on the stage, and the experience that he has put into "Herod" is thoroughly conventional and artificial experience, won in regions where art gives the law, and in an atmosphere that is redolent of Wagner and the latest decadent French romances. One does not ask from a modern dramatist the

wisdom and the moral insight of Shakspere, or from every modern dramatist the sincerity and the truth of Hauptmann or Ibsen. But surely a tragedy, if it is to be accepted as really worthy art, ought to be a genuine expression of first-hand experience; it ought to bring us close to life. "Herod" does *not* bring us close to life; it brings us close to Mr. Beerbohm Tree and Her Majesty's Theatre—a charming approximation, doubtless, but hardly one to justify a drama in claiming high rank, whatever may be the beauties of its diction and imagery and the effectiveness of occasional situations.

Intelligence in Plants and Animals: Being a new edition of the author's privately printed Soul and Immortality. By Thomas G. Gentry. New York: Doubleday, Page & Co. Large 8vo, pp. 484. Illustrated.

Observation, imagination, sentiment, and revelation were heavily drawn upon in making up this book. Undoubtedly it is very attractive to such as believe with the author, yet it is marred by many evidences of too much credulity, and of unreliability in some of the sources from which compilations have been made. The purpose is said to be to prove that the lower animals have a higher status than is generally ascribed to them, that they have a future life where they will receive a just recompense for the suffering so many have to undergo in this world, and that soul exists in both plants and animals. The propositions are supported by many facts, a large amount of assumption, a lot of reasoning, and an abundance of revelation, which together necessitate the exercise of a great deal of faith. A believing habit engendered by study of revelation and the supernatural rarely is compatible with the proper amount of skepticism for a naturalist. The volume includes discussion of the actions, consciousness, reasoning, emotions, etc., of animals and plants, of which a less credulous editor would have cut out about one-half, thereby adding very much to the value. So many things are brought forward which the author did not know and cannot prove, that they are sufficiently obvious without specification, but reference may be made to the chapter on "Our Natural Enemies" or that on "Earthworms," for instance.

The following summary indicates the position of the author with regard to things of the present and of the future: Life and consciousness preceded organization; sensation is consciousness; plants once possessed consciousness; memory is spiritual and eternal; progress is not the normal rule in human society; things will go on until all life, vegetal and animal, will be brought under the controlling and elevating influence of man; all animals, so far as can be learned, have not only a capacity for the society of man, but an absolute yearning for it (including "our natural enemies"?); beasts were intended to be the servants of man; a bond established between the soul of man and that of dog is not to be severed by the death of the material body of either man or dog; man will be man, and beast will be beast, and insect will be insect in the next world, as they are in this; palæolithic man was a living, but not an everliving soul. It will be seen that the author is equally positive in regard to material and supernatural. He believes in natural selection, the survival of the fittest, and the immortality of all, but does not make clear the future status of those who did not survive, who have gone before, as compared with that of their competitors when the latter follow after; and, while asserting identity of individuals in the next world, gives no hint as to the number of all that will have existed, in past, present, and time to come, or of the space required for them. He is looking forward to the time when nothing harmful will anywhere exist.

The Love Letters of Victor Hugo. Translated by Elizabeth W. Latimer. Harper & Bros. 1901.

"An immense packet, in which one solitary idea, that of love and marriage, is reproduced under all its forms and in all its phases" (p. 201)—in such words the youthful poet himself described what he would gladly have deposited, weekly, at his beloved's door in the early days before she was his own, and when love was still as flush as May. M. Paul Meurice's completely indiscreet collection now shows that Hugo's exuberant vitality succeeded in keeping up the supply for two years and a half. Apart from revelations of character (not, however, by any means new), there is absolutely nothing in this tedious iteration of love-assurances, eager passion, or spasms of jealousy, to warrant such a publication, except in so far as it can gratify readers eager for the outpouring of a lover almost frenzied with impatience. The interspersion of occasional reflections serves but to emphasize the dominant idea:

"A gracious God perceived that without an intimate personal union the union of souls could never be made perfect, because two persons who love each other must spend their lives in a community of thought and action. This is, therefore, one of the ends for which God has established that attraction of one sex towards another which, in itself, shows that marriage is divine" (p. 57).

Passages of this character might well serve as examples of how not to write love letters. Jules Sandeau says, "Ce que l'amour a surtout d'adorable, c'est qu'il n'a pas le sens commun"; why, then, should any one invest its professions with a wrappage of pseudo-logic? In fact, from the literary point of view, the whole of this correspondence suffers, at too frequent intervals, from the confident sententiousness of youth.

Such biographical incidents as these letters mention were abundantly familiar. Every life of Hugo to this date had already informed the general reader of the specific difficulties which delayed the union of the lovers, whose combined ages at the time, by the by, amounted to barely forty years. It is, nevertheless, interesting to note that several incidents and phases of feeling connected with this period of probation were subsequently used by Hugo in the love-episodes of 'Les Misérables.' The preface to this volume contains the following words: "They evidently were not written to be seen by other eyes than those of the girl he loved; he constantly entreats her to burn them." We do not agree with the *sequitur*, "they are all the more valuable on that account." On the contrary, when we remember the equally unreserved disclosures bearing on Hugo's maturer life and conduct made by M. Asseline and others, it seems hard that the fluctuations of the poetic temperament should, after a man's death, be exposed to general unsympathetic scrutiny. It was neither of the youthful nor of the matronly Adèle that Hugo was thinking when he wrote, in 'Les Chants du Crépuscule,'

"Puisque j'ai mis ma lèvre à ta coupe encor pleine;
Puisque j'ai dans tes mains posé mon front pâli."

There consequently appears no good reason why, in this particular case, youth's sweet-scented manuscript should not have remained for ever closed.

The Chronicle of Froissart. Translated out of French by Sir John Bourchier, Lord Berners, Annis 1523-'25. With an Introduction by William Paton Ker. London: David Nutt. 1901. [Tudor Translations.]

It might be said of Froissart, the editor remarks, that his "whole business was to live in the fourteenth century, and tell us what he saw there." In like manner one might be disposed to say of Berners that his whole business was to translate Froissart and make the fourteenth century known to the sixteenth. But such would by no means have been the opinion of John Bourchier, Lord Berners. His great business, from his point of view, was to deal with high affairs of state, to fight in the King's wars, go on his embassies, and hold fast his town of Calais. The translation of the 'Chroniques,' undertaken at the command of Henry VIII., was, like his versions of 'Huon de Burdeux' and the 'Golden Book' of Guevara, the occupation of his old age and leisure.

Berners comes at a transition period of English literature. Plantagenet prose, with its childlike grace and sweetness, had gone; the enchanting phrase of Malory was never to be recovered. When Berners wrote, the aureate style which was to glitter in 'Euphues' and give gorgeousness to the great Elizabethans, was just coming into fashion, and Berners, as some of his work shows, tried to learn its rhetorical tricks late in life, as Socrates in his old age took lessons in dancing. But he had the good taste, in dealing with Froissart, to keep to his natural first Tudor prose, than which nothing could better represent the easy conversational French of the 'Chroniques.' If we do not hear, as in the magical 'Morte Darthur,' "sweet and far, the horns of Elfland faintly blowing," we see good blows struck and gallant deeds done in his vivid pages. As chivalrous gentleman and stout fighter, Berners is thoroughly in sympathy with his subject; he knows what he is telling and how to tell it, and he feels as Froissart felt. He has always the living English phrase for the living French, and the imagination that responds to Froissart's dramatic touch.

It is impossible to make another English translation of Froissart. A modern translator must either use the phraseology of his own time and thus lose the characteristic color, or he must try the falsetto of an affected archaism. He who would read Froissart in English, must read Berners; and for this beautiful reprint, enriched by an admirable biographical and critical introduction from the pen of the accomplished editor, readers cannot be too thankful.

HAVE RECENTLY PUBLISHED:

Johnston's High School History of the United States

With Maps, Plans, and Illustrations. Being the author's "History of the United States for Schools," as revised and continued by Prof. Wm. Macdonald of Bowdoin. xvii+612 pp. 12mo, $1.25 *net*.

The present volume has been brought through the Spanish War to McKinley's second election in 1900 and materially enlarged. Political matters and the account of the Colonial period have been expanded. According to the report of the Committee on College Entrance Requirements of the National Educational Association, with returns from 65 colleges, 28 specify text-books in United States History, and of these 20 recommend Johnston's History of the United States for Schools, and it is named *exclusively* four times as often as any other.

Gordy's Political Parties in the United States

Vol. I., 1783-1809. 598 pp. 12mo, $1.75, *net special*.

A thoroughly revised edition. Vol. I. by itself is a history of the Federal period.

To be completed in four vols.; the second **(1809-29) may be expected early in September.**

"The work is *really more than a history of parties. . . . The candor, fairness, and good judgment* of Prof. Gordy are well displayed. . . . Careful and thoughtful students will find his book useful for reference, *sane, intelligent, reasonable.*"—*American Historical Review.*

McCracken's Rise of the Swiss Republic

Second edition, revised and enlarged. xi + 423 pp. 8vo, $2.00.

"This is a most convenient and serviceable book in English on Swiss history and development, and Americans have much to learn from the experience of our sister republic."—*Prof. Albert B. Hart* of Harvard.

Kuhn's German and Swiss Settlements of Colonial Pennsylvania

A Study of the So-called Pennsylvania Dutch. 268 pp. 12mo, $1.50.

"The writer of this charming piece of American history has managed with extraordinary skill to infuse into his narrative the constant element of personal interest, so that the whole story is transfused with the spirit of a fascinating romance."—*Chicago Evening Post.*

HAVE YOU MET

Monsieur Beaucaire?

A Great Book. **$1.25.**

Cape Rosier,

MAINE COAST.

FOR SALE—To settle a joint account—The beautiful headland known as Cape Rosier Head, together with four hundred acres of land attached following the shore for two miles on either side. This property is a part of the main land, and is within half an hour by steamer from Islesboro and Castine. There is a steamboat landing within a mile. The whole tract is greatly diversified in character. The shores have bold rocks, coves, and beaches, and the land comprises beautiful woods, open fields, and pastures. There are several farmhouses on it. The drives are varied and extensive through and from the property. The views from the "Head," as well as from many other points on the shore, are most beautiful and varied, commanding the whole range of the Camden Mountains, the Archipelago of Islands in Penobscot Bay, and the open ocean in the distance. The property is offered for sale as a whole only, at a low price per acre. Address

J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

BOURNE

FOR SALE—One of the most beautiful estates on Cape Cod; located at Bourne, on a charming lake, and near the head waters of **BUZZARD'S BAY**; 10 minutes' drive from station; house of 18 rooms (11 chambers); fully furnished; icehouse (filled); large stable; windmill; 15 acres land; select neighborhood. Price $12,000. ALFRED BLANCHARD, 120 Tremont St., Boston.

JOHN LANE, 251 Fifth Ave., New York.

School Trustees, Principals, Teachers,

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

The Nation, 208 Broadway, N Y.

Back Numbers of the Nation.

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 174 Fulton St., or H. Williams, 25 East Tenth St., New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LXXI. comprising the last half year of 1900.]

A Notable Book of Reminiscences.

AUTOBIOGRAPHY OF A JOURNALIST

By William J. Stillman.

With two portraits. 2 vols. 8vo, gilt top, $6.00.

His life-story opens vistas not seen in those of Dr. Hale, Col. Higginson, Lowell, and Parkman, and is perhaps even more valuable in estimating the average Yankee character and its possibilities under the happy influences of cosmopolitan experience. . . .

The Adirondack Club, with the three Lowells, Dr. Estes Howe, John Holmes, Emerson, Agassiz, Prof. Jeffries Wyman, Judge Hoar, Dr. Binney, and Horatio Woodman among its members, is the subject of two charming chapters, and another is devoted to Lowell, and then comes an account of a third visit to Europe, more profitable than either of the others, both in its effect upon the traveller's art and in its friendships.—*New York Times.*

The very simplicity with which such varied and marvellous experiences in the life of one man are set forth in his recollections impresses the reader with a strange sense of greatness in it and carries him on in a kind of spell to the last paragraph of the 800 pages that make up the book.—*St. Louis Globe-Democrat.*

Sold by all Booksellers. Sent, postpaid, by

REFERRING TO WISHART'S

MONKS & MONASTERIES

Albert Henry Newman, D.D., LL.D., Professor Church History, McMaster University, Toronto, in a signed review in the American Journal of Theology says: "It may be said at once that he has produced by far the best book on the subject in the English language, and that it would be hard to find in any language a better general discussion of the various questions involved in the history of monasticism."

With four photogravure portraits, $3.50 net.

COMMENTS ON DR. C. C. ABBOTT'S

In NATURE'S REALM

"Of the artist's work nothing can be said in criticism; its delicacy, truth to nature, and decorative effect are as admirable as they are unusual."—Evening Post, N. Y.

"The charm of such books as these lies in their essential simplicity and naturalness, but the special value of Dr. Abbott's lies in the fact that he never becomes so absorbed in the study of component parts as to fail in an adequate comprehension of nature as a whole."—The Outlook, N. Y.

With photogravure frontispiece and ninety drawings by OLIVER KEMP, $2.50 net.

At booksellers', or delivered, on receipt of price, by

LIGHT on LEGAL QUESTIONS.

There are many questions in regard to legal terms, legal history, and the principles of law which arise in ordinary reading and experience. When these questions are not serious enough to take to a lawyer, they can generally be solved by reference to **Rawle's Revision of Bouvier's Law Dictionary** (2 vols., $12.00 *net*), a standard book, ably re-edited and brought down to date, which ought to be among the reference books in every public, school, or private library. Published by

THE BOSTON BOOK CO.,

15½ Beacon St., Boston, Mass.

A WELCOME CHANGE.

"An admirable introduction to a new literary era. The pioneer movement and western expansion is a new theme. Missionary, explorer and hunter have always preceded the settler's wagon. 'LORDS OF THE NORTH' gives a graphic account of the early hardships in the far Northwest."

of

DREYFUS

Five Years of My Life (1894-1899)

"This plain and temperate narrative cannot fail to confirm the general judgment of the civilized world in favor of the author."

—HON. JOHN W. FOSTER, Ex-Secretary of State.

With maps and diagrams. Cloth, 12mo, $1.50

The Children of the Nations

By POULTNEY BIGELOW

A history of colonization explaining the influence which the mother country exerts upon the colonies, and which the colonies in turn exert upon the mother country—for good or evil. This book, which is the result of personal observation in parts of the world controlled by the great colonizing powers, is of particular interest to Americans, confronted as our country is by a problem in Cuba and by a greater problem in the Far East.

Cloth, 8vo, $2.00 net

Lovers of the Woods

By W. H. BOARDMAN

Ex-President Adirondack League Club

Adirondack sketches which breathe the charm of the woods, and which in the common-sense talk of the philosophic guides give frequent glimpses into natural history.

Miss Baldwin's School for Girls

Preparatory to Bryn Mawr College

MISS FLORENCE BALDWIN, Principal. Within ten years more than one hundred and twenty pupils have entered Bryn Mawr College from this school. Diplomas given in both General and College Preparatory Courses. Fine fire-proof stone building. 25 acres beautiful grounds. For circular, address the Secretary, Bryn Mawr.

Educational.

Five Weeks of Outdoor Study

under competent leadership—study of nesting birds, of insect life, of trees and flowering plants and ferns, and of the varied Cheshire County landscape—are offered to men and women by

The Alstead School of Natural History,

ALSTEAD CENTRE,

New Hampshire,

whose third session will open on Tuesday, July 2, 1901.

The work of the classes is serious and earnest; the way in which the subjects are approached is new. The aim throughout is to gain close acquaintance with the things studied—such acquaintance as comes only from careful, systematic observation in the open air.

The instructors are Ralph Hoffmann, Merritt Lyndon Fernald, Hollis Webster, and William L. W. Field.

The membership fee of one hundred and fifty dollars covers all expenses of board, lodging, tuition, and excursions for the entire session.

For detailed information, early application should be made to the Secretary, W. L. W. Field, at Milton, Massachusetts.

HARVARD SUMMER

School of Theology.

Third Session, July 2 to 19, 1901.

SUBJECT:

The Minister's Relation to Social Questions

Lectures by

Theologians, Economists, Practical Experts,

Fee, $15.00.

For circulars, apply to Rev. R. S. Morison, Secretary of Divinity Faculty, Cambridge, Mass.

New York University

SUMMER COURSES.

SEVENTH YEAR, JULY 8-AUGUST 16.

Forty Courses in Fourteen Departments.

University Heights combines the advantages of city and country. For "Announcement" address MARSHALL S. BROWN, University Heights, New York City.

Clinton Preparatory School

CLINTON, N. Y. (*9 miles from Utica*). **15 Boys.** 6 Teachers. Prepares for any College. **Boys 10 to 14 at time of entrance preferred.** References:—BISHOP HUNTINGTON, BISHOP WHITEHEAD, FOUR COLLEGE PRESIDENTS. J. B. WHEELER, A.M., Prin.

Rogers Hall School

For Girls. Certificate admits to Smith, Vassar, Wellesley, and Wells. Four acres for outdoor sports. Golf, Basket Ball, Tennis. Address **Mrs E. P. UNDERHILL, M.A., Prin., Lowell, Mass.**

A PRACTICAL OUTING. Vacation School for Boys, Oxford, Me., July and August. Cottage homes. Study and recreation delightfully combined. Weekly excursions in geology, botany, etc. Golfing, swimming, boating, fishing. Coaching trip through the White Mts. A. F. CALDWELL, A.M., Prin.

School Agencies.

THE FISK TEACHERS' AGENCIES. EVERETT O. FISK & Co., Proprietors. 4 Ashburton Place, Boston; 1505 Pa. Ave., Washington; 156 Fifth Ave., New York; 414 Cent. Bld., Minneapolis; 533 Cooper Bldg., Denver; 4 Evans Bldg., Oskaloosa; 203 Mich. Blvd., Chicago; 525 Stims'n Bk, Los Angeles; 420 Parrott Building, San Francisco.

ALBANY TEACHERS' AGENCY, 81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Rents and sells School Property. HARLAN P. FRENCH, Proprietor.

SCHERMERHORN Teachers' Agency, Recommends best schools, tutors, governesses. HUYSSOON & ROCKWELL, Mgrs., 3 E. 14th St., N. Y.

An Agency is valuable in proportion to its influence. If it merely hears of vacancies and tells you **that** is something, but if it is asked to about them recommend a teacher and recommends you, that is more. Ours **Recommends**
C. W. ABRDEEN, Syracuse, N. Y.

A TIMELY BOOK.
BRIGHT AND INSTRUCTIVE.

The Story of a European Tour

BY

JULIA CLARK HALLAM.

Profusely illustrated. Second, revised and enlarged edition. 12mo, 360 pages, $1.50.

PERKINS BROS. & CO.,
Sioux City, Iowa.

BOOKS AT LIBERAL DISCOUNTS. | **When calling please ask for MR. GRANT. Whenever you need a book address Mr. Grant.**

Before buying books write for quotations. An assortment of catalogues and spe ial slips of books at reduced prices sent for 10-cent stamp.

F. E. GRANT, Books.
23 W. 42D ST., - - - - - NEW YORK.
(*Mention this advertisement and receive a discount.*)

F. W. CHRISTERN
(DYRSEN & PFEIFFER, Successors),
429 5th Ave., bet. 38th and 39th Sts., New York.
Importers of Foreign Books; Agents for the leading Paris Publishers; Tauchnitz's British authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. New books received from Paris and Leipzig as soon as issued.

WANTED.—A COPY OF THE MEMOIRS (Diary) of John Quincy Adams. 12 vols., J. B. Lippincott & Co. Address
PORTLAND ACADEMY, Portland, Oregon.

Teachers, etc.

YOUNG LADY TEACHER of Private School would like position as private tutor or companion for the summer. Excellent references given. Address A. F., care *Nation*.

Financial.

LETTERS OF CREDIT. We buy and sell bills of exchange and make Cable transfers of money on Europe, Australia, and South Africa; also make collections and issue Commercial and Travellers' Credits available in all parts of the world.
International Cheques. Certificates of Deposit.

BROWN BROTHERS & CO.,
NO. 59 WALL STREET, NEW YORK.

Travel.

GOING ABROAD on a BICYCLE TRIP? Send for "Bicycling Notes for Tourists Abroad."

LEYLAND LINE
BOSTON, LIVERPOOL, AND LONDON.
1st cabin, **$45 upwards,** depending on steamer. Splendid steamers "Devonian" (new), 11,000 tons, May 4; "Cestrian," 9,000 tons, May 11; "Winifredian" (new), 10,500 tons, May 18; "Devonian" (new), 11,000 tons, June 5.
P. O. HOUGHTON & CO., Gen'l Agents,
115 State Street, Boston.

Frazar Parties Abroad.

Sailings May 16, June 20, July 6. Five carefully conducted parties of the highest standing—fourteen years' experience—visiting England, France (Brittany and Touraine), Belgium, Holland, Germany (Berlin and Dresden), Switzerland, and Italy. For itineraries and references address Mrs. M. D. FRAZAR, 72 Globe Bldg., Boston, Mass.

Arrangements made for girls at a high-class school in Dresden.

EUROPE SMALL SELECT PARTY OF LADIES, SAILING JUNE 19, Three months. England, France, Switzerland, Italy, Germany, Holland, Belgium. Twelfth party. Address Miss H. M. BARBOUR,
81 Columbia Heights, - - - Brooklyn, N. Y.

EUROPE AND HOLY LAND.
Europe in Summer, Holy Land in the Fall—best season. Few vacancies in small and select parties, personally conducted by Prof. C. THURWANGER, Copley Square School, Boston.

A few weeks in Colorado next summer will do you more good than a barrel of medicine.

WE issue a handsome little book about Colorado, which is more entertaining and informative than anything on the subject yet published. It is full of interesting illustrations and contains an excellent topographical map of the State. It can be had by sending six cents in postage to the address below

Burlington Route

Excellent hotels, perfect climate and wonderful mountain scenery make Colorado the ideal health and pleasure resort.
Colorado is not far away. We run "one night on the road" trains, luxuriously equipped, from both Chicago and St. Louis. Comfortable library smoking cars and dining cars *à la carte* make the trip seem very short. Then during the summer months tourist tickets are sold at greatly reduced rates, so the expense is not great.

P. S. EUSTIS, General Passenger Agent, C. B. & Q. R. R., CHICAGO

A New Edition *Revised and Enlarged*

LIPPINCOTT'S

Pronouncing Dictionary of Biography and Mythology

Every name of importance in the world's history receives proportionate attention in this standard work, which, with its revisions and enlargements, is the authoritative record of human accomplishments from the earliest days.

Hundreds of new articles, the rewriting of hundreds of others, the addition of many recent facts, and the introduction of portraits are features of the new edition, which retains as well all the qualities of value which have distinguished the work from its inception.

The Nation.

NEW YORK, THURSDAY, MAY 2, 1901.

The Week.

This is a business Administration, and the Cubans compliment it by talking strictly business. It is evident that their discussions at Washington have centred about sugar and tobacco, rather than about questions of political status and sentiment. But one thing is clear—some kind of Cuban Government must be set up in order to bring about a settlement even on a commercial basis, if in that way a settlement is to be had. Otherwise the President would be in the position of making a reciprocity agreement with himself. As arbitrary ruler of Cuba, he is the author of the Cuban tariff. But it would be a little too much even for his solemnity, to go into a dark room and draw up a reciprocity treaty between William McKinley, supreme authority in Cuba, and William McKinley, President of the United States. At least a simulacrum of Cuban government must come into the operation somewhere; and unless the conferences at Washington lead to the erection of a body with, at any rate, ostensible control of Cuban tariffs, they will not reach the crux of the problem.

We can scarcely be expected to credit the account of the attitude of the Administration towards Cuba, as now semi-officially given out at Washington. The story is that the President has suddenly blossomed into a determined anti-annexationist. All that he has done, including his approval of the Platt amendment, has been with an eye single to the frustration of the purposes of those wicked men who would annex Cuba to the United States. In his confidential interviews with the Cuban delegates, they were solemnly warned of the nefarious plan of the Democratic party to take over the island. That has been a Democratic policy ever since Jefferson's day. Democrats have no such sensitive regard for the national honor as the Republicans, and would not be deterred by the "solemn pledge" of the Teller resolution. With what awful sanctity the Republicans have clothed it, and how religiously they have observed it, the Cubans know. Let them, then, accept the President's terms, and they will find in him a stout defender of their territory against all covetous persons. He will even appoint a commission to talk tariff with the Cubans, and they must be, indeed, hard to suit if they will not be satisfied with a tariff commission, fully aware as they are that Congress always reduces duties (except when it increases them) on the report of a commission. Anyhow, let them trust Mr. McKinley as the one great bulwark they have against annexation.

The comic aspects of all this we pass by. The Cubans are not without humor, but we suspect that they will look pretty seriously at the alternative which is offered them in the place of annexation. That is really government under the new "American colonial policy." What that means they cannot well fail to understand. It is government of Cuba by Americans and for the benefit of Americans. It is virtually the taxation, or the control of the taxation, of 1,500,000 people without giving them any representation. We are to take entire charge of their foreign relations. We are to prohibit them from maintaining army or navy. We are to keep the island under our guns, and, if revolutions occur, it will be our troops that will restore order. But we shall not annex Cuba—oh, no; that would be horrible; we shall simply exploit the island and keep it in subjection. If Cuba were annexed, its inhabitants would have to be given a voice in their own government, and in ours; they would enjoy Constitutional immunities and privileges; and there would be a rule, not of superior beings, but of the Cuban people just as they are. This is the funny thing, that the President thinks to frighten the Cubans into bending to his will by telling them that, if they do not, there will be danger of their having the rights of an American State given them! But he and they and all of us must be blind indeed if the fact that his own policy inevitably tends to annexation is not perceived. "We do not contemplate annexation," says Senator Platt. So a man leaping over a precipice might not "contemplate" falling on the rocks beneath; but after he jumps, gravitation does the rest.

Senator Morgan is to be commended for taking the Cuban bull by the horns. He bluntly declares in Washington that the infallible ending of the Administration's policy in Cuba will be the annexation of the island, and its speedy admission into the American Union as a new State; and he therefore comes out frankly for an immediate and avowed annexationist movement. In this, of course, he is, as a Southerner, true to the historic attitude of the South. It always cast greedy eyes on Cuba, and made no hypocritical concealment of its purposes in desiring the annexation of the island. But it was always annexation that was contemplated. Our new-fangled notions of a protectorate, of exploiting island possessions without giving them a share in our government, did not enter the heads of the slaveholders. It was left for the party of freedom to devise those little tricks for holding men in political and economic slavery. Doubtless the pro-slavery Cuban annexationists would have rejoiced to see McKinley's day, if their prophetic souls could have anticipated that his plan would be much more calculatingly selfish than theirs was; but they did not—they were outspoken annexationists, and Senator Morgan is their son and heir.

The long list of appointees to lieutenancies in the army, published on Thursday morning, is fortunately qualified by the statement that the men named are to be examined as to their mental, moral, and physical qualifications before being commissioned. The fact that these 588 places have been assigned to the various States, brings out again very clearly the McKinley way of awarding offices, to which Mr. Lucius B. Swift objected so strongly and pertinently the other day. It was not a question of getting the flower of the volunteer service as the backbone of the new regular army, from Mr. McKinley's point of view, but of pacifying the spoilsmen by distributing the commissions according to the size of the States. This is also termed, *in lingua politica*, giving the different sections of the country "a fair representation." One would think that in injecting 588 new officers into the line of the army at one time, the only consideration would be the fitness of the individual. Nobody cares, fortunately enough, whether the proportion of Georgians to New Yorkers in the navy is exactly according to their representation in Congress or not. As it is, we should perhaps be thankful that at least men of some military experience, however amateur, have been selected, and not civilians pure and simple. After such an extremely just way of dividing the spoils, it must have pained the good Mr. McKinley to the quick to be informed by Senators Quay and Penrose that the thirty-three commissions allotted to them were too few. He must have appreciated their perilous situation, however, when they told him that "they could hardly withstand the pressure brought upon them" by the friends of some thirty other officers who were not selected.

One of the London financial newspapers, commenting some weeks ago on American railway "deals," drew the conclusion that the minority shareholder had become not only a negligible quantity, but a factor which now was habitually left out of consideration. Let his holdings of the shares even repre-

sent a moderate fortune, he is likely still to be treated by the real controlling interests with complete indifference. They may buy up connecting railways at an excessive price and sell to the company which they control, lease other properties with a guarantee of heavy dividends, or burden the future finances of their own company in a score of different ways, and practically without the minority owner having the slightest voice in the matter. The facts were correctly stated; indeed, they gain considerable force from very recent events in the railway world. That the holder of three or four hundred shares of Erie or Union Pacific should not be consulted before his company arranges to buy up a Pennsylvania coal company or a Southern Pacific Railway, is, to be sure, no more true now than it was a generation ago. To take a poll of the stockholders on all such questions would savor too much of the town meeting for the race of modern competition. Even in England, where the practice of interpellating chairmen, at annual railway meetings, is as resolutely adhered to as the similar practice in Parliament, the only consolation for a disgruntled stockholder is to ask his officer what business he had to do what has been done. To forbid the act, the minority holder has as little power in England as in America. But the striking development of the last few months is the manner in which even directors and executive officers have been ignored in pending "deals."

It has been noticed by every one who has watched the progress of recent railway deals, that all the largest transactions have been preceded, so far as responsible managers of the properties were concerned, either by denials or by professions of ignorance. There is reason for saying that, in at least the greater number of such cases, the ignorance was real. Until the "deal" had been irrevocably closed, the officers of the companies were simply not consulted. On more or less rare occasions they have been studiously ignored, because their position would have been hostile. It is an open secret that the Chicago, Burlington and Quincy directors were, in Wall Street's phrase, "caught napping." Had they been consulted at the start on the advantages of selling their company to one or two larger railways, there is a strong probability that the plan would have been defeated. What has been done, in a good part of the notable deals of 1901, has been that powerful capitalists, sometimes unrepresented, even indirectly, on the boards of management, but backed by enormous banking capital, have bought up control of the stock at the best price obtainable and then have issued their ultimatum. It will hardly be denied that there are serious dangers in such a system. So far as the modus operandi is concerned, these recent transactions merely repeat the exploits of Mr. Jay Gould in 1880. None of them, thus far, has repeated the second stage of that arch-speculator's methods. They have, nevertheless, succeeded in recapitalizing American railway industry on a scale which may make trouble later, besides incidentally infecting a good part of the public with the virus of speculation.

The Citizens' Union Convention opened its campaign for the municipal election on Thursday evening with a blunder. The primary object of the meeting was to adopt a platform upon which the opponents of Tammany rule could make their fight. What was needed was a brief, clear, and forcible declaration of opposition to Tammany government because of its irredeemable badness, and an equally direct pledge to substitute an administration committed simply to honesty, decency, and efficiency. Half a dozen sentences would have sufficed. An excellent start was actually made in the platform that was adopted, which begins by declaring that "the government of the city of New York is a disgrace, and the men controlling it are using public office for private plunder," and then proceeds to particularize the ways in which this is done, as by bargains with corrupt contractors, blackmail from liquor traffic, gambling and prostitution, etc. An excellent beginning was also made in formulating the policy which should be substituted for misrule and corruption, when it was declared that "mismanagement, favoritism, and dishonesty must go." The blunder was made when it was added that "we must have positive benefits for the people," and the attempt was made to particularize them. Many of these specifications are right enough, but some of them are thoroughly bad. Such is the declaration in favor of whatever action may be necessary, even to the amendment of the Constitution if that be requisite, to secure to all workmen upon municipal works, whether on the payroll of the city or of contractors, the payment of the prevailing rate of wages for an eight-hour day. Such is the declaration in favor of the acquisition for just compensation of gas and electric-light supplies, to be operated by the city if adequate merit-system safeguards are provided. Such would have been the committal of the organization to the plank advised by the Committee on Resolutions, but rejected by the convention, calling for "specific encouragement to the building of improved tenements."

All this sort of thing represents nothing but the old "bread and circuses" programme of Roman days. It is based upon the theory that the way to beat Tammany is to outbid that organization for the "labor vote," and for other combinations of voters, which it is affirmed can be "swung" by leaders this way or that. It is worse than folly to attempt such a policy as this. Tammany will beat the reformers every time when it comes to making promises of "positive benefits for the people." It will pledge itself to do everything that the "labor vote" can ask about the eight-hour law, everything that the municipal-ownership people demand about public utilities, everything that any well-organized body of voters may ask of it. And Tammany will make its pledges ungrudgingly and enthusiastically. It will not reject the notion of municipal encouragement to the building of improved tenements by a vote of 180 to 137, as the Citizens' Union Convention did. It will not keep an eight-hour-day and prevailing-rate-of-wages plank in its platform by the narrow margin of 139 yeas to 132 nays, as the Citizens' Union Convention did.

The London *Times* having called attention to the great increase of American trade with China during the past five years, a correspondent recently supplied it with some information compiled by the British Consul at Niu-Chwang for the year 1899, and bearing upon the same point. From this it appears that at least two-thirds of the foreign imports into Mantchuria during that year were of American origin. The value of the American kerosene which passed through Niu-Chwang on its way into the interior was more than $251,000, the Russian kerosene imports being valued at only $21,000. American drills, sheetings, and jeans all showed a large increase in 1899, as compared with 1898, and together represented an investment of some $8,000,000—a surprisingly large figure. Moreover, of the $2,500,000 railway plant imported in 1899, the largest part came from the United States. The *Times* correspondent is correct in thinking that this trade deserves more attention in the United States than it has hitherto received. We believe, indeed, that the general American business public is quite unaware of its magnitude. As it is, it constitutes a very strong reason why the United States should leave no stone unturned to preserve the open door in Mantchuria.

The British budget has evoked a vast amount of moralizing over England's decline in financial and, incidentally, in military prestige. If the little Boer war, as the pessimist alleges, has nearly broken the back of the British Exchequer, what is to happen when England enters on another war? To what fiscal expedients, one of the critics asks, must the United Kingdom resort when she enters upon a contest with such a

Power as Russia? This does not strike us as a very difficult conundrum. Irrespective of taxes, which still have the possibility of further increase if needed, the borrowing powers of the United Kingdom have scarcely as yet been tested. The British public debt increased $3,000,000,000 during the war with France at the opening of the nineteenth century, and neither the national credit nor the national resources were exhausted in 1815. The reason for putting fresh taxes to-day on the British citizen, instead of adding a few hundred millions more to the public debt, was plainly stated by Sir Michael Hicks-Beach, when he declared to Parliament that he would never be responsible for such reckless policy as paying the whole of a war's expenses out of loans, without putting a fair amount on the tax-payers of to-day. But there is also another side to the question of war resources over which this shaking of heads takes place. What would Great Britain do in the case of a two or three-billion dollar war with Russia? may be an interesting question. But the question, What would Russia do? strikes us as more interesting still. If the bill which the Exchequer is now footing succeeds in frightening a few of the Continental Powers, the Boer war will have served one useful purpose.

English census-returns first to hand show that the movement of population toward cities is as marked in England as in the United States and Germany. The cities gain, either absolutely or relatively, at the expense of the country. The phenomenon is so world-wide as to require an explanation rooted deep in human nature. No hasty guess at superficial and partial causes will meet the case. At bottom, we suppose, it is the gregarious instinct, and the idea that a larger and fuller life, even under manifest disadvantages, may be had in cities, with which we have to reckon. At the same time, there are certain obvious centrifugal tendencies at work. There is the "return to nature," for at least a part of the year, which is now the common note of the city-weary man. Out of this alone vast changes may develop. Electricity is believed by many to have a great part to play in dissipating, so to speak, a city's too condensed energy and life. With the cheaper transmission of electrical power—over a hundred miles, with waste of only 5 per cent., as in Oakland, Cal., to-day—the motive of great industries in fleeing from the cities is obvious. But with all this, it will clearly be long before the building up of the city at the cost of the country will cease.

Mr. Gladstone once spoke of the humiliating position of the European Powers, "prostrate before Turkey." Even more humiliating seems their present position, their numbers reinforced by the addition of the United States and Japan, yet prostrate before China. They have been so for nearly eight months. Their shame lies not in the strength and obduracy of China, but in their own jealousies and disagreements. On the indemnity question alone the delays and differences have been exasperating and dangerous in the highest degree. Nearly a month ago Lord Lansdowne told the House of Lords that the question of indemnities was "extremely difficult." Of course, every day's adjournment of a decision makes the difficulty greater, since the bills grow while waiting to be presented and paid; yet the cool deliberation of the diplomats at Pekin goes on its dawdling way as if the lives and happiness of millions of human beings did not depend upon a speedy agreement. Minister Conger was amazed and pained that the settlement, which he thought imminent when he left Pekin, was not yet in sight when he reached San Francisco. Even if an amicable solution be finally reached, as all must hope in spite of well-founded fears to the contrary, the inexcusable loitering which has marked the negotiations will remain an indelible reproach to the superior and Christian civilizations which went to China to set the barbarians right.

The Kaiser was, on the whole, happy in his rôle of fond father and loyal alumnus on Wednesday week. The visit to his own university quickened the sentiment that never fails the "old grad.," and his speech to the students at the great *Commers* given in honor of himself and of the Crown Prince avoided all contentious matters. Of course it would be unfair to compare his toast, perfervid in its sentimentality and religiosity, with our own after-dinner speaking, so remarkable for its good taste and classic self-restraint. It must be remembered that at a student *Commers* the critical faculty runs out as the beer runs in; and that what, in cold type, looks like maudlin sentiment, may have been eloquence, given the occasion and the audience. Thus the Kaiser's grandiloquent survey of the course of German Imperialism, as illustrated by the history of the Rhine, was singularly apposite at the Rhine University of Bonn, while his solemn invocation of the Divine blessing upon the students—a little startling to the reader—was sufficiently in keeping with the sentiment of the occasion. Striking phrases the toast lacked, and except that he must not "squander his strength in cosmopolitan dreams," the average "Bursche" probably retained the next morning only a vague comfortable feeling that the Kaiser had preached.

When the Duke of York opens the sessions of the Federal Australian Parliament at Melbourne next week, he will set in motion a legislative machine of a complicated nature and with a complicated work to perform. The elections held on the 29th and 30th of March were ordered by a Federal Cabinet, headed by Mr. Barton, of a strongly protectionist proclivity. In the canvass the lines were drawn mainly on the question of high or low tariff for the new Commonwealth. But the results were somewhat confused. In the Senate (chosen by direct popular vote) the returns show the election of only fifteen protectionists out of the thirty-six Senators, while in the House the figures are put at forty-six protectionists to twenty-nine Representatives in favor of a low tariff. But a good American protectionist in Australia would have to pinch himself to see if he were awake. What the innocent Australians call high protection would seem to him a horrible approximation to free trade. The most that is proposed is an average customs duty of 26 per cent. *ad valorem*. Nor is there a real likelihood that the rates will be made even as high as that. Premier Barton has, in his electoral speeches, dealt only in the vaguest generalities, but one of his colleagues, Sir William Lyne, has admitted that the duties in the new tariff are not likely to range beyond 10 to 15 per cent., with a free list including raw materials of manufacture, tools of trade, and most of the necessaries of life. If this be protection, American free-traders would be only too happy to live under it, and enjoy the sweet smell of the rose, however named.

It is obvious that Australian Federation really means a great extension of freedom of trade. Throughout the Commonwealth trade will be absolutely free, where before tariff barriers fenced out the products of one colony seeking to enter another. And the new external tariff will be moulded mainly by the necessities of raising revenue. Indeed, the platform of the low tariff party was simply this, "The lowest duties that will raise the most revenue." Under the requirements of the Australian Constitution the Government must secure from customs and excise a revenue of $40,000,000. Of this sum it is expected that $25,000,000 will be obtained from excise duties. It ought to be easy, therefore, with the whole foreign trade of Australia as a subject of customs taxes, to bring into the Treasury $15,000,000 from the tariff without making the rates burdensome. There is, indeed, a tacit understanding that industries which have been built up in Victoria and elsewhere under a high tariff, are to be treated for a time with "humane consideration"—that is, their protectionist toddy is not at once to be cut off. It is not likely, however, that any Australian "infant industries" will be allowed the venerable age of ours.

McKINLEY AND CIVIL-SERVICE REFORM.

Before the attention lately called afresh to the President's dealings with the reform of the civil service has been distracted, it may be well to state the real objections to his attitude and his method in all this business. Reformers complain not alone of specific acts of Mr. McKinley's, hostile to the cause they have at heart, and hostile as well to his own pledges. It is not a question of a thousand more or a thousand less employees removed by him from the recognized tests and safeguards. The issue is not alone the appointment of a man as Commissioner of a reformed service, who had first to be violently converted, by the gift of the office, from a belief in the spoils system. The grievance of reformers strikes deeper than any of these things. It has to do with the spirit in which the Civil-Service Law has been approached and administered by the President; with the subtle and secret honeycombing of the reform, as well as with its open and flagrant repudiation; and with the entire failure of Mr. McKinley to grasp the betterment and protection of the civil service as a principle, instead of as a mere expedient.

Mr. Lucius B. Swift has, in this connection, put his finger on one tell-tale fact, which is that, under President McKinley, "no one has been punished" for evasions or violations of the civil-service laws. This is not for lack of having gross cases, calling for executive discipline, brought to his notice. His own Commissioners, as well as volunteer reformers, have pointed out to him cynical infringements of the law. What has he done? Why, he has effusively thanked his informants, told them that they were doing their full duty in the noblest manner, and then himself has done nothing at all. As Mr. Swift says, with full cognizance of many of these instances of civil-service trickery, the President simply "looks on with complacency." Meanwhile, the service is notoriously eaten out as by white ants. Its outward semblance may be fair; but intrigue, favoritism, boss-dictation gnaw within it. The general understanding among Republican politicians is that, if they can only "get around the law" with a decent regard for secrecy, they need fear nothing from the President. He greets reformers with almost tearful sympathy; but the spoilsmen are more and more having their way, and they know that his sympathy will not fail them either.

The truth is, that Mr. McKinley has never shown the slightest conception of civil-service reform as a vital principle. He has regarded it only as one of many "interests," to be duly weighed and placated. He "recognizes" the reformers; oh, certainly! He doubtless thinks them a little queer, strangely insistent, often very bothersome; but they are a respectable body; they, too, can bring "pressure" to bear upon him, and who is he that he should withstand it? So he occasionally tries his hand at "doing something" for the reformers. That is his favorite style of putting it. It is not that he has seen a way to improve the public service; not that entrance to it has been made to depend less upon favoritism and more upon merit, and that fixity of tenure has been made to go hand in hand with greater efficiency—nothing of that. He simply feels that he has thrown a sop to the Cerberus of reform. He has yielded something to its friends. Once he reproached a delegation of New York reformers for saying unpleasant things about him, "after all I have done for you." That is his point of view; by their continual coming they had wearied him into granting a part of their requests, and now they were personally ungrateful. That there could be such a thing as an impersonal reform, a principle, a cause, was never dreamed of in his philosophy. If Reform as an abstract good were to be urged upon him, he would be tempted to reply as Pitt did when asked to do something for Literature, that it "could take care of itself." We trust that, in such a case, some reformer would have the courage to say to him, as Southey said to the British Premier, "Yes, it will take care of itself, and of you, too, if you don't look to it."

Here, at bottom, is the great vice of President McKinley's treatment of civil-service reform. He has never for one moment entered into the enthusiasm of those who have found in it a cause to battle for as a patriotic duty. All has been with him a question of balancing conflicting interests and antagonistic personalities. If he loots with one hand but guards with the other, he does not see how any one can possibly complain. As Quay and Platt and Beveridge and Fairbanks go out at one door with their list of boss appointments in their pockets, Mr. Foulke comes in at the other to hold sweet counsel about reform; and that makes honors easy, as Mr. McKinley looks at it. This, of course, is all of a piece with his conception of the Presidency as a kind of clearing-house for diverse and contradictory policies. The only question is about the comparative urgency and weight of reformers and spoilsmen. If the reformers can develop a sufficient number of pounds of pressure, they promptly get its equivalent in Executive consideration; and what unreasonable beings they are to ask more! To go heart and soul for reform because it is reform; to attack a corrupt system night and day because it is corrupt—that, plainly, is a conception which never swam into Mr. McKinley's ken.

His attitude and its effects will compel civil-service reformers to look well to their future policy. He is a new kind of enemy for them to encounter. They have faced open foes and beaten them. They have conquered the hearty coöperation of public men who began by opposing. But they have never before had to deal with just this type of professed friendship which secretly betrays. The only way for them to meet it seems to us to be to go back to the first principles of the reform—to fight the spoilsmen, in all their disguises, tooth and nail; to pillory offenders; and, above all, to present the cause unceasingly as one fitted to enlist the devotion of every patriot who would not see the country imperilled by having the public service turned into a boozing-ken of inefficient and cheating politicians. In this way alone can be kindled that ardor of eager spirits which brought the reform out of its despised beginnings to its largest triumphs, and which will yet win a victory over dull indifference and misconception in the White House, as it has before over sneers and open enmity.

THE TEXAS OIL CRAZE.

We have been favored during the past fortnight with a considerable downpour of circulars, pamphlets, and prospectuses setting forth the advantages of investing capital in oil companies in Texas. The phrase "oil company," as here used, does not mean a company actually producing oil, but one which has the intention to produce oil if it can find any on the land which it has acquired or expects to acquire. Out of nineteen companies whose shares are advertised in the Dallas *Morning News* of April 23, not one claims to have an oil well. Most of them say that they control lands in fee simple, or by lease, near the "Lucas gusher," or in some other attractive field. Some of them, however, omit to mention any particular field. Thus, the "United Oil Company of Texas and Louisiana" proclaims to confiding investors that it owns "eighty acres of the best proved oil lands in the world," but it does not say where they are situated, nor does it mention the amount of its capital stock. Only a small amount of stock is offered for sale at 75 cents per share, the par value being $1.00.

Another company advertises that it owns "the biggest well in the world," but does not say where it is situated, or what kind of well it is. There are oil wells in the world that are not worth pumping, and even Texas is not wholly destitute of this kind. Investors in the company are assured that "every dollar [of the capital] appears on the books, and any stockholder can see where the money goes." It is declared, also, that the full-paid shares are non-assessable. This assurance is common to all the companies whose

shares are advertised. Most people who are inclined to "take a flyer" are encouraged to know that they can lose only as much as they put in. To accommodate this class of simpletons, shares as low as 10 cents each are offered. The Rockefeller Oil Company of Beaumont, Texas, and the Stephenville Standard Oil Company of the same place advertise shares of that low denomination. It is not pretended that anybody of the name of Rockefeller has any connection with the former of these companies, or that the Standard Oil Company has anything to do with the latter. What's in a name?

The same issue of the Dallas paper contains a list of oil companies which had filed their organizations at the State Capitol at Austin since January 10, 1901, the date when the "Lucas gusher" was struck. They are 127 in number, with nominal capital ranging from $5,000 to $5,000,000. The average rate of production of companies (not the production of oil) has been four per day, but the average is increasing, and there is no limit to the number except the gullibility of the public. The excitement has not extended to the East in any marked degree as yet, but it may be expected to break out here soon. In Texas it has assumed all the phases of a craze, like the tulip mania of Holland, the Mississippi bubble of France, the South Sea bubble of England, and the oil craze of Pennsylvania in the later sixties. Texas is now enjoying a season of remarkable prosperity, due not to her oil wells, but to fine crops and good prices for her wheat, corn, cotton, and cattle. She has "money to burn," and she is putting it into oil speculation with a recklessness and abandon quite mournful to contemplate. Barbers and bootblacks, printers and reporters, cooks and chambermaids, salesmen, railroad hands, small tradesmen, and others, mostly in the humbler stations of life, are investing their savings in so-called oil companies, with the chances as forty to one that they will never again see a dollar of the money so expended.

This does not imply that there is no oil in Texas. There is abundance of it, perhaps more than in any other oil-field in the United States. It has been found in enormous quantity, and in the most unpromising places. Nothing more unexpected ever happened than the striking of oil at Corsicana some five years since, when the town authorities were boring for water. If oil should be found in the cactus region of the Rio Grande, it would not be more surprising than the discovery at Beaumont. The loss and misery that await the buyers of oil shares at Beaumont are the inevitable consequence of the gamble they have rushed into. Nobody knows as yet what can be done with the oil that spouts from the ground at that place. It is not an illuminating oil, but it is said to be a good fuel oil. How it is to be used for fuel is not yet determined, but it is said that tests are to be made in locomotives of the Southern Pacific Company. Most likely it will prove serviceable in that particular, and there is room for unlimited use of fuel oil in Texas, which is destitute of coal mines. Yet it will take a year's time, with all the capital that can be furnished, to provide facilities of storage and transportation, pipe lines, tanks, tank cars, tank steamers, wharves, etc. The buyers of shares in the 127 oil companies that have been incorporated since the 10th of January are of the sanguine kind who expect dividends and an advance in the market price of their holdings within thirty days.

The truth is, that not one in a thousand of the buyers of oil stocks knows what he is buying. The shares of the few "gushers" that have actually "come in" are not for sale. These are reserved for rich people, who do not part with their money on any light consideration. The barbers and bootblacks and scullions who buy shares at 10 cents to 75 cents each are attracted by names which they read in the newspapers. If they see that members of the Legislature, members of Congress, ex-Governors, leading lawyers, merchants, stump-speakers, railroad men, are in the Boards of Directors, they assume that these persons know what they are about, and they send in their money, although they have no evidence that these men have invested a dollar beyond the nominal sum necessary to qualify them as directors. Of course, it is useless to preach to these deluded souls. Nothing but their own experience will open their eyes or do them any good.

YELLOW FEVER AND THE MOSQUITO.

A distinguished man, well qualified to speak with authority, remarked in private conversation last summer: "I am satisfied that yellow fever does not depend on filth, and that the uncleanliness of a place has practically nothing to do with the presence or the spread of the disease." A year earlier the speaker himself, as well as all students of the subject, would have held such a theory rank heresy; and even when uttered, it was only the expression of a single person, although one of observation and judgment.

Since that time the remarkable demonstration by Major Walter Reed, of the Army Medical Corps, and his colleagues as to the mode of propagation of the disease in Cuba has shown that filth is not a necessary condition, and now comes incidental confirmation in an official report from another direction upon certain conditions in Cuba. It is yet sufficiently novel to be repeated here that Major Reed has demonstrated, both negatively and positively, that yellow fever does not arise from the physical débris of previous cases, nor from the closest connection with presumably infected textile fabrics of the ill or the dead; but that the *Culex fasciatus*, having fed on a yellow-fever patient, acts as an intermediary host, and through its sting injects the efficient cause into the susceptible victim. As Sambon and his colleagues in the Roman Campagna remained free from malarial disease without taking any other precaution than efficient screening, and the infected *anopheles* conveyed the disease from Italy to an otherwise unexposed subject in England, so mosquito-free non-immunes in Cuba lived and slept for weeks in the immediate presence of soiled yellow-fever bedding and clothing, while others succumbed to the bite of the selected and infected *culex*. These are the first epoch-making sanitary developments of the opening century.

In neither case has the disease cause been demonstrated out of the human body and that of the mosquito, but in both cases the mode of infection has been so clearly proved that the method of prevention, which is so much better than cure, is plain and available. Following these carefully regulated experiments, Major Valery Havard, the chief medical officer of the Department of Cuba, in a report under date of February 8, upon the sanitary condition of Havana, says: "It is certain that in Havana in 1900 no visible correlation could be seen between dirt and yellow fever." It appears that the cleanest and best-constructed district east and south of the Parque Central was the first to become strongly infected with the disease, while the unsanitary wards were attacked only late and lightly. The fever did not follow the poor and the unclean, nor the lines of previous infections, but rather the movements of non-immunes, regardless of hygienic conditions.

Statistics are notoriously difficult of interpretation. However, omitting the years 1896-'8, which introduced the disturbing factors of war and abnormal overcrowding, the death-rate of Havana during six fairly average years before American occupation was 33.21 per thousand per annum, against 18.4 for New York, 19.8 for London, and 20.2 for Paris. Of the whole number, yellow fever, which one is disposed to think of as a constant scourge, represented less than 6 per cent., or only a little more than one in seventeen. This is possibly an understatement, from imperfect registration in infantile cases, but the figures are official. Excluding infants, the fever is limited to the immigrants, all of whom are attacked, sooner or later; so that, while to the general population an outbreak of the epidemic is a minor matter, to all non-immunes of whatever age it is much more serious than the low percentage of deaths would

indicate. With the *culex* subdued, the fever will be controlled.

The reference just made to abnormal overcrowding implies that there is an ordinary overcrowding, and on this in part depends the mortality from tuberculosis, which is nearly three times that from recorded yellow fever. The overcrowding does not result in imperfect ventilation, as would follow in colder climates, so much as in concentrated organic decomposition, greater liability to tuberculous infection, undue dampness from want of proportionate sunlight, and exposure to draughts in the more inclement season, leading to catarrhs, which, in turn, establish favorable media for bacterial growth. With a general lowering of vitality, there is ineffective resistance to the infecting bacillus. It is probable that in Cuba, as in the Philippines, suppuration, once set up, rapidly passes beyond control. Generally improved sanitation, better habits of living, and the wider range of habitations which will become practicable after the extension of power roads to the suburbs, will be the main means of elevation. With most thoughtful persons, Major Havard believes that the reasons why tropical peoples eat little flesh are financial rather than physiological, and that "meat is an indispensable component of a good diet in all parts of the world."

What has been done and what should be done for the improvement of the people, constitutes an interesting study. The practical lessons of the Reed demonstration are that, with the morbific mosquito out of the way, yellow fever will not spread, and, as Major Havard points out, the duty of the quarantine officer will be limited (as to this disease) to detaining possibly infected patients over the five days of incubation and to fumigating the ship against the *culex*. Formaldehyde as a gas kills the insects promptly, and in a few hours renders an apartment, afloat or ashore, free from possible disease-bearers. Its most common use will be on land, where it has already been most effectively employed. In Havana no second case occurred in 694 out of 885 infected houses. Some of the charged insects may be expected to seek water for breeding promptly, and they should be followed up there. Pools must not be tolerated, and as the insect fortunately is local and home-keeping in its habits, it is quite possible to exterminate it by depriving it of watery breeding-places. All this is also true of the malaria-bearing *anopheles*.

CLOUDS ON GERMANY'S FUTURE.

The German press has not failed to remark the rather sombre tone of the Emperor's speeches at Bonn. His note of vague apprehension is, in fact, but an echo of a common and growing sentiment in Germany. As the unmistakable beginnings of industrial depression are casting their shadow over the Empire; as the air is filled with rumors of crumbling alliances; as tariff wars with Russia and with the United States are seen to be the almost inevitable result of the Government's capitulation to the Agrarians; as the Social Democratic party promises to display even greater strength than before in consequence of the slackening of trade and the increased cost of food, an uncomfortable feeling that troublous days are ahead has taken possession of the general German mind. The Kaiser but reflects in his despondent speeches the prevailing disquietude.

And it must be said for him that with sure insight he has put his finger upon the real seat of the trouble. This is the spirit of faction and particularism which has always afflicted the Germans. The Emperor quoted with much appositeness the reason given by Tacitus for the failure of the Alemanni to make head against the Roman arms—"propter invidiam." It is a defect which has persisted to the present hour. Bismarck used to say, "Wherever there are three Germans, there are four opinions." It was his way of lamenting the absence of a truly national spirit throughout the Fatherland. True, a powerful race-consciousness was created by the events of 1870, which made possible the welding together of all the German states; but even so, it was in some respects a *callida junctura*, as the late outbursts of South German jealousy at the overweening pretensions of Prussia have shown.

It is, however, in the stubborn individualism and aloofness of classes, rather than of sections, that the chief political peril of Germany resides. The Agrarians, the Junker party, are the Bourbons of German politics. They learn nothing and they forget nothing. Immovable, implacable, they may be outvoted, but are always unconvinced, and bide their time. For them, the give-and-take of politics does not exist. Their one fixed idea is the continued dominance, under all conditions, of the old landed aristocracy. With not too great unfairness their motto has been said to be:

> "Lasst Reichthum, Handel, Recht und Wissen sterben,
> Nur unsern alten Adel nie verderben."

Now it is to this political faction, with its sturdy contempt for foreign trade and imperial interests, that Chancellor von Bülow has surrendered. He has undertaken to revise the Caprivi commercial treaties in such a way as to give better protection to German agriculture. More than that, he has specifically promised to enact a tariff for the especial benefit of the Agrarians, with higher duties on raw materials and food products. Of course, the intention is in this way to win the needed votes in the Reichstag for naval and colonial expenditures, and in the Prussian Diet for the Emperor's pet project of internal canals. But is not the Government's policy really an undertaking to reconcile contradictories? We speak not now of warring political factions, but of antagonistic principles of commerce. Will it be possible, in other words, for Germany to hold her own in the fierce competition for the trade of the world if she deliberately handicaps herself with taxes on raw materials and food?

"Our future is upon the water," the Kaiser has boasted. Certainly the general prosperity of Germany, and the expansion of her foreign trade, since 1870, must be counted among the wonderful achievements of the nineteenth century. In thirty years the population of the Empire increased by 15,000,000, and its foreign commerce nearly doubled. Tonnage under the German flag was multiplied by ten. German industries became extraordinarily diversified and efficient, and the country took on an unaccustomed appearance of wealth. But there has been one drawback. German colonies have never paid. Only one is self-supporting, and the deficits on the colonial account to be covered from the Imperial Treasury are increasing every year. The latest estimate was of a vote of $6,500,000 by the Reichstag to keep the colonies going. In Kiao-Chau alone the shortage was $2,500,000.

Of course, all this has been regarded as an investment on which returns would be had in the future. But the question is whether a return to the policy of high protection in Germany is not going to make the German colonies a still more expensive luxury than they have been in the past, and also to reduce Germany's share in the world's trade. What is the use of going "upon the water" if the goods you send abroad in your ships are made too costly by your protective taxes at home? It is certain that both the English and the Russians, to say nothing of American competitors, are pricking up their ears at the rumors of Germany's tariff embroilments. The well-informed "Calchas," who writes in the last *Fortnightly* on the subject, "Will Germany Fail?" distinctly traces the great danger to the lack of a sound political instinct in the Germans, showing itself in the obstinate and unyielding opposition of class to class, and the forced return of the Government to the policy of protection. His forecasts are already justified, in a measure, by the statistics of declining German trade and crippled industries. All told, the phenomenon is one which goes far to explain the strain of melancholy in the Emperor's public addresses.

PAULSEN'S 'PHILOSOPHIA MILITANS.'

CAMBRIDGE, MASS., April 19, 1901.

With the exception of Herman Grimm,

there is no German scholar now living who may be said to maintain the traditions of the classic era of German idealism in as vigorous and broadly effective a manner as Friedrich Paulsen. In temper and training he is widely apart from his older colleague. Grimm seems to belong to the idyllic atmosphere of Weimar court life. One might characterize his habitual state of mind by the lines in which Goethe expressed one side at least of his own all-embracing nature:

"Zierlich Denken und süss Erinnern
Ist das Leben im tiefsten Innern."

One may imagine him roaming about with Goethe in "forest and cavern" of the Thuringian Highlands, revelling in the stillness of the woods, and musing about the destiny of man; one may think of him as delightful companion and graceful *raconteur* at one of those simple and unpretentious entertainments at the Dornburg or the Belvedere which fascinated the worldly Mme. de Staël. Paulsen is made of harder stuff. The leading professor of ethics at the foremost German university is still at heart the farmer's boy of forty years ago. He has something in him of Fichte's uncompromising temper; he is altogether a man of the people; he does not care to shine in society; he opens up only when in company with a few trusted and old-time friends; he is most truly himself when called upon, either in the lecture-room or in the literary arena, to expound or defend a far-reaching moral principle. Both Grimm and Paulsen seem somewhat out of place in the stir and rush of the intensely modern and intensely practical German capital; but it is a hopeful sign for the future of German culture that two such men should have risen to influence and leadership in the midst of these very surroundings.

Just now Paulsen has published a volume of essays, entitled 'Philosophia Militans,' which will perhaps still more clearly than his former, more systematic writings bring home to the popular mind his peculiar position as defender of idealism. As these essays address themselves avowedly to the *auditorium maximum* of persons interested in the literary aspect of philosophy, it may be not unfitting for one of this class of readers to note down some of the impressions which he received from them, and to point out the place which they seem to him to have in the general movement of contemporary German thought.

All of the essays here collected deal in one way or another with the great intellectual conflict which, though it pervades the life of all modern nations, is being fought at present with particular bitterness in Germany: the conflict of the idealistic view of the world with the supernaturalistic dogma on the one hand, and with materialistic science on the other. As typical representatives of these two extremes of supernaturalism and materialism, Paulsen considers at length two books which, during the last two years, have aroused public opinion in Germany to a remarkable degree: a 'History of Idealism,' by the Catholic philosopher, O. Willmann, and Haeckel's ultra- (or shall we say pseudo-) scientific 'Riddles of the Universe.' These two books illustrate to Paulsen the condition in which Philosophy has found herself placed now for a good many years past. Her road, he says in effect, passes through two hostile camps, from both of which she is continually being insulted and attacked. On one side she is accused of leading to atheism and moral perversion; on the other she is reviled as a traitor to science, as a mountebank cheating the credulous with such useless patent-medicine stuff as "God, Freedom, and Immortality." No doubt, the two extremes hate each other, but in their enmity against idealistic philosophy they are at one. And in a certain way they esteem each other and are indispensable to each other. There can be little question but that Haeckel's 'Riddles of the Universe' will be greeted by the Catholic party with a certain joyous satisfaction as a complete incarnation of the evil principle of modern philosophy. And Haeckel, on his part, takes a certain æsthetic pleasure in Catholic theology and philosophy, since here he sees in its normal and fully developed form what appears only as a partial and stunted growth in the systems of Kant and Fichte.

As might be expected, Paulsen has an easy game with the slander and calumnies heaped by his Catholic opponent upon nearly every great name in the history of philosophy since Thomas Aquinas. Indeed, it might almost seem a waste of energy to refute such statements as these: that Spinoza was a tricky Jew and unscrupulous demagogue, whose criminal ethics had no other aim than the extirpation of Christianity; that Hume was a shallow sophist, "whose skepticism resembles the worms that form in a dead body"; that Kant was a rebel against law and duty, an advocate of selfishness and license, an underminer of society, a Robespierre in philosophic disguise. What gives to this whole discussion its significance is this, that a man like Paulsen should condescend to take notice of such distortions of history, that he should think it necessary to uphold once more the fundamental thought of the last three hundred years against the violent assaults made upon it by the resuscitated ghost of mediæval scholasticism. No man could be further removed from sectarian prejudices than is Paulsen; no one could be fairer toward all forms of religious or philosophic belief. No writer of recent years has done fuller justice to the greatness, universality, large-mindedness, and beauty of the mediæval church. One might even say that there is a vein of mild contemplativeness, a fondness for mysticism in him that has at times made him, perhaps, too lenient toward religious creeds which, after all, do not stand the test of clear thinking. If such a man, then, sees himself forced to enter the arena for the defence of the most elementary principles of free thought, it is manifest that Hannibal is, indeed, *ante portas*, that the Catholic Church is once more preparing for an attack all along the line against every stronghold of the modern view of life; and the authorities responsible for public instruction in Germany will do well on their part not to omit anything that may help to prevent the substitution, in the minds of the growing generation, of the philosophy of Thomas Aquinas for the philosophy of Kant.

That this is indeed the goal which the Catholic Church has in view, is made clear by a papal rescript of September 8, 1899, to the French clergy, quoted by Paulsen, in which Pope Leo XIII. warns the clerical authorities against an "insidious and dangerous philosophy of Protestant origin" which cannot but lead to utter moral ruin and destruction. It is defined as a doctrine

"which, under the seductive pretext of delivering human reason from all prejudices and deceptions, denies reason the right to any conclusions except about its own functions, and thus abandons to a boundless skepticism all those arguments which, by approved metaphysics, were made the indispensable and indestructible foundation for demonstrating the existence of God, the spirituality and immortality of the soul, and the objective reality of the outer world."

While in this whole discussion Paulsen asserts the reasonableness of the Kantian view of life against the unreasonable absolutism of papal infallibility, he maintains it in his criticism of Haeckel's 'Welträtsel' against the equally unreasonable infallibility of scientific materialism. Into the details of this controversy I cannot here enter. I can only urge the reader to follow himself the truly delightful path of Paulsen's critical analysis. Highly entertaining is the way in which he dissects Haeckel's fantastic and futile attempt to replace both speculative and experimental psychology by what he calls "evolutionary psychology"—a method which turns out to be based upon the fundamental error of an arbitrary identification of locomotion and consciousness in the lowest organisms. Masterly is the proof how little Haeckel's doctrine of the relation between body and mind has to do with Spinoza's theory of the parallelism of physical and psychical processes, although Haeckel plumes himself upon having given to this Spinozistic theory its final scientific application—in Spinoza (so Paulsen shows), a clear juxtaposition of two different kinds of processes, accompanying each other, corresponding to each other, but without the relation of cause and effect; in Haeckel, an utter confusion and chaos, arising from his promiscuous use of matter, motion, energy, thought, spirit as identical terms. Most amusing is the description of Haeckel's monistic religion of the future, in which the churches will be transformed into aquariums "illustrating by molluscs, crabs, and corals the wonderful art forms of sea life," the high altar being replaced by an "Urania revealing in the revolutions of the celestial orbs the omnipotence of the law of substance," while the whole cult of course is to be directed by Haeckel himself, the discoverer of the *homo alalus*, of the *cyto-* and the *histopsyche*.

All this I can only touch upon briefly. But in order to indicate the position which Paulsen himself occupies between these two extremes of a supernaturalistic theology on the one hand and a pseudo-philosophic science on the other, I cannot refrain from quoting in full a passage in which, at the end of the whole book, he seeks to define the positive and constructive element which, in spite of all its vagaries and absurdities, this essay of Haeckel's contains:

"After all, one may perhaps see in the 'World Riddles' a symptom that natural science is once more on the point of lifting itself beyond the merely physical aspect of things to a higher and more comprehensive, in other words, to a philosophical aspect of the world. Haeckel's final goal is marked by the names Bruno, Spinoza, Goethe; he tends ultimately toward a view which conceives of psychic life, not as of something removed from reality and foreign to it, but as something most intimately allied to it, as the other, the inner side of its being. What Haeckel really means to say is this: to every relatively complete system of bodily processes there corresponds a system of mental processes; all things are of psycho-

physical nature. The most manifest case of this universal state of things is found in the organic forms of life. To the physiological observation they appear as units of bodily systems with most complex processes of locomotion, which are regulated by the universal law of the conservation of energy. But by the side of these processes of locomotion which the physiologist observes, and whose laws he tries to discover, there are going on other processes which are not accessible to the scrutiny of the physiologist. These mental processes are accessible to us directly only in one way, namely, through our own consciousness; but they are inferred by everybody as existing for the whole realm of human and animal life. To the thoughtful observer of nature, however, it is impossible not to go beyond this. The inner affinity and unity of the universe, with its constant interchange of cause and effect and its constant transformation of the organic and the inorganic, is so great that even the physicist finds himself constrained to believe in a psycho-physical principle of all nature. And thus we come to the conclusion: To every uniform physical system, to the simplest, such as cells and molecules, as well as to the largest, such as celestial bodies and cosmic systems, there corresponds some sort and some form of mental life, comparable in a way to the life which we experience in ourselves.

"Had Haeckel gone the whole length of his thoughts, he would have arrived at the view which Fechner has developed with full precision and clearness. Are Fechner's thoughts, after having rested for a generation almost inactive in the womb of time, at last about to be called to new life? Are they to accomplish in the new century what they clearly point to? Are they to win back natural science to an idealistic view of the world from which it had been estranged by the failure of *a-priori* speculation?"

In a highly suggestive and truly enlightening book on contemporary German life by William H. Dawson, which has just come to my notice,* there is a particularly well-balanced chapter on "Religious Life and Thought." The burden of this chapter is an expression of regret that the materialistic doctrines as preached by the Social Democracy should have taken away from a large part of the working classes all respect for religion, all supernatural faith, all recognition of supreme and objective ethical laws. Although this statement seems to me to leave out of account the ethical and religious forces embodied in the Socialist movement itself, it is certainly true that these constructive forces have not yet produced a system of idealistic opinions, to which the mass of those who have fallen away from the old church creed would be willing to subscribe. It is to such men as Paulsen, Eucken, and Ziegler that we must look for helping on the day of this new secular religion of the masses.

KUNO FRANCKE.

MME. REINHARD'S REMINISCENCES—II.

PARIS, April 6, 1901.

We left Reinhard and his wife on their way to Switzerland, where he was sent as Ambassador on leaving the Foreign Office. Talleyrand had taken the true measure of Reinhard, a hard-working, conscientious man, who did not care for preëminence, and was ready for anything in order to make his fortune—not very different from the poor German peasant who goes to distant colonies; from Grimm, who made his fortune as a literary correspondent of empresses and princesses; from so many other Germans who honestly make a living, and sometimes acquire a great reputation, in foreign lands. Madame Reinhard's letters from Switzerland are amusing; they describe the curious state of things which existed at Berne during the French occupation. Berne was very anti-French, and the task of the French Ambassador was anything but easy. Bonaparte arrived in May, 1800. He received Reinhard, and questioned him on the state of Switzerland and its resources. "He let him speak, which is rare, and listened to him." "After this audience," says Madame Reinhard, "we walked on the terrace, where the view is marvellous. We saw the rocks of Meillerie, immortalized in the writings of Rousseau. . . . We looked on the Valais, the door through which the hero intends to enter Italy. These mountains are going to become illustrious in history, and future ages will say with reason that Bonaparte alone could attempt such an enterprise." Bonaparte is the "hero" for Madame Reinhard; he was so on the eve of the 18th Brumaire; he will be so in her eyes to the end. Her admiration of him is absolutely sincere; she was evidently a person of great imagination, and Napoleon's career seemed to her like a long and marvellous poem.

While Napoleon was at Berne, Reinhard had some difficulties with the Swiss Government; he explained them to Napoleon, who simply told him to hint to the members of the Government to keep quiet, "as it was his will, and he admitted no change in the dispositions which had been taken, at least till the month of October. . . . At that time, the fate of Europe will be settled, and people will know whether she will be free or enslaved." Soon afterwards, Napoleon crossed the Alps, the battles of Montebello and Marengo were fought; Piedmont with all its fortresses was in the hands of the French. "Only a Bonaparte could change the whole face of things in five weeks."

Reinhard was recalled in October, 1801, and was received by the First Consul, whom he found perfectly well informed of all the affairs of Helvetia. "We will try to give you a promotion; speak of it to the Minister"—the Minister being Talleyrand, who sent Reinhard to Hamburg as Minister to Lower Saxony and Hamburg. The correspondence is interrupted during the four years which Madame Reinhard spent at Hamburg, where her family lived; we know that her husband's instructions ordered him to hinder England from obtaining recruits in Hamburg and in Denmark, and to favor in every possible way the march of the French troops in Germany and in Hanover. He found himself thus in constant relations with the French commandants of army corps, especially with Bernadotte, who occupied Hanover. Bernadotte communicated to Reinhard the order given by the Emperor to arrest Rumbold, the English Minister, near Altona, and to seize all his papers. Reinhard had to execute the order, though he protested in a letter to Talleyrand against what he justly considered a violation of the law of nations. This protest was probably the cause of the recall of Reinhard, who was replaced in Hamburg by Bourrienne.

In the spring of 1816 Reinhard was sent as Consul-General to Moldavia, with the additional title of Resident in the Turkish Provinces. His wife's letters now take us to regions which were considered at that time out of the pale of civilization, and which even now may be called semi-barbarous. There were no railways, and a journey from Paris to Jassy was no easy matter. Madame Reinhard was a woman of courage. "Many deceptions," she says, "many painful experiences have thrown over the last few years a veil which my eye is unable to pierce. One point only has remained bright, and my soul finds peace and repose when I turn towards it: the love of my dear parents and the sense of accomplished duty. These are treasures which cannot be taken away from me; they have shown me the road to follow, and will give me strength to persevere."

Reinhard and his wife could reach Jassy only with a strong escort; they went in a post-chaise through Hungary, Transylvania, Wallachia. The details given of this long journey, visits to old Greek convents, presentations to the Prince and Princess Ypsilanti at Bucharest, are extremely graphic. It was not without difficulty that Madame Reinhard accustomed herself to the semi-Oriental life of Moldavia. "This unfortunate country is the theatre of all sorts of atrocities—people assassinate, pillage, burn; and all this happens at forty or fifty leagues from Jassy, in a province which is part of a great empire. . . . All these troubles make communications very difficult."

The impending war of Napoleon with Russia made the position of the French Minister more and more trying, as the boyards of Moldavia were all more or less in sympathy with Russia. The battle of Jena strengthened him for a while. On the 6th of November, Madame Reinhard writes: "Who would now dare to measure himself with our Emperor and to thwart his vast combinations? His army, after twelve years of continual struggle, may now be called invincible. Is not the complete defeat of the Prussians evident proof of it? The war now advances our way, and the reconstitution of Poland must haunt the mind of our sovereign." A Russian army entered Moldavia at the end of November; Jassy was occupied by regiments of Cossacks. Reinhard decided to leave Jassy, and asked for passports. He was made prisoner on the way, and taken to a small town in Ukraine on the confines of Russian Poland. Reinhard was, in his turn, the victim of a violation of the law of nations. The letters written by Madame Reinhard during her forced sojourn in Russia are extremely touching. Fatigue and emotion nearly overpowered her strength, but she never lost her courage, nor even her faculty of observation, and she gives a very good account of all that falls under her eye. Reinhard sent a letter to Prince Kurakin protesting against the measure of which he was a victim. Kurakin sent him word that his letter had been given to the Tsar, and on the 12th of January, 1807, he was released from prison. The Emperor informed him that his arrest was due solely to the precipitancy of certain officials, and expressed his regrets.

Among the many incidents of Reinhard's return with his wife and their two young children from Russia to France, we will note only their meeting with Goethe at Carlsbad. They were both Germans by birth, and could not help feeling much pleasure in making the acquaintance of the greatest German poet. Madame Reinhard judges Goethe in these terms:

"I have spoken to you already of our interest in contemplating this man of extraordinary and universal genius. I say contem-

*'German Life in Town and Country.' G. P. Putnam's Sons. 1901.

plating, for our relations, so far as I am concerned at least, have never been cordial. There is in him too much preparation, a want of *naturel*, which does not excite confidence. . . . Professor Huber says truly that Goethe shuns all individuality, and this is why he has never moved my heart; he soars above all human miseries, like an inhabitant of other spheres. He never speaks of himself; I have never seen him interested in the joys or the pains of others. One rarely obtains from him a mark of approbation or of displeasure. When one speaks to him of the sufferings and deceptions of people he knows, he looks upon it all as *faits divers*, and cites similar cases. Nothing moves him. He lives in the sphere of his ideas and of his knowledge, an immense sphere, which embraces all sciences, and he finds amusement in the most abstruse matters. He occupies himself ardently with botany, chemistry, mineralogy, astronomy; everything is familiar to him. The theory of colors is his present hobby. . . . Admired as he is, no homage surprises him. During a conversation in which Goethe expressed himself with unusual fire, my husband told him that though he had found himself at different times in contact with remarkable men, he had never found in any such a wealth of ideas, such harmony, such elevation of feeling, so perfect an ensemble as in him. He confessed that he sometimes found it difficult to follow him, and was often dazed by the justness and the audacity of his conceptions. This homage did not seem to astonish the poet, who replied that it was, in fact, necessary to be accustomed to his language to be able to understand him; that he himself, on account of this, had given up taking part in conversations, and that he talked only when he found men of his own level."

Reinhard, ever after his conversation with Goethe at Carlsbad, maintained a correspondence with him, which has been published, at least in part.

Reinhard was sent, on his return, to Cassel, where he represented France for six years in the new kingdom of Westphalia. The letters written by him while he was the intermediary between Napoleon and his brother Jerome do not appear in the volume just published, and will be the subject of another publication. The correspondence, after this interval, begins only in 1813, when Napoleon's empire had begun to totter, and when the French had to abandon Germany. Reinhard made a dignified retreat from Cassel; he had no illusions, and felt that the days of the Empire were numbered. His wife kept her faith in Napoleon's fortune to the end. She wrote, however, in 1814, when she heard that a Bourbon had been proclaimed king in Lyons: "Must we regard this news as the end of an awful slaughter, or as the beginning of other bloody struggles?" For a moment, she saw "the star of Napoleon shine with a new brilliancy." That was after the victory of Champaubert; but when Paris was taken by the allies, when the end came, she could not help writing: "Thank God, it is all over." Talleyrand had no difficulty in reconciling Reinhard with the old dynasty, and, when he took the Foreign Office, he attached Reinhard to himself as Director at the Ministry of Foreign Affairs.

"My husband," writes Madame Reinhard, "foresaw that the Prince of Benevento would reappear on the stage. He had recalled his wife, whom he at first sent away [in the confusion which followed the arrival of the allies before Paris and the flight of the Empress], and, on Wednesday morning, my husband heard him express himself with great freedom of mind. 'The end is near,' said he, 'and I will not go away.' Pressed by the other high functionaries, he made believe he was going; but he had taken his measures, and his carriage was stopped at the barrier by national guards, who begged him not to leave the capital. Now, Talleyrand has put a white cockade on his hat. He has convoked the Senate, and the Tsar lives in his house."

Madame Reinhard died in the spring of 1815, worn out by the fatigues and the emotions of the preceding years. She did not see the triumphant return from Elba and the final downfall of the man who for her had always been the "hero."

Correspondence.

CAUSE AND EFFECT.

To the Editor of The Nation:

Sir: Among the comments on Gen. Funston's capture of Aguinaldo, and the Administration's reward for that feat, I have not seen the "pension system" mentioned as one of the forces that have lowered the standard of military honor among the American soldiers and people to such an extent as to make possible the method of this capture and its reward.

Most of the men in the army—particularly among the volunteers—are too young to remember when the civil-war veterans as a whole were not engaged in a mad scramble for "more pensions," and when the politicians were not eagerly granting these pensions in order to win the "soldier vote." This spectacle has represented the old soldiers, not as men who offered their lives to preserve the safety and honor of their country, but as men who went to the war for what was "in it" for them.

The ideals for the American soldier having been thus for so long a time degraded, it is not surprising that an army officer, in order to capture an enemy, should adopt the methods of card sharpers and commercial tricksters, who live by their wits rather than by their work. G. S. W.

M'KINLEY'S DEGREE.

To the Editor of The Nation:

Sir: The *Nation* is surely not "magnifying a mole-hill" in setting forth in its true light the silliness and shame of such an act as the conferring of the doctorate of laws on such a man as President McKinley. For who will sign the significant letters after his name—the next President, or William McKinley? William McKinley, of course; hence the compliment is neither to the President nor to the Presidency, but to the man. Let those who may stultify themselves, but the oldest university in the country, the one most honored, should be above such sycophancy.

William McKinley, man and President, is as ignorant of law as he is indifferent to it. Law he has violated both in letter and in spirit. Without truth, without honor, saying one thing and meaning another, making promises for party convenience and breaking them for party profit, cajoling where he fears to coerce, and bullying where he does not openly oppress—President McKinley presents in American public life a spectacle never before seen; and the conferring of a degree by Harvard University on such a man will be the crowning touch to the sight. The purchase for him of the very office which he now disgraces, his payment of political following by every possible place within his gift, his shielding of Alger and Egan, his treatment of the stolen De Lome letter, where he profited by a spying theft to read what was never intended for his eye, and then had no grace of gentlemanliness to hide his shame in his own bosom, put the letter in the fire and forget it, or else forward it to the one to whom it was written; his demoralization of the military arms of the Government, his abuse of the civil service, and would-be debasement of the judiciary—is this the man whom any set of honest, honorable men can consistently honor?

But there are still thousands of Americans who can look quite through the deeds and words of men, and who know President McKinley for what he really is; and if Harvard University (at the instigation, solicitation, and contrivance of Senator Yea-and-Nay Hoar) confers a degree on such a man, she will inflict a wound upon herself from which she may never wholly recover. V.

Baltimore, April 29, 1901.

BACH AT BETHLEHEM.

To the Editor of The Nation:

Sir: I should like to call the attention of your cultured readers to the fact that a musical event is about taking place at Bethlehem which is unique and epoch-making in America. You are, no doubt, well aware that the Moravian Church throughout the world has fostered church music far beyond any other church. Not only at home, but in every one of its missions, be they among the Eskimos of Labrador, the Hottentots of South Africa, or the aborigines of Australia, church music is brought to a high degree of proficiency. Last year, on March 27, Prof. J. Fred. Nolle (a pupil of Reinberger, Munich), the organist of the Moravian Church at Bethlehem, successfully produced Bach's Mass in B minor, the first time it was ever given entire in America. Now, this year, May 23, 24, and 25 will be Bach days at Bethlehem, as Professor Nolle has been drilling a choir of 110 members, with 100 boys besides, for the chorals, and an orchestra of 60 instruments. The music to be produced will be: First day, Christmas Oratorio; second day, Passion of St. Matthew; third day, Mass in B minor. All these Bach compositions will be given complete. There will be two performances daily, at 4 P. M. and 8 P. M., in order to render each work in its entirety without fatiguing the hearers. In order to make this communication as short as possible, while yet calling your readers' attention to this musical event, in which they cannot fail to be interested, I would say that any one desiring fuller information may address The Moravian Publishing Concern, Bethlehem, Pa.

Among the many musicians who have written that they will attend this Bach festival, I would only mention Mr. Theodore Thomas and wife, Mr. William Mason, and probably Professor Stanley of the Michigan School of Music, director at Ann Arbor. The large Moravian Church seats 1,650 people. Bethlehem is but two hours from New York and Philadelphia.

Arnim de Bonneheur.

A PORTRAIT INDEX.

To the Editor of The Nation:

Sir: You are good enough, in your last

issue, to notice my Index of American Portraits now appearing in the *Pennsylvania Magazine of History*. This is a selection, only, from an index of printed portraits, of a general nature, now comprising notes of some seventy thousand of such portraits (and covering some twenty-five or thirty thousand volumes in addition to the periodicals named in the *Magazine*). Not having been able to make it useful through publication, will you allow me to take this opportunity to inform your readers that I shall always be glad to place the information contained in the MS. at the service of students?

Yours truly, BUNFORD SAMUEL.

RIDGWAY LIBRARY, PHILADELPHIA, April 29, 1901.

SECONDARY-SCHOOL REFORM IN GERMANY.

TO THE EDITOR OF THE NATION:

SIR: Continued sporadic items in the daily papers concerning secondary-school reform in Germany justify one in supposing that the reading public takes a certain interest in the matter. It is therefore worth while to correct, as far as possible, any erroneous impressions on the subject, the more so as even technical, presumedly well-informed journals have given currency to utterly mistaken ideas. Thus, *Modern Language Notes* (January, 1901, p. 32) publishes the astonishing news, so far uncontradicted, that the *Abiturientenexamen* is to be abolished, adding that "it will not be missed," since "it has been pedagogically a failure if not a positive detriment." As a matter of fact, the examination to be done away with is merely the so-called *Abschlussprüfung* for admission to the one year's military service, three years before the close of the gymnasial course—an institution of quite recent date and a very different thing from the sacrosanct, time-honored *Abiturientenexamen*. The regular promotion to *Obersecunda* will henceforth carry with it the privilege of one year's service. Then, as to the choice between Greek and English (also mistaken by the writer in *Modern Language Notes*), the intention is to allow the substitution of the latter language for the former to pupils who do not expect to finish the gymnasium course; for by making this choice they will be debarred from going beyond the *Untersecunda*, or fourth-highest class. The plan of strengthening the English at the expense of French, wherever local conditions make such a change desirable, has been understood by some to mean the exclusion of the latter language from the gymnasia concerned, and fanciful inferences as to pro-English and anti-French feeling have been drawn from the assumed fact. There is, however, no inclination of purpose anywhere to drop the French, but in the three upper classes English may take its place if the authorities of any gymnasium so decide.

Instruction in the ancient languages in the gymnasia is in no wise made to suffer; on the contrary, the number of recitations in Latin has quite recently been slightly increased, so that from Easter of the present year eight weekly recitations during the first six years of the course, and seven weekly recitations during the last three years, are given to that language. In the Realgymnasia a similar increase of the hours of Latin has taken place. The momentum of secondary-school reform in Germany, in the direction of modernization, is to be found in the flourishing condition and growing number of the so-called Reformgymnasia or Reform schools. Their present number is about thirty, and their success is remarkable, implying, as it does, attainments in Latin with a six years' course, preceded by three years of French, equal to those reached in the nine years' course of the old gymnasium. A. L.

YPSILANTI, MICH., April 28, 1901.

PROF. ERNST HAECKEL AND HIS CRITICS.

TO THE EDITOR OF THE NATION:

SIR: Goethe tells, somewhere in 'Dichtung und Wahrheit,' of how his interest in Spinoza was rekindled through finding in his father's library a controversial volume containing a vigorous polemic directed against that "dangerous pantheist." Opposite the title-page was a wretched print duly labelled Baruch Spinoza, and accompanied by the defamatory inscription, "Signum reprobationis in vultu gerens." No one who has read in Lange's 'History of Materialism' the eloquent and touching tribute to the personal excellences and truly Christian graces of the materialist Buechner, can fail to realize how far we in this day have outgrown those very bitter personal animadversions which, as M. Taine reminds us, made the controversial utterances of our fathers sound more like the bellowing of bulls than sober arguments of rational beings. The storm of controversy excited in Germany by the publication of his 'Welträtsel,' by Prof. Haeckel of the University of Jena, appears, however, to form a melancholy exception to this blissful state of affairs.

The matter has, nevertheless, its humorous side. Prof. Haeckel began, with more emphasis than dignity, perhaps, to call the other boys names; now they are all "giving it back to him" in good earnest. It is certainly amusing to see men of the dignity and eminence of Prof. Friedrich Paulsen of the University of Berlin and Prof. Erich Adickes of the University of Kiel, "mad all through," as the boys say, and completely swept away from their usual philosophic calm by a whole-sail breeze of personal feeling as they pay their compliments to the dogmatic naturalism of Professor Haeckel. It reminds me of an experience which I had long ago, as a college boy at Harvard, with the late Professor Lovering, a solemn, gentle, mild-mannered man, who surveyed with unmoved calmness the birth and death of suns and worlds. Once, however, I saw him deeply moved. It was when he referred to one little star which, either through ignorance or obstinacy, had hitherto apparently refused to obey the decrees of the immortal Newton. As he spoke of the criminal vagaries of this wicked and wayward body, the gentle man of science for a moment looked really terrible. Not for worlds would I have been that star!

Somewhat similar is the tone in which Professor Paulsen and Professor Adickes address the materialistic Pope at Jena: "O presumptuous materialist!" they cry, "hast thou not heard, hast thou not known, that the transcendental idealism of Immanuel Kant has made materialism for ever a dead dog and a stench in all philosophical nostrils?" "Have you not read its funeral sermon preached by Dr. Lange in his 'History of Materialism' from the text 'Materialism is dead: Kant killed it'?"

Now this is very provoking! Who likes to have dead things walking about? "But I am not a materialist! You have no right to call me one! I am a monist, and a follower of the great Baruch Spinoza and the immortal Goethe," cries Professor Haeckel. "You are a materialist and no monist. I am a monist, but you are not!" cries Dr. Adickes of Kiel.

"The fact is," they both continue, "with all due regard for your achievements as a man of science and a biologist, you are wofully ignorant in the department of philosophy. It is a discipline in which, neither by training nor natural endowments, are you calculated to do more than cut a sorry figure. You are a materialist, a dogmatist, a bigot, and a fanatic!"

"As to Spinoza," adds Dr. Adickes, "you evidently have never studied his system, and are quite out of your depth when you talk about him!" "You know absolutely nothing of Kant!" adds Dr. Paulsen, "and as to Goethe, permit me to call your attention to what that great man said of that sterile and dreary book, 'Système de la Nature.' I must confess that I am firmly convinced that his opinion of the 'Welträtsel' would have been still more unfavorable if he had been so unfortunate as to have survived this national humiliation which has befallen our literature."

The books to which I refer are 'Philosophia Militans (Ernst Haeckel als Philosoph),' by Dr. Paulsen, and 'Kant contra Haeckel: Erkenntnistheorie gegen naturwissenschaftlichten Dogmatismus,' by Dr. Erich Adickes.

CHARLES EDWARD STOWE.

HEIDELBERG, April 16, 1901.

Notes.

In case a sufficient number of advance orders can be secured, the American School of Classical Studies in Rome intends to publish immediately a series of twenty-nine heliogravure plates, forming a complete presentation of the sculptured reliefs of the Arch of Trajan at Beneventum. Each plate will be about twelve by fifteen inches in size, and will be printed upon heavy plate paper measuring about seventeen by twenty inches. The whole series will be enclosed in a suitable portfolio, accompanied by a few folios of descriptive text, and will be sold at the price of $10. Communications should be addressed to Prof. Elmer Truesdell Merrill, Chairman of the Managing Committee, Middletown, Conn.

'The Specious Present: A New Inquiry into Human Knowledge,' by Alfred Hodder, and 'Chivalry,' by the Rev. Dr. F. W. Cornish, Vice-Provost of Eton, are in the press of Macmillan Co.

The Laurel Press, No. 159 Fifth Avenue, is preparing a limited luxurious edition of the 'Amoretti or Love Sonnets of Edmund Spenser,' each sonnet embellished with a decorative initial.

The Grafton Press, No. 1 Madison Avenue, announces 'Newyorkitis,' by Dr. John H. Girdner.

A new Life of Scott, by Professor Hudson of Stanford University, is promised by the A. Wessels Co.

Poultney Bigelow's 'Children of the Nations,' dedicated to Mark Twain, is about to be published by McClure, Phillips & Co.

Silver, Burdett & Co. announce 'Blue

Shirt and Khaki,' by Capt. James F. J. Archibald, a war correspondent in Cuba and in South Africa.

L. C. Page & Co., Boston, have undertaken a reprint of the 'Historical Memoirs of John Heneage Jesse,' in thirty volumes divided between the years 1901 and 1902, with a hundred etched or photo-etched illustrations. The work will be open to the trade.

H. W. Fisher & Co., Philadelphia, have in hand 'And the Wilderness Blossomed,' the story of a flower-garden in northern Maine, by Almon Dexter.

Mrs. Paget Toynbee has made great progress with the edition of Horace Walpole's Letters which she is preparing for the Clarendon Press. Her appeal for manuscripts has been widely answered, and as many as 250 new letters have been discovered. Some of these are of the greatest interest and importance. Several have come to her from America; one gentleman in Boston kindly had a manuscript in his possession photographed to send for the edition. In collating the text of the letters already printed, many omissions and errors have been detected; and the letters to Hannah More (as was noticed in a recent number of the *Athenæum*) were found to have been curiously mutilated. Mrs. Toynbee has had access to most of the collections of Walpole papers, though there are some, especially the Conway and Bentley papers, which it has hitherto been impossible to find. A careful search is now being made for the letters of Walpole to Madame du Deffand. Miss Berry, in her edition of Madame du Deffand's Letters, printed a few extracts from these, but the great bulk of them has never been published. It is seldom that papers of this kind are destroyed, but they become lost in the garrets or muniment rooms of country houses, and often the owners themselves are not aware what treasures they have in their possession. All that can be found Mrs. Toynbee is pretty sure to find; and her edition of Walpole will be for a long time the authoritative one.

Saving large print, no more comely and handy edition should be required than the second of Bunyan's 'Pilgrim's Progress, Grace Abounding, and Relation of his Imprisonment.' For the first edition the late Canon Venables was sponsor, and the revision has fallen to Mabel Peacock. A thin paper, not too translucent, allows text and notes to be packed away in 500 pages duodecimo. The work is a product of the Clarendon Press (New York: H. Frowde).

'Dombey and Son,' 'Bleak House,' and 'Little Dorrit' are three of the latest issues in the "Authentic Edition" of Dickens (London: Chapman & Hall; New York: Scribners). The chief distinction of this series is, after the text, revised by the author in 1867, 1868, the old illustrations by Phiz and others; in the case of the frontispiece, colored.

The International News Company are the American agents for 'The Book of Fair Devon,' a bid by the United Devon Association for residents and tourists. It is a longish volume, calculated for the pocket, and is an unconventional and systematic guide-book, illustrated by numerous pen-sketches, and by truly charming photographic vignettes of Devonshire scenery. The text does not shine by literary quality, even when specialists take a hand to describe briefly climate, natural history, sports by land and sea, educational advantages, and sanitary recommendations. Of special value here are the professional local health reports. There is an index, but no map—a strange omission. The whim of beginning paragraphs "flush" is surely least excusable in a guide-book.

'The Story of Rome,' by Norwood Young, one of the series called "Mediæval Towns" (London: J. M. Dent & Co.; New York: Macmillan), is a pretty little duodecimo of some four hundred pages, in which the author tells anew the oft-told tale in a manner that ought to be very attractive to the general reader. The hurrying traveller, too, would find it a useful supplement to his guide-book, though the more serious will, of course, require something much fuller. The illustrations, by Miss Erichsen, are fresh and often lend a novel charm to old subjects.

Prof. Robinson Ellis, in a recently delivered lecture on 'The New Fragments of Juvenal' (London and New York: Henry Frowde), furnishes us with a text and translation, with notes, of the thirty-six lines of the Sixth Satire, which exists only, so far as is yet known, in a manuscript in the Bodleian. He then considers the question of authenticity, and reaches the conclusion that the verses not only are worthy of Juvenal, but are in Juvenal's best style, being artificial, elaborate, and telling. In tone and subject he compares them with certain passages in the Second Satire. They lost their original place in the Sixth, he thinks, as the result of a remodelling of that poem, though the new edition did not prevail at once to the entire exclusion of these verses. They survived in some copies, either in the margin or in the place in which they are found in the Bodleian MS., after verse 365. To show that his view is not improbable, he points to similar traces of a different and earlier recension in other parts of the same satire, and to parallel phenomena in Ovid's 'Fasti' and 'Metamorphoses.' The pamphlet comes from the pen of a master, and ought to be in the hands of every student of the great satirist.

While Mr. E. S. Shuckburgh's translation of the 'Letters of Cicero' (London: Bell; New York: Macmillan, 1899-1900, 4 vols.) is the best which has appeared in English of that great mass of correspondence, there is still room for a better. It is the only complete version in English, and the only one for a hundred years that even approaches completeness; the translator has done much honest work, and labored, so far as his time allowed, for perfection; but the marks of haste are often painfully apparent on his pages, and he has obviously not lived with his original intimately enough and long enough to enable him to reproduce it and expound it in a satisfactory manner. In the interim, however, those who are unable to use the original will find it useful, though the collegian who turns to it as to a "pony" may find his ride rather an unsafe one, since it is often next to impossible to tell from whose recension of the text Mr. Shuckburgh is rendering. The introductions to the different volumes will put the general reader in a position to appreciate the nature of the times and events in the midst of which the letters are written. The footnotes add considerable antiquarian and biographical lore, and the index is a good one. The letters themselves are printed in chronological order, mainly that adopted by Tyrrell and Purser.

The new (thirteenth) General Catalogue of Columbia University (1754-1900) makes a volume of 760 pages, as against 720 in 1894; and as that issue was accompanied by a facsimile of a table of degrees for 1758-1774, so this latest has prefixed to it a facsimile of the diploma of Frederick Philipse of the class of 1773, whose name figures in the broadside just mentioned. The document bears the signature of President Myles Cooper. What helps to swell, besides a natural increase in the student body, the present catalogue, is the embodiment in it of the information contained in the pamphlet 'War Records of the Alumni' (1898). The Locality Index is maintained.

The Lee papers are, out of sight, the chief treasure of the manuscript collection of the Virginia Historical Society, of which a very condensed calendar has just been published as a supplement to the *Virginia Magazine of History and Biography*. They fill 33 pages, or more than a quarter of the whole catalogue. Other well-known Virginia names more or less well represented here are Bland, Byrd, Cabell, Carter, Custis, Fitzhugh, Grigsby, Harrison (including a large number of English wills), Henry, Hunter, Izard, Jefferson, Madison, Marshall, Mason, Massie, Maury, Monroe, Pryor, Randolph, Spotswood, Tucker, Tyler, and Washington. There is, by the way, but a single letter of Gov. Henry A. Wise, and nothing of or pertaining to John Brown. A few Northern men creep in by accident—Gens. John Glover and John Knox, in particular, with Boston Grays and Saltonstall, and John Wentworth of New Hampshire. General State history must be sought under Assembly of Virginia (curiously duplicated in Virginia Assembly), House of Burgesses, Council of Virginia, General Court of Virginia, Confederate Documents, etc.; under Indians, Cincinnati Society of Virginia, and Colonization Society of Virginia. The minutes of the latter organization would probably delight an abolition antiquary.

Mr. Carnegie's library benefactions for March were so numerous that the current *Library Journal* groups them, requiring a page and a half for that purpose. If we reckon aright, the sum total of 58 accepted gifts amounted to $1,720,000, the smallest sum (an addition to previous gifts) being $5,000, and the largest $100,000, to a Canadian institution. The month opened with a gift of $50,000, after which there was a pause, followed by daily gifts from March 7 to March 20 inclusive. March 8 was the banner day, eight institutions receiving $265,000.

The *Geographical Journal* for April is given up mainly to Col. G. E. Church's outline of the physical geography of South America. It is largely the results of his own observations during many years of travel and exploration, in which, as he says, he "wandered through pretty nearly every mule-track" on the continent. The scientific details respecting mountain ranges, river courses, plains, and coast lines are enlivened occasionally by a graphic touch. For instance, referring to the fact that the tropical Andes are at times "a gigantic electrical battery, and that they are then very dangerous to cross," he says that on one occasion he saw two storms arise simultaneously, one of which centred round the dome of Chimborazo, while the other, fifty miles distant, crowned

the summit of Cotopaxi. "Suddenly, through the highly electrified atmosphere, Chimborazo shot a hissing bolt straight for Cotopaxi, which in turn launched one at Chimborazo. Then, for perhaps twenty minutes, with a mighty and ceaseless roar, they hurled their well-aimed lightnings at each other, until the battle clouds dispersed and peace smiled again upon their magnificent loneliness." He closes with a suggestive reference to the severe conditions with which man finds himself confronted here in his struggle with nature, in striking contrast to the conditions which prevail in the northern hemisphere. He adds that he is inclined to believe that had "North America fallen to the lot of the Latin races in the European occupation of the New World, and South America to the Anglo-Saxon, the former might still have maintained its old supremacy, for the more rapid progress of the latter may not be due so much to racial superiority as to advantageous geographical surroundings."

The department of architecture in the Massachusetts Institute of Technology enjoys the twofold distinction of being the oldest architectural school in the country and of being conducted on the principle that "in no profession are breadth of culture and high mental training of greater value than in that of the architect. Recognizing this fact, it is the aim of the department," says its head, Prof. F. W. Chandler, in a report just issued, "to insure to its graduates a liberal education, as well as a directly professional training." In a brief sketch of the methods and subjects of instruction in the four years' course, he calls especial attention to the comparatively new subjects of architectural engineering and landscape architecture, each of growing importance, and to the graduate course, with its travelling scholarships. In 1893 a summer school was established, which has taken two bicycle tours in England, France, and northern Italy for the study of architectural styles. The report is illustrated by twenty-five full-page reproductions of recent work by the students in design, ornament, landscape architecture, etc. A similar set was sent to the Paris Exposition, and the absolutely unique request of the directors that some of them might be given to the École des Beaux-Arts was honorable testimony to the excellence of the work of the Institute.

A correspondent admonishes us that in our recent notice of the 'Ascent of Mt. St. Elias' we erroneously ascribed a German nativity to the navigator Bering, instead of a Danish.

—While many years must elapse before a Panama or a Nicaragua Canal can be made serviceable for commerce, it is certain that before very long Mexico will have solved in great measure the problem of interoceanic communication. The old Tehuantepec Railway route, which, the better part of a half century ago, officially engaged the attention of American engineers and railway men, and already at that time was pronounced by many to be feasible as an alternative to canal construction, has again been brought to the front, but this time under conditions and auspices which are a guarantee of the prompt and worthy execution of the work planned. Sir Weetman Pearson, perhaps the largest contractor for labor in tropical lands, and to whose ability and energy Mexico owes the completion of its famous "drainage-canal"—one of the greatest pieces of engineering work of the century—has been intrusted with the task of reconstructing the already existing railroad, and of building modern port works at the termini on the Gulf of Mexico and on the Pacific Coast of such character as will permit the largest vessels afloat to obtain accommodation and to transfer their cargoes without delay. It is stated that $30,000,000 will be expended, if found necessary, toward the construction of this interoceanic route, and strong hopes are held out that the entire work will be completed within three years. The length of the line is 190 miles, almost exactly that of the proposed Nicaragua Canal, and it is claimed that the transfer from the side of the vessel will be made in less than twenty-four hours, or in about sixteen hours less time than any possible passage of the Nicaragua Canal. While it is certain that an interoceanic railroad can never fully take the place of a canal, it is equally certain that any canal built will have to reckon with the Tehuantepec road as a formidable competitor, owing to the "cut-off" that it will effect in the distance between the ports of the Eastern United States and of the Pacific. It seems that there would be a saving of full 700 miles in the distance between New York and San Francisco by this route as compared with the route via Nicaragua, and still more as compared with the Panama route. On the other hand, the Tehuantepec route, except possibly to New Orleans, would, as compared with Panama, be entirely at a disadvantage as a trade-carrier to the Pacific ports of South America. The Panama Canal route has so manifestly the advantage over all other routes in this relation that it could easily stand whatever competition might be forced upon it by a railroad route to the Northern Pacific. It is more than questionable if the Nicaragua Canal ever could.

—It is interesting to have the opinion of so experienced a practical engineer and contractor as Sir Weetman Pearson on the financial possibilities of the Nicaragua route. We quote from a recent issue of *Modern Mexico* the following, as expressing the opinion of this authority: "The cost of the canal, as estimated by the American Commission, is placed at $200,000,000. This sum, Sir Weetman believes, will be found to be too small, and that the ultimate cost will probably reach $300,000,000. The Commission estimates the annual business of the canal at 7,000,000 tons, and, assuming that this will prove correct, and the same tariff charged as in the Suez Canal—$2 a ton—a revenue of $14,000,000 would be realized. The administration expenses of the canal would probably amount to $5,000,000 a year, leaving a net income of about $9,000,000, or an interest of 3 per cent. on an investment of $300,000,000." Seeing how rapidly the estimates on the construction of the Nicaragua Canal have risen from $90,000,000 through $114,000,000 and $133,000,000 to $200,000,000, it is probably safe to assume that the figures given by Sir Weetman, with his many years' experience in canal and railroad construction in a neighboring region, will more nearly represent the cost of construction than any of the others.

—Among the innumerable "exhibits" prepared for the Paris Exhibition, one of the most interesting is the crimson folio, devoted to the history and working of the Owens College, Manchester, which was prepared by Mr. Hartog, a lecturer on the staff, and is now published by T. E. Cornish of the same city. It may be described as a glorified "catalogue"; and the pictures which it contains will certainly give a good idea of the general aspect of the lecture-rooms and laboratories. Of the outside appearance of the buildings, the impression they produce is necessarily a somewhat flattering one, for no camera could exhibit the grime wherewith Manchester smoke is thickly coating the college walls. That part of the publication which does most credit to the institution, though we may doubt whether it was looked at much in Paris, is the Record of Original Publications by members of the various departments, since its foundation in 1851. This occupies eighty-five pages at the end of the volume, and it is the more honorable because the position of a professor at Owens is by no means one of learned leisure. What an official publication of this kind cannot give is a notion of the place which Owens fills in the community, and of its peculiar function—if, as may be supposed, it has one—in the higher education of England. The editor remarks with justice that Owens has created a new type of college in England—the college closely associated with the interests, and maintained by the civic patriotism, of a great municipality. But this raises the larger question, What is the function of these local colleges generally? One can understand that in a city like Manchester the Chemical Department has been "specially successful," considering also that it has enjoyed the able guidance of men like Sir Edward Frankland and Sir Henry Roscoe. We may believe that "continual efforts have been made to keep a just balance between science and arts"; what we should like to know is how far these efforts have been successful. We observe that the increase in the number of male students, which went on steadily until 1895, has met with some check in recent years. But this may be a temporary phenomenon.

—Perhaps the most remarkable report on the total solar eclipse of May last which has yet appeared is that of Mr. Charles P. Howard, who joined a party from Trinity College, Hartford, and selected Winton, North Carolina, as a favorable point for observing the phenomenon. His instrumental equipment consisted of a four-inch photographic telescope, with a visual finder having a diameter of two inches; but with this modest astronomical outfit he has made, if his report be not overdrawn, more wonderful discoveries in regard to the conditions and surroundings of the sun than have fallen to the fortune of any previous observer. Astronomers have long known that the structure of the solar corona is very complex, but it may well be doubted whether any one has suspected the existence of the intricate and wonderful structure described by Mr. Howard. The outer corona, as he saw it with the unassisted eye, was not "hazy and of indefinite outline," but "had as hard and definite boundaries . . . as if cut from cardboard." The wonders of the corona, however, did not fully appear until he viewed it through his little telescope. Then the pink and greenish-yellow luminosities, quiescent pink streamers, pink stems with enlarged tops, together with rings, rays, fountains, and wisps made what he terms "an intricate and involved mass," a conclusion fully justified if the premises

be admitted. Among other unique and hitherto unseen objects were the "stalks" and a forest of "pink stems." The stalks, sixteen in number, eight from each polar region of the sun, rose to the height of one hundred and eighty thousand miles; slender, white forms with fan-shaped tops. The southwest limb of the sun seemed to be the point that produced the most unaccountable growth. "Marley's ghosts" might be suggested as an accurately descriptive name for these strange forms, which are perfectly transparent, "so that any number of them could be seen through each other." These astronomical spectres have been seen by no one but Mr. Howard, and as his instruments have been carefully examined by an expert, and no serious imperfection found in them, might it not be well for him to consult an oculist?

—In some eighty pages Mr. E. G. W. Braunholtz has managed to store an amount of information on the subject of 'Books of Reference for Students and Teachers of French' (London: Th. Wohlleben) which is quite surprising. He has covered the ground very thoroughly within the compass he has allowed himself, and, if any regret is felt, it is that he did not extend the scope of his work and include titles of important books on particular epochs. But he may give us this information in an appendix to his present very complete and useful volume. Of omissions that strike one, the first is that, in the reference to *thèses* on page 3, no mention is made of the very high literary and scientific value of many of the works which appear under that not very attractive title. Some of the most important and authoritative studies on French and foreign writers have appeared in this form. Kastner and Atkins's excellent 'Short History of French Literature' will no doubt be included in a future edition of this work. Under No. 4, Literature generally, Janet's 'Les Passions et les Caractères dans la Littérature du XVIIe Siècle' is omitted, though it consists of an interesting study of that literature from the philosophical point of view, and suggests a critical method certain, if applied, to produce valuable results. Marc Monnier's 'Tableau de la Littérature Français au Seizième Siècle,' Sayou's 'Écrivains Français de la Réformation' and A. Desjardin's 'Moralistes Français du Seizième Siècle' are not included. Among the references to works on late nineteenth-century literature is not to be found Vigié-Lecoq's 'La Poésie Contemporaine,' nor, under the Novel in the seventeenth and eighteenth centuries, Morillot's 'Le Roman en France,' which, in addition to well-selected extracts, contains a very good sketch of the evolution of the novel, and excellent accounts and criticisms of writers. Lessing's 'Dramaturgie de Hambourg' is omitted, both in the original German form and in Crouslé's good French translation, as is also Souriau's admirable 'Préface de Cromwell,' one of the best studies in this line. On the other hand, Nebout's very weak 'Le Drame Romantique' is cited. Omitted, again, are the Sévigné letters with Suard's introduction, though this is one of the best selections yet published; Lanneau's 'Scènes et Portraits de Saint-Simon,' still the best selection from this writer; and Fallex's capital volumes of extracts from Voltaire—'Extraits en Prose' and 'Lettres Choisies.' Neither Léon Gautier's translation of the 'Chanson de Roland' nor Fabre's, though one of the most recent and interesting, is named. Finally, we miss Racinet's great work on Costume and Ary Renan's 'Le Costume en France,' Maréchal's 'Histoire Contemporaine,' Lemonnier's 'L'Art Français au Temps de Richelieu et de Mazarin,' Stranahan's 'A History of French Painting,' and Berty's monumental work on 'Le Vieux Paris.' Mr. Braunholtz does not often indulge in appreciation of the comparative value of the works to which he refers the student, but he might have allowed himself a word of commendation for such a book as C. de Witt Willcox's 'French-English Technical Military Dictionary,' the very best work of the kind extant. But the booklet is so well prepared and so uncommonly useful that praise must prevail in the end.

—To all Italianists we heartily recommend the compendious Life of Petrarch forming part of Barbèra's (Florence) "Pantheon: Vite d'illustri italiani e stranieri." Professor Giuseppe Finzi has already won distinction in Petrarch studies; and he has produced, in the compass of 200 pages of a little two-lire volume, a masterly narrative of the chief events in Petrarch's career, followed by an analytic consideration of the man and his problems. He is no mere apologist, and glozes over none of Petrarch's weaknesses or self-contradictions. The poet's love for Laura he assigns to the troubadour variety of the time, and shows it to have consisted with his having children by his mistress, while more than probably some of the verse in the *Canzoniere* was meant for other women than Laura. The *Canzoniere* itself Finzi rejects as worthless evidence regarding the writer, nor are Petrarch's letters (there are none extant in Italian of any moment) to be trusted implicitly, considering how much they were worked over, and always with studiously artistic purpose. Whether Petrarch was an epileptic, he leaves Lombroso and the scientists to decide. Like Rousseau, he was fastidious as to dress, fond of flowers, of art and music; was a collector; loved solitude in theory, had an intense feeling for nature, a perpetual restlessness; loved to make journeys, and was the first mountain-climber. He did not discover the ancient world, but is the modern father of humanism, clothing himself in the classics rather than absorbing them into his tissues; in Latin style far surpassing his contemporaries; so much of a Virgilian as to share that poet's posthumous reputation for sorcery. He was the first Italian, as Dante was not, classic literature and art contributing to make him such; bred and resident in many parts of the peninsula, and embracing the whole in his notion of country; caring little for Rome, except for its laurel, and avoiding residence in Florence, though a Tuscan and desired there. Dante was in exile when absent from Florence; Petrarch when beyond the Alps. Partisan of no one of the political ideas of the fourteenth century, he was wholly sympathetic with the patriotic ambition of Cola di Rienzo. He had no faith is astrology or alchemy, justly despised the medical profession of his time (surgeons excepted), had modern doubts about the hereafter. In these and in other ways he exemplified and personified the individualism which was smothered by the Middle Ages.

FURTWÄNGLER'S ANCIENT GEMS.

Die antiken Gemmen. Geschichte der Steinschneidekunst im klassischen Alterthum. Von Adolf Furtwängler. 3 vols. 4to. Leipzig and Berlin: Giesecke & Devrient, 1900.

Of all the scholars or scientific men now living, we question whether there is one who equals Adolf Furtwängler in his capacity for production. In his own profession of classical archæology there is certainly no one who approaches him. Essays, reviews, encyclopædic articles and catalogues follow one another so rapidly that it seems as though he could have no time for other work, yet they merely fill in the intervals between the monumental volumes which appear in less frequent, but hardly less regular succession. And this productiveness is not remarkable for quantity alone. The quality of the work he has accomplished is no less extraordinary. Gifted with exceptionally keen powers of observation, with a prodigious memory for facts, especially in matters of small detail, with indomitable energy in the investigation of difficult problems, and with the imagination which, when properly balanced, distinguishes the creator from the mere pedant or accumulator, he has written upon no subject without making a distinct advance, either in our knowledge of it, or in the interpretation of such data as were already at hand.

This is high praise, but it is written deliberately, and the more willingly because there is a tendency among some of his colleagues, both in and outside of Germany, to withhold from him the full credit which he deserves, and to lay more stress upon his shortcomings than his strength—a tendency for which it is not always difficult to account. For it must be admitted that his pen is sometimes wielded with more force than tact, that opinions which he does not accept are set aside with scant courtesy, and that his scorn at what he regards as mediocrity or stupidity in the work of other archæologists is expressed with serene indifference to the effect of his words upon them. On the other hand, however, it must also be said that no writer is more careful or conscientious about acknowledging his obligations to others, however trifling the debt or obscure the source from which it has been incurred. But this does not balance the scales. Nobody likes to see his own work dismissed as the "conspicuously bad and absolutely worthless book of a dilettante"; and where such frank expressions are freely indulged in, hostilities must naturally follow. It is therefore not surprising to hear Furtwängler frequently accused of forming "snap" judgments, of formulating theories without due consideration of the opposing facts, of committing glaring inconsistencies in his statements, of making positive assertions where only a conjecture is warranted by the evidence. Such criticism is not confined to those who have felt the sting of his contempt, and it cannot be denied that he has laid himself open to it. In his 'Masterpieces of Greek Sculpture,' for example, there is more than one instance where a theory offered as an hypothesis on one page becomes an established fact on the next; and is made the basis of an argument which rises quickly into a mighty structure, impregnable if the foundation be sound, but always de-

pendent upon the "if," though he sometimes seems to forget this fact. Still, even in cases where one cannot accept his theories, the knowledge which he brings to bear in support of them, the ingenuity of his arguments, and his marvellous fertility of resource render whatever he writes worthy of the closest attention; and, whether or not one adopts his conclusions, it is hardly too much to say that there is more suggestiveness in a single page of Furtwängler than in whole essays by many of his contemporaries.

In the book now before us, he is shown at his best, although strictures of the kind we have mentioned are by no means lacking. The book itself is a monument of learning, of industry, and of the brilliant qualities which have characterized the best of his work hitherto. It is difficult to conceive that any other man should cover the same ground independently for many years to come; and, should any one undertake such a task, it is still more doubtful whether he would find a publisher ready to produce the result of his labors in such sumptuous form, and with such manifest disregard of expense, as are displayed in the make-up of these handsome volumes. The foundations for this book were laid, as the introduction tells us, fifteen years ago, when the author began the preparation of his Catalogue of the Gems in the Berlin Museum, which appeared in 1896. In working over the rich material which was there at his disposal, he found that the methods by which the collection had formerly been classified were either wholly unscientific, or far behind the advance which archæological knowledge had made in other directions, and it therefore became necessary to begin at the beginning and work out an entirely new system of classification, based upon other methods of investigation, and bringing to bear the knowledge that had been gained in a generation and more in other departments of archæological research. When we see the results, as they are now laid before us, it is the more extraordinary that the study of gems has been so long neglected, in comparison with that which has been given to other forms of classical art, for it is evident that they rank almost on a level with coins in enabling us to follow minutely the evolution of Greek art and the other arts which were influenced by it, both on the east and on the west. In some respects they are even more important, for, although they do not take us into every little town or community, to show the extent to which the artistic impulse pervaded the remotest corners of the Hellenic world, they carry us back far beyond the period when coinage was begun, and, as is well known, they form one of the most important elements of which our knowledge of the great prehistoric age of Greek civilization is composed.

We do not mean to say, of course, that Furtwängler has been the first or the only one to recognize the importance of gems in this connection, or the need of a new system of classifying them. Ever since Schliemann's discoveries at Mycenæ, the Mycenæan rings and the so-called "island gems" have been the subject of close and thorough investigation, and their bearing upon the ethnology and art of the prehistoric period in Greece has been fully recognized. Moreover, we do not forget the valuable work which has been done in regard to the gems of the historical period by such men as Dr. Murray and his colleagues in the British Museum; by Babelon in the Bibliothèque Nationale, and others. But Furtwängler has worked independently of them all. Beginning with the Berlin collection, and extending his studies to every other collection that was accessible, he has covered the whole range of the subject exhaustively, working out a system of classification into styles and periods from independent observations and deductions, and treating the material with a thoroughness which it has never before received. Whether he is right in all his conclusions, and whether the new standards which he has introduced for determining the period of a gem are always infallible, of course only time and the investigations of others along the lines he has laid down can prove; but he has certainly brought the study of gems up to the level of that of vases, and he has made it so important a branch that hereafter no thorough student of Greek art can ignore it.

The first of the three volumes is taken up with the plates, of which there are sixty-seven. In these and the text-illustrations about 3,600 gems are reproduced, in the size of the originals, with comparatively few exceptions. This retention of the natural size has been a matter of principle with the author, and rightly, for, as he says, it is the size in which the artist made them, the scale on which he counted for his effect; and while in many cases details might have been brought out more clearly by enlargement, the distortion which frequently goes with it would have been unjust to the artist, and, even when not distorted, his work would have been robbed of the minuteness which is its chief charm. On only one plate, therefore (No. LI), and in a few of the illustrations in the text, does he give us a limited number of enlargements; and all the gems there shown are, we believe, illustrated elsewhere in the book in their natural size. The plates are reproductions in heliogravure from photographs taken of plaster impressions of the gems—except some of the cameos, which seem to have been photographed directly from the originals. That this part of the work has been executed with the utmost care is evident from the results, which are uniformly clear and satisfactory for purposes of study; and it is equally evident that the arrangement of these plates formed a very considerable portion of the author's labors in the preparation of the book, since the bringing together and classifying of several thousand impressions, from many different sources, could have been no light task. He tells us (vol. iii., p. 304) that down to the beginning of the Roman Empire it has been his aim to illustrate all the more important or typical examples known or accessible; but the material of the Imperial period is so inexhaustible that he has had to content himself with a limited selection. To the student it will be an invaluable help to find, for example, so many of the Greek gems of the sixth, fifth, and fourth centuries brought together and arranged upon a scientific basis of classification, so that he is enabled to study their characteristics, and to recognize differences that distinguish them from the Etruscan gems which were made under their influence. He will find the same abundance of material illustrating the characteristics of the gems of the Hellenistic period, and, what is no less important, the "Italic" or "early Roman" gems, a hitherto unrecognized class, which Furtwängler has been the first to differentiate and identify. To these we shall return presently.

The second volume *(Erläuterungen)* stands in direct and necessary relation to the first, being a descriptive catalogue of all the gems which are illustrated in the plates. In the plates themselves the gems are distinguished only by numbers; there are no titles or divisions into classes. Here, however, each specimen is classified under the period and country to which it belongs, its material and possessor are named, the design upon it is described, and its bibliography, where it has one, is given in full, generally with references to other gems having a similar design. As it is our purpose to call attention only to the characteristics of the book as a whole, it is not necessary for us to discuss this volume in detail, and we pass therefore to the third.

This, the most important of the three, is a history of the glyptic art in classical antiquity. It is divided into ten sections or chapters, each of which is devoted to a special class or period, with a brief introduction on the characteristics of Oriental gems, and a supplement containing a survey of the art in the Middle Ages and the Renaissance, a description of the various kinds of stones used by ancient gem-cutters, and the methods employed by them, and a review of the modern literature of the subject. As this volume contains no less than 464 quarto pages, it would obviously be futile to attempt a résumé of it; but, after reading it carefully, we can conscientiously say that in no other of his writings are Furtwängler's extraordinary qualities so remarkably displayed. It is so full of suggestiveness, it includes so many new points of view which have a bearing upon other forms of art as well as gems, that there is scarcely a page in it which the student of classical archæology can afford to overlook.

The general method which is followed in the several sections is to begin with a study of the historical conditions of the period to be discussed, so far as they may have had influence upon the gems, or may be reflected in them; next to proceed to an investigation of the characteristics of the gems which may be assigned to that period, first as regards the materials employed, then the forms given to the stones, the technique of the designs upon them as regards the cutting itself, the modelling of the figures, and the manner in which they are posed or combined; and finally to give a detailed account of the various kinds of subjects to be found in the class or period in question. We must content ourselves with a bare suggestion of the manner in which these various points have been worked out, by taking two examples, one on the historical, the other on the technical side.

For the former perhaps the most interesting, as it certainly is the boldest and most ingenious, is our author's theory of the relation of Mycenæan art and civilization to those of the East. The older theories, that the art of the Mycenæan age in Greece was wholly or largely derived from Phœnicia or Syria, find fewer followers every year, with the constant accession of new material which controverts them. Indeed, it seems probable that the remarkable discoveries which Arthur Evans is making in Crete will silence them for ever. The monuments which he is bringing to light strengthen to the extent of

conviction the opinion which has been rapidly gaining ground of late years, that the arts of Mycenæ and the other centres of prehistoric civilization in Greece were the vigorous and independent expression of a people who thought for themselves; that, moreover, such analogies to the work of others as they do present are distinctly European, not Oriental, in their character; and that they represent the earliest utterances of the Greek instinct for art, which are quite as original in their way as those which were to be expressed later under entirely changed conditions. Furtwängler, however, goes farther than this. He believes that the prehistoric civilization was not only independent but aggressive; that these early Greeks were not content with making their wares for themselves, but found markets for them both in Egypt and along the eastern shore of the Mediterranean, not through the medium of Phœnician traders, but in their own ships; and that in war no less than in peace they were a force with which the Pharaohs had more than once to reckon. He believes these direct relations between the Greeks and Egyptians to have begun as early as the Middle Empire, not later than 2,000 B.C., and to have been greatly developed during the Hyksos period, when the demoralization of Egyptian art gave the Greek traders a favorable opportunity for the introduction of their wares, and even led to the imitation of Greek designs in Egypt. Thus he explains, for example, the resemblance between the Mycenæan daggers and that found in the grave of Ahhotep, the mother of Amasis, by regarding the latter not as the prototype, but the copy of a Mycenæan work. These close relations, commercial and hostile in turn, continued through the following dynasties, and reached their climax at the beginning of the twelfth century in the twentieth dynasty, the period of the Dorian invasion. The effect of this invasion was not only to scatter the earlier inhabitants of Greece and the Ægean islands, but, as he thinks, to cause migrations, both by sea and overland, to the East, through Syria and into Egypt, where the invaders were finally repulsed by Ramses III., many of them finding abiding-places in the countries through which they had just passed, and succumbing to the darkness which was then covering the Greek world.

It is too soon to pass judgment upon this theory, but that it has much to support it no one who has followed the discoveries of recent years in the countries involved can deny. We cannot discuss the arguments by which Furtwängler supports it, or the ingenious manner in which the gems are brought into line as evidence. But perhaps the brief statement we have given will suffice to emphasize what we have said of the importance of this book to students of Greek art in other branches.

As a specimen of the results of his investigations on the technical side of the subject, we may select the new class of early Roman gems to which allusion has been made above. Briefly stated, the process by which this class was distinguished seems to have been somewhat as follows: In classifying the gems which were certainly of Italian provenance, he found two distinctive groups which did not belong under any heading previously established. One of these showed strong affinities with Etruscan gems in certain characteristics, but sufficient differences in others to prove that they could not have been the work of Etruscan gem-cutters. The other showed similar affinities to the later gems of the Greek colonies in Southern Italy, but it was equally impossible that they should have originated there. In the first group it was noticeable that where inscriptions occurred they were almost invariably Latin, not Etruscan; and also that whereas the inscriptions on the Etruscan gems are descriptive of the subject, on these they are simply the name of the owner. The same is true of the inscriptions on those of the second group. They are confined to the owners' names, and are usually in Roman letters, even where the names themselves are Greek. Hence there is an analogy between the two groups; and as these analogies multiply on investigation of the technique, the inference is that the two groups had a common origin, and that the place of this origin lay between Etruria and southern Italy, where the influence of both would be felt—in other words, that these were the gems of the early Romans. Pursuing the lines thus laid out, other technical peculiarities were found which differentiated these gems from those which they imitated, and a broad basis for identification was established which has enabled Furtwängler to classify as Italic or Roman—for he uses the words here synonymously—a large number of intagli, some of which have hitherto been regarded as Etruscan and others as Italo-Greek. All these antedate the Græco-Roman gems properly so called—the gems of the end of the Republic and the early Empire—by a considerable interval. They belong chiefly in the third and second centuries B. C., and if Furtwängler's identification of them is accepted, they will offer a most welcome addition to the meagre material now available for the study of Roman art at that period. The indications by which they may be recognized, and the differences between the two groups, are described with great detail in the text, and the examples of them are numerous enough to fill about twelve plates of the first volume, so that the student has ample opportunity to test the author's claims.

We have not space to go farther into the details of the book. In our notice of it we have shown little disposition to be critical, so far as criticism is the art of picking flaws. It might be shown that the assertion (iii., p. 31) that the Mycenæan gems were not used as seals has been disproved by the discoveries of Evans, who found impressions from them in the palace of Minos; we might confess ourselves unconvinced by the attempts to prove that the scaraboid was not derived from or related to the scarab (iii., pp. 61, 79); we might complain—and with justice—that the vast amount of material in the third volume is not better indexed; and doubtless there are other points to which exception might be taken, just as there are those about which there will always be more than one opinion. They cannot, however, prevent this from being a great book—the most valuable that has ever been written upon its subject; and it is with this impression of it that we prefer to leave our readers.

SIX BOOKS OF AMERICAN FICTION.

Stringtown on the Pike. By John Uri Lloyd. Dodd, Mead & Co.

The Darlingtons. By Elmore Elliott Peake. McClure, Phillips & Co.

Ole Mars an' Ole Miss. By Edmund K. Goldsborough, M.D. National Publishing Co.

Devil Tales. By Virginia Frazer Boyle. Harper & Brothers.

Crittenden. By John Fox, jr. Charles Scribner's Sons.

Doctor Dale. By Marion Harland and Albert Payson Terhune. Dodd, Mead & Co.

'Stringtown on the Pike' is preëminently adapted to the serial form of publication. Every chapter has its situation, and nearly every one its bloodshed. The Kentucky idea is the basis of the book, and it is depicted in all its manifestation (both ante-bellum and post-bellum) of negro superstition, signs and ordeals, and white men's hereditary feuds. Curious old laws are unearthed to add to the historic quality of the tale and give it its greatest interest. For Northern nerves the even balance held between "blind allegiance to ever-changing science and the fanatical faith of a superstitious slave bound to signs and omens, which result from the empirical observation of cycles of phenomena," will probably be disturbing. The final triumph of truth, however, comes about, it must be conceded, by adding to science more science. When the girl heroine confronts and confounds the expert chemist with, "You have but to properly mix hydrastine and morphine to obtain the color reaction of strychnine, although neither will give it alone," we feel that universities for women have not been wasted even if the question will ask itself, Why did not the learned chemist know that himself? And why was it reserved for the girl to discover, after the murder trial, that the supposed victim of poison had taken his "usual bitters before partaking of his breakfast," and to bring the chemist low with the simple statement, "Golden seal contains a colorless, innocent alkaloid"? Science makes a grave mistake, but signs and omens fail not. The whites pooh-pooh them, but constantly see them verified. The book, though packed with incident, is too loosely knitted to be called dramatic. While giving a good idea of the old slave superstitions, it suggests that their force is not altogether a thing of the past. The naïve and the grandiloquent in about equal parts mark the language, where it is not given over to the dialects of the "Kaintuck" mountaineer and the old negro Cupid, who is *deus* and *diabolus ex machina.*

'The Darlingtons' appears to be of the middle West, and has three leading motives, as the musicians say—a Railroad, a Study of Intemperance, and a Religious Theme as exemplified by a Methodist preacher. The Darlington family manage the railroad—the father as president, the beautiful daughter of twenty-two as auditor and comptroller, the son as traffic manager. The story of drunkenness is a moving one, not only because it leads to the most melodramatic scene in the book, but by reason of the unusual manner of its telling. The uncoiling of the inevitable chain of events is hideous, but done so simply, so unsparingly, yet so charitably, as to make a temperance tract of uncommon quality. The preacher's not too orthodox creed is unaffected and practical; in his homilies may be found some good sermonizing. The author's freest play of humor is found in the family give-and-take of the Darlingtons, where, as in other domestic

circles, jokes heard by all are seen by only a part. Revealing light is cast upon the social features of a small interior town. There is seemingly no sense of sin in making a charming girl say that visiting the sick "simply takes the gimp out of me"; or in making her warn an ardent admirer, "You mustn't look at my hair—I washed it yesterday, and it simply won't stay up." We quote a bit of dialogue:

" 'Then you don't expect to be an auditor always?' he said, smiling. 'I didn't say that,' she retorted—rather prettily. 'I don't know what I expect.' 'Don't you expect to be married?' 'I don't know about that, either. I belong to the sex which stands and waits,' she added, subtly. 'I don't imagine that you would have to stand and wait very long,' he ventured, with his dry humor. 'That would depend somewhat, I presume, upon what I was waiting for,' she returned, gracefully. 'These things usually adjust themselves, don't you think?' he asked with grave drollery. 'Not always,' she ventured."

It is hard to say whether this is more graceful, subtle, droll, or venturesome. Who shall say that the adverb in all its impressionism has not penetrated to Ashboro? The girl who always goes to the front door with her best man when he is leaving may not belong to a picturesque order of society, yet literature is wide, and there is no reason against her having her chance. But though she be as nice a girl as Carol Darlington and as fond of locomotives and horses, we suspect that her strongest appeal will be to those who go to books for entertainment ethical rather than literary.

The Maryland negro has not figured in books as prominently as his brothers from farther South. Anti-slavery-reform writers undoubtedly recognized the fact that the freedom of the Maryland negro would follow naturally upon that of the Carolinian or Virginian, while it has been natural for the Northern fiction writer to look farther afield than to the border line for the pictorial quality that attaches mainly to the remote. In a sense, therefore, Dr. Goldsborough's portrait of the negro as he is on the Eastern Shore of Maryland is a new contribution to the national gallery. The stories are told out of evident inmost intimacy with the subject, and have the satisfactoriness of all expert testimony. The talk, the superstitions of the negroes, their so-called religion—of a highly theologic cast and rich in Biblical controversy—are set down with a zeal that familiarity has only kindled the more brightly, and in an extremely well-reported dialect. Yet, for all this fidelity and enthusiasm, we seem unwittingly let into the secret of the Marylander's absence from fiction hitherto. He *is* less picturesque than the more nearly tropical negro. Perhaps because in the ante-bellum days (when we chiefly meet him) he was better off than the Georgian or the Mississippian; or is it perhaps that Dr. Goldsborough's tale has sacrificed all varnish to plain accuracy? There is much comicality, but almost no pathos; quotable sermons and stories, but very few departures from a childish level of interest, feeling, or character. To say so, as we have intimated, is quite possibly one more tribute to the author's ability in delineation. We must not and do not forget old Ezra's career as faithful bodyguard to Gen. Forrest, and his long journey home after the war to see "Mars Matthew and Miss Mary."

In 'Devil Tales' we recede to a darker age and one of more epic possibilities. The supernatural is depended on almost entirely to give the interest. The negro dialect is present, and there are incidental glimpses into plantation life; but African rites, hoodoos, and the devil are our cronies through a series of stories all more or less blood-curdling, and illustrated with happy gruesomeness by A. B. Frost.

Mr. Fox's 'Kentucky Story of Love and War' emphasizes that happiest incident of the Cuban conflict—the welding together of Federal and Confederate feeling by the common upholding of the American flag. The scene lies in Kentucky, in Chickamauga, in Tampa, in Cuba. The horrors of the war are served undiluted, while its curative effect upon sectional enmity is dwelt upon as only an ardently patriotic Southerner could do it, perhaps only a Blue Grass Kentuckian. The battle scenes are vivid to ghastliness; the scenes of home life in Kentucky sympathetically done with some excess of fertility in language. We wish our Southern friends would please omit flowers. The writer's tribute to the Regulars will find welcome and echo manywheres, while for its pictures of camp and field the book is worth reading. If it suffers and causes suffering here and there through sentimentality of manner, yet its brevity forbids great complaining.

The collaborated work of Mrs. Harland and Mr. Terhune sets forth the status of a Pennsylvania town come under the sway of an oil boom. One receives a clear and striking impression of such a town, in reading; of the excitements of wells discovered and again run dry—floods let loose through broken dams—labor murmuring at capital, capital assuaging the hardships of labor. The story opens in water and oil, progresses in lightning and fire, and closes in blood and anti-pyrin. The costuming and upholstering are done as thoroughly as the oil-tanks, suggesting heart-to-heart talks with dressmaker and decorator. The characters for the most part are types that have seen better days. The rich, benevolent, hopeless invalid who recovers unexpectedly (to every one but the reader); the lovely girl in Paris clothes, who plays and sings by twilight without her notes; the jealous, vulgar girl and her family; the athletic minister, who founds workmen's clubs; the bigoted one who denounces them; the Greek-god-faced doctor; the well-owner, who indulges himself in million-dollar freaks, and works shoulder to shoulder with the parson and the doctor for the weal of the town—are they not written in novels by the hundred? But surprises, not to be forestalled here, await the reader who pushes on to the end—an end so ill-fitting the mild quality of the opening as to give a queer shock, like the nursery stories that suddenly ended with "and just then the world turned inside out." In fact, this novel, while abounding in good description of the oil industry and in a certain amount of eccentric portraiture, is too much a hodge-podge of mush, millinery, elementary æsthetics, misplaced tragedy, and occasional descents to vulgarity, to take high rank.

East London. By Sir Walter Besant. Illustrated by Phil May, Joseph Pennell, and L. Raven-Hill. The Century Co. Pp. 364. 1901.

The paragraphs that have recently gone the round of the press respecting the promotion of the Bishop of Stepney to the episcopal chair of the late Bishop Creighton, will have caused much surprise to readers whose ideas of the East End are based on memories of the Whitechapel murders. They will suppose that Dr. Winnington Ingram must have been straining the forms of politeness to an inexcusable degree when he declared himself sorry to leave "dear old East London." Sir Walter Besant's latest study of metropolitan life will solve the problem of such regrets. It will scarcely lead to any migration of fashionable society from Mayfair to Wapping in search of desirable residential quarters; the East London Railway Company is not likely to reprint extracts from it in pamphlet form as an attraction to intending settlers; but it will at least show that the general conception of the East End as a region of unrelieved misery and destitution is a distortion of the actual facts, and it will promote that intelligent sympathy which is the condition of any real understanding of the situation.

In one respect the East End is a less inviting subject for Sir Walter Besant than those sections of London which he has described in earlier books. It makes little appeal to the historic sense. The Pool, it is true, sets him picturing Geoffrey Chaucer engaged in the duties of the Custom-house; and Dick Whittington gazing at the merchant-ships with the curiosity of a 'prentice lad; and Daniel Defoe eagerly questioning the sailors just arrived from the plantations of Virginia. The Tower, again, is in some sort a crystallization of several centuries of English history. But to the man who is compounded of all the previous generations, as Sir Walter confesses himself to be, there are no fascinating associations suggested by the leagues of mean streets in West Ham or by the factories of Ratcliffe. Nor is there scope for such forecasts of the future as would naturally be inspired by the sight of a district through which the pioneer is beginning to blaze his way. For good or ill, the main features of this neighborhood are by this time indelibly stamped upon it. There is opportunity, however, for the imagination of an experienced novelist in the discernment and interpretation of that living, throbbing humanity which, with little outward picturesqueness, contains in the heart of it dramatic possibilities equal to those of any romance of mediæval times. This opportunity is seized by Sir Walter Besant, whose portrayal of the daily life of the dock laborer, the tailor's sweater, the factory girl, the sandwich man, makes these types stand out as vividly as any characters in fiction.

Perhaps the first impression created by this study is that of the unexpected vastness of a region which is, after all, only one section of a great city. The population of East London to-day is greater than that of Philadelphia. This population inhabits about 500 miles of streets, most of them built on the same pattern. In some parts the rate of increase is worthy of one of our own Western cities. West Ham, for example, which a quarter of a century ago was a mere village, is now a town of 270,000 people. Sir Walter Besant sets forth some very striking facts in illustration of his general statement that the whole of East London is occupied by the working-classes. No private carriages, he tells us, are ever seen in its streets; it has no hotels or restaurants—there is no Raines law in East London—no

colleges for higher education, no cathedrals, no newspapers, no good booksellers' shops, and only nine or ten libraries. There is, perhaps, a suggestion of special pleading in his anxiety to emphasize this point. East London's newspapers, it is true, are imported from Fleet Street, but do not Kensington and Sydenham obtain their journals from the same source? He is undoubtedly correct, however, in his contention that the characteristic note of East London is not slumdom, but working-class respectability. Such careful investigations as those made by Mr. Charles Booth and Mr. Arthur Sherwell have shown that, in spite of Whitechapel murders, the lowest depths of London vice and beggary are to be found in certain sections of the West and South, rather than in the East. In the West more particularly "the season" makes the demand for labor intermittent, and thus, by processes with which students of social problems are familiar, promotes overcrowding and pauperism.

While this description of East London is not the fruit of a scientific inquiry or of a collection of statistical returns, it contains much that will be of value to those who are confronted by the problem of congested populations in any part of the world. The chapter on "The Houseless" has a direct bearing upon our own tenement-house question, and the account therein given of the work of the London County Council will be profitable for warning as well as for example. It will surprise many readers to learn that London, as well as New York, is seriously affected by the steady influx of Russian, Polish, and German Jews escaping the *Judenhetze* of the Continent. Sir Walter Besant expresses, incidentally, the belief that England is superior to America in its power of absorbing alien immigration. The second generation, he says, always becomes English through and through. The author's discussion of various types of charity is also of more than local significance. His well-known enthusiasm for the social work of the Salvation Army is as ardent as ever, and he brackets with Gen. Booth's organization the influence of the Settlement as "a form of philanthropic endeavor concerning which it is difficult to speak unless in terms of extravagant admiration." It will, of course, be remembered that the People's Palace is itself the direct outcome of 'All Sorts and Conditions of Men.' Unfortunately, this great institution, which combines education and amusement, has had but slight effect on the immediate neighborhood. There is no exaggeration in what is related here of the excellence of its polytechnic classes, and of the popularity of its concerts and exhibitions. It is admitted, however, by members of the working staff that the Palace is more attractive to residents in various Essex towns a few miles away—who can reach it easily and cheaply by train and tram—than to the bona-fide East-Ender. There can be no doubt that some of the definitely religious agencies in the same neighborhood have had greater success in raising the intellectual as well as the moral tone of the district; for, below a certain level, there is little chance of arousing artistic or literary interests until a spiritual impulse has first been communicated.

Before a second edition appears it will be well for the author to eliminate the repetitions—compare especially pp. 188 and 278—which are probably due to the fact that the contents of the book first appeared in the form of magazine articles. The illustrations are worthy of the reputation of the distinguished artists whose signatures they bear, and contribute to make this volume the most graphic, catholic, and illuminating sketch hitherto published of that "other half" of London which still needs an interpreter to make intelligible the mystery of its daily life.

An English Miscellany. Presented to Dr. Furnivall in honour of his Seventy-fifth Birthday. Oxford: Clarendon Press; New York: H. Frowde.

Dr. Furnivall's seventy-five well-spent years deserved as good a congratulatory volume as could be written. It would perhaps be too much to say that the *Festschrift* before us comes up to his deserts, but it is certainly a notable tribute from every point of view. Some of the forty-nine articles that it contains are quite first-rate, still more are distinctly interesting, and all are worth looking at. The title of the book is well chosen, for the contents are various enough. They range from a bouncing bit of defiant doggerel by Professor Saintsbury ("These are the words of a Tory, a bitter beast of bale") to a sketch of "The Early English Text Society in Germany," which even the reader who runs will have no difficulty in recognizing as Professor Wülker's. They include essays in etymology, syntax, phonology, metre, rhetoric, lexicography, semasiology, and textual criticism, as well as literary investigations dealing with every period, from Anglo-Saxon to Shelley. There is a poem by Mr. Stopford Brooke, a translation from the "Judith" in alliterative lines, one from Ibsen in rhyme, and several hitherto unprinted texts—Anglo-Saxon and Middle English—including a stanza which Professor McCormick has the courage to ascribe to Chaucer. The best notice of the book, indeed, would be the "Table of Contents," if we had space for it. The list of contributors, English, French, German, and American, is impressive, and becomes pleasantly significant when one remembers that all these scholars, young and old, are indebted to Dr. Furnivall not merely in a general way, like everybody who cares for our language or literature, but for those personal favors which he takes so much delight in conferring. We can mention only a few of the papers, and find it difficult to make a selection.

Professor Napier's article on the Franks Casket will command immediate attention, not only for the superb plates that accompany it, but for the learning and acumen with which the distinguished author treats his difficult and tantalizing subject. Professor Gummere's essay on the place of the "Sister's Son" in epic and saga is equally erudite, though in quite a different field, and is written with characteristic vivacity and charm. Gaston Paris writes of 'Amadas et Idoine,' foreshadowing, one must think, the crushing reply which he will some day make to the carpers who will not hear of anything good in Anglo-Norman. Mr. Jusserand reproduces two illuminations which throw light on "pageants and scaffolds high," like that on which Absolon played Herodes. Chaucerian studies are represented by Messrs. Liddell (on the Parson's Tale), McCormick (as already noticed), Mather (on the Knight's Tale), and E. E. Morris (on the Doctor). Dr. Sidney Lee writes of "Shakespeare and the Elizabethan Player," Professor Skeat of the Anglo-Saxon "Andreas," Professor Ker of "Panurge's English"—but we are giving the table of contents, after all, and may as well stop at one place as another.

The volume is beautifully printed and contains a fine portrait of Dr. Furnivall, as well as a bibliographical list of his numerous publications. Its sale should add materially to the resources of the Early English Text Society, for no student's library is complete without it.

Art Crafts for Amateurs. By Fred Miller. Truslove, Hanson & Comba.

This work is intended as a precursor to 'The Training of a Craftsman,' which Mr. Miller published three years ago. It treats of a variety of decorative arts, giving useful hints as to the method of study exacted by each, without going into any complete instruction which would enable the amateur to feel equipped for the practice of any. The range of work described includes wood-carving, beaten-metal work, modelling in clay, enamelling, enamelled jewelry, book-binding, leather work, inlaying, and stained wood decoration, gesso, fretwork, needle-work, stencilling, poker-work, and decorative painting. Each chapter is fully illustrated by examples, chiefly of modern work, many executed under the direction of the Home Arts Association, a society which has been of infinite use in developing the art tendencies of villagers and amateur craftsmen of every class living in unimportant towns. Mr. Miller insists all through the book on the importance of design in all decorative work, and the necessity of giving a great deal of attention to ancient work in all those crafts, because it is usually well designed, and rarely errs through inappropriate elaboration. He recommends drawing from nature, the study of flowers, leaves, and animals, and very justly warns the student not to use naturalistic studies for decoration, but to reduce and simplify the detail of a careful drawing from nature to decorative line. He gives some fine examples of Japanese fish and flying birds, singularly true to life, yet thoroughly decorative.

The craft which has attracted many followers of late years, both professional and amateur, is that of enamelling, so full of possibilities for splendid color and invention. Mr. A. Fisher is by far the most accomplished of the artists who practise enamelling in England; he seems to have overcome the difficulties of translucent enamel and to know all the technicalities of the art, and his work, from which we have here many illustrations, is very subtle and beautiful in ornamentation. His weak point is design when applied to the figure, denoting insufficient training in drawing. There is a great want of accent and style in his figures, although they are graceful and pretty, as in "The Voices of the Night" and the triptych, which Mr. Miller gives us here. Then, as to portraiture, the samples here given do not strike us agreeably: both Lady Elcho (No. 63) and Olivia (No. 60), although simple in treatment, are too much like modern painted portraits to be good enamels. The old Limoges enamel portraits are quite flat, the flesh tints conventional, and the brilliant color only in the dress and jewelry.

It is evidently far easier to be able to define what a decorative artist should be than to produce any good work, however simple. A careful examination of this book, with its multitude of illustrations, convinces us that it is in design that modern crafts fail to give the satisfaction we feel in early work. Mr. Miller's own drawings are quite wanting in the qualities he especially recommends. He offers many samples of his own work; not one, however, with any character or charm or special adaptability for any purpose. His judgment in the selection of works which illustrate the book seems equally at fault. We will quote several instances: (No. 173) portrait of Hans Thoma in decorated frame, and (No. 174) St. Cecilia, again in a decorated floral frame. Both these frames entirely destroy the effect of the pictures they enclose, being composed of heavily designed festoons of flowers, modelled upon florid Renaissance work supporting a row of children's heads in one instance; and in the St. Cecilia frame the flowers are modelled with great realism in squares—which divert the attention from the saint. We also note Mrs. Trequair's panel for needlework, a figure among leaves more suggestive of painting than of embroidery. The amateur can get an idea from those articles what to undertake and what to leave alone if inspired by a generous desire for following a craft.

Clue: A Guide through Greek to Hebrew Scripture. By Edwin A. Abbott. London: Adam & Charles Black; New York: Macmillan. 1900. 8vo, pp. xx, 158.

The task which Dr. Abbott proposes for himself, as outlined in the preface to this volume, is Titanic in size and Teutonic in method. 'Clue' is but the first of a series of eight volumes, to be entitled *Diatessarica*, in which the author aims to prove the correctness of his solution of the so-called "Synoptic problem." This theory, already set forth in the 'Encyclopædia Britannica' and illustrated by a sumptuous edition of the Gospels, called 'Synopticon,' maintains "that parts of the first three Gospels are derived from a Hebrew original (which has also influenced the fourth)"—a view now largely superseded by the "double-source theory."

The first volume lays a basis for the colossal undertaking by presenting the classes of errors occurring in the Septuagint version, then illustrating the author's theory by citing instances of variations in the Greek Testament which may be accounted for as similar errors. Of course this involves discussions of textual variants as well as of the problems of "the higher criticism." The latter is defined by Dr. Abbott as "simply scientific investigation and classification submitted to the judgment of common sense." Hence he appeals to the "unlearned" reader. But few of that class will have the patience to follow his minute investigations. The scholar, familiar with the linguistic facts and textual phenomena, will often take exceptions to the ingenious and plausible theories by which the author attempts to account for individual variations in the Synoptic narratives.

On one point Dr. Abbott agrees with the present critical opinion, namely, in assigning to the Gospel of Mark the closest relation with the assumed original "source." But the majority of critics now find the "source" of Mark in a Greek document. As already indicated, this series is intended to prove that the real "source" was written in Hebrew. Few books have ever been published in England that reproduce so closely the exhaustive, not to add exhausting, methods of German Biblical critics.

BOOKS OF THE WEEK.

About, Edmond. La Fille du Chanoine et L'Album du Régiment. W. R. Jenkins. 25 cents.
Adams, Mary E. Scott's Marmion. Boston: Allyn & Bacon. 40 cents.
American Street Railway Investments, Edition of 1901. (Supplement to Street Railway Journal.) Street Railway Pub. Co.

Queen Victoria

(1819-1901).

By RICHARD R. HOLMES, M.V.O, F.S.A., Librarian at Windsor Castle.

New Edition. With a Supplementary Chapter, bringing the Narrative to the End of the Queen's Reign. With Photogravure Portrait. Crown 8vo. *Net* $1.50. By mail $1.62.

*** The text of this book (with the exception of the Supplementary Chapter) is reproduced from the illustrated edition issued by Messrs. Boussod, Valadon & Co. (now Messrs. Goupil & Co.) in 1897.

The whole of the text, except the last chapter, was read to H. M. Queen Victoria, and was approved and authorized by her.

LONGMANS, GREEN, & CO.

91 and 93 Fifth Avenue, New York.

Maine Coast.

FOR SALE—On Penobscot Bay. A beautiful tract of 400 acres, with nearly four miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches; is much diversified in its surface with woodland and open fields, and commands everywhere most exquisite views of bay, islands, mountains, and ocean. There is a steamboat landing near the tract, giving daily connection with trains and boats to and from Boston. The property is on the main land, within five miles of Islesboro and Castine. It has several farm-houses, a pond, and trout-brook. It will be sold at a low price per acre to settle a joint account, and offers an exceptional opportunity for a gentleman wishing an independent estate, or for subdivision.

Address, J. MURRAY HOWE, Trustee, 28 State Street, Boston, Mass.

RARE OLD VIOLINS

Remarkable values in fine solo instruments from $50 to $10,000. Largest and finest collection in the world. Send for new catalogue containing Biographies; fac-simile labels; &c. Easy terms.

HOUGHTON, MIFFLIN & CO.'S

New Books

POEMS

By WILLIAM VAUGHN MOODY, author of "The Masque of Judgment." 16mo, $1.25.

Mr. Moody shows in these poems that he wears the "singing robes" with dignity and grace. They are marked by strong imaginative power, an uncommon range and variety of themes, and a high lyrical gift.

EVERYDAY BIRDS

By BRADFORD TORREY, author of "Birds in the Bush," etc. With 12 colored illustrations reproduced from Audubon. Square 12mo, $1.00.

This book may be ranked with Mr. Burroughs's "Squirrels and other Fur-Bearers." Like that, it is written from full knowledge, careful observation, and in admirable style. Mr. Torrey writes delightfully of shrikes and humming-birds, chickadees, and tanagers, flickers, bitterns, jays, and many other birds.

RIVERSIDE BIOGRAPHICAL SERIES

In this choice group of brief biographies six Lives have appeared—Jackson, Franklin, Eads, Jefferson, Penn, and Peter Cooper. Three more are now ready—

JOHN MARSHALL, by JAMES B. THAYER, Professor in the Law School of Harvard University.

U. S. GRANT, by WALTER ALLEN.

LEWIS AND CLARK, by WILLIAM R. LIGHTON.

Each 16mo, with photogravure portrait, 75 cents; *School Edition*, with half-tone portrait, 50 cents, *net*.

These biographies are fully up to the high standard of the six previously published. They are condensed, accurate, and written with high literary skill.

THE LIFE AND TIMES OF WILLIAM LOWNDES

By H. H. RAVENEL. With a portrait of Lowndes and a View of his Home. 12mo, $1.50.

This book tells the story of a brilliant Southern statesman, who was an admirable example of the Carolinian type of gentleman and scholar in the early years of the nineteenth century.

Sold by all Booksellers. Sent, postpaid, by

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, New York.

A JULETTY
Story of Old Kentucky.

By LUCY CLEAVER McELROY

No book of recent years has aroused more interest in advance of publication than this Kentucky story. Mrs. McElroy takes us into the "Pennyrile" district, a region never before invaded by novelists. She knows her country; she knows her people, and she depicts them with a sure and photographic touch. The story is fresh, absorbingly interesting and strikingly original, both in style and motive.

With 17 illustrations by W. E. Mears, $1.50

Monopolies Past and Present

By JAMES EDWARD LE ROSSIGNOL, Ph.D., Professor of Economics in the University of Denver. Special Lecturer in Economics in McGill University. Vol. XVIII. in *Crowell's Library of Economics*. 12mo, $1.25.

For the use of busy men who may wish to find in a single brief work a digest of a mass of information only to be obtained in a number of special treatises.

CONTENTS.—The Nature of Monopoly—Monopolies in Ancient and Mediæval Times—Gilds as Monopolies—Exclusive Trading Companies—Patents and Copyrights—Municipal Monopolies—Railways as Monopolies—Capitalistic Monopolies.

Another Woman's Territory

By ALIEN, author of "A Daughter of the King," "The Untold Half," "The Devil's Half Acre," etc. 12mo, 320 pp., with frontispiece, $1.50.

A novel of unusual strength and interest. The refinement in style, the vivid descriptions and clever analysis of character entitle it to a place among the best novels of the day.

For sale by all booksellers, or sent postpaid on receipt of price.

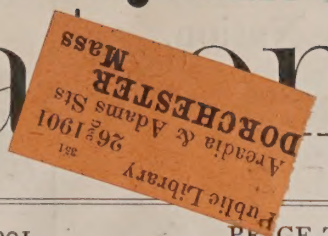
DORCHESTER BRANCH.

The Nation



VOL. LXXII—NO. 1871. THURSDAY, MAY 9, 1901. PRICE TEN CENTS.

A GROUP of GOOD BOOKS

EDWARD DOWDEN. Professor of English at Trinity College, Dublin, says of

Masters of French Literature

By GEORGE M. HARPER:

"I CAN say with a good deal of confidence and entire sincerity that it is the best study of Sainte-Beuve to be found in English, and indeed I do not know where in French in equal space so much is to be learnt and learnt with so much intellectual pleasure." (*12mo, $1.25 net.*)

AN ENTERTAINING AND VALUABLE HISTORY

The Old New York Frontier

Its Wars with Indians and Tories, Its Missionary Schools, Pioneers and Land Titles, 1616-1800.
By FRANCIS W. HALSEY. With Maps and 14 Illustrations.

THE Susquehanna frontier of New York, the center of great historic and romantic interest in the 17th and 18th centuries, has at last found a historian saturated with its annals and legends in Mr. Halsey, the editor of the *Times Saturday Review*, who has incorporated in his work a quantity of unpublished material. The narrative is as exhaustive as it is entertaining. (*8vo, $2.50 net.*)

J. G. SCHURMAN, President of Cornell University, and the President of the first Philippine Commission, says of

Ten Months A Captive Among Filipinos

By ALBERT SONNICHSEN:

"MR. SONNICHSEN'S book is valuable for the side-lights it throws on recent history in the Philippine Islands. But it is especially to be commended for the interest of the story of Mr. Sonnichsen's captivity, which he tells with a careless art that hides art, and as he produces always the impression of verisimilitude, he enchains the reader's attention and sympathetic interest from beginning to end. As I write these lines, word comes that Aguinaldo has been captured. The Tagalog bubble has burst. Mr. Sonnichsen's book is one of the few photographic snapshots we have or are likely to possess of the nature and operations of the Aguinaldian 'Republic.'" (*With Illustrations, 8vo, $2.00.*)

TWO BOOKS OF STERLING FICTION

"SHOWS HER IN THE FULNESS OF GREAT POWERS"

Crucial Instances By EDITH WHARTON

"SHE is to-day the most promising figure we have. To-morrow is hers. How far she will go it is hard to tell. But with her stern devotion to style, her worldly wisdom, her keen insight, her wit and her fancy, and, above all, her invariable good taste, there is no knowing what the future has in store. Mrs. Wharton writes as if she felt that the age of literature was not past."—*Evening Sun.* ($1.50.)

W. J. ROLFE, the Shakespearian critic, writes of

God's Puppets A Story of Old New York

By IMOGEN CLARK:

"JUST a line to tell you how much I have enjoyed your novel. When I found time to take it up I couldn't lay it aside for work that I ought to be doing, and I finished it at two sittings. It is a masterly work, better than I anticipated, measuring your ability by what I have already seen of your books and magazine matter. It is far ahead of the 'Little Lad,' admirable and charming as that was in its way. It ought to have a large sale, but nowadays it isn't the best novels that run up into the hundred thousands—more's the pity." ($1.50.)

TWO GREAT REFERENCE WORKS

Cyclopaedia of American Horticulture

EDITED BY L. H. BAILEY

Assisted by

WILHELM MILLER and many expert Cultivators and Botanists

Vols. I., II. and III. are now ready, and Vol. IV., completing the work, is in press and will be published soon.

In this great Cyclopædia will be found a complete description of all species of fruits, vegetables, flowers and ornamental plants in America Directions for the cultivation of all kinds of crops, observations on marketing, etc.

Opinions of the Work.

"We do not hesitate to commend this work to our readers, whether fruit-growers, gardeners, gentlemen of leisure, or of whatever profession, for it contains such information as it will take scores of books to give, and cannot fail to both interest and instruct every reader." —*Canadian Horticulturist.*

"The information is precisely what the horticulturist and general reader is desirous of knowing." —*Scientific American.*

"In range, treatment and editing emphatically useful—worthy of ranking by the side of the Century Dictionary." —*The Nation.*

"It is a work for the gardener to gloat over, for the student of Horticulture to pore over, and for one who is neither of these to delight in possessing."—*Chicago Tribune.*

"While the entire work will cost $20.00, it will be money well spent by any owner of an orchard or even a gardener. It will be to the farmer what the Century Dictionary is to the literary man."—*San Francisco Chronicle.*

The Price is $5.00, net, for each volume, and the work is sold by subscription. Circulars and full information will be supplied by the publishers on application.

A DICTIONARY OF

Architecture and Building

BY **RUSSELL STURGIS**, FELLOW OF THE AMERICAN INST. OF ARCHITECTS, AUTHOR OF "EUROPEAN ARCHITECTURE," ETC., AND MANY ARCHITECTS, PAINTERS, ENGINEERS, AND OTHER EXPERT WRITERS, AMERICAN AND FOREIGN.

The **only complete and practical** compendium of architectural and related knowledge. **Authoritative,** including the **most modern** knowledge, **superbly illustrated, interesting to the general reader on art,** and **indispensable to the architect.**

Volume I. now ready. Volume II. ready about June 1. Volume III. in preparation.

Complete in three volumes. Super Royal 8vo. Per Set: Cloth, $18 *net;* **Half Morocco, $30** *net.*

Among those assisting **Mr. Sturgis** may be named:

Architects—

ROBERT W. GIBSON, President of the Architectural League
H. J. HARDENBURGH, N. Y.
F. MILES DAY, Phila.

Engineers—

RUSSELL ROBB, the Author of "Electric Wiring for Architects."
WM. P. GERHARD, Consulting Engineer for Sanitary Works.
WM. R. HUTTON, London.

Painters—

JOHN LA FARGE, Artist in Mosaic and Decorative Windows.
EDWIN F. BLASHFIELD, Mural Painter.

Expert Writers, Foreign and American

ALEXANDRE SANDIER, Paris.
JEAN SCHOPFER, Paris.
W. A. LETHABY, London.
W. P. P. LONGFELLOW, Cambridge.
MONTGOMERY SCHUYLER, N. Y.
JOHN S. FISKE, Genoa, Italy.

Professors of Architecture, etc.

WM. R. WARE, Columbia.
A. L. FROTHINGHAM, Princeton.
WM. H. GOODYEAR, Brooklyn Inst.

WM. M. AIKEN, late Supervising Architect of the U. S. Treasury Dept.; PETER B. WIGHT, Sec'y Ill. State B'd Examiners of Architects: CARYL COLEMAN, Pres. Church Glass and Decorating Co.; WALTER COOK, Pres. Soc. Beaux Arts Architects, N. Y.

The Nation.

NEW YORK, THURSDAY, MAY 9, 1901.

The Week.

For some weeks past it has been the most familiar comment on the Stock Exchange that, however extreme might be the rise in prices, the public had not shown evidences of going wild. Brokers with speculative customers reported that, while the volume of buying orders was very great, their clients, in the Wall Street phrase, were "operating" prudently. They were not, in other words, buying stocks, holding them until prices were far advanced, and then using the same stocks, at their enlarged valuation, as a means of borrowing larger and larger sums of money for new speculative ventures. The fact that, until last week, there was no such sudden increase of bank loans as usually attends such a "pyramiding" movement, went some distance towards confirming the brokers' assertion. It has by this time, however, grown very plain that what the Eastern public had as yet failed to do in the way of reckless outside speculation, the West was doing as never before in its history. This fact has been proved in many ways. Even as regards the business done on the New York Stock Exchange, it is now estimated that one-third to one-half of the buying orders come by wire from Chicago and the farther West. When Eastern bank reserves, some weeks ago, showed signs of contracting, Western deposit institutions at once began to ship money to New York. It has been for weeks a noteworthy phenomenon, that Western banks were lending directly on the Wall Street market, and in the main were lending for Stock Exchange uses. The situation amounted practically to this, that the West was plunging into stock speculation at New York, and was drawing on its own institutions to supply the means.

What may be called the physical collapse of the Stock Exchange is perhaps the most novel and extraordinary part of the whole present episode of speculation. We do not, for our own part, recall any incident quite parallel to it in the history of stock-market finance. Perhaps the nearest approach to it, though on a very much smaller scale, was witnessed on the "gold board" of this city in 1869 and 1870. But even on that occasion it was rather the excessive nervous strain which attracted notice than the literal breakdown of facilities for doing the business. The simple fact of the matter is, that the business of the Stock Exchange, both in its clerical office-work and in its personal transactions on the floor, although highly systematized, is very far from being adapted to such a market as has for some weeks been in progress. There are limits to the number of different groups of brokers which a Stock Exchange member can visit between the hours of ten and three, and there are limits to the number of individual transactions which he can attend to in any group. The normal arrangements of the New York Exchange are calculated for a maximum day's business of, say, half a million shares, which, with the exception of one or two separate days, was the actual maximum until 1899. This being so, it is obvious enough that, when membership cannot be increased, when office facilities are not capable of indefinite enlargement, and when, for a period of a month consecutively, daily dealings average two million shares—something must, sooner or later, give way.

Late advices from Beaumont, Texas, say that numbers of people coming from far and near to see the "gushers" and to speculate in oil stocks and oil territory have caused something like a local famine. Prices of food have risen 100 per cent., which implies that the railroads cannot bring in provisions fast enough to supply the demand. Neither houses nor rooms can be rented. The sidewalks cannot accommodate the throngs, who are compelled to become Middle-of-the-Road Populists for the time being. There are now seven gushers in the Beaumont district, with an eighth soon expected. Land is still advancing in value, and the oil area is considered much wider than it was first reckoned to be. An English company, called the Byrd Syndicate, has taken leases on 63,000 acres of land in Hardin County, immediately north of Jefferson, in which Beaumont is situated, and is preparing to sink ten wells there. Almost every town in the State has an oil company. The Beaumont correspondent of the *Manufacturers' Record* says that there are 200 oil companies doing business there, of which probably 25 are bona-fide institutions. The remainder are of the speculative sort. "The intentions of these parties," says the writer, "are good, and in almost every instance the promoters expect firmly to strike oil, but, from a business point of view, it is taking big chances." The Beaumont discovery has given rise to a considerable body of literature on the subject of fuel oils. There seems to be a general concurrence of opinion among men of science that there will be a local demand for all the fuel of this kind that can be found, and that ultimately it may even lead to a large production of steel in Texas.

What effect the purchase of the Leyland steamship line by J. P. Morgan & Co. will have on the Ship Subsidy scheme is a question of some interest. It is not likely that the Subsidy Bill will ever come up again, but if it does, the purchase of the Leyland Line with American capital will be the best evidence that Government aid is not needed to increase the American merchant marine. The advocates of the Hanna-Frye bill based all their arguments on the necessity of a great national effort—a pull all together—to create a shipping interest to fly the American flag on the ocean and in foreign ports. Suddenly, without Government aid, and without vexing the ear of Congress, a whole fleet of ships is transferred to American ownership, a fleet that could not be built in this country in less than five years, even if our shipyards were clear of other work. Under existing conditions they could not be built here in ten years. Senators Hanna and Frye, and all others who have so desiderated American shipping, ought to be thankful for this Aladdin-like fruition of their hopes. But, says some carping critic, this does not put the American flag on the high seas. No; but Congress can do that without paying a cent out of the Treasury. The Subsidy Bill itself contained a provision for putting a large number of foreign-built ships under the American flag and paying them a subsidy to boot. Those of the Atlantic Transport Company were included. If the display of the flag is an important part of the business of navigation, nothing can be obtained at less cost. We are sure that Mr. Morgan will not object to a bill authorizing the placing of all the Leyland steamers under American register.

Shortly after the expulsion of Spain from Cuba, a Commission was appointed by the President of the United States to frame a tariff on imports for the island. This duty was assumed to belong to the military power, and the claim was not disputed. Some system of taxation was necessary, and this was the easiest and most expeditious way of reaching it. For some reason this tariff is now undergoing revision at Washington at the hands of the Commission that first framed it. The various American interests affected by it have naturally flocked to the place where the work is going on, and, as one man connected with the Commission says, "are all howling like a pack of wolves, and yet are not willing to give Cuba anything in return, not even an opiate to deaden her sufferings." It is a new thing in our economic history, this spectacle of American producers besieging a quasi-Committee of Ways and

Means in order to get duties levied on a foreign country in their interest. To exploit the American taxpayer in the framing of tariffs is a familiar principle, but to exploit foreigners is a novelty indeed. The rice-planters of Louisiana, it is said, desire to have a very low Cuban duty on rice, because in that way they will be able to increase their sales—a proposition which may be equally advantageous to the Cubans as giving them cheap food, but which ought to be considered and decided with reference to Cuban interests exclusively. The demands of our tobacco-manufacturers and our cotton-spinners are also heard in the dispute; and why are they not entitled to the same consideration as those of the rice-planters or of any other class? Give a little more time and advertising to the fact that we are framing a tariff for Cuba at Washington, and we shall have delegations from all parts of the country to assist the Commission in its work. The spectacle is most unseemly, and must be a fresh source of humiliation to the Cubans, who have fancied that they were about to assume the duties of self-government.

Good work has been done by the committee appointed by the National Civil-Service Reform League to investigate the present condition of the Federal civil service. Its first report relates to the appointment of Indian agents under the present Administration. There have been wholesale changes of Indian agents by all recent Presidents—in all but two of the sixty agencies during Cleveland's first term; seventy-six appointments during Harrison's term; eighty-one changes in Cleveland's second Administration; and seventy-nine in the fifty-eight agencies during McKinley's first term. Many flagrantly bad appointments have been made during the past four years, but some of the worst men selected have been removed. The committee, however, points out that no lasting reform can be achieved without a change in the system. This can be secured through the action of the President any day, without waiting for legislation by Congress. The President is authorized to prescribe such regulations for the admission of persons into the civil service as may best promote its efficiency, and under this law the committee has formally asked him to promulgate regulations declaring that all appointments of Indian agents shall be made by promotion from the superintendents of Indian schools and from the other higher grades of the classified Indian service, and by details from the army.

The Pan-American Exposition at Buffalo was opened on May 1 with less blare of trumpets than is usual at a great fair, but this should not create a false impression as to its importance. Architecturally, the buildings are no less interesting than those of the Chicago and Paris Expositions. The ensemble has been more successfully worked out than was that of the Paris Exposition, while, wisely renouncing the attempt to rival the "white city," the city of palaces at Buffalo will glow with color, like an Eastern town. For the first time a number of great buildings have been colored according to a prearranged and harmonious scheme, and the result may be to restore to architecture the interest it has lost in renouncing color. It would be strange if Ruskin's dream of a revival of the glories of Venetian building should first be realized by way of the Great Lakes. But the Pan-American has a serious claim upon those to whom æsthetic considerations appeal but slightly. It stands for an ideal that has been much obscured, and it affords an opportunity that has not in equal measure been given. North American ignorance of South America has been most deplorable. We have let an enormous trade which might have been ours for the reaching out, go to England and Germany. We have ignored completely a type of civilization which might have yielded us both pleasure and instruction. We were the stronger, and the initiative should have come from us. To-day our repentance assumes the form of architectural beauty at Buffalo. An apology in such form can only be taken in good part, and, unquestionably, the Exposition will tend to bring about a better understanding between the Americas, and to supply through better acquaintance a basis for mutual helpfulness and mutual respect.

It seems to be settled now that the Colombian Government has required the Panama Canal Company to make a definite proposition for the sale of its property to the United States. As the concession for the canal will expire before the work can possibly be completed, the Government has power to prescribe the terms for its renewal, and one of these is that the canal shall be offered to the United States on fair terms and in a way to meet all the objections raised by our Isthmian Canal Commission. The proposition for sale provides for an appraisal by arbitrators, whose decision as to price shall be final. This means final so far as the Canal Company is concerned, but not as to the United States. The latter is not bargaining for a canal at present. No officer of our Government can do anything except report to Congress the proposition which may be made to us by the Panama Company and the Colombian Government in unison. The report published on Monday that Secretary Hay and Lord Pauncefote have agreed upon the terms of a new canal treaty, in place of the one which fell dead two months ago, is probably premature, but such a treaty may be expected before long, the principal feature of which will be a neutrality clause not subject to doubt or double construction, and in which all the maritime Powers may unite at their own option.

With a fine "brute majority" to apply to the export tax on coal, the English Government was able to carry it in the House of Commons on Monday night. There was considerable cross-voting—a few Liberals, like Mr. John Morley, going on record for the new tax—yet the net result was a paring down of the normal Conservative majority by something more than forty. But this is by no means an accurate measure of the ill-feeling and almost open rebellion excited in the party by the Chancellor's masterful ways and by his unpopular taxes. Of course, when a question is made one of "confidence," as the coal tax was, party members have to walk up to the scratch and vote for it, despite all their grumbling. But every such forced expression of confidence really weakens the Cabinet which has to call for it. Instead of willing and enthusiastic, it gets muttering and reluctant followers, and no Government can long exist with such backing. As for the coal tax itself, the soundest and strongest argument that we have seen against it was made by the eminent economist, Prof. Alfred Marshall. His opposition was based on large grounds of national policy. Economically defensible and not at all a departure from the general principle of free trade, he yet thought the tax a vexatious novelty in international commerce, and that this was a thing highly perilous for England to introduce. Suppose other countries began to lay export taxes on the raw materials that English manufactures must have or expire? It was a dangerous precedent that the Chancellor was setting, and might be a fatal suggestion to others. Great Britain's life-blood being international trade, he is an unskilful physician who does anything even remotely to impede its circulation. This wise counsel of Professor Marshall's should be taken to heart by us Americans, who now, with so much reason, are counting upon wresting from England the primacy in trade. Against export duties, fortunately, we are protected by the Constitution.

One of the coldest of Sir Michael Hicks-Beach's dashes of cold water in his budget speech was his announcement that he did not expect to get any money out of the Transvaal to help pay for the war until after two or three years. This is a terrible come-down from the jaunty expectations of the early days of the war. Even in March, 1900, the Chancellor had to withstand

strong opposition to his new war taxes. "Just borrow the money," was the cry of the Chamberlainites; "we will get it all back out of the Transvaal some day." But Sir Michael is too sound a financier to imitate Pitt's fatal policy of borrowing everything for war expenditure, and last year, as this, he refused to be responsible for any such plan. In December of last year he informed Parliament that he had sent out a financial expert, Sir David Barbour, to report upon the prospect of contributions to the Exchequer from the Transvaal. The unexpected prolongation of the war has prevented a full report, but the Chancellor received some "preliminary observations" from Sir David, in time for his budget speech of last month, and these were of the most discouraging character, indicating that the Transvaal was practically ruined, and that a considerable period must elapse after the restoration of peace before any Imperial taxation of the country would be possible. Thus melts into empty air another vision of credulous Imperialism.

The Agrarians have thus far successfully blocked the Canal Bill in the Prussian Diet, and no means has been found to shake their stolid opposition to the Emperor's favorite project. Of course, the Ministry may retaliate by refusing to pass the new protective duties on foodstuffs. To do otherwise would be a virtual confession of defeat, for the passage of the Prussian Canal Bill was made the condition of the new Imperial tariff schedule. They must swallow the Canal Bill dose before they get their protection dram, the Emperor had said in substance. "Who swallows?" the Socialist *Vorwaerts* inquires. Duties on foodstuffs would prove a costly means of favoring the Agrarians at the expense of the country at large. The situation is an awkward one on all hands. It is apparently impossible to content the Prussian squirearchy, and yet the solid Agrarian vote is necessary to the Government. Every concession to the Agrarians, on the other hand, is likely to breed dissatisfaction among the manufacturing and banking classes, upon the support of both which the Government is dependent, while it is sure to strengthen the already formidable opposition of the Socialists. The resignation of the Prussian Finance Minister is significant of what may happen in the Imperial Cabinet. Chancellor von Bülow will give a good account of his enemies; to manage his friends is the difficulty.

A physicians' strike in Germany is the latest thing in industrial warfare. The trouble arose in connection with the system of sickness insurance, by which some thirty million Germans, on payment of a small sum, are entitled to free medical attendance. Theoretically, nothing could be more perfect than such a coöperative arrangement. Practically it has been found that the interests of the sickness bureaus (*Krankenkassen*), the doctors, and the patients clash at almost every point. The bureaus work to promote economy, and desire that few cases of sickness be reported. The people feel that the doctors treat them unfeelingly. The doctors, on their part, find the bureaus hard taskmasters. In Leipsic the conflict has declared itself frankly. The bureau physicians, as in other cities, had organized an association to represent the profession. This commission attempted to negotiate with the bureaus for better terms and less irksome conditions of service. The bureaus refused to deal with the commission, but were willing to hear individual complaints. It was the old question of "recognizing the union." The doctors did just what workingmen do under the circumstances—struck, and the work of the Leipsic bureaus is crippled.

At Munich the case of the doctors was still harder. Their average profits from the bureau service were about $75 yearly. The pay was the same for the most difficult and for the lightest cases. The united effort of the physicians raised the average pay for a call to about fifteen cents. They demanded as well a special tariff for obstetrics and other difficult operations, and, when such recognition was refused, like their Leipsic brethren, they struck in a body. The case would hardly call for comment were it not that patients are equally disaffected. The system oppresses them. They must take such physician as is allotted to them, must buy their medicines at certain pharmacies or lose the benefit of their subscription. They receive underpaid treatment grudgingly given, which is the worst treatment. They possibly lose more in equanimity than they gain in economy. While it is possible that some reform of the system may be secured, it looks very much as though its defects were radical. Organization fails when it clashes with human nature, and it is hard to see how any bureau system is consistent with the human relation that should exist between physician and patient.

The Chinese of one or two provinces are starving. At the present rate of progress, the settlement with China will be effected about 1950. Meanwhile, throughout the intervening years, the various Powers and rulers concerned will compete with each other in expressing a desire that the business be ended speedily, and a devout hope that the *others* will be moderate. The indemnity will all the while grow, like a beard in the shaving. More and more Chinese territory will be politely "leased," and if the native Government protests against being slowly bled to death, it will be asked not to disturb the wise counsels of the slumbering diplomats. We understand perfectly the immense difficulties under which the negotiations at Pekin must of necessity be carried on; but if the purposes of the Powers were clear, simple, and transparently honest, an agreement could surely have been reached before this. The interminable delays, the *pour-parlers* without end, the tentative projects, the notes written and signed and then torn up, the indemnity moved up and down like a speculative stock in Wall Street—all this looks like a deliberate intention not to agree. To the Chinese it must seem like calculated and slow torture.

The Ministerial crisis in Japan was foreshadowed some weeks ago when the House of Lords held up the Revenue Bills necessitated by the Chinese expedition. This action of the Peers was not due to the nature of the bills themselves. The project to raise about $10,000,000 by taxes on liquors, tobacco, sugar, and beer was in every way a moderate one. The refusal to vote supplies was simply an emphatic expression of ill will towards members of the Commons, who are gradually usurping a prestige which once belonged to the Lords. It should be remembered that the Japanese House of Lords is measurably free from the defects of a hereditary body. Only Princes and Marquises (about one-seventh of the total number of Peers) sit by hereditary right, the other noble members are elected by their respective orders, while numerous Peers are appointed directly by the Emperor, and forty-five are elected by the largest taxpayers. Thus the House of Lords has a fairly representative character, and certainly embodies much greater ability than the House of Commons. Contrariwise, the promotion so readily accorded to prominent officials has disqualified many of the best statesmen from sitting in the Commons. Meanwhile, under Marquis Ito's régime, the power of the Commons has increased. Parties have begun to form and multiply, the claims of which he has been obliged to consider. With this tendency towards party government have come the usual evils of such government. It is partly, then, as a protest against corruption, and even more as the assertion of a moral prerogative, that the action of the Japanese Lords must be taken. It appears to be a futile protest against the inevitable, and their willingness to tie the hands of the Ministry in an emergency like that of the Chinese war bears no creditable interpretation. The Ministry, on the other hand, has justly refused to evade the issue, and has regarded the persistent cutting off of its supplies as cause for resigning.

McKINLEY'S NEW DEPARTURE.

At the very moment when Senator Hoar, at the Boston dinner of the Home Market Club, was falling down in the old fashion before the idol of Protection, President McKinley at Memphis was doing despite to that heathen divinity almost as if he were a convert to the true faith. Many have wondered what might be the main purpose of the President in travelling about the country at this time. The minor motives he has are obvious. A skilled *populachero*, as unlucky De Lome declared him to be, he delights to mingle with his fellow-citizens, and to give back in showers that flattery which he receives from his audiences as mist—to apply to him Gladstone's definition of oratory. When plain *citoyen* Loubet develops the arts and graces of a royal progress in his journeys through France, we need not be surprised if Mr. McKinley displays similar talent. But that he has a serious aim beneath all the flowers, we are bound to believe; and what it is, we think the evidence already shows. He is bent, it seems to us, on preparing the people, and especially his own party, for a great change in the commercial and fiscal policy of the United States.

He gave distinct warning of this new departure of his in his inaugural address last March. He broke off his pæan over our prosperity to say, in words which did not at the time attract the attention they deserve, "Our diversified productions, however, are increasing in such unprecedented volume as to admonish us of the necessity of still further enlarging our foreign markets by broader commercial relations." What he meant, and proceeded specifically to refer to, was "reciprocal trade arrangements." A whole series of these the Senate had just refused to ratify. The chief objectors were Republican Senators—Aldrich, Lodge, Platt, Depew. They rested their opposition on solid and selfish protectionist grounds. Keep out foreign goods as you would the plague; the foreign market be hanged. But the President reasserted his programme. The reciprocity treaties have been extended, and will again come before the Senate, and Mr. McKinley is off on a campaign of education to secure their acceptance this time. Not maxims but markets, he said at Memphis, which, being interpreted to fit present circumstances, obviously means, "Don't stick to your outworn protectionist creed if it prevents you from selling your goods." The world-market, with not a word about the home-market, "the great markets of the Orient"—how to secure these was the burden of his story, and the problems involved we were to solve "untrammelled by the past." To show how completely he had broken with his own past, he proceeded to read with approval resolutions adopted by the Legislature of Tennessee in 1847. They were practically free-trade resolutions, dwelling upon the importance of enlarged commercial intercourse with the rest of the world. Thus we have the author of the McKinley tariff, who used to rail at the "delusory" foreign market, going back to the days of the Walker tariff to find true guidance for the present.

He recurred to the subject on May 1:

> "It is your business," he said, "as well as mine to see to it that an industrial policy shall be pursued in the United States that shall open up the widest markets in every part of the world for the products of American soil and American manufacture. We can now supply our own markets. We have reached that point in our industrial development, and in order to secure sale for our surplus products we must open up new avenues for our surplus. I am sure that in that sentiment there will be no division, North or South."

Nothing in Mr. Kasson's correspondence with the Home-Market Committee was more heretical than this, and it is all the more poisonous that it is embodied in generalities and is thus liable to be swallowed by innocents like the New York *Tribune*. This sheet quotes and commends the foregoing extract, and gives especial point to it by saying that we are to look for expansion of American trade abroad, not merely in the Orient, where our cottons are in demand, but in Europe, where our growing general manufactures may find a market. Evidently this is a sly reference to the treaty of reciprocity with France, which the Boston protectionists opposed with such lively expressions of indignation in a letter to the President, and which Mr. Kasson so ably defended.

Such a sea change is wonderful in our eyes, and we are not going to waste time in disputing or in glorying over it. The President is right now, whatever he may have been in the past. The very fact that he is an opportunist by nature is the strongest proof that he is but responding to powerful and unmistakable tendencies in the business world, when he declares that the building up of our foreign trade in manufactured goods is the strategic duty of the hour. The thing is so plain that it has convinced Mr. McKinley, and has swung him from his ancient high-tariff moorings. He has lived to be ready, at the risk of the odium of inconsistency, to speak and work for a policy which he had denounced. Sir Robert Peel did it, and so may William McKinley; and those who, all these years, have labored for the peaceful expansion of trade with all the world will not quarrel with the result, even if it come about in ways of which they did not dream.

What we are seeing is simply the fulfilment, somewhat earlier than most people expected, of the old prophecies of convinced economists. Mr. Gladstone, for example, long ago predicted the industrial supremacy of the United States. What he saw was a vast continent of inexhaustible and varied resources, inhabited by a homogeneous, an educated, an inventive people. That they would come to the front in an industrial age was certain, sooner or later. The one thing they needed to go with their unlimited natural resources was unlimited capital, and this they have now got. That they are rapidly becoming the manufacturing monarchs of the world is but the necessary consequence.

President McKinley merely interprets the sense of the business world when he urges such "broader commercial relations" as will make the path of this great and peaceful conquest by American industry easier and more secure. Everything is going forward now by leaps and bounds, but the pinch of competition is yet to come. It is for us to fortify ourselves in advance for an era of world-wide industrial depression. Everybody knows what the sure bulwark of manufacturing is in such a crisis. It is free raw materials and the open door. A Russian Consul, speaking the other day in England, said with much force that the "staying power" of English manufactures had been in the free-trade policy. From this no trained Chancellor of the Exchequer will depart. Sir Michael Hicks-Beach resisted all the pressure to tax raw materials, on the ground that it would be a step towards national suicide. To this must we come—to it Mr. McKinley is obviously willing to come—if we are to strengthen and safeguard the wonderful expansion of American commerce, especially in finished products. Great changes are in the air. By the time Congress meets, the situation may have so developed, and the appeals of the American manufacturer may easily have become so urgent, that we may see the President's plan for adopting reciprocity under the guise of "extending" the protective system carried into execution.

AMERICAN LEADERSHIP IN CHINA.

Gen. Chaffee, with all his troops, guns, and transport, is leaving Pekin and will soon leave China. The fact rounds out an episode in American diplomacy in the highest degree honorable to the country. Whatever the future of the Chinese problem may be, our contribution to its solving during the past nine months has been of a sort to quicken the pride of the patriot at the same time that it cheers the heart of the philanthropist. The work has not been done by a man sounding a trumpet before him. Indeed, not being accompanied by the thunder of the captains and the shouting, it has not attracted as much attention and won as much praise in the United States as we think it deserves. But we know that it has profoundly impressed the leaders of thought and of public life in Europe. They have seen in it a transcendent

exhibition of American leadership in the world of ideas and the world of action. The vaunted Spanish war as an eye-opener was nothing compared with the part played by America in the intervention in China. We have shown ourselves, to those having eyes to see, to be guided by a diplomacy unsurpassed in its grasp of the situation, in its clear and consistent policy, in its patient moderation, its firmness, its moral impulse.

In Mr. William Vaughn Moody's finely imagined poem, "The Quarry," he gives a poet's rendering of the service performed by America in China. Under the image of a sacred elephant, decrepit with age, he pictures China fleeing from pursuers. Good need was there to haste, for

"—— panting, foaming, on the slot
Came many brutes of prey, their several hates
Laid by until the sharing of the spoil.
Just as they gathered stomach for the leap,
The sun was darkened, and wide-balanced wings
Beat downward on the trade-wind from the sea.
A wheel of shadow sped along the fields
And o'er the dreaming cities. Suddenly
My heart misgave me, and I cried aloud,
'Alas! What dost thou here? What dost *thou* here?'
The great beasts and the little halted sharp,
Eyed the grand circler, doubting his intent.
Straightway the wind flawed and he came about,
Stooping to take the vanward of the pack;
Then turned, between the chasers and the chased,
Crying a word I could not understand—
But stiller-tongued, with eyes somewhat askance,
They settled to the slot and disappeared."

There may be about this just the touch of exaggeration necessary to give it the due effect of truth, but no one can deny that, at many critical times and in many critical ways, the American eagle has taken "the vanward" in China. In those haggard days last July and August, it was the American Secretary of State who maintained his faith, in the face of the jeering chancelleries of Europe, that the legations in Pekin were holding out. It has since become easy for the Powers to trust the educated Chinese Ambassadors, to lean upon the great Chinese Viceroys. Mr. Hay did it then. A very simple thing, but it occurred to no one else to do it. Genius might be defined as a knack at doing the easy and natural things which other people immediately curse themselves for not having thought of doing. Genius for statecraft, at any rate, lay that way in the Chinese difficulty, and it will be to the lasting honor of American diplomacy that it was an American diplomat who displayed it.

It is not for us to insist with Pharisaical complacency upon an absolute primacy in the restraint shown by our forces in China. War being what it is, we must not be surprised that the brute got uppermost in some of our soldiers, and that they took their shameful part in the shameful work of needless slaughter and burning and robbery. But this we may say, with honest pride, that in our detachment the skulking and attendant horrors of the march from Tientsin to Pekin were reduced to the minimum; that no other force had a better attested reputation for good discipline; and that the administration of the quarter of the capital city under American control won praise from the most impartial observers and gratitude from the natives themselves. Gen. Chaffee's letter of protest to the Commander-in-Chief against recurring outrages was undiplomatic, was in strictness unsoldierly, and was properly recalled and apologized for; but it was an instinctive utterance of the best American feeling, for which the man must always be thanked and congratulated, even if the General had to be disavowed.

The deliberate withdrawal of our troops marks the determination with which our Government has clung to its first clear conception of our duty in China. Other countries have vacillated, and do not yet know their own minds. Our policy was plainly stated at the beginning, and has not been departed from all through. We sent a military force primarily to rescue imperilled American citizens. Our subsequent stay was only to negotiate an honorable and lasting peace. In all the drawn-out conferences the position of America has never been in doubt. We have been for the integrity of the Chinese Empire—China for the Chinese. We have opposed laying a crushing burden of indemnity upon an impoverished, a starving people. The only American right in China for which we have been insistent is the right to trade there on equal terms. We do not need to seek an unfair advantage. An open door and no favor infallibly means for the United States, as so clear-sighted an economist as Paul Leroy-Beaulieu has admitted, the greater share and gain in the commercial exploitation of China.

American leadership in China may thus fairly be asserted in an early and sure sense of the facts in hand, in moderation and humanity in both military operations and the efforts for a settlement, and in a wise and far-seeing policy, vividly conceived at the start and made the norm of action to the end. The whole makes up a record which the future historian may well single out as the proudest in either of Mr. McKinley's Administrations. To Mr. Hay, who planned and executed, as also to the President who approved, and who has generously given the Secretary the credit which is his due, it should be a source of enduring satisfaction to look back upon the troubled and trying year of American intervention in China.

INTEREST IN PARLIAMENTARY ORATORY.

The exciting debate in the House of Commons on Thursday night came right on the heels of a widespread lament in England over the decay of Parliamentary oratory. Mr. Alfred Kinnear had a doleful article in the last *New Liberal Review*, mourning the evil days on which the House of Commons had fallen. There were no more great speakers. A "great debate" had come to mean only a great bore. The country had lost interest in the House, and was rapidly losing respect for it. Lord Hugh Cecil bluntly told the Commons, the other day, with a rash cynicism worthy of his father, that it never stood lower in public opinion. The London *Economist* grieved recently over the "shunting" of the House of Commons. These were the prevailing complaints—when lo! suddenly there was a crowded House, a nation hanging breathless upon the speeches, strong men grappling in eager argument, the old traditions apparently in full vigor again. What was the cause?

Partly, the subject of debate. It was one which appealed to powerful interests and which roused strong passions. A shilling tax on exported coal might seem poorly fitted to excite noble rage, but it really goes to the centre of English industry, English finance, and English party politics. A tax on coal means the modification, for good or ill, of the conditions affecting British manufactures, railways, shipping. It is a revolutionary step in taxation. Above all, it is, or threatens to be, a solvent of parties. This is the main thing which turns all eyes upon the scenes at Westminster, and which makes the debate run high with excitement. The speeches may change votes, may upset the Government, or at least compel a reorganization of the Cabinet. In other words, when the old prizes of Parliamentary oratory are again in sight of the orators, the old ardor returns, the old kindling enthusiasm leaps along the benches, and eloquence responds to hope.

Neither the Chancellor of the Exchequer nor Sir William Harcourt, the protagonists of the debate, is what can be called a great orator. Sir William is, however, a tremendously effective speaker—not a Rupert, but a Nasmyth hammer, of debate. His vigorous directness, his sweep and rush of utterance, his impatience of contradiction, make him an adept in the "art of abating and dissolving pompous gentlemen." But he overbears rather than persuades, breaks through obstacles instead of flanking them, and is almost wholly without that *magna eloquentia* which is as a flame nourished on its own substance, and which *clarescit urendo*. Representing, as he does, a Welsh constituency, he naturally comes forward as the champion of a peculiarly Welsh industry, and delivers his hardest blows at the coal tax. In defending it, Sir Michael Hicks-Beach shows himself the very type of the hard-headed, clear-headed, and unemo-

tional speaker. One could imagine him saying to his fervid opponents, as Bismarck said to Jules Favre, that he was there for business, and that all the arts of public declamation would be utterly wasted upon him. He knows what he wants, has himself and his case perfectly in hand, and, without resorting to a single trick of oratory (if we except a turn for cutting sarcasm), makes his argument with the cold and impersonal air of a lecturer giving a demonstration in physics. The figures are so and so; the tax will yield this revenue and have that effect; you may take it or leave it. Turn me out of office if I do not yield? You could not please me better. Anyhow, I will not yield.

Probably not since Mr. Gladstone's Home Rule Bill and speeches of 1886 has there been such a quiver of political expectancy attending a debate in the House of Commons as is felt in connection with the discussion of this year's budget. The Government has shown many signs of going stale. Its majority on paper is 150, but on important division after division it has fallen to fifty or lower. Lord Salisbury's age and health are such that he cannot long retain the Premiership. Readjustment will certainly come soon, and perhaps a great overturning. Our lively friend Timothy Healy expressed the general sense of the situation when he said the other day: "The Government were extremely anxious to get out of office, but every time they tried to get into a minority, the front Opposition bench voted for them. The explanation was that the leader of the Opposition did not want to go into office at the present juncture of affairs. But he did not think any one was more tired of the present Government than the First Lord of the Treasury himself. The Government were now only a few weeks in office, and they were more limp and more jaded than any Government he had ever known." In the revival, at this juncture, of interest in Parliamentary oratory, we are put clearly on the track of the reason for its decay. True forensic eloquence is the art of persuasion; but how can men rise to eloquence if they know in their hearts that their hearers are immovably committed against them in advance? It is the perfunctory and listless nature of voting in Congress or Commons that makes speaking listless and perfunctory. With the result of the roll-call certain beforehand, the orator knows that he is simply marking time. At his best he can get only the compliment, given in one case by a frank opponent, "You have changed my convictions, but you have not changed my vote." Rigid party control and the reign of the caucus have clipped the wings of public oratory. How eagerly audience and speaker alike grasp at the opportunity of freedom both to utter independent thought and to yield to the weight of argument, we see in the rapt attention which waited upon the speeches of Messrs. Littlefield and McCall in the House of Representatives last year. There were men speaking not the conventional thing, not the cut-and-dried party thing, but their own honest conviction. And they actually hoped to persuade others! That is the breath of life of Parliamentary oratory, and if we would restore it, we must restore the conditions in which alone it can exist.

PRODUCTIVE SCHOLARSHIP IN AMERICA.

"America now has scholarship, as well as Germany, but it is just as when the Germans claim that they, as well as the Americans, play football; to be sure, they do play it, but in cutaways and in high collars." So writes Professor Münsterberg of Harvard in a suggestive article in the current issue of the *Atlantic Monthly*. Productive scholarship—that is, the disinterested effort to extend the boundaries of the known and understood—has in America, he feels, neither achieved results that can satisfy the scholar, nor gained due standing and influence in our public life. This evil case of scholarship he attributes chiefly to two causes: inadequate methods of instruction in the universities, and the lack of sufficient moral and material reward for scholarship to attract to its austere heights our best and most ambitious minds. There is thus a twofold difficulty—insufficient training for scholars, and insufficient recognition of such training as they yet manage to secure.

American graduate students are badly trained, in the Professor's opinion, because their work in the university is merely the continuation of their studies in the college. University professors are chosen as skilful teachers, shrewd administrators, popular lecturers, graceful littérateurs, good fellows of scholarly bent—on any basis you will, save that of productive scholarship. "The university is a more difficult college—a college which presupposes a greater amount of information, and where the best informed teachers of the country are teaching; but its spirit is exactly the college spirit, merely on a more elaborate scale of instruction." It would be easy to remind Professor Münsterberg of that Academician who, to the complaint that the Royal Academy wasn't up to the mark "this year," answered cheerfully—"But then it never was." The friendly criticism of an eminent German scholar who has chosen to cast in his lot with us deserves, however, a less summary consideration. It is certainly true that many even of our better universities still carry the college shell on their heads. This is but natural; colleges were their brooding mothers. The university has been often superadded to the college without any proper addition to the teaching staff. College professors simply added university teaching to duties already sufficiently onerous, and the universities naturally retain much of the collegiate character.

So far we are in complete accord with Professor Münsterberg. What he has failed to see is that this was an inevitable stage, and is quickly passing. We shall not always see the learned in Greek dialects reviewing freshmen on the -μι verbs; and if the census were to be made of great specialists who have been gradually emancipated from college teaching and promoted to their proper work of university instruction, the results would be most encouraging. Furthermore, the whole tendency of to-day is towards the growth of a special class of university teachers. The larger universities carry on their faculties scores of recent graduates who serve, at little pay, for the opportunity of original research, looking forward to a university career.

Whether scholars are sufficiently paid is an often debated question, to the discussion of which Professor Münsterberg brings a new point of view. He feels, in brief, that salary should be in some ratio to productive scholarship, and that the mark should be set high. If you give an Ambassador, say, twenty thousand dollars, you should do as much for a scientist of world-wide reputation. The fixed scale, by which a ready man of no especial scholarship, but facile with his pen and popular with the women's clubs (things profitable all, but not conducive to production), receives precisely the same salary as his colleague who patiently toils at an unremunerative work of pure scholarship—this fixed scale is an absurdity, which no other profession tolerates. Americans everywhere respect social and pecuniary success. Make these possible to the professor, and he will have honor in his own country. Give the scholar's position the *éclat* that attaches to the other walks of life, and your best ability will go in for scholarship. Such is the somewhat circular course of Professor Münsterberg's argument. Or in other words, if a nation of gigmen will not respect the scholar on foot, give the scholar a coach and four, and the gigman will yield him the crown of the causeway. Would not a plain man not a psychologist be likely to mistake this for "the philosophy of the sty"?

Few true scholars really seek or value the ambassadorial prestige which professors are reputed to enjoy in Germany. The late Bishop Stubbs's sore grievance against Oxford was its dinner parties, late hours, smoking, Sunday breakfasts, and university sermons—the pomps and vanities, in short, as they are practised at Oxford. Another great Oxonian, the late Max Müller, fairly out-

lived his usefulness as a scholar through his desire for public applause and ribbons "to stick in his coat." The contrast is instructive. What the true scholar most desires, besides the modest competence which is the condition of all mental tranquillity, is not social success, not even public recognition—he cares little enough for the gigman's view of him—but time and facilities for research. These, and not great salaries, are the desideratum. Great energies which should be restored to scholarship to-day are wasted in mere administration. The amount of teaching required of university professors is frequently excessive, and should be reduced. Chairs and departments of research, like the Harvard Observatory, should be established. The other matter, of a living wage for professors, on a fixed or sliding scale, will take care of itself.

It remains true that scholarship is neither sufficiently understood nor respected in America, and Professor Münsterberg does well to remind us not to assume the air of such as have already attained. Productive scholarship still shares the lot of new causes. Great scholars there were in America before the universities, but organized research is a thing of yesterday with us. If Professor Münsterberg had been here twenty years ago, when Johns Hopkins was still a voice crying in the wilderness, or still later, when the Harvard or the Yale Graduate School was still only *in posse*, he might find greater reason for hope, and less for apprehension.

"Had you once seen these roads before they were made,
You would lift up your hands and bless General Wade,"

was in Scott's time the standing apology for the bad military roads in the Highlands. A similar comment might fit Professor Münsterberg's amiable counsel of perfection.

BERNADOTTE.

PARIS, April 22, 1901.

Bernadotte may well be considered one of the most extraordinary figures among those destined to hold a place in the great drama of the Revolution and the Empire. He was looked on at one time as a possible rival of Bonaparte, and was jealous of him from the beginning. He was a shrewd man of the South, and never quarrelled openly with Bonaparte; in the crisis of the 18th Brumaire he did not openly assist him, but he contrived not to turn him into an irreconcilable enemy. His rôle during the Empire is well known and belongs to history. We have less knowledge of him after the downfall of the Empire; and M. Léonce Pingaud has done well to describe to us recently the last years of Bernadotte.

The Bourbons never looked favorably on him, viewing him as an upstart, as a creature of the Revolution. They did not forget that in 1814 Bernadotte had thought for a moment of succeeding Napoleon, and of asking no smaller price for the services which he had rendered to the Coalition than the crown of France. Louis XVIII., who invoked for himself the principle of legitimacy, invoked it also for the Vasas in Stockholm. Talleyrand, who used so cleverly at Vienna the principle of legitimacy in order to secure for France her former frontiers, gave instructions to his agents in favor of the Vasas, but soon met with great resistance in many quarters. Bernadotte, who was not yet King, merely Prince of Sweden, was aware of the hostility of Louis XVIII. and was unsparing in his attacks on the house of Bourbon. He said to those who formed his habitual circle, "The house of Bourbon is rotten."

When Napoleon left the island of Elba, and landed in France, Bernadotte became much excited.

"He first," says M. Pingaud, "prophesied failure for Napoleon and consequent great good fortune for France. Twenty days elapse; the Emperor has reached the Tuileries; Murat, as if to set his rival of the North the example of repentance, has declared war on Austria. Bernadotte suddenly remembers that his engagements with the Coalition have expired. But Murat is overthrown in a few days, and Bernadotte, fearing to be once more isolated in Europe, offers to take his place among the Allies. A week afterwards, he learns that Benjamin Constant has been called to the Tuileries, that Lafayette sits in the House of Representatives, that Carnot occupies the Home Office. He exchanges views on the future of France with Madame de Staël."

The Prince in his court proclaims Napoleon the first captain in the world, the greatest man that ever lived, greater than Hannibal, than Cæsar, than Moses! This enthusiasm is cooled by the news of Waterloo. Bernadotte is so afraid of the return of the Bourbons that he affects to believe seriously in Napoleon II.; he congratulates the Austrian Minister on the subject; he would rather see the Republic proclaimed in France than to see the return of Louis XVIII.

During the negotiations which precede the signing of the treaties of 1815, he sulks, he is discontented. He does not conceal his anger; he deplores the subjection of France to the *émigrés*.

"I have been a Republican," he says on the 30th of June, 1816, "or, at least, I have served the Republic—an inexcusable crime in the eyes of the Bourbons. I do not think that they are generous enough to forget that I arose from an ordinary class in society, and the Revolution brought me where I am. I can say, however, that they are under great obligations to me, for without me Napoleon would not have found the Coalition confronting him; I was its central nucleus."

Modesty has never been a virtue of the Gascons, and Bernadotte's career was not such as to cultivate it. He was proclaimed King of Sweden in February, 1818. The Court of the Tuileries was obliged to congratulate him; he did not imitate the ordinary parvenu, but remained true to his instincts. He extended his protection to the sons of Ney, who had been his comrade in the army of Sambre-et-Meuse, gave brevets in his army to them, to the son of Drouet d'Erlon, even to a son of Fouché. The young Prince de la Moskowa became an aide-de-camp to Bernadotte's son. Count Athanat d'Otrante, Fouché's son, became a Swedish chamberlain.

Metternich denounced Charles XIV. for giving encouragement to all the enemies of his policy.

"Is it not strange," wrote he on the 23d of December, 1821, to the Austrian Ambassador in Russia, "to see encouragement to all the discontented in Europe emanating from a throne, to have them thus confirmed in the continuation of a work of emancipation which, according to the King, goes on too slowly? It is stranger still to see a King designate the royalists for the hatred of the Liberals. . . . There is much food for reflection in such an upturning of ideas."

Bernadotte often spoke of Napoleon. He was fond of saying: "If he only had listened to me, how many mistakes he would have avoided." When he learned the news of Napoleon's death, he said in his council: "He has not been vanquished by men; . . . he was greater than all of us. But God has punished him, because he relied solely upon himself, upon his own intellect; and as everything wears out, he forced this prodigious intellect and wore it out." He said, with his usual modesty: "If Napoleon has been the first man of the century by reason of his military conceptions, I have surpassed him by my spirit of order, of observation, and of calculation."

When Charles X. ascended the throne, he gave instruction to the French Minister at Stockholm, in view of the eventuality of a revolution which would reëstablish the old dynasty. But the French Minister frankly declared that nobody in Sweden was thinking any longer of Gustavus IV. and his son. Bernadotte continued to take a great interest in all French affairs, and espoused the side of the Liberals against the court party. "With him, however," says M. Pingaud, "as with the Emperor Alexander, the love of liberty reduced itself to the ardent desire to see everybody obey him freely, but blindly." He never forgot that he was a King, and that he was a Frenchman. He said in 1828: "If the throne of the Bourbons were threatened, I would leave the crown to my son, and, taking my sword with me, would go to the defence of the King of France." It may be said that from 1815 to 1830 Bernadotte kept himself, so to speak, between the monarchy of divine right and the Constitutional monarchy.

The Revolution of 1830 was not a surprise to him, but placed him in the most difficult position. His sympathies, his instincts, were on the side of the Revolution; but he was aware that the new Revolution was not viewed with complacency by the Emperor of Russia, his ally, and that he was in a subordinate position with respect to the powerful empire of the North. His ambition was so persistent, his illusions were so great, that he was somewhat surprised that the French did not think of him after the July days. He was not yet resigned to ending his life on the throne "of the Goths and the Vandals." M. Pingaud compares him justly to King Stanislas of Poland, who thought himself in exile in Lorraine, and who hoped to the end that some fortunate accident, some European complication, would bring him back to Warsaw.

Bernadotte, in his official dealings, had to conform his attitude to that of the Emperor of Russia, and Nicholas was distinctly hostile to Louis-Philippe. The new King of France sent him an autograph letter, which was brought by the Prince de la Moskowa. Bernadotte did not receive him until he had learned that the French generals Belliard and Athalin, bearers of letters from Louis-Philippe, had been received at Vienna and St. Petersburg. Nicholas answered Louis-Philippe in a very haughty way, and Bernadotte was constrained to affect great cold-

ness towards the Revolution of July, and to view it apparently through the eyes of the Tsar; the former Jacobin denounced the revolutionist parties in Belgium, in Italy, in Poland. The Swedish diplomats declaimed against Belgium, against the International Revolution. At times Bernadotte took off the mask and showed his sentiments. He was, for a while, afraid of a new coalition against France, but when the prospect of war became dimmer, he became more free to express his sympathies. He had always courteous words for Louis-Philippe personally. It seemed as if he felt that Louis-Philippe, in order to be admitted to the European Concert, had to make the sacrifices which he himself had made in order to enter into the Olympus of kings. He really wished for the stability of the new order of things in France, and severely disapproved the attempts made at Strasbourg and at Boulogne by Prince Louis Napoleon.

In 1840 Charles XIV. apprehended he should witness a new combination formed against France, on the occasion of a revival of the Eastern question. He was afraid of being obliged to enter into it. During this crisis he said: "The Paris papers threaten Europe with a propaganda, and speak of retaking the left bank of the Rhine. This indiscretion would suffice to create a German nationality. I fought long to assure to France her natural boundaries. She lost them by war, and I doubt if war will give them back to her. This will take place only by negotiation and exchanges of territory." Bernadotte, who had often been denounced as a traitor, had almost become popular in France; his name was inscribed on the Arc de Triomphe. Louis-Philippe had his portrait placed at Versailles, in the palace of the kings which he had dedicated "to all the glories of France." His name was given to one of the streets of Pau. He wrote to the Prefect of the Lower Pyrenees: "In becoming a Swede I have not ceased to think often of the interesting country where I was born, and I am always happy to learn that the inhabitants of Béarn continue to prosper under the ægis of a wise and enlightened Government." As happens to every man, Bernadotte, in his later life, returned more and more to the memories of his childhood and his youth. He received with great honors all the distinguished Frenchmen who came to Sweden. In 1840, when he heard that the remains of Napoleon were coming back from St. Helena, he was so affected that he wept. When he received, on his death-bed, an expression of sympathy from Louis-Philippe, he exclaimed, "So there is still a Frenchman who takes interest in me!"

He died on the 3d of March, 1844, at the age of eighty years, the oldest of the kings of Europe, and the last but one of the Marshals created in 1804. He had given his subjects thirty years of peace. His successor, the present King of Sweden, was the only sovereign, with the King of Greece, who visited Paris during the Exposition of 1900. He thus showed his sympathy for the country where Bernadotte was born.

Correspondence.

THE WAY OF IT.

To the Editor of The Nation:
